OSSIAN LANG, Editor.

Discontinuances Any subscriber wishing to stop his paper must notify the publishers, otherwise he is responsible for payment as long as the paper is sent. Subscribers should not depend upon their Postmaster or anyone else to order their paper stopped for them.

Change of Address Subscribers must notify us of any change in their address giving both the former and present address. Postmasters no longer forward papers unless prepaid.

Missing Numbers Should any subscriber fail to receive his copy by the tenth day of any month, notification should be sent us and another copy will be mailed.

Advertising Rates will be furnished upon application.

Publishers' Talks.

With this issue of TEACHERS MAGAZINE we gather together into one enlarged circle of readers those who have been familiar with the appearance, characteristics, and policy of several different periodicals. To give to these combined constituents equal satisfaction, helpfulness, and pleasure is no easy proposition, as we fully appreciate, and yet we assume the effort with a considerable measure of confidence because we are actuated by a somewhat exalted conception of what such a periodical as this can and should be made.

A Coveted Relationship.

To all of our readers we offer a most cordial salutation. We desire to have a relationship existing between us that is closer and more sympathetic than merely that of publishers and subscribers. We covet a more intimate knowledge of your problems and your aspirations, we desire to harmonize with your ideals and your obligations, and we aspire to minister to your success, welfare, and happiness in your chosen profession. The closer becomes this bond of intimacy, the more certainly will we be able to make this magazine a medium of supplying your needs; and the more truly and completely we fulfil this purpose, the more surely will we deserve and receive your loyal co-operation. It will be readily understood that the more fully we have your allegiance as subscribers, the more we will be able to expend in giving you both what you admire and desire.

An Exalted Standard.

An educational journal possesses the power of exerting a tremendous influence upon education for weal or woe. If its standard of usefulness and its motive of existence be faulty or false it will inspire an indifferent, careless, and perhaps mercenary demeanor on the part of educators. Nothing could be more demoralizing or injurious to education. There is vastly more in the profession of teaching than the mere earning of a living, and unless an educational periodical can constantly reveal the secret of a teacher's power, inspire him to the nobility of his calling, and invigorate him with a clarified and perfect atmosphere it lamentably fails in its true function.

The Influence of an Attractive Appearance.

It is difficult to accomplish this result by a cheap and impecunious appearance. An educational periodical must not be deficient in external evidences of prosperity and worth. A magazine of this nature should be beautiful in construction, employing excellent paper, superior illustrations, and embracing and portraying the thoughts and words of those who have something worth saying, who know how to say it, and who demand attention and justify consideration because they have accomplished things

that entitle them to speak with authority, conviction, and profit. This conception of an educational periodical we shall endeavor to fulfil, and we woefully misinterpret the disposition of the teachers of this country if we fail to realize a verdict and a response that shall reflect a sincere and generous approval.

A General Educational Magazine.

In combining into one publication those periodicals that have been distinctive in dealing with different branches of school work, it is not our intention to curtail in the slightest the material that is especially significant and helpful to any teacher. We shall give in this magazine just as much reading matter for the primary and higher grade teachers as can be found in any other periodical, and this we are able to do because of its much enlarged size. There is, to us, no sound or logical reason why material for both grades of class-room work should not appear in one periodical. To do otherwise frequently doubles the expenditure of the teacher without conserving any real purpose. To a large percentage of the teachers of our country both classes of material is imperative because of the general nature of their work, and it seems unnecessary that they should be compelled to subscribe for two periodicals in order to satisfy their needs. If it is necessary to double the number of pages of this magazine in order to adequately meet the situation it will be done, for we purpose to give just as much material of a special character as may be found elsewhere, and always to maintain a very high standard as to quality.

Subscription Price.

This confession of our aims naturally suggests the question of our subscription price, and it seems appropriate that we should devote a little space to the consideration of this problem. *The price of this magazine will be one dollar.* It is impossible for us to charge less and produce a magazine that will really satisfy our subscribers or be a credit to us. Furthermore there is no necessity for charging less, for if we present the magazine that measures somewhere nearly up to our ideal, teachers will not hesitate to pay the price.

Merit Counts.

We refuse to insult the intelligence and judgment of teachers by accepting either the idea that they will take the magazine that is the cheapest or that they fail to discern which periodical really possesses the most superior worth. Other things being consistent merit will always count, and merit will receive its price if not unreasonable and exorbitant. There is, however, another side to this problem, which is worth presenting.

The Proper Motive.

There are two distinct motives which can dominate an educational periodical, the commercial and the educational. We prefer the latter, tho we by no means ignore the former. If we were actuated wholly by the commercial motive we should realize that the largest element of profit is derived from advertising, and in order to swell advertising we must obtain the largest possible circulation, and to obtain the biggest circulation we would possibly deem it advisable to quote ridiculous subscription rates. Unfortunately, however, general advertisers for some unaccountable reason, which we believe to be unsound and illogical, have heretofore hesitated to support educational periodicals, and therefore to obtain financial returns that are not produced by a proper subscription price other advertisements must be sought that in our judgment do not always contribute to the dignity, appearance, or worth of the magazine. We have no particular fault to find with such a manifestation of the commercial motive, but for ourselves we fear that followed out to its natural conclusion such a motive will come into direct antagonism with the educational motive to the detriment of the latter. In following out our educational ideal we shall make our advertising columns just as clean, responsible, and valuable as our reading pages, but to do this we must obtain a reasonable subscription price. We want our motives to be dictated by some loftier spirit than "commercialism," and we seek your support in the evolution and development of a result that shall be a satisfaction to our idealism, and a delight to your estheticism.

Our Business Policy.

In order that there may be relations of cordiality between subscribers and publishers there must be a tactful, conciliatory, and courteous business policy. A dissatisfied clientele is always a disastrous condition. Of course, now and then uncalled-for offense will be taken at some fancied grievance or some magnified fault, and human nature is such that these results cannot be entirely eradicated. If the business management, however, is proper, these occurrences will be quite the exception, as we are determined they shall be. We shall make a persistent effort to never allow a request to be ignored, or a suggestion to go unwelcomed, or an order to be mishandled, or any other detail of a large and prosperous business to pass without the greatest consideration and care. We do not exist because you must have us, but because you want us, and we appreciate that we shall not be the recipients of your favor very long if we fail to be considerate of your feelings and prompt and courteous in our dealings.

A Timely Suggestion

How excellent we shall be able to make this periodical depends upon two closely interwoven conditions, the number of our subscribers and the amount of our advertising. Every dollar of increased advertising patronage we receive will permit us to improve the appearance and worth of this magazine for your benefit. We shall strenuously strive to allow nothing to appear in our advertising columns that is not worthy of your purchase, and if you wish to help us to produce a steadily-improving periodical from which you will derive direct benefits, we suggest that you freely write to our advertisers for those things that appeal to your wants, and especially purchase those necessities of life which you see presented in our columns.

Extension of Subscriptions.

Where any subscriber to any one of the amalgamated periodicals has paid a larger annual subscription price than is the rate for this magazine a proportionate advance

in the maturity date of his subscription has been made to equalize the difference in price. Where any person has been a subscriber to more than one of the consolidated periodicals, the unexpired time of each subscription has been added together and the maturity date of his subscription for this magazine thus ascertained. The date of the label upon the September wrapper will indicate how these conditions have been met.

Agents Wanted.

It is quite possible that some of our subscribers might like to represent us as an agent at some teachers' institute or institutes. Applications should be made promptly, and if assignments have not already been made, arrangements will be promptly concluded. We have this year an unusually attractive proposition, including exceptionally liberal cash prizes, the nature of which will be disclosed upon request.

A Weekly Journal of Current Events.

The Week's Current has been united with the monthly *Our Times*, and we offer under the latter name a neat, attractive, and helpful weekly periodical, devoted to the description of notable world events and the geography of important occurrences. We purpose making this publication a veritable "text-book" for use in schools and by teachers in connection with the study of current events, which each year is becoming a more and more important part of the school-room work. If you have not seen this periodical we strongly advise you to ask for it at your institute or send to us for a sample copy.

A Beautiful Premium.

Notwithstanding our confident belief that this periodical will receive a most generous reception and support from teachers upon its own merits, yet we shall offer this year a very attractive and popular premium in the form of three Hiawatha pictures reproduced in colors from original paintings made expressly for us by the celebrated Indian artist, Mr. E. W. Deming. A fuller description of these pictures and the artist will be found in the body of the magazine.

Tell Us Your Views.

As this periodical in appearance, breadth of contents, cover design, character of paper, liberality of illustrations, and quality of reading represents much of a departure from and an advancement over the periodicals it succeeds, we shall be very glad to receive from our subscribers some indication of their sentiments and views. It is our one aim to give to our readers not necessarily so much what they should have as what they want, and the only way in which we can do this is to keep in such close touch with the professional pulse, as to promptly and effectively respond to the symptoms with which we are thus familiar. We want to make this periodical steadily better, and if our readers will only let us know wherein we fail and wherein we succeed in ministering to their requirements, tastes, desires, and pleasure, we shall be better able to supply the wants of the educational profession.

Our Apology.

For whatever delay may arise in mailing this periodical to its subscribers with this initial number, we can only crave the indulgence, patience, and generous pardon of readers. There have been so many details to perfect, a so much larger edition to print, and so much labor to perform in adjusting the mailing lists of the amalgamated periodicals that it has seemed impossible to overcome delay in the execution of all our plans. We shall very shortly have everything in such smooth running order that we shall be able to adopt and faithfully follow a fixed and definite date of publication.

An Investment Opportunity.

We respectfully call the notice of subscribers to the opportunity for the purchase of stock in this company as presented elsewhere in the advertising columns. There is no necessity for the submission of this investment to the public, because every dollar of the desired capital has been guaranteed, but we have felt that the opportunity for safe, conservative, and profitable investment of surplus funds upon the part of teachers, in enterprises with which they are familiar, is so limited, that we ought not to deny them the privilege of accepting such an offer upon easy terms of payment when the chance so desirably exists.

New Supplementary Reading

Holder's Half Hours with the Lower Animals

60 cents
For Fourth Year

The story of lower animal life, including the protozoans, sponges, corals, shells, insects, and crustaceans, is here presented simply and on broad lines. The narrative is untechnical, and supplemented at almost every step by forceful and explanatory illustrations.

Baldwin's The Fairy Reader

35 cents
For First Year

Ten of the famous fairy stories of Grimm and Andersen appear, rewritten in simple form, in this volume.

The expressions are such as will be easily understood by the youngest, but the main thread of each narrative is left unaltered. The illustrations are numerous and attractive.

The Child's David Copper- field and Oliver Twist

(Severance)

40 cents
For Fourth Year

These masterpieces of Dickens have been retold in simple language. All elements of unpleasantness have been excluded, but the thread of each story has been closely followed. The illustrations include a number of reproductions of Cruikshank's famous pictures.

Walker's Our Birds and Their Nestlings

60 cents
For Fifth Year

Short chapters or essays on twenty of our best known birds, describing their nesting habits, the care taken of their nestlings, their food, their songs, etc., with incidents from personal observation. A prominent and attractive feature of the book is its illustrations.

The **Supplementary Reading Books** published by the American Book Company number 164 volumes, on all subjects and for all grades. They are interesting in subject-matter and simple and attractive in style. Most of them are profusely illustrated; all are carefully printed and substantially bound.

A classified and graded list, with suggested courses for graded and ungraded schools, and an illustrated descriptive catalogue, will be gladly sent free to any address on request. The suggestions given in these pamphlets can not fail to be helpful to teachers who are on the lookout for new ideas.

AN IDEAL METHOD OF TEACHING LANGUAGE STEPS IN ENGLISH

By **A. C. McLean**, A. M., Principal of Luckey Schools, Pittsburg; **Thomas C. Blaisdell**, A. M., Professor of English, Fifth Avenue Normal High School, Pittsburg; and **John Morrow**, Superintendent of Schools, Allegheny, Pa.

BOOK ONE. For third, fourth, and fifth years = = 40 cents

BOOK TWO. For sixth, seventh, and eighth years = = 60 cents

These books present a new method of teaching language and grammar which is in marked contrast to the antiquated system in vogue a generation ago. They meet modern conditions in every respect and teach the child how to express his thoughts in language rather than furnish an undue amount of grammar and rules. From the start lessons in writing language are employed simultaneously with those in conversation. Other valuable features are:

1. An exercise for each school day—carefully graded, effectively grouped.
2. Observation lessons upon things of interest to a child and within his experience.
3. Picture studies—36 in number—each suggesting a story that appeals to children.
4. Selections from the best of children's literature, so treated that children will appreciate them.
5. Letter-writing, from simple notes to formal business correspondence.
6. One line of work continued until a child attains some ease and confidence in it.
7. Rules and definitions made clear inductively before they are formally stated.
8. Simple grammar for discipline, and the best of literature for inspiration, each in its proper proportion.
9. A graphic system of diagramming, easily acquired, helpful to pupil and teacher, yet not unduly emphasized.
10. Composition exercises, with definite models from literary masters, and subjects drawn from the child's own experience.

NEW BOOKS FOR TEACHERS

PAINTER'S GREAT PEDAGOGICAL ESSAYS = \$1.25

This volume contains selections illustrating every period of educational history from Plato to Herbert Spencer. Selections from twenty-six of the world's most prominent educators are given, each introduced by a brief biographical sketch. The reader is thus enabled to secure an acquaintance with the original sources of information, and a correct critical estimate of each author's views and works.

ROARK'S ECONOMY IN EDUCATION = = = \$1.00

This book discusses the application of the principles of economy to the work of the school. It deals with the careful and economical use of time, money, and energy in effecting the right education. The general divisions of the subject are the organization and management of the individual school, and of the school system, and the useful direction of the other educational forces of the community.

NEW SCHOOL OF METHODS IN PUBLIC SCHOOL MUSIC 1905

BOSTON, JULY 11 to 27 CHICAGO, AUGUST 7 to 19

The high grade of the teaching force is shown by the fact that a large proportion has been chosen to address the coming convention of the N.E.A. on Music Education.

Copyright, 1905, by American Book Company

THIS new system of writing has been devised because of the distinct and wide-spread reaction from the use of vertical writing in the schools. It is thoroughly up to date, embodying all the advantages of the old and of the new. While it has many advantageous features, the following are especially noteworthy:

1. It teaches a plain, practical handwriting, moderate in slant and free from ornamental curves, shade, and meaningless lines.
2. Each word can be written by one continuous movement of the pen.
3. The letters, both large and small, are taught systematically.
4. The stem letters are long enough to be clear and unmistakable.
5. The capitals are about two spaces in height.
6. Each book contains twenty-

four copies, with ample space for practice.

7. The copies begin with words and gradually develop into sentences.

8. In the first two books the writing is somewhat larger than is customary because it is more easily learned by young children.

9. Books One and Two contain many illustrations in outline.

10. The ruling of the books is very simple and is a help, not a hindrance.

11. Instruction is offered showing how the pupil should sit at the desk and hold the pen and paper.

12. A series of drill movement exercises, thirty-three in number, with directions for their use, accompanies each book.

The plain standard forms used in this method of writing are shown above.

UNITED EDUCATIONAL COMPANY

Succeeding

E. L. KELLOGG & CO., Founded 1874

E. O. VAILE, - - Founded 1880

61 East Ninth Street, : : : : : New York

FOR A VERY LONG TIME many of our subscribers have been faithful to the Educational Work which has been accomplished by the predecessors of this company.

Teachers have come and teachers have gone, but our publications have steadily and consistently fulfilled their functions, guiding, directing, stimulating, and helping those who have been engaged in the trying and responsible duties of scholastic work.

We are proud of this record, and we appreciate the heritage to which we succeed.

Our Family of Readers engirdles the world, and our one aim is to **do things** in such a way, with such a purpose, and with such efficiency as to make an indelible impress upon Education for its uplifting and enriching benefit.

We are not satisfied to move along in the same old way. The law of life is progression. We want to expand, to steadily advance, to attain greater and greater development.

Whatever we shall accomplish will be through the co-operation and support of our subscribers. What more natural than that we should want our subscribers to share in our material prosperity?

AN ENLARGED OPPORTUNITY FOR PROFITS

By the consolidation into one company of the interests of our predecessors—interests that have existed commercially for twenty-five and thirty years—we are permitted to realize a very much increased patronage, which enables us to perfect the various branches of our business in such a manner as to gratify our present circle of friends and to materially increase the number of our subscribers.

INCREASED CAPITALIZATION

This enlargement and improvement of our operations has very naturally necessitated an increase in the capitalization of our business. To accomplish large things commercially plenty of capital is imperative. For this reason we have organized our present company with a capital of \$300,000, of which \$100,000 is Preferred stock.

PREFERRED 7 PER CENT. CUMULATIVE STOCK

The Preferred stock is non-assessable, of a par value of ten dollars a share, and carries a 7 per cent. cumulative clause. It is Preferred both as to Assets and Dividends. This preference means that the entire assets of the business after the payment of the current indebtedness of the company is pledged to the redemption of the Preferred stock at par before any of the assets can be applied to the common stock. Furthermore, the profits of the company must be devoted to the payment of 7 per cent. dividends upon the Preferred stock before the common stock can participate in the

earnings. Furthermore, the cumulative clause means that 7 per cent. dividends must be paid upon the Preferred stock **each year**, otherwise such deferred dividends become an obligation upon the company which must be subsequently paid just the same as any other liability. This form of investment thus partakes of a very substantial character.

ASSETS FULLY PROTECT

The Assets of the business are shown by valuations to be sufficient to protect the total issue of the Preferred stock, and the net earnings of the company should certainly insure the regular payment of the dividends required.

\$50,000 OF PREFERRED STOCK OFFERED FOR SALE

Of the \$100,000 of Preferred stock only \$75,000 will be issued at the present time, and of this amount \$50,000 is now offered for sale to our subscribers in shares of \$10.00, and upon such a basis as to make it reasonably possible for an investor to realize a return of from 7 per cent. to 10 per cent., and even more, upon his outlay.

SALE OF STOCK GUARANTEED

Every dollar of this Preferred stock that is now offered for sale has been guaranteed so that it does not effect us financially if not one share is purchased by our subscribers, but as it is our patrons who will enable us to pay dividends, so it is to our patrons that we should like the dividends to go.

EASY TERMS OF PAYMENT

For the benefit of those who would like to take advantage of such an opportunity, but who do not like to draw their savings from their bank, we have arranged to allow them the privilege of paying for each share of Preferred stock which they purchase at the rate of one dollar per month for a period of ten months. Five shares, five dollars per month. Ten shares, ten dollars per month.

THE DUTY OF SAVING

All teachers should plan to lay aside something each year as an investment out of their earnings, no matter how small such earnings may be. As a rule teachers do not have many opportunities for reliable investments in small amounts, and for this reason are sometimes inveigled into visionary and unstable propositions by the unjustifiable promise of large returns. It is because of this condition that we have decided to present this opportunity to our subscribers of becoming interested in a line of activity the stability of which has been proved by long years of operation and with

which teachers are familiar, and in which they are interested. We do not submit it as a bonanza that offers marvelous returns, but as a safe, conservative, substantial investment that promises to produce regular and attractive dividends.

Rest that Re-Creates

In six days the Lord made heaven and earth, and on the seventh He rested, and was refreshed

HUS in the quaint language of the King James version the greatest lawgiver of all ages pictured to his people the divine conception of rest after work. The sabbath of rest has become a universal institution. Industrial tyrants would have abolished it long before this if Israel had not persuaded the world that failure to observe it is a sin against God like murder and theft.

Rest after work is necessary to human life. Holidays are a wise economy. Whatever promotes health is holy. Work consumes energy, rest replenishes the exhausted store. Brain work and nerve tension are a greater tax upon health than are mechanical pursuits. Nothing wears out a human being more quickly than teaching. The constant giving of self to others in personal contact is a draft upon one's very life blood. The stirring and holding of the interest of an audience is accomplished at the expense of the vital resources of the speaker. No reasonable people begrudge the teacher his holidays. They might as well begrudge the grass the dew of heaven or the bees their winter rest.

The teacher must get away from his work for awhile if he wants to regain freshness of life. The weariness of Friday afternoons, when relaxation makes him conscious of the strain of the week's work, is nature's call to the need of rest. If he does not heed this call, his efficiency will decline. A jaded teacher cannot arouse interest, and without interest instruction is devoid of value. Dull teaching is a fraud upon humanity.

Rest which refreshes—that is what the teacher needs. That is what his vacation time is meant for. There is a rest which dulls. Its symbol is the stagnant pool. Freshness results from self-renewal. Teaching is a constant giving out. The teacher's self-renewal, then, must be largely of the nature of a taking in.

Nothing can take the place of out-door life as a renewer of exhausted nerves. Exercise is of less consequence than the breath of nature. On the mountains, by the river, in the fields, under the trees, near the sea, wherever the air is rich in God's own oxygen there is the place to be. Communion with the world's great thinkers is good, communion with nature is better. The wise teacher finds time for both. Take Emer-

son with you out-of-doors, or Shakespeare, or George Eliot. Or if you have not read Henderson's John Percyfield, include that in your list.

The National Educational Association, or an educational meeting nearer to your home, or a few weeks at a summer school is an excellent tonic. It is a mistake to conclude that teachers must avoid teachers in vacation time. These are just the days when the being with other teachers will yield most good. I know of no more delightful companions than teachers on a summer outing, bent on enjoying themselves.

Whatever you may do in the approaching vacation days, look well to your health. Rest, and give heart and lungs a chance in the chemical laboratory of nature to enrich the blood and irrigate the exhausted brain with streams of vital force. Laughter is the great ozonizer of the human system. Smiles are a balm to weary nerves, laughter makes health contagious. Would you have your recreation period do its perfect work upon you, rest much, smile often, laugh once in a while.

Smiles and laughter are born of companionship. The sun smiles on the lake, and the lake transmits the smile to the birds of the air, and all nature is atune with joy. Loneliness can only mimic the form of a smile. Be with others, be with those who can best sympathize with you, don't shun your fellow teachers. Walk with your friends, rest with them, smile and laugh with them. You will find the fountain of youth.

Your friends on the bookshelves, who have revealed you to yourself, who have given you courage and power and vitalized your work, they, too, should have your companionship. Rest, air, smiles, laughter, and a comradely exchange of experiences and hopes become more truly vivacious when they nurture the growth of the mind and of the heart. The teacher needs growth almost as much as rest. The atmosphere of the school-room and the constant dealing with untrained intellects will shrivel the soul unless it renews its vigor and buoyancy by bathing in the rivers of life.

Rest the tired nerves by throwing off the burden of responsibility and care, refresh body and mind by congenial companionship, and attend to the growth of your soul by an interest in the abiding things of humanity. Health first, joy next, then growth.

The Child or You?

By Edward F. Bigelow, Stamford, Conn.

IN all this talk about nature study and its educational value, there are some puzzling aspects. Chief among these is the fact that frequently the nature study chosen for the child is a misfit—a something adapted to someone else and forced upon the reluctant victim, or the denial of what the child desires, with nothing supplied as its substitute. It is in such cases either a second hand, ill-fitting garment or else the poverty of forced nakedness.

To illustrate: Not long ago I had, as a most enthusiastic member of one of my classes, a boy about ten years of age. He manifested an eager, sympathetic interest in the various natural objects which I brought to the attention of the class. But I could easily see that it was only sympathetic. He could appreciate my enthusiasm for my favorite pursuits, because he had a love for his. He balanced my enthusiasm by his. And this was just what I desired. I did not expect him to be interested in everything that pleased me. On the contrary, I constantly urged specialization, even among these youngsters. You work with your choice, be it your pony, goat, dog, pigeons, rabbits, fancy mice; in fact, with whatever you desire to keep, and of which you make a specialty. Enter lovingly into the care of it and learn all that you can in regard to it, was my advice. Then I urged each one to tell the others what he had observed.

"May I keep just what I wish to?" was the inquiry, in substance, from several of the bright-eyed boys.

"Yes," I said, "it is your interest not mine that I am consulting."

The next week upon visiting this school, I was met at the door by several boys. "I've got something; I want to show it to you." I ascertained that several had been out in the woods and fields on a "still hunt" for "specimens." There were salamanders, frogs, and turtles innumerable. One had obtained a pair of screech owls, another a flying squirrel, and others still more unusual objects.

"Say, I want to speak to you away from the other boys," said one of the pupils as he pulled at my coat. I followed him to the end of the hall. There he whispered, "I went to S——'s zoological store and I've got something up in my room that I want to show you. They won't let me have it around here. I had to hide it. Boys and some of the masters said they would kill it. It's a beauty. I want to surprise you. I know you will like it."

So I went up to my room (it was a boarding school), and in a few minutes there was a scurry of tip-toeing steps down the hall and an eager tapping at the door.

"Let me in quick."

I opened the door and in he came. "I had to look out for the other boys." He sat down on the edge of my bed, thrust his hand into his vest and began to pull.

"I tell you he's a beauty, all curled up here

except what's around my arm. There's the other end of him."

So saying he took his hand out of his vest and pointed to the end of his left coat-sleeve. Then he resumed the pulling.

To my surprise, and I must confess, somewhat to my distaste (for I had never been a very enthusiastic herpetologist), and not a little to my amusement at the little fellow's affectionate tuggings, he pulled out a king snake more than four feet in length, longer, indeed, than he was, and landed it admiringly and triumphantly on my bed.

"There," he exclaimed, as he passed his hand lovingly down the snake's body, and gave a slight tug at the tail as the head was wriggling under my pillow, "ain't he a beauty?" and he went on eagerly to say, "I'm so glad you said that we could get anything we wish, for I just love snakes. I paid a dollar for it. Got it cheap. Don't you think so? The other boys bought covies, and a pair of white rabbits, and one has a pair of white mice, and—but my snake beats them all. S——said it is harmless, 'just as gentle as a kitten,' he said. Look at the markings. Ain't they beauts? Seen his head? Let me show you. Say, ain't he nice? See here. Now I'll show you how I do it. . . . I can wind him four times around my neck. And look, quick, here's another thing I have taught him to do"

It was a first-class exhibition of snake loving. It is not necessary to go into details and describe all the things the boy and the snake did, nor to tell of my rather reluctant efforts to handle the pet, and to share in the boy's enthusiasm. His interest was genuine. It roused him as nothing else could have done. I let him play with the snake on my bed to his heart's content, while I sat admiring his interest and his fearlessness.

"You see I don't have many chances to show what I can do with him—just to a few fellows that like snakes, up in my room—and mother won't let me keep him at home—I like to show what I can do with him. Ain't he great? Ain't he a beaut?"

It was the joy of telling, of expressing, of sharing his joy with another person. It was one of the most delightful evenings that I ever spent at the school, and I don't care much for snakes, either, but I do like boys.

His joy was short lived.

The next week he came to me with tears in his eyes, and grasping my hand, he said, "I carried him home, and when I was at school they told the coachman to kill him."

He could say no more. His love had been genuine, so was his grief. I saw that he had loved that snake even more than I had imagined. And as I had genuinely shared in the happiness that his pet had given him, I could do no less than to share in his sorrow. I comforted him to the best of my ability, and longed to thrash the coachman. Perhaps you say that the

coachman was not to blame. He obeyed orders. Yes, I said that later on, but there are times when one goes toward most conspicuous causes by the most direct route, and doesn't linger for subtle analysis or abstruse philosophy.

Two or three weeks afterward I met his mother. She said, "I wish you wouldn't encourage Arthur to keep snakes. I don't like snakes, so I told the coachman to kill the horrible creature that he brought home."

What did I do? Nothing. There are occasions when one is like the man in the courtroom of whom I have heard. The judge had imposed a fine of five dollars for contempt of court. The man meekly replied, "Your Honor, I beg leave to submit that there is some mistake about this. I have expressed no contempt for this court; on the contrary, I have tried to conceal my sentiments."

So the situation demanded that I meekly say, "I beg pardon, but I had supposed that I was trying to assist in the *development of the boy*, not of you . . . Excuse me, but I have something to say to those boys over there."

It requires no stretch of the imagination to hear some teacher who reads this, say, "I think she did right. I don't like snakes either and I should not want my boy to have snakes about the house. I, too, would have told the coachman to kill it. The teacher ought to have interested him in something else that is better."

And I say to you, O reader, be you teacher or parent, who cares what you like or do not like to have about? You are trying to put into the boy's mind mental furniture of the same material and pattern that ornaments yours. You are insisting in having him develop along exactly the same course by which you have been developed, to think the same thoughts, and to be an exact counterpart of you. It is possible that he may be an improved and corrected edition of you. He may be a trifle superior even to you. Have I good authority for saying I don't care what you think, nor how you were developed, nor what you like, nor what you are? Mother Nature ignores you. She says, "Never in all the ages did I produce another physical or mental individuality like yours and never in all the eternity of creation will I ever duplicate it." She is evidently "sick of her job," yet you insist in being superior to nature and in holding yourself up as the perfect model, and you shout, "I don't like," as if anyone cares what you like or dislike. You are adult and are beginning to go down hill. The child is a later and revised edition. Nature is progressing toward perfection, and the child even now is superior to you. When you come to love your "snakes," to bury your likes and dislikes, not because you dislike snakes less but because you love the child more, you will understand what is really meant by the expression, "Nature Study from the standpoint of the child."

Before a large audience at the Connecticut Chautauqua I told this story of the boy and his pet, and of the assassins that destroyed his snake, and retarded his mental development. At the close of the lecture a tall young man

came up in the crowd, gave my hand a cordial grasp, and said:

"You struck it right that time. My teacher thought she was a great nature study teacher; she posed as such, at least. She was always picking flowers and pulling them to pieces, and talking about stamens and stigma, and corolla, and such things. One day I carried to school my box of spiders. I never was much interested in anything else, but she shuddered and grew pale, and said, 'Ough! I don't like spiders. Do take them away. I can't bear to look at them.' I carried them away. I guess we are even. I never can get over the impression which I received from that woman's dislike of my pets. To this day I almost shudder when I hear anyone talk of pulling a flower to pieces—I guess it's the association. 'Love me, love my dog,' you know."

He gave my hand another grasp and went on. I didn't have even an opportunity to reply, but I understood.

I had planned to end this article with the foregoing, altho other exasperating and pitiful examples of the adult forced on the child, crowd upon my mind. I had said to myself I will not record more of these outrages, so had laid aside my

This delightful picture of Mr. Edward F. Bigelow and his daughter, Pearl Agnes, is an eminently typical one. Mr. Bigelow is most at home in the midst of field or forest—and with children. It is because he has brought so much of forest and field into the "Nature and Science Department" of *St. Nicholas* that so many eager boys and girls turn to those pages the minute a new number of the dear old magazine is received. And it is for a like reason that boys and girls of a larger growth listen so eagerly to the nature talks Mr. Bigelow is giving so generally at the teachers' institutes and associations from Connecticut to the Pacific coast. Mr. Bigelow gets his nature studies first-hand—he speaks the language of bird, beast, flower, and tree, and that is why he can give such valuable hints to teachers as are to be found in "The Child or You?"

manuscript. But I am compelled to mention two more experiences of the kind.

The door bell had just rung. I listened to learn who had called. The maid came to the top of the stairs, and said:

"A lady and a little boy to see you, sir."

I found in the hall awaiting me a fair-faced, well-dressed lady, carrying a covered basket, and holding her little son by the hand. His face bore a sorrowful expression.

The mother said, "I know you have many pets, but I thought you might like another. I have a white rabbit in my basket, given to my son by a friend who is interested in 'such things' (sic) and I don't want him."

I turned to the boy and said, "Do you want to give away your pet rabbit?"

"No, sir," tearfully, "but mother says we have no place to keep it and doesn't want—"

"All right, if that is all, I can fix it. I have an unoccupied hutch. I will send it right over. You can keep a rabbit out-of-doors in the winter, you know, if you have a good hutch. It is not at all necessary to have a room in the house. I'll tell you all about—"

"But, sir," interrupted the mother, "I don't want the rabbit. I don't see why Uncle William gave it to him. He knows I don't like to feed such things and have them around."

It was a queer kind of conversation, a triangular kind. The mother talked to me and I addressed all of my remarks to the boy. His face had brightened, as if with a ray of hope.

"I judge that you are fond of rabbits."

"Yes, sir, very. I like them better than anything else, but mother doesn't want me to have one. I spend all the time over at Uncle William's and he—"

"I think I must be going. Sorry you can't take it, sir. We must dispose of it somewhere else."

I suppose she went home that Saturday evening, and taught the Sunday school lesson to her boy, and told him that all good boys go to

heaven, and all bad boys keep rabbits. One thing, however, puzzles me. I wish she would enlighten me as to the final and eternal fate of such mothers.

Again I laid the manuscript aside, and again I have taken it up. Yesterday I went to New York, and one more example so impressed me that I must record it. It is strange that when a topic is uppermost in mind, everything seems to point toward it and illuminate it.

On the train was a tall, strong, angular woman with a florid face. She carried a basket and tried to lead three children, ages, I should judge, from about four to eight. The youngest, a pretty little girl, was pushed into the seat by the crowd in the aisle. Her mother reached back, took the child by the arm, and literally dragged her thru the crowd.

"Come on here, you imp, you are so slow, Annie. What a bother you are. Why don't you keep up with us?"

Then the mother set the basket down on the platform, seized the weeping child, shook her violently, jerked her hat forward, and with her apron mopped little Annie's streaming face.

"You must learn not to be so slow—I could have got off that car twice to your once. Couldn't you see that all the people wanted to get out?"

"Yes, you old virago," I said to myself, "perhaps I could have got off three or four times to your once. I can walk faster, and I am somewhat stronger than you. I should have liked to get off at least twice. Once as I did, a little ahead of you, when I saw your disgraceful performance. Then I should have liked to go back, to grab you by a wrist, and make you skyrocket for that door. Come on here, you old hag, I set the pace, not you; don't you see this is the pace at which we get off, mine, not yours. There you are, landed in a heap, and serves you right. That's something like. Now you understand it is my pace that governs."

But I must stop, for my indignation is stimulating my pace at too active a speed.

Summer squashes raised by children in the far-famed school gardens at Hyannis, Mass.

A Visit to the Circus

By Mattie Griffith Satterlee

IS there anything that thrills the childish heart with such rapture as the promise of a visit to the circus? Never mind the proviso "if you are good." No matter how impossible the condition may be to comply with, upon ordinary occasions, with the blissful anticipation of *that* visit in perspective the impossible ceases to exist.

This has been the experience of all classes of children since the advent of the circus on our planet. The children of my school, however, come not from the *classes*, they emanate entirely from the *masses*, and seething masses they are, too.

When those benevolent gentlemen who are known to the public under the appellation of "Barnum and Bailey" sent me word to the effect that fifty-seven of my pupils would be allowed to visit the circus on the afternoon of April eleventh, the wild enthusiasm that prevailed would have made an optimist of a misanthrope. I feel assured the most bored or *blasé* being would have been made healthily happy, just to have seen the bright faces of those children, the brilliant glow on their olive cheeks, the sparkle in the beautiful Italian eyes.

The day arrived, and at twelve o'clock the forces were assembled for departure, first having been regaled with bread and molasses. Being duly sustained with this delicacy I looked critically over my expectant column. The great question had been to get hats or some sort of head covering for the girls—the Italian girls, big or little, never wear hats. All the morning of that eventful day, I had been using my ingenuity to the utmost, to secure a sufficient number of hats.

Just at the moment of departure a little girl rushed in, with a "creation" on her head, awesome to behold. It was a band of straw, a *very* narrow one, and this band was decorated with an enormous white muslin bow, as large as the child's entire head. The appearance of this remarkable hat was like that of a huge sign.

Netta, the child, was in a state of delighted vanity. She asked me in breathless eagerness how much money she at that moment possessed in the school savings bank. I told her she was creditor to the amount of eight cents. She clapped her hands and said, "The lady who sold me dis hat, said I might give just what I had in de bank if it was more than five cents, even if it is so stylish."

The effect of the little dark face under this immense white sign was ludicrous in the extreme, if it had not been so pathetic. The teachers, struggling with these two feelings, kept preternaturally grave faces. Not so the boys, who see only the comic side. They made a few exceedingly frank remarks. Netta was greatly demoralized by this adverse criticism and turned to me to scold the culprits. They were quelled, and peace restored.

However, as the line filed by, Netta complained

again. "Tony," right behind her, "was saying tings."

I turned to Tony and said in grave displeasure, "Are you saying anything unkind, Tony? I am sure I hope not, as I wish you *all* to be so happy."

"No, ma'am," said Tony, his black eyes sparkling with mischief, "I only said, 'Gee.'"

The next morning I anticipated much pleasure and amusement, as I hurried to school laughing in advance as I thought of the droll remarks the children would make upon their festivities of the day previous. I was met by a delegation of children a block from the school. To my eager inquiry, "Well, were you delighted, were you all happy?" Which means in our school, "Were you good?" As I insist, no child can be anything but good, who is happy.

A curly-haired, black-eyed little fellow looked up at me and said most seriously, "Yes, ma'am, we were very polite."

"But," I replied, "what did you *do*?"

Tony, with a gravity equal to the first boy, made the laconic statement, "We rubbered."

After the opening of school, I said, "Who can tell me something about the circus, something pretty, I mean."

At this, Josephina sprang to her feet and said, "O the elephants were *sweet*, the music played 'Sleep, baby sleep,' and the elephants went to sleep jus like de little babies."

Guido, who has been a little citizen of this land of the free only seven months, imparted the startling intelligence, that *he* saw, and liked, "Guster Ground," broken English for "Buster Brown."

Pasquale said "of de bunch *he* liked de horses, first; and de funny men (meaning the clowns) next."

Luigi raised his matchless eyes and looked at me dreamily, then asked slowly, "Were dose lovely ladies in pink and white and blues, were dey *fair* ladies?"

Knowing he used the word "fair" for "real," I said, "Yes; what kind of ladies did you think they were, if they were not real, or as you say, fair?"

"I tought," he said, gazing solemnly at me, "perhaps dey wasn't ladies, dey was angels."

The glamor of that visit has lasted for the past month. The other day I was explaining to the children the fact that time seems to pass rapidly as one grows older. Luigi asked, without any relevancy, whether the children would be invited to the circus again next year. I said I thought they probably would have that great kindness shown them next year also. "Den," said Luigi, "it won't be so long till *next* April cause I'll be a year older, den de time will be shorter."

Every blessing rest upon the heads of the managers of the Barnum and Bailey circus, for giving this glimpse of Fairyland to the poor little children of the street.

A Summer Vacation Experiment

By Jeannette Winter Hall, author of "The New Century Health Primer"

THE period between the last of June and the first of September has presented to many teachers problems difficult of solution. It is too long a time for idleness and too much needed for recreation to permit of its being used in school work; while the financial aspect of the question forbids a large expenditure of money for mere pleasure.

Having spent several summers at resorts and rural boarding houses, one pedagog felt that he could no longer expend so much time and money in simple recreation which afforded no opportunity for productive activity. He resolved to find some way to combine recreation and education for his three growing children, and rest and change for the adults.

Thinking this could best be done in simulating pioneer life and producing a home from a wilderness, he went in quest of a piece of land of no special value as farming land, situated near enough to the city to make the expense of reaching it a nominal one, and where the ad-

The Cottage.

vantages of woods and water might be combined.

After a few pilgrimages to out-of-the-way places, a sixty-five acre tract of woodland was procured, bordering upon a small spring lake whose water makes its way eventually to one of our great lakes. The land being uncleared woodland was low-priced, and yet for the purpose intended doubly valuable. The lake and the river into which it flowed provided fine bathing, rowing, and sailing, and a waterway to three good-sized towns.

During the winter following the purchase, a cottage was planned and replanned by way of recreation from the cares of professional and domestic life. By springtime it was agreed that the restful anticipation and the exhilaration of planning had already justified the initial outlay.

Early in June the family took up its residence in rooms with a neighboring farmer in order to be near the building operations. All took part in choosing a site. A small clearing near the lake, commanding a distant view of the river and the bluffs of the Great Lake was decided

upon, as it lay near a good bathing beach and harbor, and afforded facility for garden, vineyard, and orchard, while there were large oak and beech trees to shade the grounds.

The mother and children marked the corners of the proposed foundation, the father drove the corner stakes, and the home was begun. A carpenter came the next day and he, with the help of the pedagog, erected the cottage.

While the father was occupied in this way the mother did the light housekeeping for the family. She spent the spare time near the building where the children were busy playing in the sand and water or picking up and straightening nails, laying aside shavings, chips, and kindlings for future use, or pulling and burning mullen stalks and sand-burs.

During the following spring a flying trip was made to the new home, where, with some help from a neighbor, seeds were planted for the summer supply of vegetables.

In July the family, augmented by the addition of a sister and a nephew of thirteen, took up its residence in the cottage. This was made comfortable with home-made furniture supplemented by some important additions from town. The plan of living was co-operative. There was to be no hired help on the place. All members of the household, guests included, were asked to share the work. Masculine guests lent their aid in the various building projects and the beautifying of the grounds. The boys and the feminine members of the household shared the housework. To make the plan more effective and to prevent its being irksome, arrangements were made to have the laundry work and the bread-making done away from the premises by someone in the neighborhood. A horse and vehicle were hired when needed, and milk was brought from an adjoining farm.

Each person was expected to keep his own room in order, even to the periodical sweeping and cleaning. The general work was divided among the different members of the family. The mother assumed the cooking, the care of the children, and the general management. The work following the meals was apportioned among the sister, the daughter, and the guests, as was also the tidying of the dining and living rooms and the preparation of the vegetables which the father brought from the garden. The boys brought in wood and water and carried out ashes. In this way, with simple living, altho the family sometimes numbered a baker's dozen, no one was overworked and all had time for reading, rest, and recreation.

Soon after his arrival at the farm the pedagog and the carpenter began the building of a launch. Each member of the family made some contribution toward the building of this boat. The children caulked and rubbed it down, the nephew painted and oiled it, and the "sisters, cousins, and aunts" made the cushions and assisted in the festivity of launching.

The woods were full of wild berries which were gathered by those who liked to go berrying, and by those who did not like "berrying" but who liked berry tarts. In this way the table was abundantly supplied with fruit and the excess was conserved for winter use in town. By September the nephew had learned to swim and all the children could row. They had done some clearing of underbrush with the help of a neighbor boy, had nearly rid the place of sand-burs and mullen, had helped to build a boat and seen

The children kept the table supplied with fresh fish.

it launched, and had gained some very practical knowledge of domestic science.

The games of this summer consisted of making and launching miniature boats, in making docks and harbors, and in sand manipulations.

Thoreau's "Walden" was read aloud and was enjoyed even by the little children, because it described a life so similar to their own and an environment which seemed to be embodied before them.

During the early part of the second season there was an urgent demand from the small people for a drum, to the cost of which they offered to contribute from their savings. A drum which had seen service in the Cuban war was procured, and the grandfather, who was a veteran of the Civil war, gave the children drill in military movements. This became a regular feature of early evening diversion both to the home children and to the neighboring children. The nephew presented to the drum corps a cannon which he had designed and made. The effect of a salute at sundown and the floating of a flag on all festive occasions lent a decidedly military tone to the games of this summer, while the reading of Cooper's "Pathfinder" made the following of Indian trails and obscure landmarks a favorite pastime.

All fuel for the house was supplied by the little people, who gathered loose wood, pine knots, dry branches and chips from the woods. A rustic arbor was made by the nephew, who cut and trimmed the saplings for its construction and put them together according to his own de-

sign. The two older children, now eight and nine years of age, and the nephew could troll and cast with a fair measure of success and they kept the table supplied with all the fresh fish used during the season.

Any two of the children could be trusted to take the boat and go a mile across the lake to get and deliver mail. The nephew and the older boy were fearless in the water and were able to swim and float. The six-year-old boy, who has a special love for life in all its forms, became familiar with various kinds of plants and animals, and the nine-year-old daughter counted among her accomplishments the ability to prepare an evening meal, for which she made biscuits and shortcake, and she could also take entire care of her person and her room.

Before the fourth pilgrimage was made the nephew's father had built a cottage upon an adjoining piece of land and the children had the advantage of seeing this home develop. The nephew himself painted the cottage and assisted his father in clearing out underbrush, trimming trees, and disposing of debris.

Up to this time all nature work had been incidental, but it was now thought time to do something definite and the bookshelves were stocked with reference books on biological subjects. The aunt undertook to introduce the children to their bird neighbors and the insect life of the woods. This introduction was seemingly incidental and was given whenever occasion offered. Twenty of the birds came to be known by name and song, deserted eggs and nests were collected, the habits and peculiarities of insects were noted, and specimens of insects and cocoons were added to the collection.

The mother guided the study of plant life. The children already knew in a general way most of the trees and flowers native to the grounds, but now they learned the distinguishing features of six or seven plant families, noted the conditions under which the different plants grew, how they were protected and disseminated, and learned something of galls and the plants to which they were peculiar.

Daily drill of the drum corps.

What delighted the children most was to take trips with their father and uncle to learn the mysteries of water lore and woodcraft. They blazed paths, felled trees, and made roads. They even took some part in surveying the boundaries of the farm. These tramps thru the woods led to many discoveries regarding animals and plants. A toad was captured and

kept for a time in a box of wet moss arranged to simulate the environment in which he was found. Here he was studied and tended with care, and was declared to be a wonderful animal. A bumble bee's nest was observed by four pairs of eager eyes until the children thought they understood the bees and their methods of building. A mole was captured but was speedily released. Ant hills and moles' burrows, however, were an abiding source of interest.

The most important event of the year was the construction of a sailboat. The boat itself was built from homemade plans by a carpenter on an adjoining farm, but the spars were cut in the woods by the men of the family, assisted by the children, who later trimmed, peeled, rubbed, and oiled them with their uncle's help, while the women made the sails.

The social side of country life was secured by inviting the neighbors to help celebrate the launching and christening of the boat, and by lending a hand to assist a near neighbor in his threshing. The children were old enough this year to sit up a little longer in the evening so that more time was given to reading. Cooper's "Prairie," Thompson's "Green Mountain Boys," and Fox's "Little Shepherd of Kingdom Come" were enjoyed by the entire family. The effect of these books was again seen in the games. The boys played scout, they went to the woods to eat their meals, they made rafts and took journeys upon them. The nephew this year learned to pilot the launch, the ten-year-boy took

some lessons in piloting, and both boys understand the mechanism of the engine. They can paddle a canoe and sail the boat in fair weather. The two older boys can wield an ax to fell good-sized trees, which they know how to trim and bring to the house and cut into stove wood.

The daughter has had practice in canning and preserving fruit, in cooking plain vegetables, and preparing simple meals.

In anticipation of a camp which the boys hope to occupy for a part of the next summer they have done some clearing in a remote piece of woods and have laid out camp grounds.

Looking back on the four years' experiment, it seems to be a success both as a means of education and of recreation. The effect of the life is noticeable in the children's increased ability to adapt themselves to different conditions, to find materials at hand for games, to repair their toys and tools skilfully, and in their knowledge of the labor value of things.

As to the outlay. If the cost of the launch and the sailboat, neither of which is essential to the experiment, be excluded and the cost of the land and the buildings be spread over a period of ten years, the property will at that time have been increased in value by improvements so as to represent all the money spent upon it during that time, plus all of the living expenses for the two months of each year. In other words the vacations will have cost nothing, as all the outlay may be considered as an investment represented by the property.

A thousand children at play on the school lawn at Webster City, Iowa. What more pleasing sight can there be to a lover of children! Photographs of the many pleasant features of school life are always welcome. Will you not contribute yourself? TEACHERS MAGAZINE is indebted to Supt. L. H. Ford, of Webster City for this delightful picture.

Visits to Teachers' Workshops

What They Are Doing at Hyannis.

AT Hyannis the home is the central subject in everything, not the home of "me and my wife, my son John and his wife, we four and no more," but Hyannis, the Cape, Massachusetts, the United States. Hyannis is first. What will make Hyannis a better place to live in, what will add to her prosperity, what is her relation to the rest of the world, how does she serve mankind—these are the questions around which instruction turns. The school garden, with its mind-stirring, body-strengthening, spirit-nourishing activities is the starting point and correlating center. From this basis instruction starts out and to this it returns whenever it can do so without resort to pedagogic artifice. Here is the distinguishing feature of the Hyannis school. Practical activities—and what more healthful, useful, and educative activities can there be than gardening—practical activities are the correlating forces.

My observations have convinced me that this interesting experiment marks an important departure in education. Principal Baldwin has made productively constructive work the center of teaching in the elementary school. Here we have an objective, handleable something to start from. The children are on home-ground and are kept busy from the very beginning. The thought that they are enrolled in the list of

producers is before them from the first day in school. The work they are doing impels thought of the future, of the product, of the relation of their tasks to the world to be.

New England thrift was born on the Cape. The nature of the soil will probably never let it die. So Hyannis is in tune with its environment. Principal Baldwin was asked one day to supply an exhibit of sewing and knitting work of the little ones. He conferred with Miss Kimball to see what could be done about it. The supervisor of industrial work had to confess that the children were wearing the results of their labors—the stockings they had darned, the handkerchiefs they had hemmed, the aprons they had made—and so the exhibit could not conveniently be furnished without sending the children along with it. This is loyalty to the school's platform. I cannot cite a better example to explain the Hyannis idea.

The doubting Thomases and Betsies who talk about "expense" whenever constructive work or the household arts and industries are mentioned as entitled to a place in the school program, will not get much comfort from Principal Baldwin. The whole "expense" of installing a complete cooking school was \$40—say, forty dollars—that's all! Remember the school is on Cape Cod. Moreover, the head of the school is a Yankee. That is why the apparatus of the chemistry room was by a few inexpensive addi-

Buildings of the State Normal School at Hyannis, Mass. The central building is the normal school proper with recitation rooms, laboratories, and offices of the principal. On the right stands the dormitory; on the left, the training school. The large sweep of lawn and gardens in front is something that materially enhances the beauty of the whole scene.

A Series of Practical With Class Compositions

The illustrations here given show a most interesting and useful series of activities taught in the first years at Hyannis. A corner of the school-room is by a plain screen transformed into a bare room. The children use their best efforts to furnish and decorate this room to make it look cozy. Here it is doing service as dining-room. Some other day it will be the parlor or the bed-room. Under the guidance of the teacher the children go thru the various activities of the home, incidentally learning social manners and acquiring tact and taste. In the composition period

PREPARING FOR TEA.

How do you do? I am Corinne.

We are playing house to-day.

This is our dining-room.

Is it not a pretty room?

We think it is.

I am laying the table now.

Henry and Marion are at school.

They are coming home soon.

Soon we will have tea.

TEA.

Now we are having tea.

Stuart plays he is the father.

He will serve the meat.

I will pour the tea.

Do you see Marion?

She is my little girl.

Henry is my little boy.

Will you have some tea, Stuart?

tions to the burners made to do service for genuine cooking, the most practical kind of chemistry there is to be found.

In one room the desks are neatly covered with oilcloth with a hole cut out for the ink well. The desks are new, and teacher and children feel that they should be taken care of, hence the oilcloth. Do you see the point?

One who believes in the work can usually get the money that may be needed. Look at Watertown and see what Frank R. Page has accomplished. TEACHERS MAGAZINE will have an article about it. But we are talking of

Hyannis now. What this school has done may be done by a system of schools. That is the point.

The activities of the children furnish an abundance of topics for conversations, for compositions, for illustrations, for arithmetic, for geography, for every branch in the ordinary elementary school curriculum. If the orders these children will some day write to the grocer and butcher and baker are not correctly spelled, it will not be the fault of the school. The eighth-year class is keeping careful accounts of the expenditures and incomes of the school gardens. Every item is charged. The sale of

Lessons in Housekeeping

Written in the Primary School

these activities are described. The children construct the sentences and the teacher writes them on the board. After all corrections and refinements are made which the children consider necessary or desirable, the result stands as a class composition. By the kindness of Miss Finley TEACHERS MAGAZINE is enabled to let its readers see a series of these compositions with the scenes described in them, exactly as the children worked them out.

AFTER TEA.

Marion is helping Mamma.
She wipes the dishes for her.
Mamma washes the dishes.
I am reading my book.
I am a little boy. My name
is Henry. I go to school.
Papa reads the paper.
Stuart is playing he is papa.
I will read my book to him.
I read it to my father every
night.

TIDYING THE ROOM.

Corinne is sweeping now.
Marion is helping her.
They are sweeping the dining-
room. They will dust it, too.
Marion says, "I like to help
you, Mamma. What can I do
now?"
Mamma says, "You may help
me dust the room."

the vegetables and flowers takes care of the cost of the work and the materials needed.

The location of Hyannis is ideal for the development of such work. It is ideal because the teachers think it is ideal and have made it look ideal. The bleak New England shore is a reality on the Cape. The lover of the sea rejoices in it. The soil is not naturally very productive, except for cranberries. The lover of garden work has the satisfaction that his harvest has been honestly earned by the sweat of his brow, and so he thinks the conditions ideal. What better reward can man look for than the

joy, or call it pride if you will, of having conquered a difficult task! That makes for character.

On the walls of Principal Baldwin's office are pictures of Jesus and Froebel, and there is also a statuette of Pestalozzi. Social service in the spirit of Jesus, living with the children in a garden as Froebel would have school life, enabling the young to grow by self-activity, into useful manhood and womanhood as Pestalozzi would have the teacher do—these are the inspirations. Hyannis is pointing to an aim that is ideal and real, intensely real.

Hints and Helps

Plans,
Methods,
Devices, and
Suggestions

from the
Workshops
of many
Teachers

This feature, originally planned for *Institute and Primary School*, has proved so popular with teachers that it has been copied by nearly every educational periodical in the country. TEACHERS MAGAZINE will continue to publish the best to be had for this department. The Editor would like nothing better than that he might be able to visit the school-rooms of every one of the the hundred thousand teachers who will read this magazine. What an abundance of good things he would find! But that cannot be. The next best plan is to have the teachers aid each other by writing out the devices and plans and thoughts that have proved most helpful to them. Will you not contribute from the store of your experience? A good book will be sent for every contribution accepted for this department.

Hiawatha Bird Books.

I was surprised to find when the birds, the harbingers of summer, began to come back to us again that, altho the children knew from the chirping that they were again about us, few knew any of them by name, or the order of their coming.

One little boy when asked what was the first bird to come to us in the spring answered, "The whip-poor-will."

This was a bad state of affairs, but I knew that no amount of drill would accomplish my purpose, so I led the children into making their own efforts.

They had been reading of Hiawatha and how

The little Hiawatha learned of every bird its language,
Learned their names and all their secrets,
Talked with them whene'er he met them,
Called them, 'Hiawatha's Chickens,'

and each child when the idea was suggested, was delighted to play the part of Hiawatha himself.

We made little booklets, by cutting white unruled paper in pieces 7x5 inches and covering them with pink cardboard. These we tied together with pink ribbon so that they would open easily. On the back was written the title "Bird Book," and the quotation from Longfellow, and each child was given a picture of a bird which was pasted on the cover. We used the smallest Perry pictures for this.

Inside the children were to record the birds they saw each day with a full description of each species.

The ability of the pupils increased until towards the end of the season they illustrated their books with some drawings of birds' bills, feet, and bodies, and with pictures of birds cut from magazines.

By the time the birds of the last wave were here, such as the humming bird, oriole and whip-poor-will, our little Hiawthas had "learned their names and all their secrets," and I believe each child spent a happier summer because they knew something about our bird neighbors.

Virginia.

RUTH O. DYER.

Mounts for Pictures.

If there are some teachers who have not the ways and means to procure regular mounting paper for the numerous pictures which help so much to make a school-room attractive, this suggestion may be practicable.

I bought a roll of ingrain wall paper, which comes in dark red or green, at about twenty-five cents a roll, and cut it up into sheets of a size suitable for pictures. I have found this inexpensive, and unless the mount is carefully examined, the real material would not be guessed.

I cut the same kind of paper into sheets about 7 by 12, fasten them together in the center and thus make a nice booklet of about 8 pages. The name of each child is written on a slip of paper and pasted on one of the booklets. As fast as a child learns a word I have him cut it from a newspaper or magazine, and paste it into his book. Often small pictures are pasted in the book to make it more attractive.

This booklet is a source of delight to the children, while it teaches neatness and gives the little folks an idea of making articles for themselves. The book is carried home when it is filled.

Maine.

A. M. E.

Fancy Booklets.

Have you tried making booklets the shapes of birds, leaves, flowers, hearts, etc? When we have a story on birds we wish to preserve, I have the children draw a bird with rather a wide body to give plenty of space for writing, and have them cut enough papers of the same size to form a booklet. Then we tie them with a bit of colored raffia or ribbon. For a leaf story we take a pressed autumn leaf and trace around it. We cut several sheets on the same pattern, and put the subject on the cover. Sometimes we tint the covers in water colors.

For a flower booklet a wild rose or pansy will be found suitable.

Our heart booklets are cut from red paper and in them we write such quotations as

"Kind hearts are the gardens,
Kind thoughts are the roots,

Kind words are the blossoms,
Kind deeds are the fruits."

"Hearts like doors can ope with ease
To very, very little keys;
And don't forget that they are these,
'I thank you, sir,' and 'If you please.'"

GERTRUDE MIKOLEIT.

Visiting Card Messages.

I had a hundred visiting cards printed, with my name, at a cost of twenty-five cents. Whenever a pupil has two or more perfect lessons in a day I write the fact on the back of one of these cards for him to take home.

It is surprising how hard they try for the cards, especially since I explained that people use visiting cards to send messages that they are unable to carry themselves, and so I send my card to tell the parents when I am pleased.

Try the plan and see how well it works.

I should like a good method of presenting short division to a class of foreign children.

California.

JUDITH M. FURLONG.

A Home-Made Recitation Book.

Having quite a collection of select reading, poetry, etc., cut from old journals, papers, and magazines, I decided we could best preserve them for future use in a scrap book.

I obtained an old law book—this was selected because it was large, well bound, and put together with strong thread—and carefully removed every other leaf, sometimes two or three in a place, to allow for the paper to be put in.

It was then divided into sections, one for Christmas selections; others for humorous, patriotic, pathetic selections.

The recitations were then neatly pasted into the book each in its proper place. After it is all filled we are going to arrange an index.

The pupils take interest in finding something "good enough" for the book, for of course only the best selections are put into it, and those bits suitable for pupils as recitations Friday evenings or for special entertainment programs.

ALICE BAKER.

A First Story.

I have been a reader of PRIMARY SCHOOL for a number of years. I could not teach without it and I wish it came every week instead of once a month, I find in it so many helpful things.

I enclose a little copy, the first attempt at writing on paper without a copy. We have only twenty-nine weeks a year and I get rather discouraged sometimes. Our schools are graded, three grades in one room, which keeps a teacher pretty busy.

The little boy who wrote this story is only seven years old and in the third grade. This is just as he wrote it without any correction or suggestion by me. There are mistakes—which he corrected in the next story.

I am always so much interested in what teachers have to say of their work with first, second, and third grades.

Maine.

ELLA M. GREENLEAF.

A CHRISTMAS STORY.

I like Christmas. I like to read Christmas books. I went up to the hall to the Christmas tree. Christmas is good I got a watch and a pretty ball that shined and to books and a pair of pance and a little to cent book.

To Secure Good Attendance.

In January I gave a plan for securing good attendance. Those who used this plan may find it helpful to know how the cards were changed so as to give better results.

I purchased cardboard, 8x4 inches, and had a ladder with twenty rounds printed on them. At the top of the ladder was printed a verse of that helpful poem by J. G. Holland, called "Graduation."

Heaven is not reached at a single bound,
For we build the ladder by which we rise
From the lowly earth to the vaulted skies,
And we mount to the summit round by round.

Instead of using the gold and blue stars, as on the others, we had four different kinds. The gold stars represented a perfect day in attendance and deportment, a silver star represented absence, a blue star tardy, and a red star a correction in deportment.

These cards not only made a change for the children, but I found they were an improvement on the skies because they aided in securing better deportment, and each day's record was distinct and separate, as there were twenty rounds and twenty school days in a month.

If a pupil were tardy and had imperfect deportment on the same day, both stars could be placed on that day's round.

For the benefit of those who cannot readily purchase cardboard, I will say the stars (all colors) can be obtained from The Dennison Manufacturing company, 1007 Chestnut st., Philadelphia, and the cardboard from R. P. Andrews, 627 Louisiana ave., Washington, D. C.

Virginia.

RUTH O. DYER.

A Hot Afternoon.

It was a hot afternoon in September. The glowing sun sent its scorching rays on the roof and sides of the little white rural school-house which was unprotected by even a tree. In the school-room it seemed too hot to breathe. The thermometer on the north side of the room registered eighty-eight degrees and the nineteen restless pupils, varying in age from five to sixteen, were lounging in their seats. As I tapped the bell for afternoon recess and as the children filed listlessly past me, I realized that the language lessons on coal which I had planned for the last hour would be an utter failure.

Written language required too much exertion for a day like that.

Some interesting work *must* be given the chil-

dren, something that would cause them to forget the heat, but when the children had taken their seats my heart sank with despair, for I was myself too tired to originate any instructive occupation.

Suddenly I had an inspiration. One class was studying map drawing by scale. Giving to the three little folks some colored shoe pegs for work in stick laying, I sent the rest of the pupils to the board with their rulers. Who ever saw a child who did not like to draw on a board? I had each child measure off a two foot space and we called it a meadow. I then asked each to draw a picture of a tree, and we would see if any one could tell what tree was represented. How hard they thought! As I watched the trees grow on the board, some looking as if a west wind had broken them and others as if they had been struck by lightning I realized that these country children surely had "eyes that see not." Two

I bought a small cane and to it tied one yard of baby ribbon for each pupil, putting each one's name on a calling card and slipping it to the top of the ribbon. Every time a child has a perfect lesson I slip upon his ribbon a piece of cardboard, one inch square, such as is obtained at printing offices, with "Perfect spelling" written on it.

Of my class of twelve, nine have had perfect lessons every day this week. Every fifth cardboard put on I color, which adds enthusiasm, as every child is anxious for a colored one.

Pennsylvania.

ANNE HENWOOD.

Geography Incentives.

I wonder if there are other teachers who, like myself, have felt that the asking of questions on the map was so much time that could be better used? I find that by allowing a pupil who is capable of reading the questions and determining if the answers given are correct, a new interest is created and that seeming waste of words on my part means a showing of great self-confidence on the pupils' part. They glory in asking one another questions that may puzzle.

My boys and girls have become rather critical map drawers by having their maps of the week put on exhibition every Friday afternoon. Each map is numbered, and they vote by numbers as to whose drawing is truest to the map given in the book.

My decision is always asked for afterwards, but I seldom find it necessary to dispute their decision.

The best maps are cut out and decorate the top of our blackboard.

Pennsylvania.

E. MAIE SEYFERT.

Educational Exhibit at a County Fair.

Township Superintendent A. B. Graham, of Springfield, Ohio, has for several years arranged an educational exhibit in connection with the Putnam, Ohio, county fair. This fair is held at Ottawa, the county seat, and the educational exhibit has proved to be one of its most interesting features.

In 1903 an educational hall was erected, at a cost of \$3,000. The building is 100 feet long by 40 wide.

The exhibits are arranged about the walls, the work being mounted on cardboards and tacked up. Work not mounted is made into books and suspended from racks and railings in front of the wall exhibits, as shown in the illustration.

Educational Hall on the Fair Ground in Clark County, Ohio. This hall was erected in 1903 at a cost of \$3,000.

of the drawings, one of a maple and one of a pine, were so good that I allowed them to remain on the board until the drawing teacher had made her visit. As I asked them to prepare for dismissal one large girl involuntarily exclaimed, "It isn't time to go home?"

They had been working hard and yet had forgotten the heat because of interested attention.

As we rode home in the large school wagon the children discussed the shapes of various trees comparing them with those which had been drawn, and as I listened to their comparisons I felt that surely the afternoon had not been wasted.

M. E. STEVENS.

New Hampshire.

Spelling for Second Grade.

In looking over the number of the magazine which came yesterday I see that a teacher has asked for suggestions for spelling for second grade. I find this plan very satisfactory.

Interior of the Educational Hall, showing the side allotted to the city of Springfield. Notice mountings on wall, hinged partitions, railings in front of wall exhibits, and racks and cases.

No premiums are paid for superior work. Each township making an exhibit of all its schools, receives ten dollars' worth of books; villages and special districts are awarded five dollars' worth; and the city of Springfield one hundred dollars' worth of books. This plan assists in building up small township and village libraries.

This idea of an educational exhibit at county fairs is certainly worthy of widespread imitation.

Taking Notes.

What teacher whose class is of an age to take rapid notes has not been troubled by the bad habits pupils speedily acquire thru taking notes, especially if their books are not inspected and corrected by the teacher? And of course the careful correction of notes in a class of ordinary size involves a vast amount of time and labor that had better be expended in some other way. Yet bad spelling, careless grammar, illegible penmanship, improper capitalization, and incorrect punctuation are only a few of the evil results that often come from note taking, until in many cases, the notes are more than valueless.

One teacher of my acquaintance had studied this question in his own class, and feeling that some corrective measures should be taken, resolved to try an experiment. Accordingly, he announced one morning that the first few minutes

of each day would be given to a "First Draft Exercise," that he would rapidly dictate a short exercise which the pupils were to take, and that he would collect the papers and correct each until he had reached the tenth mistake, but that any paper containing more than ten mistakes would be considered too poor to merit the expenditure of more time on it. Careless or illegible writing and untidiness were to be considered and marked just as other mistakes. This simple little plan succeeded beyond all expectation. The pupils were eager to have their papers "pass muster" and exerted themselves to do their best. Finding that legible work could be more quickly and easily done with good tools, the pupils began to come with several well-sharpened pencils ready for use, that not an instant need be lost. The number of papers containing more than ten mistakes decreased from day to day and the pupils began to feel a pardonable pride in the fine appearance of their notes. In the meantime, not a word had been said about notes in other classes, but the teacher noticed the marked improvement in the notebooks with much satisfaction, and when the professor of sciences brought him a set of notebooks, and called his attention to their remarkable neatness, saying he believed it was largely due to the drill obtained in the "First Draft Exercise," he felt that his effort had been abundantly rewarded.

Morals and Manners

In a New York Park.

By ALICE MAY DOUGLAS, Maine.

"Let's go and play in the park," said Althea, as she and her cousin looked from the window of the large New York hotel where they were boarding, while their fathers were attending to some important business in the metropolis.

"All right," said Norman, "and do you know that I like the New York parks better than I do those at home."

"I like both alike," said Althea, tying on her dainty hat. "Mamma said that I could go, so we might as well run right along."

"And I a-chasing after," laughed Norman. "So here we go!"

The cousins were soon in a park which was near their hotel, and were admiring its beautiful flowers and trees. They played tag for a while, then jackstones, then they seated themselves under a large tree to rest and to guess riddles.

"Now I'll give you an original puzzle," said Althea, "but—" she stopped suddenly and turned around.

"But what?" asked Norman.

"But there they are."

"Who?"

"Belinda and Conrad."

"What of it?" asked Norman, indifferently.

"O nothing. Only I was wondering if they'd speak to us."

"Why shouldn't they, I should like to know?"

"O don't you know that their father is rich—why, well, perhaps one-half as rich as Croesus and perhaps one-third as rich, and he has lived in New York five years—ever since he left Boston?"

"Don't rich people's children know how to speak?" asked Norman sarcastically.

"O well," faltered Althea, "you know that Belinda and Conrad always speak to me when they are alone but when they are with anyone who boards at their hotel, they don't."

"Then they're not worth noticing," said Norman, independently. "I'd consider it a greater honor to have a parrot or a talking doll say 'howdy-do' to me than anyone like that. Just as if money made a person good or bad!"

"But it makes me feel kind of bad when they don't speak to me."

"Yes, I suppose it does, to know that you live in a world in which there are people who have no more sense than that." The lad's cheeks flushed and his eyes snapped and he said, "Althea, is it possible that you can waste a single thought over such people—why if you do, I should think that you had less sense than they have."

"Now don't give me a scolding," pleaded the

girl, holding up her hands in mock horror, "but listen, they are calling to us."

Belinda and Conrad advanced like two little figures that had just stepped out of the latest fashion book; they waved their hands prettily and bowed daintily and Conrad called out, "Won't you come and play hide and seek with us?"

Neither Althea nor Norman answered.

"Wouldn't you like to play hide and seek with us?" called Belinda.

"What shall we say?" asked Althea.

"Just tell me again, will you, how they've been treating you," said Norman, nervously.

"O I've met them perhaps ten times when they did speak and perhaps ten times when they did not speak."

"But did they see you?" demanded Norman, looking his cousin squarely in the face as if he were a lawyer and she a witness in the court room.

"Of course they did and twice they turned their heads as if making an excuse for not speaking—they were with their aunt then."

"But did *you* speak to them?"

"Yes I did," replied the little girl, nodding her head with great emphasis, "and I spoke so loud that they couldn't help hearing me unless they were deaf, and they are not."

"Wouldn't you like to play hide and seek with us?" called out a piping little voice in the distance.

"We'll see," Norman shouted back.

"It would be lots of fun for us to play with them," said Althea. "Of course you and I like to play with each other best, but it would be nice to have someone else to play with once in a while."

"That is so," assented Norman, "and shall we say we'll play with them?" He seemed to be putting his cousin to the test.

"I don't know," said Althea.

"But we must answer them," said Norman. "Because we have not as much money as they have, they look down upon us, altho we behave in as proper a manner as they do. They will play with us when they are alone, but when the wealthy boys and girls are with them they do not. If we let them treat us in this way we shall lose our self-respect and mother says that one had better lose one's right arm than one's self-respect."

"I don't know what to do," answered Althea, "I don't feel hard towards them, for that would be wrong, but what shall we do?"

What did they do? How I should like to know. If you don't think this is a nice story please give it a nice ending for "All's well that ends well," and send a letter to the EDITOR, telling what the children did.

Play and Self-Activity in Early Education

By Sarah C. Brooks, Principal Teachers' Training School, Baltimore, Maryland

EDUCATIONAL plays, in the sense of their use in primary schools, are of three kinds: games for the further development of the senses, and the accumulation of thought stuff, dramatic games, and games for physical development; and any one class of games may partake of the nature of the other two.

Following the lead of the child in his natural way of acquiring knowledge, and realizing the importance of further and more systematic development of the senses in order that thought and judgment may have a firm basis in the future, the teacher plans for series of lessons or plays thru which the child may be a joyous, active agent in his own development. All senses are thus harmoniously developed, and brain areas exercised as nearly as possible at a time when they are in the best condition to receive and retain impressions. The various kindergarten books of songs and suggestive stories are in the hands of primary teachers, as guides in the planning and execution of these games; and the best teachers are students of Froebel's Mother Plays, which have in them the essence of all that is worth while in the early training of the intellect and the emotions.

When a child faces a new situation, or hears a story that touches his fancy, he says, "Let's play that," and the meaning of his entreaty perhaps lies too deep for our complete interpretation. That by this dramatic effort he hopes to play himself into a clearer comprehension of the incident, or the story, seems to me to be certain; and, perhaps, I have borrowed this interpretation from some one else. That by becoming more familiar with it by putting himself into it, he grows in sympathy, as well as in comprehension, is also certain. The constructive imagination, that highest human effort, is exercised in projecting situations, conversations, and the like. For this reason the burden of suggesting the dramatic situations should be thrown upon the child as much as possible. To the suggestion, "Let's play that," the teacher should respond, "How shall we play it?" In the time of the Greek dramatists, and in the time of Shakespeare, stages did not, as they do to-day, picture the whole story, and leave nothing for the imagination to project. Even the dialog was not an essential feature of the Greek play, but much was to be inferred by the audience from pantomimic action, the story of the play being presented by the chorus before the action began. In the old Globe theater, in London, a board was displayed upon the stage, bearing the words, "This is the forest of Arden," and the audience supplied the herbage. We are not to infer from the foregoing that the birth of genius is wholly dependent upon a more vigorous exercise of the constructive imagination, but we must be convinced that every successful effort strengthens the brain power now in possession of the actor.

Primary schools select poems, fables, fairy sto-

ries, legends, and historical stories that are worth representing dramatically and otherwise, and encourage the dramatic instinct of our children by having them actively participate in their reproduction. This requires considerable courage in the initiative, as many kindergartners and primary teachers can testify; but I have never heard of one who once beheld the joy of the participants, and their facility in suggesting situations, willing to do away with the practice.

Physical games for the correlation of the muscular self, and of brain and muscle, are no less important than the two classes previously mentioned; but as they are of the character which children naturally select upon the playground, and because it has seemed difficult to tone the boisterous element sufficiently to admit of house play, without emasculating the plays, these games have been much neglected. Now the primary teacher has such help from various directions of practice in different parts of the country, from books published at prices within the reach of all, and by encouragement from our

best educators in making these plays as well as the others the basis of work in language and reading, that the game time is often made delightful by such games as tag, going to Jerusalem, climb the ladder, tug of war, and cat and mouse.

WHERE SHALL WE GET THE TIME?

Now, how is all this apparently extraneous material related to the child's actual acquirement in reading, spelling, writing, number, and language, and when does the child find time to "learn his books," as the commoner expression goes? If by its addition the pupil suffers a loss in acquiring power, or in amount of material which the child under other conditions acquires and stores in memory for future reference, parents have reason to find fault with unfamiliar methods of dealing with old subjects, or with the new subjects, popularly known as "fads," introduced into the course of instruction.

Instead of introducing children to the difficult process of reading by selecting the first lessons from some reader made in some region re-

Home Garden of a pupil of the Downing Street School.

Mr. Homer P. Lewis is superintendent of the city's schools.

mote from their own town and local interests, the early lessons in reading are based upon objects of observation and experiment, upon plays, stories, and poems familiar to the learners. Interest, the first requisite of retention, is thus enlisted, and a general vocabulary is obtained, which, with a few modifications, will fit the regular reader in good time.

These first lessons are presented upon the board, written, so that pupils early become acquainted with and imitate the written form. Instead of spending weary weeks upon single letters, when interest is at white heat our whole words and sentences, words and phrases, are mastered, and spelling begins. At the same time, by using the written form, the teacher is enabled to vary the exercises in reading, as she could not do if confined to the printed page. Thus the charm of novelty is added to the other pleasures of the day, and danger of learning by rote and by place is obviated. Parents sometimes proudly say, or said formerly, "If I show my child the picture he can read the whole page." What does this show? The child has learned to associate spoken words and sentences with a given place and illustration, when perhaps not a word of the lesson is familiar to the eye.

A close accompaniment of reading is language. Children are encouraged to tell how games are played. They are asked to give directions for a play. Thus, exactness and continuity of spoken English are encouraged, for unless definite directions are given players are in doubt, and confusion ensues.

Poems adapted to the child's stage of development, and to the season, are committed to memory, thus adding to the beauty and the power of his later expression by literary form most beautiful and most easily retained.

Stories of like fitness to stage of development are presented with the skill and forcefulness that come from study, practice, and love of literature. These stories are reproduced in many ways, and while being reproduced are pondered over until whatever ethical element they may possess is unconsciously absorbed by the child. Scenes illustrating certain portions, or favorite characters of the story, are cut from paper with scissors, are painted, outlined with pegs or lentils, and sometimes molded in clay. It is re-told to the teacher and to the other children by one or more members of the class, and, according to age and acquirement, the class reproduce certain portions of it in writing, that most difficult form of expression.

By means of the general development due to systematic training of the senses, and thru comparison of objects definitely selected and presented, form, weight, size, and number are developed, and work in arithmetic begins. Thus presented, mental poise and mental power are gained before facility of manipulation, and growth follows the natural order.

While in the business world automatism and mechanical facility are the first

essentials in all who aspire to the keeping of books and accounts, to the growing child, all-round mental development is of the first importance. Given this power at the proper time, and by following natural methods, facility and exactness can be easily acquired later.

So, in the primary school of the present day, if the child at the close of the first year lacks in memoriter work and mechanical accuracy, which is by no means an essential, but sometimes a characteristic, he gains sufficient power and self-helpfulness to more than make up for the deficiency during his second year. His habit of self-activity in the educational effort is strengthened by one more year of exercise, and he comes to his second year of grade work with confidence in himself and strength to meet the new conditions.

HEALTH TO BE CONSIDERED.

From the physiological psychologists the primary teacher learns two or three facts which guide in the preparation and use of a daily schedule or program. In the first place, the child's powers of attention are limited, consequently the recitation period is brief, seldom covering more than fifteen minutes.

In the second place, nerve tire is obviated by change of occupation, consequently the exercises are varied to meet the emergency. Number follows reading, and a marching exercise, or a game, occupying but four or five minutes, changes the thought and the muscular activity. The general exercises of the day, such as music, drawing, and language, alternate with reading, writing, and arithmetic.

In the third place, the periods of greatest vigor during the day, which are two in number, are devoted to that kind of work which by experience proves to be most taxing upon physical and mental energy. This point is of less importance in the first grade than elsewhere, but is worthy of consideration by the primary teacher, whatever her grade.

A HIGH IDEAL.

It will thus be seen that the teacher of little children must be a student as well as a woman of affairs. If all the virtues and all the graces and all the mental endowments of which any woman is capable could be united in one person, that person might be considered for a primary teacher.

Traveling thru a Tunnel. — A Nursery-Made Geography Play.

How to Reach the Heart of the Boy

By Louisa McDermott, Minnesota

LITERATURE is a powerful factor in the spread of ideas. We are so familiar with the educative value of literature that it often happens we forget it has limitations. There is a dynamic quality in personal contact that even the most effective writer has never fully captured and transferred to his page. All books are dead, but some books are deader than others. I mention this with a feeling of genuine regret, for it is born of a realization that many of the good things in educational literature have not given me a proportional stimulus.

This particular dynamic force of personal contact came to me by that small, pale green sheet of water called St. Mary's Lake which lies embosomed in the heart of the Mission Mountains of Flathead Reservation in northwestern Montana. There I went for an outing in July with a party of scientists from the state university and several summer tourists from the East, and there I learned something of birds, a little of fishes, renewed my acquaintance with many old-time friends in the vegetable kingdom, and was introduced to several of their western cousins. All this I learned and some other things besides, but the greatest value for me was the stimulus of personal contact with the people and the surroundings; and I regret that it is not possible for me to transmit in any great measure the "motif," as the Germans call it, of it all.

This renewed enthusiasm in the occupations and amusements of boys had its preparation in some years of work in Indian boarding schools where the teacher lives in the same building with her pupils, and when one lives so very close to childhood she is apt to absorb some knowledge of child life. Still I might have managed, even thus situated, to escape much enlightenment had

it not been for a certain combination of circumstances that, fortunately for myself and the children who have been under my charge, thrust the information upon me and gave a new insight and a new enthusiasm to school-room work.

About four years ago an investigation in child study took me off the rostrum and set me down among my children, to live with them, to observe them, and to learn how to teach them. My fellow teacher at that time was a college-bred woman. She had full confidence in the old-time methods and unlimited invective for fads and faddists which comprised most of the new aids, devices, and methods of modern education, and all who advocated the use of them. She declared openly for the use of methods that I believe are systematically vicious, and yet she was in some respects the best teacher I have ever known.

She lived with her children and knew them as only a woman can know the children she loves and cares for and who finds her interest in what interests them. More than any teacher I have ever known she was able to possess herself of the inner life of a school and be a determining factor therein.

She was a large comfortable-looking woman with the pulse of perpetual youth in her veins, a maternal fondness for every manner of boy, and an arm strong enough to intimidate the outlaws and crush incipient rebellion. It was not altogether strange that such a woman would feel contempt for the worn and jaded teacher who went out with pencil and note-book to make observations on the plays of children.

It may have been scientific interest in the child mind, or perhaps the personal influence of such a teacher, or better still both forces acting together that helped me renew my youth and

brought me in spirit back to the days of childhood when myself and brother with our collection of miscellaneous-looking dogs lived a free poaching life, and roamed the hills together.

A fuller acquaintance with the occupations, interests, and amusements of the boys grew into a warm interest, and interest deepened into affection and I learned what many people had known before, that the small boy is a most interesting animal. Especially is this true when there are very many of him and he has not been over-indulged.

When the blizzards of Minnesota shut thirty or forty of him in the play-room and left him to his own resources, he developed an astonishing amount of noise in a short time.

Weaving Indian Blankets in the Hiawatha Class. (Indian Village and Wigwam in the Corner.)

An interesting picture from one of Superintendent Page's schools at Watertown, Mass.

A small boy is very fond of noise, but just plain empty noise palls upon him after a time and he would do something better if the means

A picture from far-away Hawaii, our beautiful island territory in the Pacific ocean.—This shows the boys in the grammar grade of Krupakulua school, ready for work in the school garden. Mr. S. R. Dowdle, of Maui, is the teacher. He has done a great work for his school. Two years ago he was awarded first prize in the competition for the best-tried plans for beautifying school grounds.

were at hand. He is a destructive animal and finds fun in smashing things, but he is also constructive as well and dearly loves to make new things. I know because we've worked together.

Boys at an Indian boarding school are well clothed, sheltered, and fed, but they do not have a great deal of the trimmings and trinkets that so delight the boyish heart. There is considerable raw material and with skill and ingenuity one could evolve many things.

While camping at St. Mary's lake I happened to see a book which was just the help I had needed when working with my boys at Pipestone Indian school. And while I devoured the pages and made mental applications of the many interesting things therein described, I had a dreary feeling of lost opportunity.

I remembered Emery McIntosh, the Scotch Sioux, who went to Hampton, Va., to learn the trade of ship carpenter and pictured in my mind the avidity with which he would seize upon certain portions of the book and show forth his skill and ingenuity. Then there was Wabass Smith, the Irish Chippewa, red hair and freckled face, a child of disasters, catastrophes, and fights innumerable.

When the spring began to throb in his veins, and the freckles

surged upon the surface of his square face, trouble was in store for poor Wabass who could not control the impulses from within. Once Mr. McKay, the farmer, sent Wabass on an errand that brought him in the vicinity of the lake and went a few hours afterward to find Wabass at the edge of the water with two ground squirrels hitched to a mud turtle, trying to make the queer combination swim out on the lake. The stern Scotchman laughed heartily and Wabass escaped serious punishment that time.

Wabass I remembered when I read the chapter on Kites, and it seemed to me I would walk miles and spend many hours just to see the springs of sheer delight that would lift him off his feet. There were such splendid kites, the construction described so fully and such simple inexpensive materials; and we never got beyond the pleasures of plain, simple kite flying.

The possibilities of so many simple pastimes were developed in the book in ways I had vaguely dreamed of, but had never been able to fully grasp! Soap bubbles, aquariums, the training of dogs, the care of birds, fishing, balloons, and many other things, all of which would furnish the teacher a good lever with which to raise the interest of her boys.

I did not write this to advertise Dan Beard's "American Boys' Handy Book," but because there are very many boys and several teachers who are needing the book.

With the fullest possible knowledge of a boy's nature, his interests, his ambitions and his ideals we may often fail to reach him. But where mutual ignorance is established misunderstandings are sure to abound. If there is little in common between ourselves and our boys we can not hope to be a determining factor in the evolution of their characters, and that is just what it is our business to be.

Macdonald School Garden at Middleton, N. S.

Nowhere on the American continent is more careful attention devoted to instruction in gardening and agriculture than in Canada. The people there are heartily in favor of them and give them generous support. The illustration here presented shows what is being done in a Nova Scotia school.

★ National Holidays and Patriotic Exercises

A Flag Birthday Party.

By NELLIE L. HARTY, Vermont.

WHEN the children of the First Primary school returned to their room on the afternoon of June 14, they found the walls and pictures hung with flags of various sizes. They came tip-toeing into the room, smiling and nodding, and gathered in little groups to wonder what it was "all about." They seemingly felt very sure that something was "going to happen."

When the bell ceased ringing the teacher stepped to the board and wrote the words, "Flag Day," in a conspicuous place. The children nodded and smiled again as much as to say, "I told you so," and listened with delight when the teacher told them that as this was the birthday of the flag we were going to give it a birthday party.

At this point they all laughed with glee, but sobered to business at once, when asked for suggestions as to how the party should be conducted. "Sing about it," "Say verses," "Talk about it," "Read about it." There was no hesitation as to ways and means. "Yes," the teacher said,

Betsy Ross House, Philadelphia.

"we will do all those things." So they started off with America, repeated the memory gems and "pieces" they had learned for Washington's birthday and Memorial day that bore reference to the flag. They reviewed the knowledge gained of George Washington, Betsy Ross, and the Flag; how Betsy Ross made the first one at Washington's suggestion, substituting five-pointed stars for six-pointed ones. Then they gained the new fact that the flag was "born" or adopted by Congress June 14, 1777, and that it was 127 years old to-day.

This brought forth the questions from one young idea as to whether the flag had grown any larger, not larger as boys and girls do every year, but as to number of stars, and in the love and reverence of the country for which it stands.

These exercises took the first half hour of the

afternoon. For written language the second grade wrote a little story about the flag, beginning and ending with a favorite and appropriate memory gem. The first grade reviewed the primer stories of George Washington and the flag, supplementing them by sight reading from new primers on the same subject.

The afternoon and birthday party came to a close by singing "Salute the Flag," to the tune of "Maryland, my Maryland," and giving the flag pledge learned for Memorial day.

The children pronounced it a very nice party, and went home very happy, and I think very patriotic, young Americans.

The Flag Salute.

The Flag Salute in most general use in the United States is accompanied by the following:

We give our heads and our hearts to God and our country. One country, one language, one flag.

After words and movements have been mastered by the pupils the salute should be given with but one signal. Several months of drill will be required however, before a class of children will have attained this result. Meanwhile the drill should be given once each day, to a series of signals, thus:

The flag, held by a standard bearer, should be in front of the school.

1st Signal.—At a tap of the bell each child takes hold of the back of his seat, preparatory to rising.

2nd Signal.—All rise quickly, and each stands alert and erect.

3rd Signal.—Extend right arm, pointing at the flag; arm raised slightly above horizontal.

4th Signal.—Bend forearm so as to touch the forehead lightly with the tip of the fingers of the right hand. As the fingers touch the forehead all say, "We give our heads." emphasizing the word "heads."

5th Signal.—The right arm is carried to the left side and the hand is placed, with fingers open, over the heart, as the words are said, "and our hearts."

6th Signal.—The right hand is dropped to the side. The pupils then continue, "to God and our country."

7th Signal.—Standing erect, but without moving, all say, "One country, one language."

8th Signal.—At the words "one flag," each speaker bends the body slightly forward, and extends the right arm to its full length.

9th Signal.—The right arm is dropped to the side, and all take straight standing position once more. All seated.

A Playtime Medley: A Closing Day Exercise.

As given at public school No. 77, New York city.

By Roberta C. Claus and Florence G. Strouse.

This exercise is arranged for fifteen little girls as follows:

- Three children carrying hoops and sticks decorated with bells and ribbons.
- Three children with jacks and balls.
- Three children on roller skates.
- Three children on tricycles.
- Three children rolling doll-carriages in which are baby dolls.

In the above order the little ones make their entrance, humming the chorus of the "Playtime" song. Those in the first row roll their hoops up the aisle, the "jack girls" come in skipping, the third set skate, the girls on tricycles follow one after the other, while the doll-carriage girls bring up the rear.

Each group gets into position at the front of the room before the following group advances.

First Position.—Children form in two lines (smallest girls leading) facing each other, seven in the right line, eight in the left. Tricycles and doll-carriages are pushed behind the lines. The children hum and sway in their places on the line till all are in position.

PLAYTIME SONG.

(The melody is given on this page.)

- When ting-ling goes the bell, (1)
And school's done for the day, (2)
We march home then rush (3) out pell-mell
Into the street to play.
Oh well, (4).
Why shouldn't we be gay? (5)
Bring out your hoops and skates, (6)
Bring out your dollies (6) too,
Start every game, tho rough or tame,
That ever childhood knew.

- Chorus*—(7) Playtime, gaytime,
Winter, Fall, or Maytime,
(8) Ho! Vacation's coming,
Don't you wish 'twould stay alway?
Playtime, gaytime,
Winter, Fall, or Maytime,
(9) Don't you wish you'd naught to do,
But play away all day?

1. Hoop girls raise and shake their hoops so that the bells tinkle.
2. Right line faces front, left line faces the rear. Children march one or two steps as they sing.
3. Quickly face in opposite direction and run back to first position.
4. Emphasize, by nodding the head from side to side.
5. Each child turns and questions the one standing next to her.
6. The children point to the articles named.
7. Children join hands and dance with swaying motion.
8. Right hands flung up.
9. Lines face about toward the school, those in the drill pointing to the school-children at the word "you."

1st Doll Carriage Girl.—There are so many things to play. What shall we have first?

- All {
Hoops!
Jacks!
Tricycles!
Skating!
House!

1st Hoop Girl.—No, we're going to roll our hoops first. Come on, girls!

The hoop girls go down the aisle made by the two lines. (*Second position.*)

HOOP SONG.

(Tune, "Goodnight Ladies," to be found in any book of College Songs.

- Hoop Girls.*—Where's your hoople? (1)
Where's your stick?
Now get ready
And start off—quick. (2)
All.—Merrily we roll along,
Roll along,
Roll along—

Playtime Song (The Melody).

To be sung quickly.

When ting - ling goes the bell, And
school's done for the day, We march home, then rush
out pell - mell In - to the street to
play. Oh, well! why shouldn't we be
gay? Bring out your hoops and skates, Bring
out your dol - lies, too, Start ev' - ry game, though
rough or tame, That ev - er child-hood knew.

CHORUS.

{ Play time, gay - time, Win - ter, Fall or
Play - time, gay - time, Win - ter, Fall or
May - time! Ho! Va - ea - tion's eom-ing, Don't you
May - time! Don't you wish you'd nought to do But
wish 'twould stay al - way?
play a - way all (Omit.....) day?

Merrily we roll along
Till our hoops fall down.

Hoop Girls.—Bells a tinkling, (3)
Ribbons fly, (4)
Hoops look pretty
As they go rolling by.

All.—Merrily we roll along, etc. (5)

1. Children question each other.
2. Hoop girls roll their hoops up thru the aisle.
3. Hoops are held up and shaken.
4. Hoop sticks are raised.
5. During the second chorus, the hoop girls resume their places.

1st Hoop Girl.—(To the first jack girl).—Now you can play, Alice.

1st Jack Girl.—(To the others)—Have you got your jacks and balls?

2nd Jack Girl.—Yes, here they are.

The jack girls take second position.

1st girl.—One I have, (suiting the action to words.)

Two I have,
Three I lose them all.

2nd Girl.—One I take up in my hand
And two I drop the ball.

3rd Girl.—One I take,
Two I make,
Three I do the same,

All.—Playing together
In all kinds of weather—
Jacks is a jolly game.

1st Tricycle Girl.—Now we will ride in our tricycles.

The tricycles are placed one behind the other. The girls sit in them as they recite.

Oh! in our jolly little tricycles
Whirling, twirling tricycles,
We have such fun while we're riding
Up the block, around, then here.
Fascinating tricycles,
Captivating tricycles,
Pacing, chasing, while we're racing
In our tricycles.

While the tricycle girls are returning to position the chorus is repeated by all with appropriate motions.

1st Skate Girl.—Who'll beat me skating?

2nd Skate Girl.—I will!

They skate down the aisle and come to second position.

SKATING SONG.

Slowly, as if with gliding motion.

Oh, come and skate with me, But

keep step—one, two, three, Or else you'll

fall, you see, And then what times there'd be.

Oh, come and skate with me,

But keep step—one, two, three, (1)
Or else you'll fall, you see,
And then (2) what times there'd be.

(3) Now all take hands and so,
Right easily we go—

(4) Oh the best fun we know
Is then to skate just so.

1. Skate to the front.
 2. Throw up the hands as if in despair.
 3. Face about and skate back.
 4. Stand and face the front again.
- This chorus is repeated by all with similar motions.

1st Doll Carriage Girl.—Now we are going to play house. It is the very nicest game of all.

As the doll carriages are brought to second position, the rest of the children hush and rock imaginary dolls.

DOLL CARRIAGE RECITATION.

Beside the busy crowded street,
Some children like to play;
And watch the boys run 'round the block
In a happy kind of way,
While others group, (1)
On a quiet stoop,
With play toys all around, (2)
And all is done,
To have such fun,
As in playland e'er was found.
Pencil and book, (3)
Some children took,
To play at keeping school, (4)
Where each one did
As she was bid, (5)
And no one broke the rule.
Then hand in hand,
A merry band,
Some like to dance (7) and sing,
But in every way,
The nicest play,
In my opinion is—

DOLL SONG.

(To be sung to the tune of Swanee River.)

With my little golden headed dolly, (8)
My own dearest doll,
Sitting in her dainty little carriage, (9)
She's the nicest play of all.

Chorus.—Oh my pretty little dearest,
My golden headed doll,
I shall always hold you nearest, (10)
My baby, the best of all.

1. Drawing close together with arms around each other's waists.
2. Showing imaginary toys.
3. Action of writing imitated.
4. The tallest girl steps forward as teacher, faces the other two and shakes her finger at them, then quickly resumes her place.
5. All stand stiff and still.
6. Shaking heads.
7. Action suited to words.
8. Pointing to dolls.
9. Setting dolls in carriages in a motherly way.
10. Taking dolls from carriages and holding them close.

Here the last doll-carriage girl, as if by accident, jostles the third jack girl who exclaims,

3rd Jack Girl.—What are you doing?
"I'm only teasing," answers the other.

Immediately a lively march is played while the girls on the right hand column march around, stamping and

pouting till they form a line stretching from side to side. The rest stand in a second line behind them.
The first line recites:

I feel so awfully blue, (1)
I really don't know what on earth to do, (2)
No one here (3) to help me have any fun,
Away they all run (4).
When the least thing is done;
I pinched her (5) on the sly,—
(A goody girl is she (6) a-passing by)
"Oh stop!" (7) says she, in the silliest way,
But this is all I have to say:
Teasing, (8) teasing— (9)
I was only teasing you; (10)
Teasing, (8) teasing— (9)
Just to see what you would do.
Teasing, (8) teasing— (9)
To find out if you're good and true,
Don't be angry (11)—I
was only, only teasing
you. (12)

1. Scowling (The children are easily trained to imitate facial expressions.)
 2. Shrugging shoulders.
 3. Shaking head and looking around.
 4. The first line turns quickly, each girl touching one of those in the second line. The latter jump away, but resume their places.
 5. Same action as in four, the "teasing girls" smiling saucily.
 6. They mock and mimic the "goody-goody" girl.
 7. Stamping angrily.
 8. The first line quickly faces the girls in the second. The latter stand still.
 9. The first line quickly faces front again. (These quick, uniform faces are very effective.)
 10. Smiling roguishly.
 11. The girls in the first line step back and embrace those in the second.
 12. Each "teasing girl" strokes the cheek of her partner in the second, looking up to her as if asking forgiveness. Then places are resumed.
- The girls in the second line now step forward, while the "teasing girls" step back.

Second line—
(1) Oh, what's the use of quarreling and crying?
What's the use of always being angry at you?
What's the use? It's better to be trying
To just have fun
And so be done
With pouts and sulks and tears.
(2) Come, (3) let's make up! Who'll be the first to do it?
Let's make up, and promise never more to squabble,
Let's make up—'twas fooling and you knew it,
(4) And so we'll play,
The livelong day
In happiness and peace.

1. During the whole of the first stanza, they stand with hands clasped in front, palms down, heads turned swaying in time to the music.
 2. They face the "teasing" girls.
 3. Hands outstretched to take the hands of the "teasing" girls.
 4. Each girl in the first line steps back and puts her arm around the waist of a "teasing" girl.
- The "Playtime" song is repeated, all the motions being the same as before, except in the case of
"Don't you wish you'd naught to do"—
As this line is sung, the children turn about facing the school, with their backs to the platform.
- 1st hoop girl.—I know a much nicer place than this to play in. Come with me and I'll show you.
- Humming the "Playtime" chorus, the children make their exit in the same order as that in which they entered.

Common School Hymns

Morning Hymn.

(J. H. ROLLE.)

1. Praise the Lord! Praise the Lord! The morn - ing
2. Praise the Lord! Praise the Lord! In ver - - nal
3. Praise the Lord! Praise the Lord! From out their

sun a - wakes the fields from night - ly rest, And the
beau - ty prais - - es him the flor - - al year, In the
dens the wild beasts loud - ly roar their praise, O my

whole cre - a - tion's gladness streams . . Re - born in - to our breast.
skies, and in, the leaf - y bow'rs, . . The bird's glad song we hear.
soul! more loudly still to God . . . Thy grate - ful trib - ute raise.

A NEW DEPARTMENT.

Our TEACHERS MAGAZINE will give each month at least one hymn suitable for the common schools where children of all religious beliefs are gathered together. These hymns have been selected with great care, and the editor feels confident that they will prove a welcome collection to teachers everywhere. If you know of any favorite hymn which might be included please tell us about it. We want al' the best things to be had in this magazine.

Thoughts from Shakespeare

Memory Gems collected by Louise O. Twombly, Massachusetts

All places that the eye of Heaven visits,
Are to a wise man ports and happy havens.
—RICHARD II.

Be to yourself
As you would to your friends.
—HENRY VIII.

Condemn the fault, and not the actor of it!
Why, every fault's condemned ere it be done.
—MEASURE FOR MEASURE.

Free Clay Modeling for busy work at seats.—Beginning first grade, Spry Vacation School, Chicago, Ill. Henry S. Tibbitts, principal.

Defer no time, delays have dangerous ends.
—HENRY VI.

Earthly power doth then show likest God's,
When mercy seasons justice.
—MERCHANT OF VENICE.

From lowest place when virtuous things proceed,
The place is dignified by the doer's deed.
—ALL'S WELL THAT ENDS WELL.

Glory is like a circle in the water,
Which never ceases to enlarge itself,
Till by broad spreading, it disperse to naught.
—HENRY VI.

Have more than thou showest,
Speak less than thou knowest,
Lend less than thou owest.
—KING LEAR.

It is not enough to speak, but to speak true.
—MIDSUMMER NIGHT'S DREAM.

Joy had the like conception in our eyes
And at that instant like a babe sprang up.
—TITUS ANDRONICUS.

Know you not
The fire that mounts the liquor till 't run o'er,
In seeming to augment it wastes it?
—HENRY VIII.

Like as the waves make toward the pebbled shore,
So do our minutes hasten to their end.
—SONNETS. IX.

Men at some time are masters of their fate.
—JULIUS CAESAR.

Now God be praised! that to believing souls
Gives light in darkness, comfort in despair.
—HENRY VI.

Our doubts are traitors,
And make us lose the good we oft might win,
By fearing to attempt.
—MEASURE FOR MEASURE.

Patches, set upon a little breach,
Discredit more, in hiding of the fault,
Than did the fault before it was so patched.
—HENRY V.

Rude am I in my speech.
And little bless'd with the soft phrase of peace.
—OTHELLO.

Silence is the perfectest herald of joy: I
were but little happy, if I could say how much.
—MUCH ADO ABOUT NOTHING.

'Tis not enough to help the feeble up,
But to support him after.
—TIMON OF ATHENS.

Uneasy lies the head that wears a crown.
—HENRY IV.

Verily I swear, 'tis better to be lowly born,
and range with humble livers in content, than
be perk'd up in a glistening grief, and wear a
golden sorrow.
—HENRY VIII.

Uncle Remus Inspires a Library

By Fannie Lee Leverette, Georgia

IT was during a reading lesson, about a month before Thanksgiving, 1900. The boys and girls of my grades in the Eatonton public school, Putnam county, Georgia, the birthplace and childhood home of Joel Chandler Harris, had just finished reciting.

They were much interested in their new reader, Harris's "Stories of Georgia," and particularly so in that morning's lesson about Nancy Hart, a Georgia heroine of the Revolutionary period. When the reading period had come to an end, the pupils were loath to close their books and there were many expressions of the pleasure they had found in reading good books. At this point I told them the story of how Joel Chandler Harris, the writer, and author of their reader, had been born in the humblest sort of circumstances here in Eatonton, and how he had educated himself by reading good books to which he had access in the home of his employer, the editor of a country newspaper called *The Countryman*.

To my surprise, I found that while all the young readers were familiar with the "Uncle Remus" stories, not one of them knew that Joel Chandler Harris was born and raised right here in Eatonton, nor had they ever heard the interesting story of this self-made man, who had achieved success under most adverse circumstances.

Mr. Harris had a very limited education in the usual sense of the word. He had to become a breadwinner for himself and his mother when a mere boy. He tells in an interesting sketch written for *Lippincott's* several years ago, of his early love for reading, and how he began his life as an author. Uncle Remus says that his desire to write and give expression to his thoughts came from hearing his mother read "The Vicar of Wakefield" when he was a child.

Altho too young to appreciate the story, there was something in the style or the humor of the book that struck his fancy, and he immediately set to composing short stories, in which the principal character, no matter whether hero or heroine, silenced the other characters by crying "Fudge," at every favorable opportunity. Unfortunately none of

these child stories were preserved. Mr. Harris remarks that they must have been remarkably true to nature since their keynote was "Fudge!"

"Miss L——, we ought to have a library and good books to read so we could educate ourselves, and maybe some of us will write books like Uncle Remus some day," said Mary, a bright-eyed girl of eleven, as we closed the reader. The thought was a happy one and well put. "We can and will," I replied, "if you all really want one and will help me in the matter."

Ten minutes before school was dismissed an enthusiastic conference was held and we all decided to begin work that very afternoon. I offered a bright silver dollar to the boy or girl who brought in the largest amount of money at the end of two weeks from that date. When the pennies, nickels, dimes, and quarters were counted there were twenty dollars, and Mary had won the prize.

Other contributions came in like small amounts. It was time for another business meeting, so we met again, both teacher and pupils, and set about arranging plans. Neither Carnegie nor Rockefeller ever felt the weight of their financial responsibilities more than the children did that twenty dollars, and like Mr. Carnegie, they were afraid they would die rich; the money must be spent at once for the books. They were afraid to put it in the bank, for fear something might happen to the time-lock and we could not get it out.

Many anxious days were spent while I pored over book catalogs and studied how to make the money go farthest. At last the order was off. Soon we received notice that our sixty books were at the depot. There were instantly almost as many volunteers to go down after them. No more appropriate name could be thought of for our library than "The Joel Chandler Harris" library. A committee was appointed to notify Uncle Remus of our action, and to ask the board of trustees to arrange a place for the books.

Shelves were placed in an unused cloak room and the children themselves bought a

glass door with "Joel Chandler Harris Library—1900" artistically painted on the glass. Almost a week later Mary, our president, came to school—we have always thought without her breakfast, she was there so early. When I arrived she had a letter with a monogram in the form of a rabbit on the back. Her eyes themselves told that she had good news. She had a letter from Uncle Remus, telling us how much he appreciated the honor the boys and girls of his native county had conferred on him by naming their library for him. He said he really and truly appreciated it more than any other honor he had ever received. At the express office there were a framed life-sized picture of himself to hang over the library, and twenty of his books, sent with his compliments.

It just seemed as if we could not find words in the dictionary suitable for Margery Harris Leonard, a namesake of Mr. and Mrs. Harris, and our librarian, to employ in writing a letter of thanks.

Thus we began and we have kept on growing. Publishers and friends of the author sent books, and many of the children sent others.

Thanksgiving came, and we had a big pumpkin with goodies inside attached to strings on the outside. Three cents a string to draw, or two for a nickel, brought in five dollars for the treasury.

Then Christmas came and we had a Christmas play. It was the exercise called "Santa Claus' Wooing," which appeared in THE TEACHERS' INSTITUTE some time ago. Every one paying ten cents into the treasury beforehand received a filled stocking from Santa Claus. This netted us almost ten dollars.

Christmas morning we received a notice that Uncle Remus had sent us twenty handsomely bound volumes of "The Young People's Library." Mr. Harris has the honor of being a member of the editorial board of these publications. How could we ever thank our good fairy! His generosity inspired every one to greater efforts.

Valentine day and Easter came, and both were celebrated happily and with pecuniary profit to the Joel Chandler Harris library. During the school recesses for several terms Miss L—— made and sold home-made coconut creams, bisque, and chocolate candies. Thus the nickels grew into dollars, and the dollars went into books. To-day we have more than three hundred volumes in our library, which is the largest department library in Georgia. Not a book has ever been lost.

Our library plan is as follows: We have a complete list of all the volumes always in the schoolroom. There is a file on which the children place their written applications for books. They are allowed to carry books home only on Fridays, so as not to interfere with school work. All books carried home must be returned and checked in by the appointed librarians on Monday morning.

A book may be read during the last half hour of the school day after lessons are over.

The library, aside from the pleasure it gives the children, and carrying pleasure into homes thru them, I have found to be of very great help in securing better deportment in my room. Teachers know full well the truth of the old adage "An idle brain is the devil's work-shop." A good book is good company for a tired or restless child, and there is no mischief abroad.

UNCLE REMUS.

This is an age of readers, and Mr. Carnegie, the great philanthropist, has well caught the spirit of the American people in establishing libraries for the people, and adopting the motto, "To live in the hearts we leave behind is not to die."

TEACHERS MAGAZINE wants for its readers the best, most interesting and helpful articles, illustrations, and devices that teachers can desire. Will you not lend a hand by contributing whatever may serve this end? Write anything. The editor will be glad to hear from you.

How to Become Proficient in Story-Telling

By Jennie M. Harris

IT has been said that story telling is a gift, that story tellers, like genuises, are born, not made. This statement has deprived a great many people of the pleasure of telling, and a great many children the pleasure of listening to stories. You have no right to say, "I cannot tell a story," and let that suffice for never making the effort. It is impossible to tell what you can do, until you have conscientiously tried. People are often surprised at the result of their efforts.

The more credit to you if you start out with the idea of no talent, but the determination to see what you can do without it. It may be, you will find yourself more richly endowed than you ever dared to hope. Story telling is a gift, but it is also an art—an art that comes more readily to some than to others, but in both it is perfected by practice. The chief reason why so many persons cannot tell a story, is because they have no story to tell. Instead of thoroly mastering the story to be told they begin with a vague, dim idea in their minds, hoping that the idea will grow, and become more real as they proceed with their story—they "trust to luck"—this however does not often happen, this clearing and vivifying of the idea, and the narrator is lost in hopeless floundering. First get this vague image clear and vivid. To do this, it may be necessary to read the story several times, then in order to be sure you have it sufficiently clear to reproduce without hesitation, write it out, and compare it with the original. Hesitation is fatal to interest. Faith is at stake. Your faith in yourself and the child's faith in you. The story must come with such readiness as to raise no doubt in the child's mind, or your own, as to your ability to remember. To very young children the story is a part of you, as much so as any other talk you may have with them.

After having learned the story thoroly you must look for the leading truth, or leading idea rather, which is always the inner truth, and then mark the strong points, for they need the greatest prominence, being the Soul, as it were, of the story. If you desire to deviate from the selected story, to embellish it, with

ideas of your own, be sure to keep to the main point and beware of too many unnecessary details—tho children love details, these sometimes lose, for them, the main idea of the story.

In repeating a story to the children, keep as near as possible to the first version. Children see very readily and clearly the details of a story and retain them vividly and they are always ready to correct the slightest deviation from the original. They are very serious in their corrections and regard any deviation as a lack of truthfulness on your part. Miss Buckland tells of a story once being told in which

there were *three* plates on a shelf. Every bright little mental eye saw the three plates as plainly as possible: and when on repeating the story, it was said there were *two* plates on the shelf, an indignant exclamation at once arose, "There were *three* plates, last time there were three plates." A charitable little child suggested "But perhaps one has been broken since last time;" the general feeling, however, was that the second version was not strictly the truth. An air of mystery, surprise, and expectation is very helpful to keep up the interest of little children. Questions and guesses will often recall their wandering attention. But care must be taken at all times not to overdo it, or harm will result. The children may become more interested in the question and guesses than in the story itself, and then interest in the story is weakened instead of being strengthened.

Froebel has said that "Story telling is a real strengthening spirit bath." Try it for yourself and find out, be thoroly convinced, that Froebel was right. Let go the idea "I have no talent, I can't tell a story." You will succeed in the end if you but keep up the effort.

Surely the love and sympathy for little children that is rooted in the heart of almost

every adult, and especially in the heart of every kindergartner and school teacher, will aid you in your undertaking.

A human heart full of sympathy and love, makes fluent the tongue of a speaker, and to be a good story teller means to be a king among the children.

JOEL CHANDLER HARRIS.

The prince of American story tellers, whose "Uncle Remus" has become a household favorite in the English speaking world.

Favorite Games for Primary Grades. I

By Emma B. Olwin, Illinois

Others of Miss Olwin's charming games will be published in September. While especially adapted to primary classes they suggest what may be done higher up.—ED.

THERE is no one thing in a primary grade that gives a better return than the playing of games. In no other way is the freedom of speech, the feeling of companionship, the little courtesies, and the spirit of unselfishness so easily taught.

In games, as well as in stories, children always have their favorites, and if allowed to choose will ask for the same game day after day. I have chosen some of these "favorite games" to describe, knowing that they will "make friends" wherever they go.

THE RELAY RACE.

This is a prime favorite with both boys and girls.

Two "captains" are chosen. They stand on opposite sides of the room, facing each other. They choose runners (alternately) until all the pupils are chosen. It is necessary to have an equal number of runners on each side.

Each captain holds an eraser in his hand. At a given signal the captains run to the front blackboard (or wall) touch it with the erasers and run down the second aisle from their own "sides" (in order to avoid confusion). Each gives his eraser to the last pupil in his line, steps aside to give him a chance to run, and follows him until both reach their own place. The two second runners run to the board, touch it, run back and give the eraser to the last one in their respective row—and so on.

There are always two pupils running, one from each side. The side that gets all of its runners to the board and back *first* wins the race. The game becomes very exciting when only a few are left on each side to run and win.

In this game the children are allowed to "root" and no college game of football has more enthusiasm among its "rooters" than is displayed by the small boys and girls.

Running, properly—on the ball of the foot and with shoulders well back is easily taught in connection with the game.

Many a restless movement, due to long continued sitting at desks, may be avoided by giving five minutes to the relay race.

THE MULTIPLICATION GAME

Is another favorite and is a friend to the teacher also, who wonders why children cannot learn tables more readily.

Have small cards, either written or printed, with a multiplication combination on each. Turn them, numbers downward, on a desk. A child runs up, takes a card, peeps at it, holds it carefully so that no other child can see it. For example, the card has on it 8×6 .

The child says: "I am a child from the family of 6's, can you guess my name?"

He then calls on a pupil who says: "Are you 7 6's are 42?"

"No, James." (Calls on another.)

"Are you 3 6's are 18?"

"No, Edith," and so on until the correct combination is called. Then he shows the card, and the one who guessed correctly chooses a card and continues in the same way.

If the pupil called on should make a mistake, for instance saying, "7 6's are 45," and the pupil with the card fails to say "That is incorrect," he is obliged to forfeit his card to some child who noticed the mistake. The improvement in multiplication tables can be noticed in a few weeks after playing the game, for all the pupils are desirous of being called on to guess.

SPINNING THE PLATTER.

This is another little device for the dreaded multiplication table.

Let each pupil have a card with a multiplication combination on it.

Have a granite pie-pan that can be placed on edge and spun like a top.

The game is started by a child who "spins the platter" and at the same time calls for a combination as "6 9's."

The pupil who has the card with the six nines upon it runs to the platter, saying as he runs, "Six 9's are 54."

If he gives the combination correctly and gets there before the platter has stopped spinning, he has the privilege of spinning the platter and calling for a combination.

If he fails to give his combination correctly, or to be prompt in reaching the platter, he takes his seat and the first pupil has another turn.

The delight the pupils take in having an opportunity to "spin the platter" makes them alert and prompt in answering, and in this way a fine review of tables is given without the pupils' knowing that they have been working as well as playing.

Suggestion for a June Calendar, designed by Lillie Larson, of Colorado.

Recitations with Action

The Tulips.

By CLARA J. DENTON, Author of *Twinkling Fingers*, etc.

- (a) One little tulip, in a corner growing,
- (b) Two little tulips, April winds are blowing.
- (c) Three little tulips, red and white and yellow,
- (d) Four little tulips, watch each little fellow.
- (e) Five little tulips, in the corner staying,
- (f) Six little tulips, with the sunbeams playing.
- (g) Seven little tulips growing all together,
- (h) Eight little tulips care nothing for the weather.
- (i) Nine little tulips, merry faces showing,
- (j) Ten little tulips, in a long row growing.
- (k) Ten little tulips, standing straight and true,
Ten little tulips, (l) we pluck them all (m)
for you.

MOTIONS.

- (a) Raise little finger on right hand,
- (b) Raise next finger and move both quickly.
- (c, d, e, f, g, h,) Raise a finger at each letter.
- (i) Raise next finger and bend all at first joint.
- (j) All erect again.
- (k) Spread fingers out but hold erect,
- (l) Bring hands together as if holding flowers.
- (m) Extend hands in act of presenting flowers.

Little Kitty.

By LUCY ALLEN.

- (1) What does little Kitty say?
"Please give (2) me a (3) taste to-day!
- (4) Bread and (5) milk so nice, I see,
Leave a little, please, for (5) me."
- 1. Move right forefinger. 2. Point to self. 3. Raise hand to mouth. 4. Spread hand out to right. 5. Ditto to left.

BLACKBOARD DRAWINGS FOR JUNE OR SEPTEMBER BY W. E. SPARKES.

When a leaf is partly hidden by another, or by a flower, it should first be drawn in its entirety as indicated in figures 1 and 4. The faint lines should be left and only the appearing parts thickened in. The colored markings present on so many petals are converted into firm chalk lines.

Little Talks on School Management. I

By Randall N. Saunders, Hudson, N. Y.

Before School.

I AM satisfied that the moments spent by both teacher and pupil before school have a great influence on the character of the sessions. The good feeling—or the ill feeling that may be engendered in those moments of relaxed tension when the pupils are left largely to follow their own inclinations, will surely follow thru the day and be manifested in every exercise and recitation.

If the day has opened with an altercation in the school yard, if it has opened with some trespass that demands a trial and a punishment, a spirit of controversy, of revenge, of sadness, or of sulkiness will pervade the whole day and destroy the possibility of getting the best results from that day's work. On the other hand, if the day be opened in the school-yard with some game in which all have been interested and all have enjoyed, and the pupils come in tired for the moment, with that dangerous superabundance of animal spirits in a measure reduced, and with the glow of the brisk pleasure still in their hearts and on their faces, that day will have a briskness and a glow that will be inspiring to both teacher and pupil, and the teacher will close his room with a feeling so seldom experienced, that the day has approached the ideal.

There is always an unknown quantity in the daily experience of many teachers—a quantity that exhausts nervous force, engenders senseless apprehension, and is paralyzing to the best effort. This quantity is found in the equation, "X equals 'what's coming next'," and the constant dread of the solution has been the *bete noire* that has frightened many a teacher from the profession.

It strikes me that one of the prime requisites for a successful teacher is ubiquity, that omnipresence that will enable him to anticipate the events of the day, dissipating the potentiality of the problem by being "on deck" first, last, and all the time, having a thoro knowledge of the "what next" by guiding the impulses that influence its production. In many years' experience, I have found that the moments I spent with my boys and girls "before school" were the most valuable moments of the day. There will be little likelihood of flagrant transgressions under the eye of a kindly, but inflexible teacher. His presence alone, among the boys and girls while at play is a safeguard

even tho he be meditative and seemingly oblivious of what is going on. And what may not his influence be if he joins heartily in the play?

Whenever I came out in the spring with a hastily fashioned kite or a pair of temptingly treacherous stilts, I was at once the center of an expectant group, anxious to see me do something which I did not, for I entrusted the trial of all contrivances to the many who were willing to experiment. Need I say that the girls were treated to paper doll dresses that would have made Worth green with envy?

To ball and bat, to croquet and other out-of-door games, to snow forts and snow men, to conundrums, to quiet "sitting down" games "before school," I attribute many of the "best" days for which we ever long. Such days I sincerely believe are to be largely attained thru the "before school" influence of the teacher's interested presence among his pupils, with them, heart and hand, in everything, as a good, but not a goody-good child (?) himself, instructing, by active example, controlling by unostentatious assumption of the leadership when the game evinces alarming tendencies.

That group of idle boys, over there, with their heads together, giggling and sly-glancing, without plot or intention are concocting that which in its influence will make your school-room a miniature sheol for the whole day. Get them busy without delay.

There is still another phase of the subject, on which; just a word, and that only a question. Will not the teacher be fresher, better tempered, and less likely to make the very errors against which he would guard, if he spends a portion of the play time on the play ground?

Supplement to TEACHERS MAGAZINE, June, 1905

The Three Misses Cottontail

Told by OSSIAN LANG; Illustrated by MARGARET ELY WEBB

[Copyrighted by Young America Publishing Co.]

Many, many years ago there lived in the swamp near Farmer Hopper's house a happy rabbit family.

The father rabbit was known far and wide as Bunny Cottontail, and his wife was called Dame Cottontail. I never was told whether Mr. and Mrs. Cottontail were rich, but I do think they had reason enough to feel so, for they had three bright little daughters, Jeanie, Nannie, and Lolo.

Rabbit life is not as safe as some other lives, not half as safe, for instance, as any one of the nine lives of a cat. At least, that is what Father Cottontail thought when he met the wolf one bright morning.

Bunny and the wolf were looking for breakfast. The wolf got his,—and that is how Mrs. Cottontail became a widow.

When Jeanie and Nannie and Lola Cottontail were told that their father must have been eaten by the wolf they were very sad. They begged their mother to build them a house with a lock on the door so that the wolf could not get in and eat them.

Mother Cottontail said she would. So she went down to Farmer Hopper's house to see what could be done. Maybe Mr. Hopper would build them a house where her daughters might be safe. Now it happened that the wolf started out from his house to call on Farmer Hopper's hens just about the time when Mother Cottontail kissed her daughters good-bye. The wolf met Dame Cottontail, and that is how Jeanie and Nannie and Lolo became orphans.

When evening came on, Jeanie, who was the oldest, said to Lolo, who was the youngest of the three Cottontail orphans, "Go up to Farmer Hopper's house and get some straw to build a house with, where we three can live so that the wolf shall not eat us."

Lolo went to Farmer Hopper's house as she was told, and got all the

straw she could carry. Then the three Cottontail orphans worked all night, and in the morning the house was finished. It was the prettiest house that anyone could build of straw. It had two doors that could be locked at night, and a large kitchen, and a pantry, and a tower, and everything that young rabbit ladies may wish for.

When the work was done Jeanie said, "I am the oldest of us girls, and I am going to look through the house from top to bottom to see whether it is safe and comfortable before we move in."

So she went in, and half an hour afterwards she looked out of the window in the tower and called down, "I have locked the doors and you cannot come in. The house is just what I have always wanted. There is not room enough for three to be very comfortable. So you two had better go away before the wolf catches you. I am going to stay here. Good-bye."

Then Jeanie Cottontail shut the window, and Nannie and Lolo began to cry and begged their sister to let them in. Jeanie paid no attention to them.

After a while Nannie said to Lolo, "Go up to Farmer Hopper's house and get some birch bark to build a house with, where we two can live so that the wolf shall not eat us."

Lolo went to Farmer Hopper's house and got all the birch bark she could carry.

Then the two Cottontail sisters worked all night, and in the morn-

ing the house was finished. It was even prettier than the one Jeanie had taken for herself.

Nannie said to Lolo, "I am older than you, and I am going to look through the house from top to bottom to see whether it is safe and comfortable before we move in. And mind you, Lolo, I am not going to play as mean a trick on you as Jeanie did on us."

So Nannie went in, and half an hour afterward she looked out of the window in the tower and called down, "I have locked the doors and you cannot come in. The house is just what I have always wanted. There is not room enough for two to be very comfortable. So you had better go away before the wolf catches you. I am going to stay here. Good-bye."

Then Nannie shut the window, and Lolo began to cry and begged her sister to let her in. But Nannie paid no attention to her.

After a while Lolo ran again to Farmer Hopper's house, and thumped with her hind feet on the floor of the front hall. Mr. Hopper came out to see what Lolo wanted now.

Then little Miss Cottontail began to cry and said, "Please, Mr. Hopper, let me have something to build a house with, so the wolf shall not eat me."

Mr. Hopper took pity on Lolo, and built her a house of stone and iron with a cabbage garden around it. The house was much larger than either Jeanie's or Nannie's, and it looked just as pretty as could be.

Lolo thanked Mr. Hopper, and then locked her doors and went to bed, for she was very tired.

Meanwhile the wolf had been looking everywhere for the three Cottontail girls. Just about the time Lolo went to bed he learned from Mr. Hopper's cat that they had built three houses for themselves, one of straw and one of birchbark and one of stone and iron. So he started out to hunt for them.

First he came to the straw house and knocked at the door.

Jeanie looked out of the tower window, and when she saw the wolf she called down, "Go away! I am not going to open the door for you. You ate my father and my mother, and now you want to eat me. Go away!"

The wolf said, "If you do not open the door, I will blow down your house."

So he blew and blew till the house fell over, and he caught Jeanie by the neck and ate her.

"My! isn't she tender and sweet," said he, smacking his lips. "I like her even better than her mother, and I thought Dame Cottontail was as juicy a rabbit as could be found. I must look up the other Cottontail girls now. They will be lonesome without Jeanie."

Then he started off, and before very long he came to the birch bark

house. He knocked at the door, and Nannie popped her head out of the window in the tower to see who was there.

When she saw the wolf she called down, "Go away! I am not going to open the door for you. You ate my father and mother, and now you want to eat me."

The wolf said, "If you do not open the door I will blow down your house." So he blew till the house fell over, and he caught Nannie by the neck and ate her.

"This beats anything," said he, smacking his lips. "What a lovely girl she is! I do think Nannie is even better than Jeanie was, and Jeanie tasted better

than her mother, and I liked Dame Cottontail ever so much better than Bunny Cottontail. I have always known that rabbit ladies are juicier than rabbit gentlemen. Now I am beginning to believe that the younger a rabbit lady is the sweeter she is. What a delicious tidbit Miss Lolo Cottontail must make! I must call on her and invite her to dinner."

So the wolf trotted over to Lolo's house and knocked at the door. Lolo was in her cabbage garden, and when she saw the wolf come run-

"Lolo was in the garden."

ning toward her house, she quickly ran in and locked the door behind her.

The wolf knocked. Lolo called through the keyhole, "What do you want, Mr. Wolf?"

The wolf said in his sweetest voice, "Oh, how do you do, Miss Cottontail? I called to invite you out to dinner."

Lolo called through the keyhole, "*Out* to dinner, did you say? I suppose you mean *in* to dinner."

The wolf was not at all pleased with this joke, but he made believe he did not know what Lolo meant. So he said, "I do not know what you mean, Miss Cottontail."

Lolo said, "What I do mean is that you are not going to eat me for your dinner. Do you understand that?"

The wolf did not give up hope yet. He said, "My dear Miss Cottontail, who ever told you that I would eat you? You are the last rabbit in the whole swamp I could ever think of eating."

Lolo called out, "Go away! You ate my father and my mother, and maybe you ate my sisters too, and now you have come to eat me. You may say what you like, I am not going to open the door for you. Besides, I would have you know that I have a telephone in my house and can call over to Farmer Hopper and ask him to send his big dogs around to chase you away."

Then the wolf got very angry and said, "You saucy snip of a Cottontail girl! If you do not open the door this minute, I will blow down your house."

Lolo called out, "You ought to be ashamed to call me names. Now I will not open the door at all."

Then the wolf blew and blew and blew and—blew so hard that he burst, and then, O wonder! Mr. Bunny Cottontail and Dame Cottontail and Jeanie and Nannie came out all safe and sound. Lolo looked out of the window, and when she saw what had happened she ran down and opened the door, and all the Cottontail family were together again.

Jeanie and Nannie felt ashamed at the way they had acted, and told Lolo so. But Lolo kissed them, and said she had forgiven them.

Then Dame Cottontail went to the kitchen to cook dinner, and Father Cottontail whistled a Virginia reel, and the three Misses Cottontail danced till dinner was ready.

For the Language Class

Let the children tell the story of this picture either orally or in writing.

A Double Acknowledgement.

The Story of a Teacher's Mistake.

By SUSIE E. KENNEDY, Rhode Island.

"Fritz, you may stand on the platform."

The boy looked up from his book, but did not move.

"Fritz Avery, I request you to step to the platform."

The boy addressed raised his head, and looked his teacher full in the face, but remained seated.

Miss Dunham was rather under medium size, but she had grit. Walking quickly up the aisle, she grasped the boy by the collar. Fritz allowed himself to be lifted from his seat and stood looking calmly down upon her from his five feet seven. As she attempted to move up the aisle with her charge, he gently passed his arm about her, and placed her in the seat he had just vacated. Then taking the book from her hand, he placed himself in her chair at the desk and called out the primary class to read.

The frightened children not knowing what else to do, were about to obey, when Miss Dunham, having recovered a little from her surprise, walked quickly up the aisle. With eyes blazing and voice trembling she said, "Fritz Avery, you are expelled."

The boy gave his teacher one searching look, then bowing politely he left the room.

There were examples to correct after the pupils were gone, and so the purple shadows had begun to gather before Miss Dunham left the school-house.

Her head ached and her heart was heavy. Fritz Avery was among her most promising pupils and one in whom she had always felt a special interest. Together with the feeling of disappointment in her pupil struggled a feeling akin to remorse. Why could she not have kept her temper? Why have allowed the whole school to witness her fall into the fault which had been the bane of her life? How could she ever correct any fault of her pupils now that they had seen her own weakness? But it had been such a provocation!

In spite of all her reasoning she was conscious of having lowered her own standard. The high hopes she had held of being a power for good among her pupils seemed to fade away into the purple shadows which were fast taking the place of the golden glow of the sunset. It seemed now as if they would never lift, as if she must live henceforth amid their purple depths.

She was obliged to pass the home of the Averys on the way to her boarding place. As she neared the house she saw Fritz coming down the walk.

"Miss Dunham," he called, "will you wait a minute, please? I would like to speak with you."

"I did not act the part of a gentleman," he said, stopping before her. "I have taken time to think it over, and am now ready to tell you that I am sorry. My father has taught me that all women are to be treated as I would like other boys to treat my mother.

"I shall tell the whole story to-night after the children are in bed, and I know that my mother

will grieve and my father will condemn. I will not ask you to forgive me, Miss Dunham, for such behavior does not deserve forgiveness. I would, however, like to say this for myself. You no doubt thought I had broken your rule about communicating, but I had not."

Miss Dunham opened her lips, but she could not speak. A great choking in her throat seemed to bar the way.

Fritz continued, "I am not going to pretend that I do not care about being expelled; I do care a great deal."

He stopped and gazed out into the west where the purple shadows were gathering. When he began again, his voice trembled.

"I feel the disgrace, not for myself alone. Father and mother have always trusted me, and little Tim—will never believe in his big brother again."

The words came slowly, but there was more to say, and he made himself go on.

"Miss Dunham, I have never told you, but if I had got along well this term my uncle was going to send me to the city to school in the fall. There are not many of the boys about here who get that chance, but uncle has plenty of means, and he knows how ambitious father and mother have always been for me.

"It is all over now, and I am going to settle down and forget my ambitions. Ambitions are not for such as I."

He was about to turn away when Miss Dunham placed her hand upon his arm. "Fritz, you shall come back to school you must come. I was in the wrong, and—"

Very gently did the boy displace the hand, as he said, "No, Miss Dunham, I shall not come. I have disgraced you and the school. I can never face those little ones again. I, the oldest pupil, should have set an example of deference to the teacher, but instead I insulted you before them all. No, Miss Dunham, my school days are over. To-morrow I shall go to work with the farm hands. Maybe I can behave myself well enough to be with men all the time."

"Fritz you shall not give up school. I will apologize. I will tell the children that I was too hasty, that you did not whisper."

He put out his hand deprecatingly, but spoke as calmly as before. "No, but I will go to-morrow morning, if I may, and make an acknowledgment before the school, and, if you will let me I will finish the term. Unless I am greatly mistaken, you will have no more trouble with me."

Miss Dunham saw that it would be useless to reason with him, so mentally resolving to carry out her part of the humiliating process, she bade him good-night and went home, to spend many sleepless hours in the attempt to overcome her chagrin that a boy fifteen years old should set her, a teacher of as many years, an example in nobility of character.

It was with some surprise that the pupils of Miss Dunham's school saw Fritz Avery walk up the aisle the next morning and take his seat as tho nothing had happened. When the opening exercises were over, he raised his hand. Being granted permission he stepped forward to the

place assigned him the day before, and looking down upon the astonished faces before him, spoke as calmly as tho reciting an ordinary lesson.

"You all saw my misbehavior yesterday. I have already apologized to Miss Dunham but I do not feel that I have done my duty until I repeat before you all that I am heartily ashamed of the whole matter, and I intend to become what, as the oldest pupil I ought always to have been, —a leader in all that is good and right. I want you to watch me closely, and if you see in me any want of deference to our teacher, I will thank you to remind me of my duty. I am old enough to know that our parents send us here to learn, and that Miss Dunham is doing her best to help us become noble men and women. The least we can do is to show her due respect."

At this moment Miss Dunham stepped to his side. "Children," she said, her voice trembling, with suppressed emotion, "Fritz is not wholly to blame. I spoke too hastily. He had not been whispering as I thought. He had broken no rule, and I aggravated him beyond endurance and without cause. Before the school I ask his pardon, and promise that I will try to be more patient with you all."

Miss Dunham was still teaching, when, ten years later, his college course ended, Fritz came to bid her good-bye, before entering upon his life work in a distant state. As she looked into his face and saw the strength of character, and steadfast-

ness of purpose stamped upon it, she felt exceedingly grateful that the better part of herself had conquered in the struggle between conscience and pride.

The Three R's

The Art of Penmanship.

By CHARLES T. LUTHY, Peoria, Ill.

THE first thing to be done is to get out of the minds of leading educators the erroneous idea that penmanship is beneath the dignity of mature and scientific attention. They seem to consider the art unimportant and of child-like simplicity. Seventeen millions of children attend the schools of the United States and are learning to write; the other sixty millions of her population either have learned or will learn. Is penmanship unimportant?

Is it of childlike simplicity? Let me answer this by copying from an article of mine in the *New York Sun*:

"Penmanship consists of form and execution, both of which are founded on movemental, visual, and geometric principles. The letters, therefore, are geometric forms, and, as all geometric forms are mathematically exact, penmanship, contrary to the prevailing opinion, is, as to its forms, a mathematically exact art. Let me explain briefly. An inch circle and a vertical inch square, if correctly made, are perfect geometric figures. Not a line, not a direction, not a proportion can ever be bettered; they are absolutely perfect. One is composed wholly of curve, the other of straightlines. Now erase the upper left quadrant of the circle and close up the gap with the corresponding quarter of the square, and erase the upper left quarter of the square and round out the gap with the corresponding quadrant of the circle. Are these figures less perfect, according to their designs, than the circle and the square? No. Likewise are the Roman script letters composites of curves and straight lines, and as they are geometric figures they are mathematically as exact and as exactly definable as the circle and the square.

"I have the fifty-two original plates thru which were developed the correct geometric analysis of the Roman script letters. With this analysis every teacher and every pupil can understand the make-up of the letters and can intelligently and exactly define them.

"The literal forms have geometric principles of their own underlying them that are as wonderful as are the trigonometric functions which apply to triangles. As these functions apply to a triangle, no matter how it is turned, so do the geometric principles apply to the letters, no matter whether they slant to the right or left, and to elevate a style of penmanship simply from the directional quality of a single line up into a system, shows a want of knowledge and a disregard of fundamental principles. There is and there can be only

one correct writing. This is not mine; I have simply discovered its principles."

As an art penmanship connects the useful with the beautiful. On one side it invades the geometric principles of lineal and superficial forms in common with mechanical drawing, architecture, etc.; on the other side it invades their higher principles of esthetics in common with drawing, painting, and sculpture.

Is the trigonometry of an art whose forms are mathematically exact, that is, conform to geometric principles, and which further conform to esthetic principles, and still further to movemental principles of childlike simplicity of little consequence?

The art is beautiful, wonderful, and profound, yet adaptable to all ages and all grades.

(To be continued.)

Word Drill.

My second grade was weak in word study, so I tried the following plan with good results: One morning I made on the board the picture of a tree without leaves. When the children came to the board they thought of words they wished put on the tree for leaves. These I wrote with green crayon, until the tree was full.

The next morning the children were Jack Frost and with the pointer they showed me words they wanted changed to autumn leaves, naming the word and telling what color they wanted it changed to, while I traced over the word with the color. Then the wind blew and each child named a word he wanted blown off the tree, pointing to the word also. In this way the word was named three times, written twice, and pronounced three times, and the children were helped in getting the words.

Reading in the Grammar School.

By CORA B. WHEELER, Maine.

THE need of cultivating good reading is especially apparent in the upper grammar grades. At a time when it would seem that teaching of reading might be reduced to a minimum, one finds special drill necessary.

The period of consciousness may account largely for the results.

To so conduct the reading lesson as to reduce the necessity for individual drill, would seem to be the remedy for embarrassment.

The lesson should not be at the expense of expression, however. Clear enunciation may be the object in view. To secure this vocal drill is of paramount importance. A mechanical drill will not suffice. To be a success the drill must be made to have feeling—life. The teacher must lead in this.

The standard must be high.

Pupils must be studied while they study their reading lesson. Whenever a certain method has served its purpose, a new one must be devised. I use the word "devised," for I am persuaded that the tact which can devise a method suited to the needs of a class, is the tact which will make a successful teacher of reading.

Whatever I may have received of inspiration, of appreciation, and of desire to excel, has come to me, I believe, thru interpretations of reading from my best teacher. The desire to read well has oft been born while listening to a good reader.

The old-time custom of reading in concert should be revived. Those patriotic selections which stirred the blood of those who have heard them should be made to live again.

Let them be read again and again, until the spirit possesses the wills of the readers.

If anything is worth reading it is worth reading well.

To be able to read well, aloud, is an accomplishment worthy of the effort expended.

If children were encouraged to read aloud at home, and were helped there to read the best and read it well, the results would be apparent. The best readers in a class have this advantage, as a rule.

With some it is an inherent tendency to read well.

If the physical offers no resistance the mental can accomplish much.

To "see," mentally, the thought, and to be actuated by a desire to reproduce it for the benefit of the listener, will furnish a worthy motive of expression. Selections read and reread in class, each time with renewed effort, not only familiarize the pupil with the mechanical part of the reading, and so reduce the self-conscious effort, but acquaint one with the "sentiment" of the author. The ability to discriminate is an important accessory to the reading habit.

The average pupil forms his taste for reading at an early age.

The school committee, the public library, and the teacher offer suggestions. The manifestations of the reader will reveal his taste.

Books adapted to his present need must be kept within reach of the pupil.

His tendencies must be noted.

His tastes must be recorded if one would help the pupil to choose the best.

This subject of reading is, to me, one of the most far-reaching in its influences. Not only how, but what, a pupil reads will furnish a means of character building.

The teacher reads; the pupils read; the pupil reads (when he wishes to).

Variety in conducting the lesson will prove productive of excellent results.

A new method for every day or every mood.

Teach, drill, test.

Let the pupil learn to read by reading.

Let self-consciousness be forgotten in the desire to read well.

Encourage criticism only in the kindest way.

Let the pupils talk much.

Let conversation lessons be frequent.

Whatever time can be so employed let it be given to reading by the teacher.

Let the devotional exercises be characterized by the reverential tone and attitude of the teacher.

Let memory gems be regularly recited.

Let the reading lesson begin in the morning.

By example and precept teach children the use of the voice—its value and worth.

Let music become a daily exercise.

Did you ever hear the tea-kettle sing?
You listen some day.
It sits close to the fire.
It says "Hm, Hm, Hm."
Then it sings louder.
It sings "Bubble, Bubble, Bubble."
Oh, I like to hear the kettle sing.
Do you?
We sing a song about the kettle.
We like to sing about it.
We say "Hm, Hm, Hm," just like the kettle.

How I Interest My School in Library Work

By Gladice M. Cummings, Wisconsin

ON entering a new school last fall I found that the children knew very little about their library. Being a lover of books myself I began to plan how I could get the school interested in library reading.

Fortunately the books had been well selected and a great many could be used for text-books and supplementary reading. Not having been used much they were in good condition.

At my request one of the oldest girls remained after school hours one afternoon, and together we cleaned the bookcase and recorded names and numbers of books. We arranged them according to subjects, grouping historical geographical, nature, fiction, etc., together.

After calling the children's attention to the appearance of the bookcase, I talked with them in regard to the care and value of a library.

I selected five books of general interest and assigned a chapter from each to be read by different pupils, telling them that they would be required to give an oral report of the same.

I wrote the program on the blackboard to avoid mistakes as to when they were to report, thus:

Morning	Subject	Pupil
Monday	Cod and Cod Fishing	Alfred H.
Tuesday	The Honey Bee	Louisa H.
Wednesday	Birds	Alma Y.
Thursday	How Matches are Made	Inga H.
Friday	Raisin Growing	Walter E.

As soon as one pupil has reported on his chap

ter the book is given to another, to prepare a report for the following week. Each Friday finds the new program on the board. I encourage friendly strife in seeing who can give the best reports.

The primary children may tell a fairy story or primary history story. (Do not slight the little ones.)

The results of my plan have been very satisfactory, for after a book has been reported upon, the children often ask to take it home that they may read it for themselves.

The parents have also become interested in the work, as I have overheard several say their parents are reading the book or have asked them to give their report at home. This pleases the children, and they are all ready and willing to report, for the greater the interest the greater the success.

We are still "giving reports," and are anxiously awaiting the new library books that we may devour their contents.

Drawing and Constructive Work

Freehand Cutting.

Story Telling with Paper and Scissors.

By ELIZABETH M. GETZ, Charleston, S. C.

UNTIL the child has become impatient with the necessary restrictions of freehand cutting, there is no form of graphic expression which is more valuable to him and none into which he enters more heartily. Children love it, therefore they do their best. In this way they grow.

The mental and spiritual growth that comes from untiring effort to do their very best every time, does not come with children from enforced effort; it must be whole-hearted and spontaneous.

Tasks that are lacking in interest are accomplished largely thru an effort of will; but it is the teacher's will, not the children's that is strengthened thereby. It is repeated and determined effort that is crowned with success. This effort the children make fully and freely in their cutting.

The child soon learns that in order to cut he must know definitely what he wants to express. His imagination is called upon to form a mental image, he must visualize clearly or there will be blank spaces in his work that cannot readily be filled in by meaningless cuts as is often attempted with lines in drawing.

A child who has learned to express something by a cutting will seldom cut paper or anything else without a definite purpose.

What a child fails to express in one cutting he will observe and remember for future use. He not only observes in order to correct past efforts at expression, but is constantly on the lookout for material for future work. It not infre-

quently happens that in a room where children are interested in cutting some child interrupts the history, geography, or reading lesson with an exclamation similar to this: "Oh, I see a picture there!" Is this not what all educators should strive to do,—store the mind with clear, definite, mental pictures? When this is being

accomplished there is little difficulty in teaching a child to read intelligently or to remember what he reads.

To consider carefully all the conditions of a problem before attempting its solution is a very important habit and yet not an easy one to form. The mental operations of cutting are analogous to the successful solution of a problem. To see the whole before the parts, to look for essentials rather than for unimportant details, and to think carefully are the natural results of practice in this form of expression. It is difficult to conceive of any fixed habit of thought in any special line not having its influence in all other mental processes, and when formed young enough, it must have some effect upon the moral as well as the mental development of the child.

The physical development is not unimportant. Mind and body work in unison, concentrated effort is required. The hand is occupied in working out the mental picture. It must be kept under control. Every cut must count; one careless slip of the scissors and the picture is spoiled. The child soon realizes this and works more carefully. This teaches definiteness of action in all manual operations. If, however, a false cut is made and the picture is spoiled, the

Oh, golden fields of bending corn,
How beautiful they seem!
The reaper folk, the piled-up sheaves,
To me are like a dream.—MARY HOWITT.

boy or girl is seldom found who does not of his own accord make another attempt. We have known a child to try earnestly as many as seven or eight times in order to make a cutting that he felt was his best.

The very limitations of the material serve, to a certain point in the work, to stimulate the pupil to greater exertions. It is in the effort to overcome the flat appearance of the surface that the child cuts out pieces to represent waves, or punches holes in the paper to represent stars. This is good. It taxes the ingenuity of the child, but when he is no longer satisfied with the results, or when he makes repeated efforts to represent distance, as in this illustration, it

*Little Mamma, the mother
Call the little of men together*

An effort to represent distance.

is much better to discontinue the cutting lessons and to give more frequent opportunity for expression by drawing.

It is just as necessary in graphic as in written expression to be thoroly acquainted with the subject. On this will depend much of the success of the lesson. If at any time there is some event of local interest to the children, as a parade, a street fair, or a circus in town, have the children tell you something of it by a drawing or cutting.

The following suggestions for graphic expression are given not only to be used by the teacher, but to serve somewhat as a guide in making other selections.

Home Life.—What does mother do to amuse the baby? How do you help mother on Saturday? Have you a cat or a dog at home? Do they know any tricks? You may show me how pussy drinks her milk. Has sister a bird? You may show me a picture of its cage. What did mother do to help you get ready for school?

School Life.—Do you bring a lunch to school? You may show me what kind of a lunch basket you bring. Did you wear on your head to-day a

*"When down came the blackbird
And nipped off her nose."*

hat or a cap? Draw its picture. Show me by a drawing what game you play at recess.

Community Interests.—Who lights the street lamps? Draw a picture to show the lamplighter. How do you get your mail,—does the carrier bring it? Tell me about this by a drawing. The baker, the shoemaker, the hay the farmer harvests, his crops, the blacksmith; the trains,

To illustrate the days of the week.

street cars, etc., are all topics of interest to children if presented in the right way.

"Who has seen the wind?
Neither you nor I;
But when the trees bow down their heads
The wind is passing by."

Show by a drawing some things that the wind does. Suggestions. It scatters the seeds; turns the mills, sails the boats, dries the clothes, bends the trees, etc.

My Week.

"On Monday I wash my dollies' clothes,
On Tuesday smoothly press 'em;
On Wednesday mend their little hose,
On Thursday neatly dress 'em."

On Friday play they're taken ill,
On Saturday something or other;
But when Sunday comes, I say, 'Lie still,
I'm going to church with mother.'"

The Song of the Wind.

"I've a great deal to do, a great deal to do,
Don't speak to me, children, I pray;
These little boys' hats must be blown off their heads,
And these little girls' bonnets away."

You may show me by a drawing something
funny that you have seen the wind do.

"I work and wait the whole week thru,
For Saturday and Sunday,
Then while I wonder what to do,
They're gone, and it is Monday."

"P. was a polly,
All red, blue, and green,
The most beautiful polly,
That ever was seen,
Poor little Polly."

How many have ever seen a parrot? You may
draw its picture, using colors to show how beauti-
ful are polly's feathers.

Who Likes the Rain?

"I," said the duck; "I call it fun,
For I have my little red rubbers on;
They make a cunning, three-toed track
In the soft cool mud. Quack, quack!"

Cut to illustrate:

"There were ten pigeons in a row,
Perched on a branch quite high."

Occasionally ask a riddle and let children draw
their answers.

"What shoemaker makes shoes without leather,
With all the four elements put together?
Fire and water, earth and air,
Every customer takes two pair." (Blacksmith.)

After this has been guessed or told, lead the
children to see how fire, water, and air help in
making the horseshoe of the iron which has been
taken from the earth.

Read Longfellow's "Village Blacksmith."

"As round as an apple, as deep as a cup,
And all the king's horses can't pull it up." (A well.)

"I have a little sister, they call her Peep, Peep,
She wanders in the water deep, deep, deep,
She climbs the mountains high, high, high,
Poor little thing she has but one eye." (Star.)

"We are bound in hard shells,
And each shell has a case,
Until Old Jack Frost
Thought he'd visit the place;
We are of many kinds,
We are black, brown, or white,
And searching to find us
Gives children delight." (Nuts.)

"I am as black as black can be,
But yet I shine,
My home was deep within the earth,
In a dark mine,
Ages ago I was buried there,
And yet I hold
The sunshine and the heat which warmed
That world of old." (Coal.)

Seasonable Blackboard Drawings, by W. E. Sparkes.

Nature Study and Geography

Nature Lessons.

By L. P. HOPKINS.

ENTERING a pleasant primary school-room towards the last of the spring months, I proposed to the young teacher to give the class a lesson on the wild daisy, a large bunch of which stood upon the desk before her. She seemed somewhat reluctant and thought there were not daisies enough to give each child one. I suggested that two children might observe one flower, but she still hesitated. I saw a crayon drawing of daisies on the blackboard which indicated a very superficial study of the flower, and was by no means a truthful representation of the structure and environment of the plant. I spoke of this and she admitted that she was not very clear in her knowledge of the daisy and made that from a printed copy and not from the plant itself; it was intended as an ornament for exhibition and to decorate the blackboard. She said she had never studied the flower and did not know how to classify and describe it. However, she said she would try to give a short lesson, if I wished.

She distributed the daisies in the vase, and then, holding up one so as to present the blossom as if it were a face, she pinched the involucre about the golden head and told a short story about a little girl named Daisy who went to walk in the fields with her sun-bonnet on, her white ruffled sun-bonnet like this (turning the golden head about in different directions). "This little girl," she said, "had pretty golden hair and a wide green and white pointed collar which you see when you take her bonnet off; she went dancing about in the grass and the wind blew her white ruffles, and she met ever so many more little girls nodding and dancing with their slender forms and green fluttering dresses and golden hair shining in the sun. They had a lovely time playing hide and seek at the party, and at last they covered their faces up with the white points and fell asleep, and the dew came down and gave them drink, and washed their faces all fresh for another day."

The children evidently enjoyed this story, and the fancy of the daisy as a little girl, but what had they gained from such a lesson, in observation, or in scientific methods of study? What unfolding of any of their powers of reasoning, or even of spiritual perception? Only the imagination had been appealed to. It was a lesson possibly for a kindergarten morning talk, or a play hour, but not in any sense a scientific exercise. I did not wholly condemn it as a relief from the

regular work, but asked why she did not introduce something of the structure of the flower, and call attention to its composite character and make a point of classification. The young teacher said she really didn't know anything about it herself, that they didn't get as far as that family of plants in the high school, and had never taken it up in the normal school. After giving the class a brief lesson to bring out the distinctive features of the flower and develop the observation and comparison of the children with the flower in their hands, I left the school with a renewed sense of the need of trained teachers in this branch if anything like scientific habits of observation is to be cultivated in the schools.

PLANT LESSON IN A PRIMARY SCHOOL.

Here is a sketch of a plant lesson given in a primary school, which I considered profitable as well as enjoyable:

A potted lily with large leaves is in the window, also a potted growing violet, with its cluster of heart shaped leaves hanging outward. The two plants are placed before the class. John brings a pitcher of water, and Mary a sponge filled with water. While the class is looking on, John pours gently some water on the lily plant; it trickles down upon the surface of the leaf, and

runs in the deep channels of the leaf-veins down to the center of the plant. Mary squeezes her sponge high over the violet plant, and the drops trickle down from the base of the leaves over the blade toward the drooping points from which they drip to the ground in a circumference corresponding to the spread of the plant. What is the water for? It is to give the plants drink. What part of the plant has little mouths that can drink? The ends of the roots. Which plant has a root in the center just below the stem? The lily. How is it with the violet whose leaves shed the water all around it? It has a spreading root. Why then are the lily leaves deeply channeled to the stem which comes directly out of the bulb? Why are the violet leaves drooping over with pointed ends? The wise contrivance, the conformity of structure to function, the providence of God who made all, is thus brought out.

Studies of North America

A Series of Lesson Outlines by Adelaide R. Pender, Connecticut

(To be used with any geography.)

Size.

To the Pupils.—Turn to the tables in the back of your book and find out how large in square miles North America is. Compare in size with the other continents. Compare the size of the United States with that of Canada. How many square miles in your own state? How many of your own state would you be able to make from North America? The United States? Think of a mile in any direction, then of another mile at right angles to this. Try to think a square built on these two miles. This will help you to think a square mile. Close your eyes and think a square mile in this way.

Where is the greatest width in North America? In the United States? Where is the greatest length in both these divisions? What is the general shape of North America?

Use the scale of miles and tell how many miles along each of the coasts.

Draw the map roughly and the other continents in the same way to show comparative difference in size.

Location.

To the Pupils.—In what hemisphere is North America? What direction is it from each of the other continents? Point to each of the other continents. Stand and face the directions.

In what zone or zones is North America? The United States? What tropic passes thru North America? Trace that tropic across all the continents. What circle passes thru North America? Trace the circle and name places on it.

How many degrees long is North America? The United States? How many degrees wide? What parallels bound the United States? What meridians near its eastern and western extremities? What parallel is near your own town? Trace on the map your own home parallel around the world, naming places passed thru. Trace the meridian that goes thru your state. What other places does it pass thru? Trace the meridian from which the longitude in the U. S. is reckoned. How many degrees are you from it?

To the Teacher.—Have these parallels and meridians traced again and again until the children can name places with their eyes shut. This splendid exercise will help in all future work.

Outline.

To the Teacher.—There are certain indentations and projections on the outline that must be learned, and drill, drill, drill, is the only way to fix them. This drill should be carried on by means of the maps and globes until the pupils can close their eyes and see the coast as plainly as they can the continent as a whole. Let the pupils use their pencils while they point and trace. Some of these drills are given below.

Name all the prominent indentations and projections in order about the continent. Name all the gulfs, bays, islands, capes, peninsulas, isth-

muses, straits. Of what state or country is each a part?

Name all the indentations and projections on the southern coast; the northern coast; western; eastern; the coast farthest from us; nearest; on the largest ocean; the smallest.

What are the largest bays, islands, peninsulas, etc.?

Name the smallest gulf; the largest; smallest ocean; largest. Where are most of the islands and why?

What sea is near Alaska? Gulf near Florida? Bay near Labrador? Ocean nearest Chicago, Denver, or Cincinnati?

What cape is off Florida? Massachusetts? California on the south?

What is the commercial importance of each indentation or projection?

Is the coast of North America regular or irregular as compared with other continents? Account for irregularity, and where it is most regular and least, etc.

Compare the outline with other continents in respect to length, importance commercially. Suppose North America had a coast with no good harbors or bays, what effect would this have had upon the race? Name all effects.

Learn to spell indentations and projections.

Have you ever heard of any these indentations and projections in your historical work? Watch daily papers for references to any of them.

Surface.

To the Pupils.—Turn to the relief map of North America. Let us see what the surface story of North America is. Draw your fingers down the side where there are the most mountains massed; draw them down another side where there are mountains; run them over a place where there seem to be no mountains of any size. Close your eyes and think the surface map as a whole—the highlands on the west, on the east, and the great central plain.

Go to the board and sketch a rough map of North America; draw a few lines to show the mountains. Use the back of the crayon to show the great central depression. Close your eyes again and think the relief map. What do you see? I shall ask you to refer to this relief map often because it is going to help you understand the surface of North America better.

Look on an ordinary map and find the name of the mountains that are next the great central depression on the west. Let us trace the Rocky mountains from Alaska to Texas. Here is a plateau averaging more than a mile above sea level, from which lofty peaks shoot up into the air still higher. Imagine yourself above the peaks and look down; close your eyes and think of yourself as sailing over the Rockies, parallel with them, from Alaska to Texas. What do you see?

What is the highest mountain near your home?

What is the highest one you have ever seen? What did you see when you stood on a high mountain or a very high hill and looked down? You would see more from the Rockies and on a larger scale, but the general features are the same. Snow-covered peaks, deep valleys filled with vegetation, many fir trees, long, winding ravines in the valleys, and lakes. Do you like the picture?

Let us look in the supplement of our geographies for the names of some high peaks we will see on our imaginary journey:

Mt. McKinley, Alaska—20,464.

Mt. Logan, Canada—19,539.

Mt. St. Elias, Canada—18,024.

Fairweather, Alaska—15,292.

Longs, Colorado—14,271.

Holy Cross, Colorado—14,176.

Pikes Peak, Colorado—14,147.

Fremonts, Wyoming—13,576.

Let us turn to the map and locate those peaks again and again with our pencils until we remember just where they are.

Do the Rocky mountains include all of that highland mass on the west of our great continent? Let us see what the coast relief story is. Find on the map the names of two Pacific coast ranges. What are they? Run your pencils over the coast range and the cascade which ends in the Sierra Nevada range. Which of these is the rim of the great plateau? Close your eyes and think of the great plateau over a mile high with an eastern rim, the Rockies, and a western rim, the Sierra Nevada—Cascade. Draw at the board something that suggests this plateau with rims. If you can think of this plateau with rims you will be able to reason about certain conditions within it later on.

Turn to the supplement again and find the names of peaks that shoot up from the western rim of the plateau:

Mt. Whitney, California—14,898.

Mt. Rainier, Washington—14,444.

Mt. Shasta, California—14,440.

Mt. Hood, Oregon—11,934.

Let us locate these again and again until we can see them with our eyes closed.

In the Cascade range there are remains of old volcanoes with lava sides. Let us close our eyes and look down and see the picture presented by these lava-covered mountains.

You have seen in imagination our plateau with its rims. Now between these rims what is there on the relief map? Yes, an inland basin. Trace with your fingers this great basin on the relief map, and then find what states it covers. What becomes of the rivers here? Can they go out over the rims? There are only two things they can do—either dry up or enter lakes where they evaporate. By and by we will learn more about these lakes and rivers. What does the book tell you about Salt Lake? Close your eyes and think this picture. Imagine yourself looking down on Great Salt Lake.

Put your pencil on the Colorado plateau. What have the rivers done here?

Put your pencil on the Pacific slope. We have already found the coast range. What is there in the depression between the Sierra Nevada

and coast range? Draw your pencil down the long, narrow valley of California.

Let us see if we have a clear mental picture of this western highland now. Close your eyes while you think as we name several times—the Rocky mountains as the eastern rim of the plateau, the Sierra Nevada-Cascade as the western rim, between these the Great basin, between the Sierra Nevada and the Coast range, the long valley of California and the Pacific slope.

Now we will turn to the Appalachian system. Run your pencil up and down this long system. Notice any difference between this system and the Rocky mountains.

Find detached groups of peaks or mountains. White mountains (Mount Washington); Green, Adirondacks. Find the Blue Ridge; Mount Mitchell.

Draw your pencil along the long fertile valleys. Show with your fingers the slope from the Appalachian highlands to the Mississippi valley.

Trace with your fingers the Atlantic coastal plain. Where is it highest? Where lowest? Widest? Narrowest?

Have you ever been to the shore? If you have, your idea of the coastal plain is correct. Think something very much larger. Trace the Gulf coastal plain.

Let us find the prairie land. What states does it comprise? What kind of soil? Find the western plains—trace. What states in these?

The cover of a book of geographical stories, made by a pupil of the eighth grade of a public school at Watertown, Mass.

Let us turn to the map and drill on the surface until the picture is ours.

Height.

Can you think of anything a mile high? What is the very highest object you have ever seen? What is the highest object in your own town?

Now how much higher than this object is Mt. McKinley or Pikes Peak? We cannot realize height like that, can we? If you ever go to the Rocky mountains and see those lofty snow-covered peaks you will appreciate high altitudes, and you will think the little hills with which you are familiar are mere pigmies.

A Southern Teacher's Nature Study Notes

By Marie Hardel, New Orleans, La.

Miss Hardel has given TEACHERS MAGAZINE her Nature Study note-book, exactly as she arranged it for use with her pupils in Louisiana. The editor has selected the notes on "The Orange" for the present number, because it is suited to any month of the school year. It is planned to accompany the double-page chart, which forms the center of the magazine.

Notes upon the growth, cultivation, etc., of rice, the butterfly, sugar-cane, seeds, the cocoanut, the cypress, and the frog, will be given later. These lessons, taking up the nature studies in accordance with the observations of a teacher in the South, will be of value to Southern teachers, but even more so to teachers and pupils in other sections of the United States and other countries.

The Orange.

Varieties.	Branches.
Home.	Leaves.
Soil.	Flowers.
Propagation.	Fruit.
Care.	Uses.

There are two principal varieties of the orange, the bitter and sweet. The citron, lemon, and lime belong to the same family as the orange.

The orange grows in tropical and sub-tropical countries, generally no further north than the thirty-first degree of latitude.

The soil must be rich and alluvial. Oranges can be grown from the seed, but better results have been obtained by grafting on sour orange stock. If grown from a seed the tree must be seven years old before it will bear, but grafted trees have been known to bear fruit before they have been growing six years. Under favorable conditions, orange trees will continue to bear uninterruptedly for a long time.

There is great uncertainty in fruit grown from seed trees, as the fruit produced is often inferior to that from which the seed was taken. By grafting the tree produces earlier, and it can better withstand the attacks of insects; the trees are also less susceptible to root diseases.

The orange tree needs careful pruning. Washes of lime or wood ashes and water should be applied to prevent the attacks of insects.

The branches or shoots of sour orange trees have sharp spines (thorns); sweet orange trees are destitute of spines.

The leaves are a bright glossy green. They are large, oval shaped, and pointed at the end. The leaf is compound, as it is composed of a broad leaf and a small fleaet which grows between the stem and the leaf proper. The leaves are opposite or alternate in manner of growth. The blade has transparent dots or glands resembling punctures, which contain a pungent, aromatic oil.

The flowers, which are white and very fragrant, appear in summer. The petals vary from four to eight in number, altho the usual number is five. The petals are very thick. The stamens

are numerous. The pistil is sometimes single, sometimes compound. The ovary contains many cells, and develops into a large, many-sided body.

The fruit varies in shape, being flattened, elongated, furrowed, or with conical protuberance at the apex. The color varies from golden yellow to deep orange or even blood color. The rind is aromatic and closely dotted with oil cells. The fruit ripens fully in the spring following the summer in which the flowers appeared; but can be harvested from November to May.

Both fruit and leaves are used medicinally. Oil is obtained from the tender shoots, leaves, and rind. Delightful perfumes and oils are obtained from the flowers.

The wood is of a fine yellow tint, hard and close-grained. It is valued by cabinet makers and turners for inlaying and for making small articles. The wood takes on a good polish.

From the bitter, or Seville oranges, marmalade is made. The sweet orange is highly esteemed as a dessert.

HISTORY.

Few if any trees can boast of a more ancient and honorable lineage than the orange. Its original home was undoubtedly India, whence it spread westward over Asia, Africa, and Southern Europe, principally thru the agency of the Arabs, who discovered it as early as the ninth century.

Mandarin orange from Florida, one-half natural size.

From Spain it was carried into the New World by explorers and missionaries. This variety was the bitter, sometimes called the Seville orange.

The sweet, or China variety, was introduced into Europe by Genoese or Portuguese merchants, and reached our shores in the same way as its more acrid predecessor.

Mandarins are small flattened oranges in which the rind separates very readily from the pulp. These oranges are very sweet.

Florida and Louisiana are noted as producers of oranges which are particularly sweet and juicy.

The Humming-Bird.

By BERTHA WILLIAMS.

A flash of scarlet,
A glint of green,
A gleam of yellow
And golden sheen;
A whirring and whizzing,
A buzz and hum,
A dart and quiver,
A glance—'tis gone!

The Whippoorwill.

By ANNIE GARLAND, Canada.

THE whippoorwill is commonly recognized by his note and not by plumage, as he is very seldom seen. He is a nocturnal bird and very shy. He lives in the woods and sings at twilight and at evening time. Nearly every one has heard of the song of the whippoorwill tho few may have seen him. His song consists of three notes and sounds as if the bird

were calling whippoorwill, whippoorwill, whippoorwill. In the twilight the clear, plaintive cry is very attractive. There are a great many superstitions connected with the song of the whippoorwill. Some believe that it is an omen of evil when heard near a house.

The nighthawk is frequently mistaken for the whippoorwill. It is a smaller bird, however, and cannot sing. It is also to be seen in the daytime as well as in the evening.

DESCRIPTION OF PARTS.

The bill is short and curved. The head and back are dusty brown and fawn.

The breast is a dusty, sheeny brown and fawn.

There is a white fringelike collar just below the throat.

The wings are brown with fawn bars.

The tail is brown and grey with some white feathers. It is long.

The legs are very short.

The plumage is very soft and has much the same appearance as the wings of a moth.

HABITS.

The whippoorwill builds no nest, but lays its eggs on the bare ground or on a decayed log. The eggs are dark in color, in fact, very much the same color as the bird or a log.

The whippoorwill lives entirely on insects which it catches while on the wing. It flies with its mouth open, and has whiskers which act as a strainer in catching insects.

The whippoorwill has a peculiar way of sitting lengthwise and not crosswise on a perch.

Summer Crowd at Asbury Park, N. J., America's famous seaside resort.

Here the convention of the National Educational Association will be held July 3-7. (See announcements on another page.)

Children of Other Lands

Simple Geography Lessons by Dorothy Wells, New Hampshire

The Boys and Girls of China.

WHEN a little baby comes to a home in China the father and mother are very glad, just as fathers and mothers are in the United States. But there are many, many poor people in the great Chinese Empire, and they find it hard to earn enough money to pay the rent of their houses, and to buy food and clothing. For this reason, if the baby is a boy they call it a great happiness. They know that when he grows to be a man he will be able to work and earn money to take care of himself, and perhaps of his father and his mother too. If the baby is a girl they call it a small happiness. While they are glad to welcome the little daughter, they know that she will need dresses and food and many other things that cost money. Then when she is grown up she will marry and go away from home. In China after a girl is married she belongs to her husband's family, and is lost to her own father and mother.

When the baby is a month old its head is shaved. If you want to know what it is like, you need only to look at a Chinese or Japanese doll. The babies look just like these dolls.

All friends of the family are asked to take dinner with the new baby, when the little one is a month old. Everybody must accept the invitation if possible, but at any rate must send a nice present to the parents.

Sometimes we see in our country Chinese names such as Ah Lee, in front of laundries or over stores. These seem very queer to us, they

are so different from American names. The Chinese girls often have very pretty names, however, such as Beautiful Autumn, or Charming Flower. Li Hung Chang was a wealthy China-

Little Chinese gardeners. For this charming photograph TEACHERS MAGAZINE is indebted to Miss Jean Hazleton Brown, of Foochow, China. The children are pupils in her school.

man who visited our country several years ago. His name means Fragrant Palace. Mr. Wu Ting Fang, Illustrious Bird, was the Chinese minister at Washington for a long time.

A Chinese child is said to be one year old when it is born. Its birthdays are reckoned from New Year's day. When it has passed its first New Year's day it is two years old.

In summer, the baby wears only a pair of shoes and a single piece of clothing around the chest. In winter he has thick quilted cotton trousers, that make him look very clumsy, but keep him pretty comfortably warm.

The Chinese children as well as grown people, live principally upon rice, with some vegetables. They eat no bread, and the poorer people have meat only on holidays. They have no knives or forks, but they eat their rice with chopsticks. These are two long straight sticks, which are held between the first and second fingers. The rice is taken up between the sticks and so lifted from the bowl to the mouth. If you think this is easy, break open a clothes pin, and try to eat your oatmeal some morning with the two pieces.

Almost the first little game American mothers play with their children is "This Little Pig Went to Market." Chinese mothers play a simi-

Chinese Children of Miss Brown's Kindergarten, at Foochow, China.

lar game with their babies. Taking hold of the toes one by one, the mother says:

This little cow eats grass,
This little cow eats hay,
This little cow drinks water,
This little cow runs away,
This little cow does nothing,
Except lie down all day,
We'll whip her.

As she says, "We'll whip her," she pats the little bare foot.

When the American boy is old enough, he puts on trousers. He feels that he is almost a man. When the Chinese boy is about five years old he feels that he too is getting large enough to show that he is a big boy. He cannot make any change in dress, for he has always worn trousers, but he can have a queue. So one small strand of hair is allowed to grow as long as it will, and is braided into a small pig-tail, which hangs down behind and bobs up and down as he runs about and plays.

His queue is very useful. When two boys play horse in this country, one boy is harnessed with a pair of reins. When two Chinese boys play horse, the driver drives the horse by the pig-tail.

There is a game called "Queue" which the boys are fond of playing. It is really a Chinese form of tag. In this game, any boy caught with his queue hanging down his back may be tagged and slapped. The boys dance about with their queues thrown over the shoulder. Suddenly a boy throws his back into place and the others all rush to catch him. If he gets it over his shoulder again before the others can touch him he is safe. If they reach him first, he must take his slaps as good-naturedly as he can.

Chinese children have as many, and as delightful games as we have. Mr. Isaac Headland, who has written a charming book called "The Chinese Boy and Girl,"* tells about a game he saw played by several little girls in China, called "Pat your hands and knees." The girls sat down in pairs, as we would to play "Bean Porridge Hot." They clapped hands to the following rhyme.

Pat your hands and knees,
On January first,
The old lady likes to go a sight seeing most.

Pat your hands and knees,
On February second,
The old lady likes a piece of candy it is reckoned.

Pat your hands and knees,
On March the third,
The old lady likes a Canton pipe I have heard.

Pat your hands and knees,
On April fourth,
The old lady likes bony fish from the north.

Pat your hands and knees,
The fifth of May,
The old lady likes sweet potatoes every day.

Pat your hands and knees,
The sixth of June,
The old lady eats fat pork with a spoon.

Pat your hands and knees,
On August eight,
The old lady likes to see the lotus flowers straight.

Pat your hands and knees,
September nine,
The old lady likes to drink good hot wine.

Pat your hands and knees,
October ten,
The old lady, you, and I, may hope to meet again.

China is the paradise of kite flying. Men as well as boys take great delight in this pastime. Kites are of all sizes, colors, and shapes. Once a year kite-flying day is celebrated. The sky is full of dragon-shaped, fish-shaped, animal-shaped, and other kinds of kites. Often a boy and his grandfather may be seen flying kites together. There is a great rivalry as to which shall have the oddest kite or the one that will fly highest.

New Year's, which is everybody's birthday, is the great holiday of the year. It is the Fourth of July of China. The boys rise early to fire off their crackers, and fire-works are going all day long. It is a glorious time for the Chinese boy.

When night time comes in China, mother or nurse puts the little folks to bed, but not into soft little beds like yours. The Chinese sleep on beds of brick and on pillows stuffed with bran, without pillow-case or sheet. They sleep just as well in their beds, as you do in yours however, and they wake in the morning as happy as any

American children, ready to greet each other with a cheerful "Chin chin," for "Good Morning," or to shake hands with themselves, showing how glad they are to see their friends again.

*The writer of this article is indebted to Mr. Headland for much of the material given here. "The Chinese Boy and Girl," is published by the Fleming H. Revell Company, Chicago. It deserves a place in every primary school-room.

The Household Arts in School

The St. Louis Plan of Domestic Science

A Lesson Outline by LISBETH M. GLADFELTER, St. Louis.

Lessons Preparatory for Cooking.

Personal preparation.

Care of body, hands, nails, hair.

Clothes, plain, cotton, clean.

Special cloths, cap, sleeves, apron, holder, hand towel.

Study of kitchen utensils, names, places, care. Teaching arrangement of drawers, closets, and compartments.

Cloths and towels used.

Linen glass towel, dish towel, dish cloth, dish mop, cloth to wipe tables. Flannel squares for polishing metals.

Two floor cloths.

Scope of work.

Study of foods (not trade of cooking) study of plain sewing (practice of different stitches), study of emergency work (nursing and care of the sick), and sick diet, general housework (care of lamps, dish-washing, dining room and bed room work).

Time—Two years—(80 lessons)—1½ hours each, VII. and VIII. Grades.

Examinations written, semi-annually. Practical, unaided preparation of some previous lesson.

Practice in measuring weights and measures. (All measures taken level.)

(One-half tablespoon obtained by lengthwise cut.)

(One-quarter tablespoon by cross cut back of true half.)

Review tables of liquid and dry measures and avoirdupois.

Comparison of weight and volume, using water, flour, butter, sugar, rice, etc. Weight of one dozen eggs.

Rule. Sift dry materials before measuring.

Suggestive notes on preparatory lesson.

(Work well done by teacher in this lesson makes lessons which follow much more orderly and systematic.)

Try round holders.

Sew two tapes to apron waist band; fasten holder to one, to the other the hand towel.

Each pupil should

have note book and pencil. Teacher's note book should exactly record all taught. The practical value of fractions appeals to the child as never before, if this lesson be well taught. Children should leave the kitchen impressed with the value and beauty of order and system.

At each lesson there are three girls appointed to do the extra tasks besides their regular lesson for that day. These girls are called the housekeepers, their duties being as follows:

First housekeeper.

Attend to the fires. Wash zinc and floor cloth. Fill hot water reservoirs and tea kettle, and at end of lesson empty and wipe dry. Take charge of any extra pots on stoves and of ovens for all baking. Rub stoves with dauber and polisher.

Second housekeeper.

Dust the room, wash the dust cloth, take care of teacher's table, take care of dressers and blackboard. Take care of supplies, lock and unlock compartments.

Third housekeeper.

Take care of sink. Empty sink strainer, scrub with hot soapsuds, polish faucets, wash the cloths used. Take care of ice-chest. See that towels are hung evenly on racks.

These officers are changed at each lesson. Such work gives each girl a chance to practice general housework. The work never interferes with a special lesson, as the first two housekeepers do most of their work before the lesson, and the third one remains a few minutes after the lesson if her work is not quite completed.

Cooking Class in Locust Valley School, Nassau county, L. I.
Dr. J. S. Cooley of Glen Cove is the county superintendent.

The Palace of Knowledge

A School Exercise by Lucia B. Cook, South Carolina

Five or
six children
stand in line.
Let numbers one
and two hold a reader
between them. Number

two with his other hand assists number three in holding a history, and so on, making an unbroken chain of children and books. The books represent doors, and behind them sits Knowledge, a child wearing a crown and holding a scroll. Another child stands outside the doors.

Child.—

Very funny doors are these,
Knowledge come unlock them, please
Is this not your castle wide?
I would like to peep inside.

Knowledge.—

Every door leads up a stair.
Many wondrous things are there.
Tho the steps are steep and slow,
It will pay you, child, to go.

Child.—I'll climb the stair of literature.

Taps reader with knuckles. Children holding reader reply.

Child.—

Thoughts that live and cannot die,
Throb within my mansion high.
Thoughts that move to nobler deeds,
Every human eye that reads,
But you cannot ope and see,
Till you bring the magic key.

Child (in disappointment).—

Since no magic key have I,
Door of history I'll try.

Knocks at history book. Children reply

Heroes long with laurels
crowned,
Past my barriers are found.
Flag of truce and battle song,
Treasured up for ages long,
Tales of valor and of sin—

Child.—

Open, door, and let me in.

Door.—

Never may my hinges swing,
Till the magic key you bring.

Child knocks at Geography's door.
Geography replies.

Geography.—

Earth and stars and surging
sea,
Locked within my portals be.
O'er this lovely planet wide,
There is so much we should
know,

Of our common home below.
So I charge you day by day,
Don't neglect my words for play.

Teacher.—Come in, Mr. Arithmetic!

Enter Mr. Arithmetic with book, etc.

Arithmetic.—

Many boys and girls complain,
I'm perplexing to the brain.
It has ever been my rule,
To make people think at school.
Studious thought shall overcome
Every hard and tedious sum.
I am practical, you see.
You had better learn of me.
You will oftentimes be sad
If you do not learn to add.
Just suppose you couldn't tell,
What the time was by the bell.
S'pose you ate your birthday pie,
Wondering, "How old am I?"

Teacher.—Come in, Mr. Eyes and Ears!

Enter child.

Child.—

Some one said long years ago,
Some one, too, who ought to know—
Best of teachers, and most wise,
Are a boy's own ears and eyes.
Books may close and school days end,
Eyes and ears will still befriend.
Take your books and con them well,
Learn to read and write and spell,
But of all your teachers wise,
First stand Doctors Ears and Eyes.

Simple Outline Drawings.

Pieces to Speak

for the
Older Children

The Old School.

When the last long line has passed from sight,
And the footsteps echo away,
I often sit at my desk and muse
Alone at the close of the day;
And I think of the children of other years,
Who, under my loving rule,
Have morn and night passed in and out
The halls of the dear old school.

And oft, in the short December days,
As I sit in the quiet room,
When all of the children are gone away
Young faces people the gloom;
Right there is the seat where Roy once sat,
Who went in the fragrant June;
I laid a rose on his heart and wept
That Roy should be called so soon.

And there in the self-same row sat Clare
Of the brown and serious eyes;
They tell me an honored name has Clare,
In her home 'neath southern skies;
And here sat Guy, of the radiant face,
Oh, the tears will fall, I own,
When I think of Guy, our soldier boy,
Who died in the far Luzon.

Ah, sweet and sad the memories
That cling to the dear old room,
And oft my pen forgets to move
As I sit in the early gloom;
And I bless the children, one and all,
Who, under my loving rule,
Have morn and night passed in and out
The doors of the dear old school.

—CARRIE SHAW RICE.

Song to the Trees.

By BLANCHE A. JONES.

This song was written for use at the Arbor Day exercises of the Pittsburg (Pa.) high school. It may be sung to the familiar "Italian Hymn," to be found in all church hymnals, or to "America."

Joy of our childhood days,
"Buckeye," to thee we raise
Glad some our song.
Thy nut so smooth and brown,
Thy shadowed, leafy crown,
Thy petals floating down,
Loved have we long.

King-like thy majesty,
O sov'reign tulip-tree,
Stately thy mien!
Of noblest lineage thou,
Royal thy flower, thy bough;

Quivering thy leafage, how
Wondrous of sheen!

Lift thy fair boughs on high
Gracefully to the sky,
Elm of our land.
Washington's shelt'ring tree,
Dear is our love to thee;
For home and liberty
Evermore stand.

Might of the forest thou,
Oak of the gnarled bough,
Hail, hail, all hail!
Rocked by the tempest vast,
Torn by the wintry blast,
O'er thee, Old Oak, steadfast,
Naught shall prevail.

Maple Seeds.

Curious things, with odd-shaped wings,
The sweet May-time to the maple brings;
Over our heads,
On slender threads,
Idly flapping their crimson wings.
Each tiny pair suspended there,
Swaying about in the soft spring air,
Seems to the eye
Longing to try
Its wings abroad in the azure sky.

As I lie, with half-shut eye,
Watching their feeble efforts to fly,
Other fair things,
Soon to have wings,
Rise unbidden before mine eye.

From this life's things, its storm and stings,
Longing to haste with heavenward wings,
Waiting to die,
Waiting to fly,
Only waiting to use their wings.

Come twilight gray, that clears away
The misty dreams which o'er me stray;
Naught now I see,
Save the maple tree,
With its winged seeds forever at play.—*Selected.*

Smile.

Smile, once in a while:
'Twill make your heart seem lighter;
Smile, once in a while,
'Twill make your pathway brighter.
Life's a mirror; if we smile
Smiles come back to greet us:
If we're frowning all the while,
Frowns forever meet us.

—NIXON WATERMAN.

With Lewis and Clark.

"A LITTLE CHILD SHALL LEAD THEM."

By LOUISE BEECHER CHANCELLOR, Paterson, N. J.

NOTE.—An infant and its mother accompanied the Lewis and Clark expedition from the Mandan country to the Pacific coast and back; during this time not a life was lost.

Little brown baby of long, long ago,
Columbia's children your story should know.

Unheard your name is,
Unsung your fame is!
Gladly we pay now the tribute we owe.

Bleak was the winter when Lewis and Clark
Reached in Dakota the site of Bismarck;
No city flourished then,
Indian camps housed our men,
While on the frozen flood none could embark.

Thru the cold season the voyagers stayed,
Bitterly grieving to be thus delayed
Grudging the hours spent
In the snug Mandan tent
While for the great river's thawing they prayed.

There as they waited the coming of spring
God sent the dreary camp such a dear thing,
One hundred years ago
Came baby Charbonneau!
'Tis of this little brown baby I sing.

Sacajawea, the Bird, was his mother.
Stolen away from her tribe to another,
She had become the bride
Of the French-Indian guide,
And hers were secrets known to no other.

Who else the source of the rivers could tell
Down in this land where fate led her to dwell?
Who but she could describe
Trails of the mountain tribe
Or speak their language she once loved so well?

Lewis and Clark for their guide, you must know,
Hired the clever half-breed Charbonneau.
Then they heard from his wife
Tales of her early life.
"With us," they cried, "babe and mother shall go!"

Springtime at last made the waterway clear.
Then who so happy as Sacajawea!
Up rose a joyful shout,
Boats and canoes set out
To claim the West for our country so dear.

Proud was the mother, in softest furs wrapped,
Little pappoose on her back safely strapped.

Such a fine cradle, too,
Made the light bark canoe
Dancing along by the silver waves lapped!

Thirty-two men formed that party so strong.
Count him not weakest, the baby along.

Ah, you shall know at length,
In him lay all their strength!
Who journeys with a child plots nothing wrong.

When hostile Indian bands lined all the shore,
Angered at pale faces ne'er seen before,
Gently the mother's art
Re-assured every heart,
An "open sesame" to every door.

For such a talisman lay on her breast,
Softly appealing to all that is best.
Angry suspicion dies,
Lulled by a baby's cries,
And where he travels, peace follows the guest.

High over mountain tops covered with snow,
Down the dark canyons where deep rivers flow,
Three thousand miles or more
To the Pacific shore,
Dear little baby, how far you did go!

Miracles on our frail human lives rest,
And thru you, baby, peace claimed the North West.
Rivers and mountains wild
Harmed not the little child,
Carried where man's footsteps never had pressed!

Brave little voyager, our love you claim.
Child of the North West, let that be your name.
So shall we sing of you,
Telling your story true,
That it may live in the record of fame.

July and August are vacation months. TEACHERS MAGAZINE will publish each year ten beautiful numbers like the present one.—Then follow two months of planning for the new volume with incidentally a week or a fortnight of absolute rest from editorial cares, if all goes well. The next number will reach you in time for the opening of school. It will be full of the best obtainable material and in attractiveness shall surpass if it can, even this number. Of course, you'll be with us. If you have not yet sent in your subscription for the new volume don't delay it any longer. We want you with us. Write this day.

Preparing a Corner of a School Yard for the Garden.

TEACHERS MAGAZINE is indebted for this photograph to the Cleveland Home Gardening Association, which is a pioneer in school gardening. For several summers it has given prizes for the best gardens connected with schools, and for vacation home gardens. It supplies seeds to the Cleveland school children at the very lowest prices, and thru its efforts the boys and girls of the beautiful city by the shore of Lake Erie are gaining an interest in Nature and her secrets that will be their precious possession for life.

Old Jingles for Little Folks to Learn

Toad and Frog.

"Croak," said the toad, "I'm hungry, I think,
To-day I've had nothing to eat or to drink;
I'll crawl to a garden and jump thru the pales,
And there I'll dine nicely on slugs and on snails."

"Ho, Ho!" quoth the frog, "is that what you mean?
Then I'll hop away to the next meadow stream,
There I will drink, and eat worms and slugs, too,
And then I shall have a good dinner like you."

The Kilkenny Cats.

There were once two cats of Kilkenny,
Each thought there was one cat too many;
So they fought and they fit,
And they scratched and they bit,
Till, excepting their nails
And the tips of their tails,
Instead of two cats, there weren't any.

Two Little Dogs.

Two little dogs sat by the fire,
Over a fender of coal-dust;
When one said to the other dog,
"If Pompey won't talk, why I must."

Hush, Baby, My Dolly.

Hush, baby, my dolly, I pray you, don't cry,
And I'll give you some bread and some milk by and by;
Or perhaps you like custard, or maybe a tart,
Then to either you're welcome, with all my heart.

Little Jenny Wren.

As little Jenny Wren
Was sitting by the shed,
She wagged with her tail,
And nodded with her head.

She wagged with her tail,
And nodded with her head,
As little Jenny Wren
Was sitting by the shed.

Little Betty Blue.

Little Betty Blue
Lost her holiday shoe,
What shall Betty do?
Buy her another
To match the other,
And then she'll walk upon two.

A Warning.

The robin and the redbreast,
The robin and the wren;
If you take from their nest
You'll never thrive again.

The robin and the redbreast,
The martin and the swallow;
If you touch one of their eggs,
Bad luck will surely follow.

My Maid Mary.

My maid Mary she minds the dairy;
While I go a-hoeing and mowing each morn;
Gaily run the reel and the little spinning wheel,
Whilst I am singing and mowing my corn.

The Little Cock Sparrow.

A little Cock Sparrow sat on a green tree,
And he chirruped, he chirruped, so merry was he;
A little Cock Sparrow sat on a green tree,
And he chirruped, he chirruped, so merry was he.

A naughty boy came with his wee bow and arrow,
Determined to shoot this little Cock Sparrow;
A naughty boy came with his wee bow and arrow,
Determined to shoot this little Cock Sparrow.

"This little Cock Sparrow shall make me a stew,
And his giblets shall make me a little pie, too."
"Oh, no!" said the sparrow, "I won't make a
stew,"
So he flapped his wings and away he flew!

Cock Robin's Courting.

Cock Robin got up early,
At the break of day,
And went to Jenny's window,
To sing a roundelay.

He sang Cock Robin's love
To the little Jenny Wren,
And when he'd got quite to the end,
Then he began again.

Elizabeth, Elspeth, Betsy, and Bess.

Elizabeth, Elspeth, Betsy, and Bess,
They all went together to seek a bird's nest.
They found a bird's nest with five eggs in,
They all took one, and left four in.

Pussycat Mew.

Pussycat Mew jumped over a coal,
And in her best petticoat burnt a
great hole.
Poor Pussy's weeping, she'll have no
more milk,
Until her best petticoat's mended
with silk!

I Like Little Pussy.

I like little Pussy, her coat is so
warm,
And if I don't hurt her, she'll do me
no harm;
So I'll not pull her tail, nor drive her
away,
But Pussy and I very gently will play.

Hiawatha's Childhood.

Three Paintings by E. W. DEMING.

ARTISTS have time and again attempted to depict Indian life in its various phases, as, sitting in their elegantly furnished studios, they imagined life in the forest might be. Their pictures were often attractive in conception and coloring, but they lacked the

breath of life, that could come only from long study of the Indians as they really lived.

And that is why Mr. E. W. Deming's paintings of Indian life stand out in such pleasing contrast to most work along this line. Mr. Deming spent years among the Indians, sleeping in their wigwams, eating their food, listening to their folk-lore tales; until he knew them as they were, and could almost think their very thoughts. His most recent work is of particular interest to us: He has painted three pictures of

Hiawatha's childhood, especially for TEACHERS MAGAZINE.

Beautiful reproductions of these pictures have been made in the original colors, and will be sent as premiums to subscribers to TEACHERS MAGAZINE. The small photographs of the paintings have been made for this page. These show simply what scenes from Longfellow's poem "Hiawatha" have been selected by the painter. The first picture is of Nokomis telling the little Hiawatha the meaning of the rainbow:

" 'Tis the heaven of flowers you see there;
All the wild-flowers of the forest,
All the lilies of the prairie,
When on earth they fade and perish."

The second picture shows the boy surrounded by the birds and the beasts. The poet tells us that

" Then the little Hiawatha
Learned of every bird its language,
Learned their names and all their secrets,
How they built their nests in Summer,
Where they hid themselves in Winter,
Talked with them where'er he met them,
Called them 'Hiawatha's Chickens.' "

" Of all beasts he learned the language,
Learned their names and all their secrets.
How the beavers built their lodges,
Where the squirrels hid their acorns.
How the reindeer ran so swiftly,
Why the rabbit was so timid,
Talked with them where'er he met them,
Called them 'Hiawatha's Brothers.' "

In the third picture Mr. Deming has depicted

Hiawatha on his return home after his hunting:

" The heart of Hiawatha
Throbbled and shouted and exulted,
As he bore the red deer homeward,
And Iagoo and Nokomis
Hailed his coming with applause."

The reproductions are 9 by 13 inches, and each is separate. The three will serve as beautiful decorations for any school-room. They will at the same time stimulate the younger children to the study of Indian life and occupations. To the older boys and girls they will be an inspiration to the study of Longfellow and his wonderful Indian poem—the greatest of its kind.

The reproductions of all three Deming pictures are given free to subscribers to TEACHERS MAGAZINE. They *cannot be purchased*. As they are very expensive, the number is limited. When the edition is exhausted, no more copies can be obtained. The premiums will be given, as long as they last, upon payment for renewal of subscription, and to new subscribers.

Among Ourselves

The Editor's Round Table

The combining of four educational periodicals of national reputation and patronage into one attractive magazine preserving the best features of the former and doing full justice to the expectations of their subscribers is a task of considerable magnitude. How well I have succeeded on the literary side is for you to say. The actual consummation of the combination dates back only a few weeks. Thus everything had to be done with more or less haste. The approaching vacation time will afford me an opportunity to catch my breath and lay out the plans for the new volume with care. If you like the present number you will be more pleased with the September number. Every department will be well organized by that time. "Till we meet again"—next Fall.

The editor of *TEACHERS MAGAZINE* takes particular pleasure in welcoming the former readers of *The Intelligence* and *Primary School Era*. I will try hard to win and hold your good will, my new friends, and make you feel at home in our circle. You of *Institute* and *Primary School* know something of me, for we have worked together and talked together for eight years. A cordial personal relationship with the readers of *TEACHERS MAGAZINE* means much to me, and so far as in me lies I will endeavor to merit it. The only way in which I can become acquainted with your special needs and wishes and gain some knowledge of your educational aspirations and individual ideals, is by occasional letters from you. I may not always be able to answer these letters as I would like to do, but I assure you each one of them is gratefully appreciated. Friends—my friends—I bid you each and all a hearty "good cheer." May your well-earned summer vacation refresh and strengthen you for the work of the new school year, and may your cup of joy be full to overflowing!

I can imagine the fun you and your little folks will have next year, playing the rollicking games Miss Emma B. Olwin describes on another page. Miss Olwin is a teacher in Evanston, Ill. She has many more of these games. They have all passed the test of her own school practice, and she has promised to tell us about others in the *TEACHERS MAGAZINE*.

The editor has been made happy by a dainty little card bearing the legend "Leighton Ormes, May 10, 1905," and fastened by a white satin ribbon to the card of Mr. and Mrs. Edward Bernard Allen. Thus the world has been made richer by a new denizen and one home brightened with greater glory. Mrs. Allen is, of course, our own Alice Ormes whose many good articles have brought help and cheer to the readers of *Primary School* and *The Teachers' Institute*, both of which are now merged in this beautiful *TEACHERS MAGAZINE*. Let us all hope that Alice Ormes Allen will remain a life member among the writers for our magazine. Her new joy will fit her even better to contribute good things. A mother, after all, knows best the child heart.

After you have read Mrs. Hall's "Summer Vacation Experiment," you will feel like starting straightway for the Great Lakes to build a cozy summer cottage right close to the water's edge. Anyway that is how I felt when I first looked over the charming description. I know of a wise and happy woman—this happiness is the surest test of wisdom. She is a Boston teacher. Several years ago she bought half an acre of pasture land, and built thereon an inexpensive little cottage. There she goes with two

Dr. Irwin Shepard, the genial Secretary of the National Educational Association in his home office at Winona, Minn.
(See the article on page 626.)

or three friends, just as soon as the school doors close for the summer vacation, and there she stays until September 1. She goes a-visiting in the little farming community when she feels like it, and stays at home when she doesn't. And she just rests, and rests, and rests. When she goes back to school in the fall she is truly a new woman—fresh, and ambitious and enthusiastic.

Before Mrs. Hall sent me her article she submitted it to Dr. M. V. O'Shea, the distinguished leader in the child study field. It was Professor O'Shea who had the kindness to tell her that he was sure I should be glad to have it because of its pedagogical value. How many birds can you recognize by sight and by song? Ask the children. For their special benefit and pleasure the article was written.

The educational history of the last twenty-five years is largely the exploitation of personal or local initiative fostered by professional periodicals and developed into movements of more or less extended scope. Without educational periodicals edited by men of noble ideals and hopeful persistency educational progress would have been less general and the good things would not have been as rapidly passed around as they have been. Among these leaders there are two particularly close to us; they are Mr. Amos M. Kellogg and Mr. E. O. Vaile. Both have served the schools of America for many years. Both have taught in rural and city schools and occupied prominent positions in the teaching profession. Their lives have been consecrated to the cause of education and their strength has been spent in promulgating higher conceptions of child training and in promoting endeavors that would best serve the needs of humanity. They have now laid down the burden of responsibility they have borne so many years. Their interest in the great work will continue as long as they breathe.

Mr. Vaile has been known widely as a man of deep-seated aversion for every form of sham and pretence and self-seeking. He has been a keen observer and fearless critic, and his trenchant pen has been wielded for right and truth as he saw it. A special reform with which he has been and still is most prominently identified is the simplification of English spelling. Neither the giant task of the enterprise nor the caustic assaults of opponents could dismay him. The adoption by the N. E. A. of a small number of simplified spellings and the identification of that

great organization with the spelling reform movement has been almost entirely due to his insistence and persistence. In whatever Mr. Vaile has stood for he has never permitted personal gain or business advantage to dictate his attitude. It is this which makes the volumes of *The Intelligence* a monument of which he may well feel proud.

When in 1874 Mr. Kellogg acquired the weekly SCHOOL JOURNAL he dedicated this publication to educational reform. A graduate of the Albany State Normal college, where he studied under David P. Page, that first great trainer of teachers in America, with a wide experience gained in public and private elementary, high, and normal school work, as institute instructor, and as contributor to educational periodicals, he had become convinced that all reforms in the schools must begin with the improvement of teachers. This became a settled conviction in his mind. Accordingly he set out to arouse the teachers to an appreciation of the magnitude of their work and to urge them to labor for a deepening and broadening study of the mighty problems involved in education. He preached child study from the very start, he spread an interest in the labors

and ideas of Pestalozzi, he insisted early and late that there is a special philosophy of teaching which must be made the subject of serious, systematic study. He got teachers to read books on education in spite of the prevailing scepticism with reference to the value of such books.

E. O. Vaile, of Oak Park, Ill.

Amos M. Kellogg, of New York.

Every endeavor coming to his notice which gave promise of elevating teaching to a higher plane and making the life of the children in the schools brighter and happier found in him an enthusiastic advocate. He has never lost his faith in the wonderful possibilities of teaching children. How many teachers there are who owe to him their start on the road to light, we shall never know here below. Their number is large. Hundreds of grateful letters from subscribers to the *Teachers' Institute* bear testimony to that fact. Of my great personal debt to him as a teacher I shall speak at a later time. His thoughts are ever of the needs of the teachers of America. As a teacher of teachers he has done a mighty work.

Let us hope that both Mr. Vaile and Mr. Kellogg may be permitted to see their dearest hopes brought to fullest fruition, and that the future may deal kindly with them. They will remain warm friends of our TEACHERS MAGAZINE. Our best wishes to them!

A teacher from California wrote a letter some time ago, asking for nature study lessons especially suited to her section of country. It occurred to me that such a series might be a most profitable one for teachers not only in California, but for the teachers in other parts of the country.

Just then came to my desk a brown cloth covered note-book from New Orleans. I opened it and read it from cover to cover at a sitting. It was from Miss Marie Hardel, and here was just what I wanted, good for the Southern teachers, who are quite as clamorous as our California friends, but especially good for Miss California herself. I know you and your pupils will enjoy the orange lesson. The others will come later, and will be found quite as useful as the lesson outline on the orange.

Every teacher ought to know Miss Sarah C. Brooks. She is an educational leader of national influence and one of the really great primary teachers in the United States. She is an exceedingly modest woman and keeps in the background as much as she possibly can. Whenever I ask her to write, she almost invariably suggests someone else who she is sure ought to be asked instead! For a number of years she was supervisor of the primary schools of St. Paul. It was her remarkable work at this place, which first brought her prominently before the educators of the country. When J. H. Van Sickle became superintendent at Baltimore, he felt that he must have her for principal of the Baltimore Training School for teachers. Miss Brooks accepted the offer, and so she is now teaching Maryland girls how to teach. TEACHERS MAGAZINE hopes to have an article from her pen occasionally.

Miss Kraus and Miss Strouse are two bright young teachers here in New York city. They wrote the "Playtime Medley," to be found on another page, for their own pupils to give as a Christmas entertainment. Miss Julia Richman, district superintendent and one of the educational leaders of America, was there. Miss Richman was so well pleased with the play that she advised the writers to send it to me for use in TEACHERS MAGAZINE. I hope many of you will use it, for children enjoy nothing more than to give an entertainment in which their beloved playthings have a part.

• The two little gardeners who are proudly exhibiting summer squashes in the picture on page 568, are the sons of Prin. William A. Baldwin, of the State normal school at Hyannis. Mrs. Baldwin was at one time a frequent contributor to *Primary School*. Her name then was Jennie Skinner.

Have you seen *Our Times*, the new weekly journal of current events. It is a combination of the monthly *Our Times* and *The Week's Current*, two periodicals that have been for

many years welcome visitors in thousands of homes and school-rooms. The best features of both are now brought together in one interesting and attractive journal which will be issued weekly from the office of TEACHERS MAGAZINE by the United Educational Company, at 61 East 9th street, New York. If you will write to the publishers they will take pleasure in sending you a sample copy.

Miss Pender is a graduate of the State normal school at New Britain, Conn. She has taught in district school, and in different grades in city schools, and so has a first hand knowledge of the problems with which the teacher has to deal. For several years past geography has been her special study, and she is going to give the readers of TEACHERS MAGAZINE the benefit of her work along that line. She was at one time associated with me on *Teachers' Institute* and *Primary School* and knows what teachers are most likely to want. Miss Pender is an enthusiast in geography teaching. She lectures occasionally on this subject at teachers' institutes, and teachers always like her and derive much help from her suggestions.

Mr. U. G. Wilson, whose name you will see in one corner of the "orange" chart which occupies the two inside pages of this number, has been making charts for us for many months. The teachers like his work, because it is painstaking and accurate. He is not satisfied merely to draw a flower, a bit of fruit, or an animal. When he is to draw a chart, he finds out from his teacher-friends just how they would go to work to teach about the animal or the flower. Then he puts upon the chart whatever will help the pupils most in mastering the subject. I am planning to have considerable work from Mr. Wilson in the coming months.

Dame Nature Hints.

When the Food is not Suited.

When Nature gives her signal that something is wrong it is generally with the food; the old Dame is always faithful and one should act at once.

To put off the change is to risk that which may be irreparable. An Arizona man says:

"For many years I could not safely eat any breakfast. I tried all kinds of breakfast foods, but they were all soft, starchy messes, which gave me distressing headaches. I drank coffee too, which appeared to benefit me at the time but added to the headaches afterwards. Toast and coffee were no better, for I found the toast very constipating.

"A friend persuaded me to quit the old coffee and the starchy breakfast foods, and use Postum Coffee and Grape-Nuts instead. I shall never regret taking his advice. I began using them three months ago.

"The change they have worked in me is wonderful. I now have no more of the distressing sensations in my stomach after eating, and I never have any headaches. I have gained twelve pounds in weight and feel better in every way. Grape-Nuts make a delicious as well as a nutritious dish, and I find that Postum Coffee is easily digested and never produces dyspepsia symptoms."

Name given by Postum Co., Battle Creek, Mich.

There's a reason.

Get the little book, "The Road to Wellville," in each package.

Questions on Current Events

(These questions will be found valuable for school-room use as well as for the teacher's own review of the world's progress. Answers will be found in the issues of OUR TIMES for June.)

Where did the International Railway Conference meet? Name some important subjects it considered.

What is meant by neutrality? What accusation did Japan make against France? Why did the dispute threaten to draw Great Britain into the war?

For what prize did yachts sail across the Atlantic?

Who was the last veteran of the war of 1812? What honors were given him by the state and city of New York?

Where did General Wood have a desperate battle with the Moros?

Sketch Julia Ward Howe's career.

What is the substance of the petition presented to President Roosevelt by the Chicago strikers? What was his reply?

Why does Cuba want the treaty with the United States changed?

Why does not Canada desire reciprocity as much as formerly?

What order in regard to materials did President Roosevelt issue to the Panama commission?

For what reason do Chinese propose a boycott of America?

Name some famous people born in June.

What does Attorney-General Moody say about the power of Congress to fix railroad rates?

What exposition opened this month? Where is it held? Describe the region around Portland. What do you know about Lewis and Clark? What states are a part of what was known as "the Oregon country"?

What is Emperor Nicholas' decree regarding Poland? Why is there reason for doubting that it will be carried out.

Describe the recent tornadoes in Kansas and Oklahoma.

What measures has Oklahoma taken to prevent loss from tornadoes?

Why will the government erect a fort at Cape Henry?

How has Egypt's revenue been increased under British rule?

Why has it been proposed to divide Pennsylvania?

What is the population of the Philippines, according to the census lately completed? Why did the Filipinos oppose the census at first?

Why did not the Japanese follow up their advantage in the naval battle of August 10 last? Where have the fleets of Russia and Japan been maneuvering for the past few weeks? Tell about recent movements of the Japanese and Russian armies.

How long was an electric telegraph "flash" going around the world from Washington?

What famous Virginian died recently? What actor?

How did the national government and the state government of South Carolina come into conflict over the "dispensary" system?

Describe the oil pipe line from Kansas to New York.

To what ancient British legal society was Ambassador Choate lately admitted?

What arguments may be brought for and against women's clubs?

Why will Count Cassini go to Madrid?

Coffee Congestion.

Causes a Variety of Ails.

A happy old lady in Wisconsin says:

"During the time I was a coffee drinker I was subject to sick headaches, recurring every 2 or 3 weeks, and sometimes lasting 2 or 3 days, totally unfitting me for anything.

To this affliction was added, some years ago, a trouble with my heart that was very painful, accompanied by a smothering sensation and faintness.

I would be unable to lie down, but was compelled to sit gasping for breath until I was perfectly exhausted.

Dyspepsia, also, a few years ago came to make life harder to bear. I took all sorts of patent medicines as well as doctor's prescriptions, but none of them helped me for any length of time.

The doctors frequently told me that coffee was not good for me; but without coffee I felt as if I had no breakfast. I finally decided about 2 years ago to abandon the use of coffee entirely, and as I had read a great deal about Postum Food Coffee, I concluded to try that for a breakfast beverage.

I liked the taste of it and was particularly pleased to notice that it did not 'come up' as coffee used to. I had only hoped that the Postum Food Coffee would help my digestion, but I soon found that it was doing much more than that. The bad spells with my heart grew less and less frequent, and finally ceased altogether, and I have not had an attack of sick headache for more than a year. My digestion is good, too, and I am thankful that I am once more a healthy woman. I know my wonderful restoration to health came from quitting coffee and using Postum Food Coffee." Name given by the Postum Co., Battle Creek, Mich.

"There's a reason," and it is this. Coffee has a direct action on the liver with some people, and causes partial congestion of that organ preventing the natural outlet of the secretions. Then follows biliousness, sallow skin, headaches, constipation, and finally a change of the blood corpuscles and nervous prostration.

SILVER, BURDETT AND COMPANY

1905

The house of SILVER, BURDETT & COMPANY has just passed its twentieth birthday and is entering upon its twenty-first year. What continuous success these two decades have brought can be fully realized only by those who remember the early days of the house and see the proportions to which it has grown. That its high standards and aims have been recognized, that its efforts to give the best service possible have been appreciated, is attested by the many kindly messages of congratulation and encouragement received at this time. For all these tokens of good-will the house thanks its friends and pledges itself to strive toward the ever more complete fulfilment of its motto:

"THE BEST TEXT-BOOKS AT THE LOWEST CONSISTENT PRICES."

SOME UNIQUE TEXT-BOOKS

The Common School Book of Vocal Music

By ELEANOR SMITH

A book of simple and attractive songs, adapted to conditions existing in the ungraded schools.

The Manuscript Series of Vocal Selections

By ROBERT FORESMAN

A simple, definite, three-book course, covering invention, original work and the study of songs.

The Educational System and the Natural Movement Method of Practical Writing (Medial)

By W. A. WHITEHOUSE

Copies selected for their educational value and for the introduction of the indispensable natural movement.

The Quincy Word List

By FRANK E. PARLIN

Over seven thousand of the commonest English words, graded and arranged according to a definite plan.

SOME STANDARD FAVORITES

The Rational Method in Reading

By EDWARD G. WARD

A method for acquiring English rapidly and intelligently, leading to independent expression and correct pronunciation.

The Sensenig-Anderson Arithmetics

By DAVID M. SENSENIG
and ROBERT F. ANDERSON

A practical series, covering the study of arithmetic from the lowest to the highest grades.

The Modern Music Series

By ELEANOR SMITH

A course using nothing but the best song material for the child's singing and study.

Stepping Stones to Literature

By SARAH LOUISE ARNOLD
and CHARLES B. GILBERT

A valuable series of school readers, artistically illustrated with reproductions of famous masterpieces.

Recent Books of Real Interest

Famous Men Series

I. Famous Men of Greece II. Famous Men of Rome
III. Famous Men of Middle Ages

Historical biographies told in a way to attract and hold the child's interest. Adapted to Third and Fourth Reader grades. Handsomely illustrated with many photographs of famous historical paintings. Price, 50 cents each.

Pathways In Nature and Literature

A First Reader A Second Reader

By SARAH ROW CHRISTY, Edited by the late DR. EDWARD R. SHAW

The most attractive books published for teaching children to read. Beautifully illustrated with colored pictures. First Reader, 96 pp. 25 cents; Second Reader, 112 pp. 30 cents.

Spelling and Word Building

A Primary Vocabulary By EUGENE BOUTON, PH. D.

appear two or three times. Over 250 illustrations. 118 pages. Price, 25 cents.

Eadie's Physiology and Hygiene for Children

An interesting book on an original plan. Words taught as individuals and in their phonic relations. Most of its 2,300 words appear two or three times. Over 250 illustrations. 118 pages. Price, 25 cents.

The most attractive school-book published. Colored pictures differentiate the parts of the body. Teaches functions of organs, not a long list of technical terms. Written in language of a child of the fourth grade. 204 pages. Price, 45 cents.

The Sketch-Book

By WASHINGTON IRVING New Edition

among other articles, those famous short stories of literature, "The Legend of Sleepy Hollow" and "Rip Van Winkle." No. 17. Standard Literature Series. Single number. Cloth, 20 cents, manila, 12 1-2 cents.

Edited by Dr. EDWARD EVERETT Hale, Jr. A new edition of a selection of the stories of The Sketch-Book, including, "The Legend of Sleepy Hollow" and "Rip Van Winkle." No. 17. Standard Literature Series. Single number. Cloth, 20 cents, manila, 12 1-2 cents.

Dotey's Latin Exercise Books

On Caesar's Gallic War

By A. I. DOTEY, DEWITT CLINTON HIGH SCHOOL

A new help to Latin teachers and pupils. These books furnish the pupil with a definite line of work on each chapter, by "Suggestive Questions and Notes"; "Grammatical References" on listed words; "Vocabulary" of new words in chapter, etc. Ruled and adapted for writing with pen. Books I. price, 25 cents; Books II., III., and IV., each, 20 cents.

The above-named books have marked attractions.—Which of them interest you for your classes?

Histories

For High Schools and Colleges

Myers' Ancient History

(REVISED EDITION)

List price, \$1.50

For many years Myers' "Ancient History" has been in almost universal use in the schools of the country, and has continuously given the highest satisfaction to both instructors and students. To make this superior work still more adequate, the author recently prepared a thorough revision, which made possible many improvements in the text itself, in its arrangement, in the maps and illustrations, and in the appearance of the book.

Myers' Mediaeval and Modern History

(REVISED EDITION)

List price, \$1.50

In its revised form, this standard text is a companion volume to the author's revised "Ancient History." It is especially adapted to the use of secondary schools; but through the aids provided in numerous bibliographies, references to original sources, and in suggested topics for special research it is also well suited for use as a basis of work with college classes.

Robinson's History of Western Europe	-	-	-	-	List price	\$1.50
Robinson's Readings in European History. Volume I	-	-	-	-	" "	1.50
Cheyney's Short History of England	-	-	-	-	" "	1.40
Montgomery's Students' American History (REVISED EDITION)	-	-	-	-	" "	1.40

THE BEST OF THE OLD AND THE BEST OF THE NEW

Smith's Arithmetics

By DAVID EUGENE SMITH, Professor of Mathematics in Teachers College, Columbia University

Primary Arithmetic	-	-	-	-	-	-	-	-	List price	35 cents
Grammar School Arithmetic	-	-	-	-	-	-	-	-	" "	60 cents
Intermediate Arithmetic	-	-	-	-	-	-	-	-	" "	40 cents
Advanced Arithmetic	-	-	-	-	-	-	-	-	" "	45 cents
Practical Arithmetic	-	-	-	-	-	-	-	-	" "	65 cents

These five books offer an unrivaled opportunity for the discriminating teacher and superintendent to choose the book and arrange the series exactly fitted to the pupils' needs. The books may be most conveniently grouped in series, as follows:

1. Grammar School Series. Primary Arithmetic, Grammar School Arithmetic.
2. Practical Series. Primary Arithmetic, Practical Arithmetic. (This series has the same material as Series 1, with extensive additions.)
3. Three-Book Series. Primary Arithmetic, Intermediate Arithmetic, Advanced Arithmetic. (This series is identical in matter with Series 2.)

Intended to vitalize the teaching of elementary mathematics, these books preserve the best that was in the old-time arithmetic with its topical method and abundant drill and at the same time include material that is thoroughly modern in arrangement and in treatment. In the selection of problems those against which teachers have long protested have been replaced by those that appeal to the life, the interests, and the powers of children.

A suggestive monograph entitled "The Outlook for Arithmetic in America," by Professor Smith, will be sent postpaid to any address on request.

Awarded Highest Honors of Merit the World Can Bestow

Gold Medal and Diploma by International Jury, World's Exposition, St. Louis, 1904; also officially adopted by Chicago Board of Education for use in the Public Schools and recommended for adoption in different states. :: ::

Never before in the History of Dictionary-Making has a Lexicon been produced that contains the Essential Encyclopedic Features of the large, cumbersome dictionaries, together with hundreds of new words, appearing now for the first time and at a price within the reach of all. :: :: :: :: ::

Dictionaries of Biography, Geography, Biblical, Classical Names; Musical, Legal, Medical Terms and Symbols, Foreign Phrases, Synonyms, English Word-Building, Abbreviations, Metric System, use of Capitals plainly indicated; Etymologies based upon latest scientific research, Proof-reading, etc.

Large, clear Print; Vocabulary Words in bold, black type, Proper Nouns indicated by capital initials. Original system of Diacritical Markings, with key foot of each page. New plates. Hand composition. Endorsed by Professors in Princeton, Northwestern, Michigan, and Nebraska Universities.

"Laird & Lee beat the world with their dictionaries and series of books of information."—*Boston Times*.

"Their combination lexicons bring foreign nations into closer relations with America."—*World's Work*.

Library Edition

763 pp. Over 900 illus. 30 full-page plates, 11 in colors. Flexible leather, polished green edges, thumb-indexed, in box, \$2.50.

Encyclopedic Edition

900 illus. 762 pages. 26 full-page plates, six in colors. Half leather, gold-stamped, sprinkled edges, thumb-indexed, \$1.50.

School Edition

840 illus. (14 full-page). Without Legal and Medical Departments. 634x5 in. 746 pages. Black cloth, marbled edges, back title in gold, indexed, 85c. Black cloth, plain edges, not indexed, 75c.

SUPERIOR TEXT-BOOKS AND REFERENCE WORKS

Practical New Standard Speller

By ALFRED B. CHAMBERS, PH. D. For Primary, Intermediate and Grammar Grades. A new departure. Entirely different from the many dry and unattractive Spellers and Word Books. Lessons made interesting by special dictation exercises and memory gems in prose and verse. Pronunciation, Word-Building and Analysis; Rules for Spelling, List of Prefixes, Suffixes, Important Abbreviations, Names of Rivers, Cities, Towns, Grammatical and Arithmetical Terms, and Words pronounced alike but spelled differently, Diacritical markings based on WEBSTER'S NEW STANDARD DICTIONARY; carefully selected extracts and quotations from great authors and eminent statesmen, with nine full-page half-tone portraits. Designed to enlarge the pupil's vocabulary. Based upon the most modern scientific system of teaching. Frontispiece United States map in ten colors, showing boundaries, of original states and new territorial acquisitions, illustrating the Nation's wonderful progress and development. 240 pages. Size, 5 3/8 x 7 1/4 inches. Handsome, decorative board cover, in colors, cloth back with head band, 25c.

Brown's Standard Elocution and Modern Speaker

By PROF. I. H. BROWN. The great standard on Elocution, Voice Culture, Modulation, Accent and Pronunciation. Position, Gesture and Facial Expression faithfully delineated by over sixty original drawings prepared especially for this work. Every detail thoroughly explained. Modern in every respect. Carefully selected and graded recitations, from the world's great masters of elocution and prosody. 256 pages. Decorative cloth cover, \$1.00.

The New Modern Webster The Ideal Lexicon for District and Primary Schools. Half a million copies now in use. Large, clear, boldface type. At last a dictionary has been produced that will not only save the children's eyes, but the price is within the reach of all. 60,000 words and definitions; key to pronunciation foot of each page; rules for spelling; English sounds explained; abbreviations, foreign phrases, metric system, proofreading. Size, 4 x 5 1/2 inches. 435 pages. Numerous text and full-page illustrations.

School Edition—Stiff silk cloth, red edges, 25c. **Desk Edition**—Stiff silk cloth, 50c. Full Russia leather, full gilt, thumb index, \$1.00.

Special price to pupils and teachers: **School Edition, 15 cents. Desk Edition, 30 cents. Leather Edition, 60 cents**

"There are dictionaries and there are dictionaries, but there is only one NEW MODERN WEBSTER."—*Ram's Horn*.

Henry & Hora's Modern Electricity

Electricity. All problems solved and worked out step by step. Cross indexed. 150 splendidly prepared illustrations. Two new wiring diagrams. 355 pages. Silk cloth, decorative cover, \$1.00. Full leather, gold stamped, \$1.50.

STANDARD BOOKS FOR SUPPLEMENTARY READING

Heart of a Boy

By DE AMICIS. Appeal to young and old; a great favorite in all schools. Vividly portrays a boy's life at school. 290 pages. Beautifully illustrated, decorative cover, 75c. **DE LUXE EDITION**, 32 full-page half-tones, and 26 text illustrations. Superb binding, in gold and colors, in box, \$1.25.

Tan Pile Jim; or, A Yankee Waif Among the Bluenoses

By B. FREEMAN ASHLEY. Life and experiences of a boy found sleeping on a pile of tanbark. Full of healthy life and action. Illustrated. 239 pages. Silk cloth, special cover design, 75c.

Air Castle Don

By B. FREEMAN ASHLEY. A plucky boy's adventures in a large modern city. Free from objectionable situations. Fascinating from cover to cover. 340 pages. Silk cloth, illustrated, 75c.

Dick and Jack's Adventures

By B. FREEMAN ASHLEY. Two boys and their daring adventures on the ocean and Sable Island. Wholesome and instructive. 312 pp. Silk Cloth, illustrated, 75c.

Two Chums; or a Boy and His Dog

By MINERVA THORPE. The triumphs of a waif who leaves home for a strange land. Fascinating and instructive. 230 pages. Silk cloth, artistic cover, 75c.

Rex Wayland's Fortune

By H. A. STANLEY. A delightful story of life among the mountains. Thrilling. 391 pages. Silk cloth, decorative cover. Illustrated. 75c.

Fireside Battles

By ANNIE G. BROWN. An interesting story for girls, full of rich pathos and tender sentiment. Illustrated. 327 pages. Silk cloth, 75c.

LAIRD & LEE, Publishers 263-265 Wabash Ave., CHICAGO, U.S.A.

National Educational Association, Asbury Park and Ocean Grove, N. J., July 3-7

Dr. Shepard and the N. E. A.

This summer the convention of the National Educational Association will be held at Asbury Park, N. J. The dates are July 3 to 7. Teachers over the whole country are rejoicing at the opportunity to visit this famous New Jersey seaside resort. Those who have toiled for the past ten months on the prairie flats or among the hills will enjoy the change to the delightful salt breezes and the gentle ripple or the stormy thunder of Old Oceanus. Those who have lived or worked on other portions of the Atlantic coast will enjoy comparing New Jersey with the beaches of Cape Cod or Florida.

Everything will be done to give the teachers a good time. A magnificent orchestra will play every day in the great open Casino, built out over the water, and concerts—with perhaps an oratorio—will be given by soloists and a chorus of 600 voices. The famous “board walk” is studded from end to end with electric lights, a veritable fairy land for an evening promenade. Bathing, boating, fishing—Asbury Park is indeed “queen of watering places.”

The railroads will sell tickets from all sections of the country at reduced rates. The New York City teachers have arranged to entertain N. E. A. visitors in the greatest city in the new world. Columbia university has prepared an especially fine program for three days' sight seeing in New York city. New York university also holds out an attractive invitation.

Dr. Irwin Shepard, permanent secretary of the N. E. A., will have an office at Asbury Park from June 15 until the close of the convention. It is to him and his corps of courteous assistants that you will go for information, and for anything else you need. Of course Dr. Shepard is a busy man. The thousands of visitors have thousands of questions to ask. But he is equal to the enormous task. With

all the pressure of work Dr. Shepard is ever genial and considerate and tries to have everybody feel happy. His kindly face fairly beams with good nature. If ever you want to see how Santa Claus, the loving patron saint of children must have looked, you want to get a good view of Dr. Shepard. But don't tell him who told you about this. It might embarrass him.

It gives me particular pleasure to be permitted to introduce you to Dr. Shepard's workshop at Winona, where he has his permanent residence. His home is located on a pleasant avenue shaded by tall trees. When he was made secretary of the N. E. A. he had an addition built to his house, just for N. E. A. business. There are three large rooms and you can imagine something about the enormous amount of business from the fact that Dr. Shepard keeps two stenographers busy all the time, and occasionally he has to have extra help. There are five railroads running into Winona, so tho not a city like New York, Chicago, or San Francisco, a letter written to Dr. Shepard from any part of the country will reach him as quickly as it would if he lived in one of the large business centers.

Dr. Shepard was for years principal of a normalschool, and knows all the difficulties and all the joys of the teacher's life. As secretary of the great association of American teachers he belongs, at least a little bit, to every member of the N. E. A. It's worth a long journey to get acquainted with Dr. Shepard.

By the way, TEACHERS MAGAZINE will have an exhibit at Asbury Park. Mr. Frederick R. Boocock, the president of the United Educational Company, and Mr. E. L. Kellogg, the vice-president, will be there. The editor, too, will be on hand and hopes to meet you face to face.

If you feel too tired for work or pleasure, take Hood's Sarsaparilla—it cures that tired feeling.

VACANCIES FOR SEPTEMBER

We have been called upon by School Boards, College Presidents, Normal Principals, and Superintendents to recommend teachers for a large number of most excellent positions. Among them are the following:

SUPERINTENDENCY, West, \$1800
SUPERINTENDENCY, East, \$2,750
SUPERINTENDENCY, East, \$4,000

PRINCIPALSHIP, H. S., Wis., \$1,000
PRINCIPALSHIP, H. S., Iowa, \$1,100
PRINCIPALSHIP, H. S., N. Y., \$1,400
PRINCIPALSHIP, H. S., Ill., \$1,200

MATHEMATICS, H. S., \$1,200
MATHEMATICS, H. S., Tex., \$1,000
MATHEMATICS, COLLEGE, South, \$1,500 and Home

PHYSICS and CHEMISTRY, COLLEGE, \$1,200-\$1,500
MATHEMATICS, H. S., S. D., \$1,000

VACANCIES FOR SEPTEMBER

Save the Babies.

INFANT MORTALITY is something frightful. We can hardly realize that of all the children born in civilized countries, twentytwo per cent., or nearly one-quarter, die before they reach one year; thirtyseven per cent., or more than one-third, before they are five, and one-half before they are fifteen!

We do not hesitate to say that a timely use of Castoria would save a majority of these precious lives. Neither do we hesitate to say that many of these infantile deaths are occasioned by the use of narcotic preparations. Drops, tinctures and soothing syrups sold for children's complaints contain more or less opium, or morphine. They are, in considerable quantities, deadly poisons. In any quantity they stupefy, retard circulation and lead to congestions, sickness, death. Castoria operates exactly the reverse, but you must see that it bears the signature of Chas. H. Fletcher. Castoria causes the blood to circulate properly, opens the pores of the skin and allays fever.

Letters from Prominent Physicians addressed to Chas. H. Fletcher.

Dr. A. F. Peeler, of St. Louis, Mo., says: "I have prescribed your Castoria in many cases and have always found it an efficient and speedy remedy."

Dr. E. Down, of Philadelphia, Pa., says: "I have prescribed your Castoria in my practice for many years with great satisfaction to myself and benefit to my patients."

Dr. J. E. Waggoner, of Chicago, Ill., says: "I can most heartily recommend your Castoria to the public as a remedy for children's complaints. I have tried it and found it of great value."

Dr. Edward Parrish, of Brooklyn, N. Y., says: "I have used your Castoria in my own household with good results, and have advised several patients to use it for its mild laxative effect and freedom from harm."

Dr. J. B. Elliott, of New York City, says: "Having during the past six years prescribed your Castoria for infantile stomach disorders, I most heartily commend its use. The formula contains nothing deleterious to the most delicate of children."

Dr. C. G. Sprague, of Omaha, Neb., says: "Your Castoria is an ideal medicine for children, and I frequently prescribe it. While I do not advocate the indiscriminate use of proprietary medicines, yet Castoria is an exception for conditions which arise in the care of children."

Dr. J. A. Parker, of Kansas City, Mo., says: "Your Castoria holds the esteem of the medical profession in a manner held by no other proprietary preparation. It is a sure and reliable medicine for infants and children. In fact, it is the universal household remedy for infantile ailments."

Dr. H. F. Merrill, of Augusta, Me., says: "Castoria is one of the very finest and most remarkable remedies for infants and children. In my opinion your Castoria has saved thousands from an early grave. I can furnish hundreds of testimonials from this locality as to its efficiency and merits."

Dr. Norman M. Geer, of Cleveland, Ohio, says: "During the last twelve years I have frequently recommended your Castoria as one of the best preparations of the kind, being safe in the hands of parents and very effective in relieving children's disorders, while the ease with which such a pleasant preparation can be administered is a great advantage."

Dr. F. H. Kyle, of St. Paul, Minn., says: "It affords me pleasure to add my name to the long list of those who have used and now endorse your Castoria. The fact of the ingredients being known through the printing of the formula on the wrapper is one good and sufficient reason for the recommendation of any physician. I know of its good qualities and recommend it cheerfully."

GENUINE CASTORIA ALWAYS

Bears the Signature of

The Kind You Have Always Bought In Use For Over 30 Years.

THE CENTAUR COMPANY, 77 MURRAY ST., NEW YORK CITY.

Book Chat

Probably you have so many books in mind which you want to read this summer that you are not looking for advice. However, a few hints may not be unwellcome. You can just as well read what will make you a broader man or woman, and a better teacher, as to waste the whole vacation on trashy fiction.

In the first place, if you are interested in country life, or expect to spend a part of your vacation on a farm, read *A Country Home*, by E. P. Powell (published by McClure Phillips & Co., New York). If it does not make you long to buy an abandoned farm, or at least own somewhere a plot large enough for a garden, you are a thoroly incorrigible cityite.

The American Book Company (New York) has recently published two little books to which I want to call your attention. The first is called *Half Hours With the Lower Animals*. The author is Charles Frederick Holder. We have had nature study books galore, but most of them have treated of the self-same things—the dog, cat, horse, etc. I wanted to find out the number of claws possessed by a lobster, the other day. I looked thru more than twenty nature books and failed to find what I wanted to know. Just this sort of information is what Mr. Holder gives. He tells the life-story of the jelly fishes, the corals, the shells, crabs, lobsters, the best-known insects, and the other familiar forms of lower life. The book is one you will enjoy reading, and you can use every bit of it in school next year.

The second of the American Book Company books *The Fairy Reader*—fairy tales adapted from Grimm and Andersen, by James Baldwin. Those of you who are familiar with Dr. Baldwin's other books know how charmingly he writes. To you I need only say that this little book is arranged as a supplementary reader for second or third year children. Those who have not seen others of Dr. Baldwin's books, I should advise to get and read this one with care. Then if you cannot get it for use as a reader

All Run Down

Wanting in vitality, vigor, vim—that is a condition that no one can safely neglect, for it is the most common predisposing cause of disease. The best medicine to take is

Hood's Sarsaparilla

Builds up the whole system; makes the sick well and the weak strong; cures when everything else fails.

keep your copy on your own desk, and just see how often it will be borrowed by the children.

Have you seen *The Art and Life Primer*, by Nellie C. Jacobs (A. Flanagan, Chicago, publisher)? It is just the primer teachers of beginners have been looking for so long, because in spite of its 145 pages, it contains less than 250 new words. At the same time the little stories are bright and interesting, the pictures will appeal to children, and the letters are just the right size.

With this characteristic and beautiful dedication, Supt. George H. Phillips, of Birmingham, Ala., sends out his *Old Tales and Modern Ideals* on its mission into the world: "With Faith, Hope, and Love, I dedicate this little volume to the young men and women, who, as students of the Birmingham high school, inspired my unfaltering Faith in youth,

strengthened my Hope for the future of my state and country, and established my Love towards God and all Goodness." —It was my great pleasure to have read this book in the manuscript; I received the best sort of inspiration from it, and so will you. I am going to tell you more about it some time, but I have only room here to tell you that I want you to read it. You will be a better man or woman, and a better teacher for having done so. Mr. Phillips is a grand good man, and his message should be yours. (Silver, Burdett & Company, New York.)

There is a little book that will help mightily in your own nature study this summer. It is called *Nature Study*, and the authors are Frank Overton and Mary E. Hill. It really leaves nothing to be desired for the ordinary student, old or young, and it will aid you in learning to see the world around you as it is. (American Book Company.) C. S. G.

Reproduction Stories

A Faithful Dog.

A man who was once traveling with his dog took out his purse one morning to see if he had money enough for the day. He then left his room, leaving the dog behind.

When he went to pay for his dinner he found that a gold coin had been lost from his purse. On returning home in the evening his servant told him that the dog seemed to be ill. It had not tasted a mouthful of food all day.

The man went at once to look at the dog. As soon as he entered the room the faithful creature ran and laid the missing coin at his feet. It then ate the food that had been laid down for it.

The man had dropped the coin in the morning and the dog had picked it up. All day long he had held the gold piece, fearing even to eat, lest he should lose it before he could return it to his master.

Tit for Tat.

A farmer met a well-dressed man with a large handful of wheat taken from his field. The man greeted the farmer cordially and began to praise his wheat. "These are fine specimens," he said, "and they do you credit. I like to take a few home; they interest the ladies."

Upon this the farmer began to admire the style of the stranger's coat, and asked the man to let him look at it. Taking out a penknife he cut a small square piece from the back, saying as he did so, "I always take samples of cloth; they interest my wife."

The stranger was very angry, but the farmer quietly reminded him that he had as much right to take a piece of the coat as the man had to take a specimen of the wheat.

A Beaver's House.

A man owned a beaver which he tried to tame. The little creature never, however, lost his natural instinct for building.

One day when the family was away the beaver found his way into the house, and began to build. As there were no sticks or mud, he made use of anything he could find. He gathered boots, baskets, books, and gloves, and piled them up, just as he would have done in the woods.

When the man returned, he found the whole house in confusion. The beaver was lying snug in the cosy home he had built in a corner of the dining-room.

Bird Helpers.

A sparrow while flying among some telephone wires in a large city hurt one of its wings. The bird dropped helpless into the street. In vain it tried to fly up to its nest under the eaves of a nearby house.

Two other sparrows heard the cries of the wounded bird. They tried to lift it, but they were not strong enough. At last they flew up to a tree, from which they took a strong twig, and together carried it in their bills to the place where the wounded bird sat.

Each held one end of the twig, while the wounded bird took hold of the middle.

Supported in this way the bird was lifted to its nest.

The Dog's Count.

A dog belonging to a gentleman used to go every day to the butcher's shop for a piece of meat. Every time the meat was supplied the butcher made a cross on a board with a piece of chalk. The dog always waited to see this done, then he started for home with the meat.

One day the dog noticed the butcher made two crosses with the chalk instead of one. He at once seized a second piece of meat, and in spite of the efforts of the butcher to hold him, ran off with both pieces in his mouth.

The Old Horseshoe.

A teacher and his son were walking along a dusty road on a warm summer day. The boy saw something in the road, and on looking found it was an old horseshoe. His father advised him to take it along, but the boy did not seem to think the shoe of any value, so the father picked it up and put it into his pocket.

They passed thru a little village, and there the father sold the shoe and bought some juicy cherries with the money.

Pretty soon the boy began to feel thirsty. He looked about for water, but could not find any. Then the father took from his pocket the bag of cherries, telling his son that he had bought them with the money obtained from selling the shoe. In this way he taught the boy the valuable lesson that everything that has value should be taken care of.

A Cat and a Pigeon.

In a loft where a mother cat was rearing her kittens, a pigeon had built its nest. The bird had several times lost her eggs because of the rats, and for this reason she had chosen a place near the cat's quarters.

Puss did not object, and soon the two mothers became good friends. They ate out of the same dish and showed real fondness for each other.

The strangest part of it all was that when the cat was away the pigeon looked after the kittens. The bird flew at anyone who came near, trying with beak and wings to drive the intruder away. When neither her own babies nor the kittens required care, she was often seen fluttering near, when the cat was making excursions abroad.

Care of the Teeth.

Clean white teeth and a wholesome breath are among the things that help one to make an agreeable impression in business or society. So desirable are these personal characteristics that most people are in search of them, not always with success. Permit us to give such a little advice. Get a bottle of Rubifoam and note its wonderful effects. It makes the teeth white, renders the breath fragrant, and by its antiseptic qualities produces a marked improvement on the health. A good thing deserves a good introduction; hence the beautiful and artistic advertisement found in another column. Rubifoam is made by E. W. Hoyt & Company, Limited, Lowell, Mass., and sold everywhere.

Back of the label
on every bottle of
delicious, fragrant

RUBIFOAM

lies the secret of beautiful teeth and attractive, wholesome mouths. The use of this wonderful liquid dentifrice brings to the mouth a charm and refinement quickly appreciated among the well-bred. It is because there is peculiar worth *back* of the label that Rubifoam has become the popular American dentifrice.

Look out for the imitations which are content to copy the label, the bottle or the color of Rubifoam, but fail in the scrupulous pains and rare ingredients which really make Rubifoam.

Sold everywhere at 25 cents.

SAMPLE FREE.

E. W. HOYT & COMPANY, Lowell, Mass

It Disinfects and Heals

One cake of Glenn's Sulphur Soap contains more pure sulphur than does a whole box of other "sulphur" soaps. Use it in toilet and bath. It disinfects, heals eruptive sores and cures itching. Get the genuine of your druggist.

Mother Goose Cut-Up Problems.

If 9 of the 4 and 20 blackbirds that were baked in the pie stopped singing, how many kept on singing?

The king, the queen, the maid hanging out the clothes, and the blackbird that nipped off her nose are how many? Suppose there were three kings, three queens, three maids, and three blackbirds; how many in all?

If the old woman who lived in a shoe gave broth to 15 children, whipped 8 more, and sent 7 to bed, how many children had she in all?

As I was going to St. Ives,
I met seven wives.

Each wife had seven sacks; how many sacks in all? Each sack had seven cats; how many cats in all? The king of France went up the hill,

With twenty thousand men.

If half of the men came down again, how many came down? If one-fourth of the men stayed on the hill, how many of them stayed?

Bo-Peep had half a hundred sheep. If one-fifth of her sheep lost their tails, how many sheep still had tails?

The old fashioned method of sharpening a lead pencil with a knife is a waste of time, not only for the man or woman who has much of it to do, but to all employers who pay for this time in money. A good pencil sharpener, therefore, is a boon to busy people, and a consolation to employers.

There are many particular reasons why the new and improved pencil sharpener, The Climax, is needed. Summed up, they are: The cutting is done from the point. It saves time, a single turn of the crank doing the work. It is clean, and that is important, especially as the knife method also involves washing the hands. It is also the cheapest in the long run. The cutter can be sharpened for only 25 cents and postage, which is much better than purchasing a cheap one several times in a short while, for once the Climax cutter is sharpened it lasts. J. M. Olcott, 63 Fifth ave., New York, is distributing this useful invention.

WRITTEN RECITATIONS

Are of greatest permanent value to the student. They necessitate a thorough knowledge of the subject, for the student must recite all of each lesson; they invite the use of absolutely correct English, for every word falls under the critical eye of a painstaking instructor; they inspire habits of neatness in the preparation of recitation papers; they are valuable for reviews and for occasional reference long after a course of study is finished, for the instructors send back with every paper many helpful and timely suggestions relating to methods of study; and enclose, also, printed answers to test questions. These model answers show how the authors and instructors would answer their own questions, and being unabridged, contain much additional instruction matter. The quality of instruction depends largely upon the preparation of teachers for their work. It has been stated that few colleges, except the strongest in each State, engage better equipped teachers than those we employ.

COURSES FOR TEACHERS

PRIMARY METHODS.—A very extended new course of study in Primary Methods, covering the work in every branch taught in the first three grades of school; also careful treatment of the subjects of organization, management and discipline.

NORMAL ELECTIVE COURSES.—Thorough review courses in twenty-two common school and high school branches; any five subjects constitute a course of study for one tuition fee. Thousands of teachers have prepared for higher grade certificates through this department of the School; they now teach better schools than formerly and receive higher salaries.

ACADEMIC COURSES.—Each branch is a thorough, complete course in itself.

Business, Shorthand, Typewriting and Pharmacy for those preparing for commercial careers. Over twenty six hundred graduates can testify to the effectiveness of our instruction. Ask for new 1905 catalogue; it describes all courses of study and announces particulars of the four \$100 annual scholarships in Northwestern University which our School offers for the best work in its various departments.

"CRAYOLA" CONTEST

A NOTE OF THANKS

Any proposition that stimulates original and individual work among scholars of any age has an educational value to those scholars and to the schools they attend. But this stimulation cannot attain its greatest possibilities for progress and development without the co-operation of the Teachers in charge. So evidently has such co-operation, direction and interest on the part of a large number of Teachers throughout the country contributed to the success of the Crayola contest, that we beg leave here and now to thank them and to express our appreciation of their assistance.

EDUCATIONAL FOUNDATIONS

Professional Advancement Course

OSSIAN H. LANG, *Editor*

Educational Foundations occupies a unique place among professional periodicals. Aiming to be neither a newspaper nor a journal of methods and devices, nor a mere review of education, it has for fifteen years steadfastly adhered to its original plan of supplying broad, thoro, progressive, carefully planned courses of reading for teachers who are striving for solid and permanent success in their chosen life-work. In addition to the most helpful surveys of the various departments of pedagogy, this magazine supplies intensely interesting and profitable general culture courses.

One superintendent writes: "Your magazine has opened my eyes to the larger aspects of education, and my teachers and their pupils have been made the happier by my awakening."

A former country teacher writes: "I had lost courage and intended to take up the study of law, when your magazine came to me and taught me that great work can be done in education. I studied faithfully the contents of every issue and passed, with high standing, a principal's examination. My present place pays double the salary I had a year ago."

Only \$1.25 a Year

SPECIAL RATES WILL BE MADE TO READING CLUBS USING TEN OR MORE COPIES. A circular giving suggestions for the organization and conduct of such clubs both in city and country and outlines of ten courses with valuable pedagogical books will be sent on application. Address

FOR JUNE

VERY PRIMARY TEACHER will want to aid her little ones to make the most of this lovely month. With school-room windows wide open, with vacation clearly in sight, the child's whole nature is ready to respond to suggestions for outdoor nature study in a simple, fascinating way. To meet just this enthusiasm, we have prepared and are ready to send instantly a very inexpensive little volume—the *June* number of the **MONTH BY MONTH BOOKS**. Here are its contents:

FIRST WEEK—THE BUTTERFLY. Outline for Study; A Lesson of Faith; Busy Work, Bibliography.

SECOND WEEK—THE BEE. Outline for Study; Amy Stewart; Jupiter and a Bee; The Bees, the Drones, and the Wasp; Some Queer Bees; King Solomon and the Bees; Poems, Busy Work, Bibliography.

THIRD WEEK—FLOWERS. Outline for Study; Flower Queries; Morning Glory; The Rose; Fun with Flowers; Saint Elizabeth and the Roses; The Origin of the Moss Rose; Flower Emblems; The

Greenies; Legend of the Forget-me-not; The Story of the Morning Glory Seed; The Flowers' Picnic; Songs, Poems, Busy Work, Bibliography.

FOURTH WEEK—THINNER CLOTHING. Outline for Study; Cotton; Arachne; Review of the Seasons; Picture Study—Jean Batiste Camille Corot; Songs, Busy Work, Bibliography.

PATRIOTIC DAYS. Outline for Study; Flag Day; Songs, Busy Work, Bibliography.

A Bunker Hill Celebration. Fourth of July. Celia Thaxter. A Feast of Roses. Rose Drill. Graduation Programs.

Let us send you a copy at once while the month is here—25c.

These **MONTH BY MONTH BOOKS** are used by thousands of Primary Teachers who are most enthusiastic in their praise. If you are not familiar with them let us send you the *June* issue so that you may judge of the series. There are Ten Volumes—one for each school month.

UNITED EDUCATIONAL CO., 61 East Ninth Street, NEW YORK

* **Cut-Up Reading** *

A Fruit Garden.

The paragraphs, forming this "cut-up" story, are to be pasted, each on a separate piece of paper. Each is to be read by one pupil, allowing the others to guess what fruit he is describing. The answers, in regular order, are: strawberry, raspberry, cherry, currant, pear, apple, grape, banana, orange.

I have a garden. Many kinds of fruit grow in my garden.

The first fruit that is ripe in the summer comes in June. It grows on a plant near the ground. It is small and bright red. It has little brown seeds on the outside. What is it?

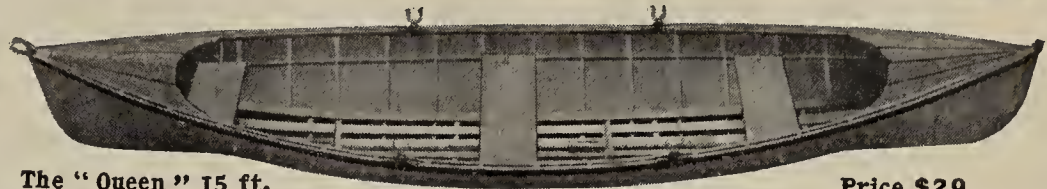

A little later than the strawberry, I have pink berries that grow on prickly bushes. These berries have seeds inside. Sometimes the berries are black. Sometimes they are white. Can you guess what these berries are?

On a tree in my garden there is a red fruit. It is ripe in July. It has a long stem. It has a round stone in the center. Mother makes this fruit into pie. The robins like to eat my juicy, red—Can you think what?

Near the fence I have a row of bushes. Each bush is about four feet high. On these bushes are little bunches of red berries, like small bunches of grapes. They are sour. They make nice jelly. What are they?

In August my trees begin to have ripe fruit. My best tree has oblong fruit. Each is about three inches long. It has green skin on the outside. It is juicy and sweet. It has about six brown seeds in the center. What is it?

The "Queen" 15 ft.

Enjoy Your Vacation

Boating is the ideal recreation for teachers. It gives rest, exercise, pleasure, and health.

Mullins Stamped Steel Boats Are Safe They Can't Sink

Staunchly built of strong, rigid steel plates, with air chambers in each end like a life boat, they are buoyant—strong—safe—speedy—as much better than a wooden boat as a steel greyhound is better than a wooden schooner. They don't leak—crack—dry out—wear out or become water-logged and can't sink because of the air chambers.

Motor Boats, Row Boats, Hunting and Fishing Boats
Mullins Steel Motor Boats are elegantly equipped, full-fledged, torpedo stern motor boats—not row boats with motors in them. They are breaking all records.

Motor Boats, 16 foot, 1½ h. p., \$135; 18 foot, 3 h. p., \$240. Row Boats \$20 up
All boats are sold direct and every boat is fully guaranteed. Prompt deliveries. Send for 1905 Catalogue.

Member National Association of Engine and Boat Manufacturers.

16 ft. Torpedo Stern Motor Boat—1 1-2 h. p. \$135

CROOKED SPINES MADE STRAIGHT

If you are suffering from any form of spinal trouble you can be relieved in your own home without pain or discomfort. A wonderful anatomical appliance has been invented by a man who cured himself of Spinal Curvature. Its results are marvelous. It is nature's own method. The scientific and medical world is amazed at the work being effected. Noted physicians in prominent medical institutions and in private practice are endorsing it. The Sheldon Method relieves the pressure at the effected parts of the spine, the whole spine is invigorated and strengthened, all soreness is taken out of the back, the cartilage between the vertebrae is made to expand, the contracted muscles are relaxed and the spine is straightened. There is bright hope for you, no matter how long you have suffered. We have strong testimonials from every state in the Union. The appliances are being sent all over the world. Each one is made to order from individual measurements and fits perfectly. There is positively no inconvenience in wearing. We guarantee satisfaction, or refund your money at the end of thirty days' trial.

Write for our new book giving full information and references.

HEADACHE

Every effort of the brain or body consumes phosphates. When the supply is less than the demand, derangement takes place and headache follows.

Horsford's Acid Phosphate

(Non-Alcoholic)

is the ideal preparation for brain-workers. Supplies phosphates in a form readily assimilated, promptly relieving headache, nervousness and insomnia.

If your druggist can't supply you, send 25 cents to RUMFORD CHEMICAL WORKS, Providence, R. I., for sample bottle, postage paid.

When it begins to get cool in October, my round, red—are ripe. They are a little sour, just right to eat. They have red skin on the outside, and brown red seeds inside. What are they?

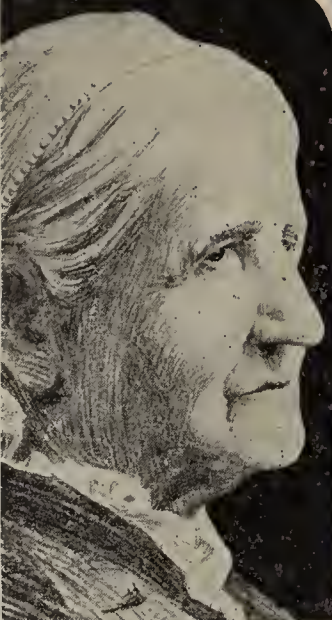

Climbing over the garden fence there is a vine. It has leaves nearly as large as my face. In the early fall there are large bunches of purple fruit under the leaves. When I eat them, I pick off each round piece. I eat the inside, but I do not eat the skin. This fruit is sometimes made into wine.

Some fruits do not grow in my garden. In winter I sometimes buy a long yellow fruit. I take off the peeling in strips, the inside I find is sweet. It has no seeds and I can eat it all. What is it?

There is another yellow fruit that I like to eat. It has thick skin, white on the inside. This is divided into sections. I eat one section at a time. It is sweet and juicy. What is it?

Frederick S. Oliver, of Ballard, Cal., writes: Antikamnia tablets have done grand service in alleviating women's pains. Shall take much pleasure in recommending them in various nerve and inflammatory pains. Druggists sell them, usually charging twenty-five cents a dozen. Camping and outing parties will do wisely by including a few dozens in the medical outfit.

MODENE

HAIR ON
FACE
NECK
AND
ARMS
INSTANTLY
REMOVED
WITHOUT
INJURY TO
THE MOST
DELICATE SKIN

IN COMPOUNDING, an incomplete mixture was accidentally spilled on the back of the hand, and on washing afterward it was discovered that the hair was completely removed. We named the new discovery MODENE. It is absolutely harmless, but works sure results. Apply for a few minutes and the hair disappears as if by magic. IT CANNOT FAIL. If the growth be light, one application will remove it; the heavy growth, such as the beard or growth on moles, may require two or more applications, and without slightest injury or unpleasant feeling when applied or ever afterward.

Modene supersedes electrolysis. Used by people of refinement, and recommended by all who have tested its merits. Modene sent by mail, in safety mailing-cases (securely sealed), on receipt of \$1.00 per bottle. Send money by letter with your full address written plainly. Postage stamps taken. LOCAL and GENERAL AGENTS WANTED

MODENE MANUFACTURING CO.
Dept. 51, Cincinnati, Ohio.
Every Bottle Guaranteed.
We offer \$1,000 for Failure or Slightest Injury.

An Educational Exhibit.

One of the interesting exhibits of school supplies at Asbury Park, N. J., in connection with the National Educational Association Convention, will be the color drawings executed, by pupils from various states, with the Dixon crayons.

The exhibit will be at the West End hotel under the charge of Mr. Reed, manager of the educational department of the Dixon company. A cordial invitation is extended to all teachers to examine the exhibit. How well the crayons fill the need may be indicated by the contract for 36,000 boxes recently awarded to the company by the city of Indianapolis.

The Twins.

We're twins—an' my name's Lucy Brown,
An' her name's Lulu: I'm called "Lou,"
An' ever'body in 'is town
'Ey call my sister 'at name, too.
An' folks, 'ey come to see us here,
An' we ist have th' mostes' fun
'Cause ever'body says: "Oh dear!
W'y 'is one is th' nuther one!"

My papa sometimes look at me,
An' say, "Well, Lulu, how you glow!"
An' nen I laugh, an' nen, why, he
Say goodness sakes! he'll never know
Which one is which. An' nen I say
No one can tell us twins apart
'Cause we're together any way
An' nen he holler, "Bless your heart!"

My mamma never gets us mixed;
She always knows my twin fum me,
An' papa says she's got us fixed—
Our clo'es, or hair so's she can see.
But mamma hugs us bofe up tight
An' kisses us, an' pats our curls,
An' says a muvver's always wite
An' always knows her preshus girls.

But nuther folks 'ey ist can't tell—
An' oncet when Lulu clumb a tree
An' couldn't hold, w'y when she fell
Th' doctor thought 'at she was me.
Nen we all laugh, an' he ist say
It's all in how the notions strike,
'At bofe of us looks ist one way,
But 'at I look th' most alike!

—WILBUR D. NESBIT, in *Harper's Magazine*.

Rest and Health for Mother and Child.

READ Hester of the Grants

A ROMANCE OF OLD BENNINGTON

By **THEODORA PECK**

Frontispiece by **THOMAS MITCHELL PEIRCE**

"**H**ESTER OF THE GRANTS" is a spirited and wholesome story of love and war in Vermont during the Revolution. The Hampshire Grants, in which the scene of the story is laid, were described in an official report of General Burgoyne, of the British forces, "as a country which abounds in the most active and most rebellious race of the continent." The heroine is a daughter of that race and the author has given her a personality which is little short of fascinating. The story is full of action, sentiment, courage and patriotism, the characters are all skillfully drawn and the plot is developed with convincing force and effect. The author is deeply imbued with the New England spirit and has imparted its full strength to this attractive novel. It is but just to say that Miss Peck has treated her theme with womanly feeling, grace and dramatic art of a high order. The whole story abounds in the Green Mountain atmosphere."—*Army and Navy Journal*

FOR RESTORING BRAIN POWER

This is an age of mental overwork and worry. The brain is weakened by either mental or bodily excesses. A special food to nourish and keep the nerves strong, the brain clear and vigorous, is an absolute necessity. For this

VITALIZED PHOSPHITES

formulated by the late Dr. Samuel R. Percy in 1872 has been found wonderfully efficacious. It is derived from the vital or nerve-feeding principle of the ox brain and wheat germ, the very elements to restore brain and nerve power without the aid of injurious drugs or narcotics.

"I have used and highly recommend **CROSBY'S VITALIZED PHOSPHITES.**"
—Rt. Rev. HORATIO POTTER, D.D., Late Bishop of New York.

“THE MOST SATISFACTORY SET OF READERS”

MISS MARY MOORE WELTON, for a number of years Principal of the Primary Department of the Ethical Culture Schools of New York, and one of the ablest primary teachers in America, in a letter to Miss M. W. Haliburton, one of the authors of “**GRADED CLASSICS READERS**,” says:

“It is altogether the most satisfactory set of Readers I know. In my opinion you have the right conception of Phonics, both as to the method of teaching it and as to its proper subordination to the thought side of the work. While I differ from you in a few details, I consider that you have met the most serious requirement of a set of Readers—that of giving the children ‘literature’ from the beginning. You have also succeeded in giving them much fresh material, which adds to the attractiveness of the books. I most heartily commend the whole series.”

EBERHARD FABER, NEW YORK

Teacher's Plan Book and Progress Record

Designed by **STANLEY H. HOLMES**, Supt. of Schools, Haverhill, Mass.

14th Thousand

The pages of this book consist of ruled spaces to be filled in by the teacher, designating “Work planned,” “Work accomplished,” etc.

If a teacher will write in this Plan Book an outline of the day's work in each study, she will enter upon her work with force and vigor, and the pupils will also be greatly benefited.

Price, paper, 30 cents

Valuable New Publications

The Brownie Primer.

Printed in four colors. To make an attractive book one must have an attractive subject, one that appeals to the child. The authors with this in mind have chosen the little brownie men for their characters. The child becomes intensely interested in these queer little men. The authors have endeavored to bring out those traits of the human character that children enjoy. The stories will inculcate lessons in ethics, morals, and manners. Vocabulary 300 words, but 7,000 words of reading matter. It is a beautifully printed and handsome book of 112 pages. Price, 35 cents. Sample, 25 cents.

The Art and Life Primer.

By NELLIE C. JACOBS, New York City Schools, is one of those books for the use of children in school of which one can speak with enthusiasm. Its beauty and utility in leading the pupils to an appreciation of art, and at the same time in advancing them in a knowledge of English, cannot be gainsaid. The pictures are such as appeal to every child; they are copies of famous paintings. The subjects are dear to the child-heart. The main purpose of the primer is to teach the child to read from a book during his first weeks in school; to teach him to read fluently, understandingly, independently, and with expression, before he ventures upon the difficulties of a first reader. Vocabulary limited to 190 words. 144 pages. Price, 30 cents. Sample, 18 cents.

Practical Drawing Books. primary series one to four, each 40 pages, 15 cents. They are the best and are becoming the most popular drawing books published. Write for full particulars, sample pages, etc., or remit 25 cents for two numbers.

Our Little Sisters; The Brown Baby, The Sun Baby, and Gemila, 32 pages, 6 cents; 60 cents per dozen. **Fairy Tales, Red Riding Hood** and others, unique illustrations, 6 cents; 60 cents per dozen. **Tale of Bunny Cotton-Tail,** 44 pages, 10 cents; 75 cents per dozen. We have dozens of others. See our 1905-6 catalogue, ready July 15th.

Our Catalogues should be on your desk. Note the following:

TEACHERS' CATALOGUE. 140 pages of Helps and Aids for Teachers, School Singing Books, Little Classics, Pictures, Stencils, Alphabet Cards, etc. A valuable and useful catalogue.

SCHOOL SUPPLIES AND FURNITURE. 54 extra large pages. It describes supplies needed in or around a schoolhouse, Maps, Globes, Charts, etc. Wholesale prices.

Type Studies in Nature Study and Literature.

By ANNA E. MCGOVERN, State Normal School, Cedar Falls, Iowa. A manual in nature study for the first four grades. Third edition. Rewritten and illustrated. Hundreds of poems, stories, and lesson plans interspersed with talks to teachers as only a successful training teacher can give to a class of student teachers. 360 pages. Cloth, \$1.00.

Games, Seat Work, and Sense Training Exercises.

By M. ADELAIDE HOLTON, Primary Supervisor, Minneapolis, Minn. Anything Miss Holton offers is good. The games, seat work, and sense training exercises contained in this little book are the result of years of experience with thousands of children and hundreds of teachers. Great care has been taken to give a variety of educative exercises that cultivate attention, concentration, interest, judgment, and reasoning, and that train along the lines of regular school work. It is a valuable book for any teacher to possess. 128 pages. Cloth, 40 cents.

How Little Cedric Became a Knight.

Little Cedric is a beautiful little story. It inculcates bravery, right, respect, and love. The pupil's edition, 32 pages, 6 cents; 60 cents per dozen. Teacher's edition has hosts of suggestions and helps on the teaching and use of the story. Price, 15 cents.

Publishers' Talks

IT certainly is a source of a great deal of pride and gratification to us, to have TEACHERS MAGAZINE receive such unstinted praise and wide-spread commendation. It is not an easy problem to publish an Educational Journal that shall either measure equal to the exalted subject it seeks to portray, or is worthy of the refined and cultivated taste of the constituency it wishes to serve. Under the circumstances, to justify such enthusiastic words of approval as has been reaching us from all sections of the country is truly delightful, and we would thus express our sincere appreciation to all our readers who have so encouraged our efforts by their cordial approbation.

In issuing TEACHERS MAGAZINE in its present form we have been dominated by the belief that the teachers of this country are entitled to as high class a magazine as it is possible to publish at the appropriation at our command. In order for this magazine to attain to that standard of "high class" which we have set before us as a goal, it must conform to a number of essential qualifications. 1st. It must be attractive in exterior and interior appearance; and this involves good paper, good type, good ink, good illustrations, and good workmanship. 2nd. It must be interesting and helpful in content; and this necessitates discriminating editorial judgment and the utilization of the worthiest contributory talent. 3rd. It must be inspired by and pervaded with the highest Educational motive; so that the truest ideals, the best aspirations, and the most devoted work may ever be encouraged and cultivated upon the part of those into whose hands are entrusted the moulding and perfecting of the lives and characters of the youth of our land.

Can we accomplish this ambition? We surely can, especially if the teachers endorse our endeavors by the liberal support to which we believe such a magazine is entitled. We have no fear but that we shall have this extensive patronage, for we have implicit faith that merit will find its just reward. Our chief concern is to establish the merit and the rest will follow as a natural sequence. The June number of TEACHERS MAGAZINE was so good, that evidence is apparent in every quarter that teachers prize it highly and will support it very largely. As an illustration of the general impression that the magazine has created we cannot resist the temptation to quote a few sentences from some letters that have particularly touched our pride.

From a City Superintendent of Schools.

"The TEACHERS MAGAZINE is a most gratifying, climatic, educational issue. We have been endeavoring for years in America to reach this goal. The triumph is fairly your own and I congratulate you."

From a County Superintendent of Schools.

"I take this time to commend TEACHERS MAGAZINE. It more nearly reaches my idea of an up to date helpful paper than any I've seen lately. I hope it may have much prosperity."

A Testimonial from Abroad.

TEACHERS MAGAZINE is delightful and helpful in the highest degree. It is by far the best teacher's journal of its kind I know of in Great Britain, America, and France. I hope to come and see your schools personally someday. May you be blessed with health and success in your noble work."

From the Rank and File of Teachers.

"Please accept my best wishes for your new monthly magazine. It marks a step forward in the progress and

betterment of school literature. The magazine is an honor to the profession."

"I have examined carefully your new TEACHERS MAGAZINE and the more I look, the more delighted I become. I am really enthusiastic about it and think it perfectly splendid, so delightfully gotten up, so helpful, and above all so practical."

"Am charmed with the new magazine. It is just what we teachers have needed for a long time."

"I was very much pleased with the first number of TEACHERS MAGAZINE which you so kindly sent me. It does not seem possible that you can give so much for so little. I am sure the teachers of the country cannot fail to appreciate its helpful pages."

"I want to congratulate you upon your initial number of TEACHERS MAGAZINE. It cannot fail to interest every teacher from primary to high school. Miss Brook's article on "Play and Self Activity in Early Education," or Edward F. Bigelow's "The Child or You" is more than worth the price of the magazine. I have taken *Primary School* for years and am looking forward to TEACHERS MAGAZINE with a great deal of pleasure."

A Pledge of Continued Excellence.

We have learned that there is some disposition in certain directions to question either our ability or our intention to make subsequent numbers so delightful in every way as the first issue. To all such critics we would have this number make its own reply. The June number was not issued as a sample, for as such it did not do us justice. This number in several respects is better than the June magazine, and in successive issues we hope to excel even the successes we thus far have achieved.

The Value of Educational Journals.

In asking for a subscription to this magazine of any teacher into whose hands it may fall, we do not wish to do so to the detriment of any other educational journal. It is not our wish to wean any individual, by the excellence of this publication, away from any other paper to which he has been accustomed to subscribe. What we would like is to have teachers subscribe for this magazine in addition to any other journals that they may now be taking. And why not? It certainly is worth a teacher's subscription, and every teacher should properly seek any medium that will acceptably influence her work, and aid her in her classroom duties. Of course, we know how radically unjust and unequal is the compensation of many teachers, and yet the meagerness of pay should be no excuse for a sacrifice of good reading. On the contrary, the smaller maybe the teacher's compensation, the more reason there is for constant association with good educational literature. A subscription to a number of the best educational journals is the very best expenditure that any teacher can make, because such reading not only tends to make less grinding the daily routine, and serves to increase the ease and pleasure of teaching, but, furthermore, such reading adds to the proficiency of any teacher and more certainly prepares her for positions of large remuneration. By all means perfect your usefulness and efficiency by keeping in touch with the best thought and methods of your profession. Take your state journal because it is entitled to your support, and because it is to your interest to keep posted upon state educational matters, and then take three or more other magazines dealing with the problems upon which you are engaged. If you try to subscribe for all of these journals in the first month of the school year, it may seem a little difficult and possibly may demand some sacrifice,

but every teacher that is conscientious about the character of her service, and ambitious about the results she wishes to produce, can and should devote one dollar each month to educational literature. This will permit of subscribing to several educational journals even tho the subscription and payment be made in different months, and still have a margin for the purchase of a few of the best books that are published each year.

Make Yourself an Associate Editor.

Neither the editor or publishers of this magazine can hope to entirely comprehend the various points, features, or subjects that might properly be treated in our columns with the greatest acceptance to our readers. We are greatly impressed with the idea that "everybody knows more than anybody," and we therefore hope to encourage that spirit of cordiality and co-operation between our readers and ourselves whereby we may be the better guided, by suggestions that reach us, in achieving that constant advance in interest and helpfulness that we are eager to have ever apparent in this publication. If our readers will only write us when any article is especially interesting, or when, in their judgment, certain space assigned to a given subject could be better devoted to something else of greater importance and merit, it will be a great aid to us in interpreting and satisfying the desires of our host of friends. There may be reasons why it is impossible to act favorably upon every suggestion offered, but nevertheless, we would like our readers to become, as it were, associate editors of this magazine and help us in the production of a journal worthy of the best minds of our professional talent.

A Word of Explanation.

Should there be any additional delay in properly merging the subscriptions to the various Journals amalgamated into the TEACHERS MAGAZINE, we crave the indulgence of our readers. We hope that by the time the Magazine is ready for mailing that this difficult task will have been accomplished and that the correct date of each subscription expiration will appear upon the address label of each Magazine, but, if not, please be patient and we shall have everything adjusted very shortly. The material increase in our business, and the extra demand thus made upon our manufacturing facilities, has made it impracticable to continue our plant in our own building at 61 East 9th St. There did not exist in our building either the room to permit expansion, or the arrangement of our work to the best advantage. Furthermore, it has seemed to us too expensive to use this floor space in one of the choicest business localities of New York which can be rented for office purposes to such good advantage, when our own manufacturing can be done elsewhere with greater convenience and economy. For this reason we have been utilizing the summer months in transferring our machinery and plant to our new location in Elizabeth, N. J., where we have a large floor space in a building purposely erected for this very character of business, and where we will be better able to meet the demands made upon us by a steadily increasing patronage. We shall maintain our general office at 61 East 9th Street, and shall perfect an attractive salesroom where the best books upon education may be seen, and which will be in charge of a courteous and capable staff of salespeople. Here we shall hope to receive the visits of our patrons with ever increasing frequency.

An Attractive Investment.

We take the liberty of especially calling the attention of our subscribers to the possibility of obtaining some of the preferred and common stock of this company upon easy terms of purchase. The advertisement displayed elsewhere will speak for itself, but we strongly urge anyone who is seeking a good investment for money already saved, or for money that they would like to save, to promptly take advantage of this opportunity. The sale of every dollar of this preferred stock that we are now offering to our subscribers has been guaranteed, but we naturally favor the holding of our stock by educators rather than by financiers. It is the teachers who will enable us to declare dividends, and it is to the teachers that we want these dividends to return. It is not an easy matter to find a safe, conservative, and attractive seven per cent. investment, and oftentimes we are tempted to take a financial interest in lines of activity about which we know little or nothing, merely because the promise of a good rate of interest upon our money is submitted. In this case, however, a chance is offered for teachers to invest in a business with which they are familiar, with which they are in sympathy, and the solidity and safety of which is evidenced by the thirty years and over, of continuously successful operation. This stock will not be offered for sale

for any great length of time, and judging from the applications that are reaching us, this period of time threatens to be even shorter than we at first anticipated. Applications should therefore be made promptly.

The Use of Current Events in Teaching.

We are firm believers in the use of Current Events in the school room, for there is scarcely a study that cannot be illuminated and made more interesting by illustrations taken from the important occurrences of the day. In many schools current events are specifically taught, but in all schools they should be utilized as an aid to teaching. We fail to see how any progressive teacher can well get along without some medium for keeping posted upon the events of the day. Of course, the daily newspaper fulfills this function, and yet there is so much chaff with the wheat that it necessitates considerable time and careful discrimination to grasp and understand the events that are properly applicable to class room studies. We are diligently endeavoring to meet this situation in *Our Times*, and we purpose continuing our effort to make this journal increasingly valuable, interesting, and wholesome. Many teachers regard *Our Times* as the "Prince of Weeklies," and so it is for their work and needs, but it is going to be still better. It has been changed into a weekly because we realize that a current events periodical for use in the class room must be issued oftener than once a month.

We also have other plans in connection with *Our Times*, that later on will prove a most pleasing and gratifying surprise to its readers, and which will make it an exceptionally entertaining and instructive magazine. In order to develop the very best plans of associating important events with the daily studies of the school, we purpose during succeeding months to offer a series of prize contests for the most advanced and practical methods of using current events in teaching geography, history, civics, language, composition work, and in other branches of study. The first contest will be in connection with history as is outlined in a special advertisement printed elsewhere in this magazine.

As an aid to teachers in reviewing pupils upon the current events of recent occurrence we shall print in each number of this magazine an examination that may be used for that purpose, giving both the questions and answers, and specifying the page and issue of *Our Times* where full information may be found. *Our Times* should not only be in the possession of teachers but of pupils also, and more and more schools each year are encouraging the use of this periodical. Teachers can give a great impetus to this movement, and if anyone who is using current events in his teaching will write us we will gladly supply information as to several methods whereby this can be accomplished. There is no better way of arousing the wit and latent brightness of a child, or of stimulating a love for study, than by keeping him alive to important events, and the relation of such occurrences to his class room work.

Help Us Improve This Magazine.

How? Very easily. This periodical is an expensive one to publish, as you know, and we cannot make it what we wish it to be in appearance or intrinsic worth unless we have liberal advertising support. On the other hand advertisers do not patronize a publication very long if it does not pay. What we desire to urge is that our readers scrutinize the advertisements displayed in this magazine each month as carefully as they do the reading matter, and whenever possible patronize those who are supporting educational work. By this we do not mean that you shall order unless you need, but when you do need, familiarity with the names of those supporting a periodical of interest to you, will enable you to return an obligation without any additional cost to yourself. We shall jealously guard our advertising columns so as to allow space in this journal, to nothing that is not meritorious and worthy, and we hope our subscribers will still further back our efforts by forming the habit of examining advertisements with care and interest.

Date of Issue.

We shall endeavor to faithfully respect the 20th day of each month as the date of publication of this magazine, so that it may be in the hands of subscribers before the first day of the month for which it is issued.

Graduation Day Programs.

It will afford us considerable satisfaction if teachers will send us the program of the last graduation day exercises of their school.

THE TEXT-BOOKS

PUBLISHED BY THE

AMERICAN BOOK COMPANY

Include over three thousand titles, and form by far the most complete and valuable collection of School and College Text-Books ever issued.

Its large editorial staff is constantly engaged in supervising the publication of new books which have been written by eminent authors. During the past five years this Company has issued nearly 400 new text-books, in addition to copy books, bookkeeping forms, etc. To this list there will constantly be added other books which will be prepared especially to meet such requirements of teachers as may arise.

The American Book Company's publications cover every branch of study pursued in schools and are unrivaled for their popularity in

Elementary Schools

Secondary Schools

Preparatory Schools

Commercial Schools

Business Colleges

Normal Schools

Colleges and Universities

Teachers who wish something standard or something new or different in the way of text-books are invited to correspond with us. There is no want in this connection that we can not supply. Price

Lists, Circulars, and Catalogues will be sent to any address on request.

OPINIONS OF TEACHERS USING THE BOOKS:

THERESA L. STOUT, Ithaca, N. Y. :

I am well pleased with Steps in English and have introduced both books in my school this year. I would not know how to teach without them. I shall take every opportunity for recommending them to teachers who have trouble in teaching language and grammar.

**CHARLES. B. BOYER, Superintendent of Schools,
Atlantic City, N. J. :**

We have been using Steps in English during the past year, and have found it very satisfactory. The book is standing the test admirably, and I shall continue its use.

**SAMUEL GELWIX, Superintendent of Schools,
Chambersburg, Pa. :**

After a careful examination of many texts on grammar, our Board adopted Steps in English for use in our schools. A year's trial has proved the wisdom of the adoption. Our children have taken a deeper interest in the study of this important branch, our teachers have been enthusiastic in their recommendation of the book, and the results have been far more satisfactory than for years past. I believe our experience will be the experience of all using Steps in English.

**JANE E. LEONARD,
Teacher of Rhetoric, Composition, and Literature,
Indiana State Normal School, Indiana, Pa. :**

Why were not books like these written long ago? Thousands of teachers will rise up and call you blessed. You have largely taken away the bugaboo of composition writing from the schoolroom.

**H. A. CASSIDY, Superintendent of Schools,
Lancaster, Ohio. :**

At present we are using Book One in the third grade and the results are very gratifying indeed to pupils, teachers, and myself. There seems to be system about the lessons that appeals immediately to any one handling the book. It is our expectation to use Steps in English as our text-books from the third grade up.

**J. M. FURMAN, Principal Irving School,
Tarrytown, N. J. :**

I was reluctant about making the change to Steps in English, but have been glad I did so. The pupils are enthusiastic in their work, and have made rapid improvement. I shall continue the use of the series.

**LINA E. TROENDLE, Principal Agassiz School,
Chicago, Ill. :**

We have tried Steps in English and have found it a most valuable aid in our language work. My teachers are loud in its praise, and some are of the opinion that it is the best work they have ever used in the class room.

**FREEMAN E. LURTON, Superintendent of Schools,
Preston, Minn. :**

With the beginning of this school year we introduced Steps in English, and judging from the joint testimony of all teachers using them we did wisely. They have produced a unity in the work of each grade, and a continuity in the work of successive grades that was lacking before. Then, again, the constant and well worked out composition practice is an excellent feature of the books.

**LEE SWIFT, Superintendent of Schools,
Tracy, Minn. :**

We like Steps in English. It has the essentials, and the analytic, and the synthetic is balanced. It does not run to extremes, and extremes are the abomination of text-books. Time has been when the author who could not ride a hobby into the text-book arena had no place within the list. The signs indicate that we are returning to a saner condition.

**H. C. BUELL, Superintendent of Schools,
Janesville, Wis. :**

After a long session of our Board of Education, during which the text-book committee and myself presented the strong and weak points of fifteen series of language books to the Board, that body unanimously adopted Steps in English as our text-book in language for our schools.

**CLAYTON G. MABEY, Principal, Nunda High School,
Nunda, N. Y. :**

At the beginning of the year we put Steps in English in our fourth grade. Results have shown that we have made no mistake in so doing. The book is logical and not too advanced for the grades. The pupils have shown added interest in their language work, and the teacher no longer finds it necessary to secure animation by supplementing the text-book. We expect to use both books the coming year.

AMERICAN BOOK COMPANY

LATEST BOOKS FOR SCHOOLS

THE ROSE PRIMER . . . \$0.30

The excellent pedagogical features and the attractive mechanical appearance constitute two striking features of the Rose Primer. The work is well graded and new words are presented very gradually. Only two new words are introduced in each lesson, constant repetition of those already learned being provided for. At its first occurrence, each word is presented both in script and in print. The subjects treated are familiar and of interest to all children. The sentences are short but connected in thought with those which precede and follow so as to excite the interest of the pupils. Phonic drills and reviews are given at proper intervals.

NEW BOOKS FOR TEACHERS

ROARK'S ECONOMY IN EDUCATION . . . \$1.00

This book discusses the application of the principles of economy to the work of the school. It deals with the careful and economical use of time, money, and energy in effecting the right education. The general divisions of the subject are the organization and management of the individual school, and of the school system, and the useful direction of the other educational forces of the community.

PAINTER'S GREAT PEDAGOGICAL ESSAYS . . . \$1.25

This volume contains selections illustrating every period of educational history from Plato to Herbert Spencer. Selections from twenty-six of the world's most prominent educators are given, each introduced by a brief biographical sketch. The reader is thus enabled to secure an acquaintance with the original sources of information, and a correct critical estimate of each author's views and works.

SPENCERS' PRACTICAL WRITING

Six Books. Each, per dozen . \$0.60

A modernization of the most popular system of penmanship ever published. It has been devised because of the distinct and widespread reaction from the use of vertical writing in the schools, and meets present-day wants. It teaches a plain, practical hand, moderate in slant and free from ornamental curves, shade, and meaningless lines. Each word can be written by one continuous movement of the pen. It combines all the advantages of the old and of the new, and is easy to learn and easy to teach, combining both grace and legibility and avoiding all faddish extremes.

CARPENTER'S GEOGRAPHICAL

READER--AFRICA . . . \$0.60

The latest and final volume of the most successful series of geographical readers on the market. It embodies the same features of clear, forceful and simple style, together with similar interesting subject matter and methods of presentation. The book gives a simple knowledge of the peoples and countries of Africa as they are to-day by means of a personally conducted tour. Much of the volume is the result of the author's travel and observation. There are a large number of illustrations, many of them reproductions of photographs taken by the author in his travels. In addition, there are six maps, which present all the places mentioned in the text.

UNITED EDUCATIONAL COMPANY

SUCCEEDING

E. L. KELLOGG & CO., Founded 1874

E. O. VAILE, :: :: Founded 1880

61 EAST NINTH STREET,

::

::

::

NEW YORK

FOR A VERY LONG TIME many of our subscribers have been faithful to the Educational Work which has been accomplished by the predecessors of this company.

Teachers have come and teachers have gone, but our publications have steadily and consistently fulfilled their functions, guiding, directing, stimulating, and helping those who have been engaged in the trying and responsible duties of scholastic work.

We are proud of this record, and we appreciate the heritage to which we succeed.

Our Family of Readers engirdles the world, and our one aim is to **do things** in such a way, with such a purpose, and with such efficiency as to make an indelible impress upon Education for its uplifting and enriching benefit.

We are not satisfied to move along in the same old way. The law of life is progression. We want to expand, to steadily advance, to attain greater and greater development.

Whatever we shall accomplish will be through the co-operation and support of our subscribers. What more natural than that we should want our subscribers to share in our material prosperity?

AN ENLARGED OPPORTUNITY FOR PROFITS

By the consolidation into one company of the interests of our predecessors—interests that have existed commercially for twenty-five and thirty years—we are permitted to realize a very much increased patronage, which enables us to perfect the various branches of our business in such a manner as to gratify our present circle of friends and to materially increase the number of our subscribers.

INCREASED CAPITALIZATION

This enlargement and improvement of our operations has very naturally necessitated an increase in the capitalization of our business. To accomplish large things commercially plenty of capital is imperative. For this reason we have organized our present company with a capital of \$300,000, of which \$100,000 is Preferred stock.

PREFERRED 7 PER CENT. CUMULATIVE STOCK

The Preferred stock is non-assessable, of a par value of ten dollars a share, and carries a 7 per cent. cumulative clause. It is Preferred both as to Assets and Dividends. This preference means that the entire assets of the business after the payment of the current indebtedness of the company is pledged to the redemption of the Preferred stock at par before any of the assets can be applied to the common stock. Furthermore, the profits of the company must be devoted to the payment of 7 per cent. dividends upon the Preferred stock before the common stock can participate in the earnings. Furthermore, the cumulative clause means that 7 per cent. dividends must be paid upon the Preferred stock each year, otherwise such deferred dividends become an obligation upon the company, which must be subsequently paid just the same as any other liability. This form of investment thus partakes of a very substantial character.

ASSETS FULLY PROTECT

The Assets of the business are shown by valuations to be sufficient to protect the total issue of the Preferred stock, and the net earnings of the company should certainly insure the regular payment of the dividends required.

\$50,000 OF PREFERRED STOCK OFFERED FOR SALE

Of the \$100,000 of Preferred stock only \$75,000 will be issued at the present time, and of this amount \$50,000 is now offered for sale to our subscribers in shares of \$10.00, and upon such a basis as to make it reasonably possible for an investor to realize a return of from 7 per cent. to 10 per cent., and even more, upon his outlay.

SALE OF STOCK GUARANTEED

Every dollar of this Preferred stock that is now offered for sale has been guaranteed so that it does not affect us financially if not one share is purchased by our subscribers, but as it is our patrons who will enable us to pay dividends, so it is to our patrons that we should like the dividends to go.

EASY TERMS OF PAYMENT

For the benefit of those who would like to take advantage of such an opportunity, but who do not like to draw their savings from their bank, we have arranged to allow them the privilege of paying for each share of Preferred stock which they purchase at the rate of one dollar per month for a period of ten months. Five shares, five dollars per month. Ten shares, ten dollars per month.

THE DUTY OF SAVING

All teachers should plan to lay aside something each year as an investment out of their earnings, no matter how small such earnings may be. As a rule teachers do not have many opportunities for reliable investments in small amounts, and for this reason are sometimes inveigled into visionary and unstable propositions by the unjustifiable promise of large returns. It is because of this condition that we have decided to present this opportunity to our subscribers of becoming interested in a line of activity the stability of which has been proved by long years of operation and with which teachers are familiar, and in which they are interested. We do not submit it as a bonanza that offers marvellous returns, but as a safe, conservative, substantial investment that promises to produce regular and attractive dividends.

FURTHER DETAILS UPON APPLICATION

HISTORY AND CURRENT EVENTS

WHAT IS THEIR RELATION?

HOW MAY THEY BE CONNECTED?

Is not one of the best methods of arousing an interest in the study of History by connecting Past History with Present History?

WHAT PLAN DO YOU PURSUE?

In order to arouse discussion upon this subject and to stimulate the thought of our leading pedagogical minds as to the best plans of using Current Events in connection with various studies, we propose to conduct a series of Monthly Contests along this line.

THIS MONTH THE CONTEST IS ON HISTORY

PRIZES of \$10.00 for the First, \$5.00 for the Second, \$2.50 for the Third best method of using Current Events in the teaching of History

CONDITIONS OF CONTEST: 1. Replies to the History Contest must reach us by Nov. 15th. 2. Plan must be submitted in full detail, giving illustrations. 3. It is desirable that the plans submitted should, as far as possible, specify *Our Times* as the medium for obtaining the Current Events used as illustrations, although this is not demanded. PRIZES AWARDED BY THE EDITORS.

EDUCATIONAL FOUNDATIONS

A SYSTEMATIC COURSE
IN PEDAGOGY :: ::

A GLIMPSE OF SOME OF THE GOOD THINGS IN STORE FOR 1905 AND 1906

Eduoational Biography. First emphasis this year will be placed on the biographies of the men and women most prominently identified in formulating new ideas in reducing them to practical methods, and devices for school room use.

History of Education. Vittorius da Feltre & Loyola, and the School of the Jesuits will be among the many special artic es relating to the History of Education. The former lends a powerful influence upon Pestalozzi, and through him upon all modern elementary education.

Woman's Work in Education. The great work done by women has never been adequately presented. Interesting articles will appear concerning Miss Stone, Miss Buss, Emma Willard, Lydia Sigourney, and others.

Education Among Different Types of Women. An important series to be continued by Miss Griffin.

Eminent Living Educators. Articles concerning Dr. Sheldon of the "Oswego Movement," Supt. Newton C. Dougherty will write about Newton Bateman and Dr. E. Oran Lyte, concerning Wickersham. There will besketches of Dr. W. H. Maxwell, Dr. F. Louis Soldan, and President Eliot.

Methodology. There will be articles concerning general rules of teaching, and also upon instructions in special branches. Teachers' Examinations will be continued.

Common School Extension. There will be a further exposition of this subject by Educational Foundations, which has already won the leadership in this line in the past.

The Social and Economic Life. Several articles will appear on topics of vital interest to the Teachers' Social and Economic Life.

Subscription, \$1.25 a year. Special terms to clubs. Address

No. 1

Thoughts for the New Year

HUMAN beginnings usually have a past behind them. We call it experience. We speak of it as something we have gone thru and come out of. The supposition is that we have profited by it. That is what the past is for: to profit by.

Wisdom places a high value upon the past, gathering it and hoarding it with as much care as the bees do their honey. Nothing of any significance is permitted to be lost. History is the great storehouse of human experience.

It is to history that man owes his superiority over the lower animals. His is the privilege of calling to his aid the experiences of other men and other times. Whatever his special needs may be, he is reasonably certain to find suggestion and help from those who have gone the way before him.

Teachers are especially favored in the records of humanity. Large stores of precious material have been accumulated for their guidance. Each month new treasures are added by thoughtful workers in the field who want to let others share in their successes. They are laden with messages of encouragement and good cheer, and seek to render easier the problem of teaching aright.

To bring home to teachers everywhere the good things which this world has for their special help and comfort, is the purpose of this publication. It seeks to be a magazine, a storehouse of rich treasures gathered from the workshops of men and women who are planning and laboring for the best interests of mankind.

This is the teachers' season of resolutions. The new school year shall be richer in satisfaction than any year that has preceded it. Two things will make it so: gather all the strength and aid that can be found, and give freely to others.

To the young teacher who is just beginning his first year in school I would like to say a special word: keep up your courage, hold fast to your faith whatever the disappointments you may meet. It is well that we do not realize the limitations of our powers when we enter upon a new task. The confidence of inexperience has pushed the world around many a difficult corner. The danger time is the moment when we see some of our most cherished plans go aglee. It is then that we must cling to hope with all our might. Once our optimism is shipwrecked we are no longer fit to have the care of young people, they need plenty of sunshine always.

Better than running the danger of a shipwreck is, of course, wise preparation for the journey. A few homely hints from my own experience and observation may be found useful. They are briefly don'ts.

The first don't is spelled with a capital D and sums up a whole sermon. *Don't speak ill of anyone.* The "anyone" may be the teacher who had the place before you, or a school trustee, or a pupil in the school. Don't. Disparaging remarks about your predecessor must be guarded against in every possible way.

Beware of cliques! Be careful when you come to a new place to avoid entangling alliances with factions in social or church matters. It is best to go slowly in forming friendships. Be cordial to everybody. Let others do the talking about local affairs; they know more about them than you do, and you will learn more by listening.

Say little of your educational advantages and whatever social distinction you may have enjoyed in the past. Let your conduct speak for for you.

Be sure to set aside at least an hour a day for your own improvement. Growth in culture is imperative to a teacher. He who does not strive for his own advancement cannot inspire others to progress. The world's treasure house of literature is at everyone's command. Why not take up Shakespeare, or Scott, or Homer? Dante's Divine Comedy may keep you busy for many months. Read at least one really great book of general literature. Next, resolve to be a faithful student of the history, theory, and practice of education. Here *Educational Foundations* will prove of invaluable assistance to you.

Don't fritter away too much time over daily papers and literary magazines. You want to read your local news, of course, in order to keep in touch with what is going on in your town. *Our Times* will supply a convenient summary of the important events of each week. The literary magazines have in late years become mere entertainers, and only a few of them have any serious purpose behind them.

Rest much! Live teaching is nerve-exhausting work. There is a constant spending of vitality in personal contact with alert young minds. After school hours throw yourself flat on your bed and be perfectly relaxed for ten minutes or more.

If difficulties arise write me. TEACHERS MAGAZINE desires to help you and thru you the children.

The Convention of the National Educational Association

[Editorial Review]

There has not been a saner, more significant, and more all-around satisfactory convention in twenty years than was the one held at Asbury Park and Ocean Grove. Boston had larger numbers, enrolling almost twice as many tourist members. The 1905 meeting had President Roosevelt.

The educational duty of the United States was never more comprehensively and more clearly presented. There was no desultory talking and few attempts to make the welkin ring. Seriousness and purpose characterized the program from beginning to end. Reports of unusual value and importance were received and discussed. Minor topics were crowded to the rear, even in the department meetings. Largeness of view prevailed. That pettiness which, according to tradition, is inseparable from the composite character of teachers, was less in evidence than ever before; less than one meets with ordinarily in conventions of journalists, physicians, and clergymen.

Mr. Maxwell was a superb presiding officer. The preparations were perfect. Everything went off without one hitch. If there was any disappointment it was not permitted to come to the surface. The decorations of the convention hall were simple and thoroly appropriate in their patriotic character and quiet beauty. The music was in itself a feast of rich things. Tali Esen Morgan possesses marvelous skill in the organization and training of choruses and orchestras. The music chosen for the convention was a compliment to the taste of the teachers. Mozart, Handel, Berlioz, Mendelssohn, Wagner, Gounod, and Schumann, together with inspiring patriotic music rendered by a chorus of several hundred voices and several good soloists and a fine orchestra, with Von Nardroff presiding at the organ, contributed materially to the success of the meetings. It was all enjoyable in every respect.

A sermon by Dr. Hillis opened the convention. It was essentially a heart to heart talk with teachers, full of comfort, of encouragement, of inspiration to go ahead and make the world a brighter and more beautiful place for future generations to dwell in. Never was the teacher's reward more eloquently pictured. The promise of the modest work done in the thousands of school-rooms thruout the land was shown in glowing words.

President Roosevelt, "the best loved man in the whole round world," as Miss Blake called him in a burst of enthusiasm, was plainly delighted to appear before the N. E. A. He did not in the least attempt to conceal his genuine pleasure. Neither did the teachers hesitate to express their admiration for the large-hearted, courageous, God-fearing, tactful, manly President of their country. Mr. Roosevelt seemed to realize the important bearings of the occasion upon the welfare of generations of citizens to come. He spoke as one seeing in the teachers young America's true priests and priestesses

who are shaping the ideals of the nation to be. He talked about fundamentals in a straightforward way and in a spirit of humane charity.

The President impressed upon his audience the supreme duty of heading the young in the right direction. He warned especially against the false notions of "success" which a narrow commercial spirit has fostered into wide acceptance and which the newspapers have magnified into popular idols. There was not a single extreme statement. Every phrase was carefully chosen. It was the voice of wisdom that seeks

Nathan C. Schaeffer
The new president of the National Educational Association.

not after plaudits, but for the spreading abroad of truth.

The addresses by Dr. Hillis and President Roosevelt supplemented each other admirably. The President's words were the more serious and profound; Dr. Hillis pictured the common topic in more vivid colors. The latter sought to reach the heart of the teacher as a human individual hungering for Divine comfort; the President knocked at the door of the teacher's conscience. If there had been no more than these two addresses the convention would have been amply worth while. They gave a glorious setting to the thoughts that should be uppermost in the minds of educators at the present time.

Miss Katherine D. Blake won all hearts by her exquisite response to the President's address. Her speech was a matchless gem. There was something indescribably sweet in her whole bearing and delivery. The ring of her voice, the heartfelt genuineness of her admiration for the President, her winsome smile—everything added to the charm of her felicitous words. She did not seem in the least embarrassed. There was nothing studied, nothing artificial, nothing affected. It was a brief vision of the best type of noble American womanhood, which in its loveliness is rarely brought to view in public. The women rejoiced that one of their sex performed her part so admirably; the New York city teachers were proud to claim her as their own, and everybody who heard her was glad to have come.

The election of State Supt. Nathan C. Schaeffer, of Pennsylvania, met with hearty approval on all sides. There is no more popular man in the whole Association, unless it be James M. Greenwood, and he has been president. Dr. Schaeffer is a whole-souled, big-hearted, generous Pennsylvanian, a man of unsuspected intellectual resources, an able administrator, a fine scholar, and an educator whose whole life is consecrated to his calling. The election came to him unsought and as a precious gift for the silver anniversary of his wedding.

The newspapers generally gave extensive reports of each day's proceedings. The New York city papers were especially generous in the amount of space accorded. But, true to their straining after sensational elements, and with no effort to obtain an intelligent understanding of things, they printed as much fiction as fact. It was to be foreseen that the reporters would describe the teachers after their own fashion, drawing for coloring chiefly upon their prejudices. However, there is no need to worry about it. The people generally care little for the real facts. Newspapers are read for entertainment rather than instruction. Their reading takes the place of alcohol with the many. Too bad.

President Roosevelt's Address.

IT is not too much to say that the most characteristic work of the Republic is that done by the educators, by the teachers, for whatever our shortcomings as a nation may be—and we have certain shortcomings (laughter) we have at least firmly grasped the fact that we cannot do our part in the difficult and all-important work of self-government, that we cannot rule and govern ourselves unless we approach the task with developed minds, and with what counts for even more—with trained characters. You teachers make the whole world your debtors.

Of your profession this can be said with more truth than of any other profession barring only that of the minister of the Gospel himself. If you—you teachers—did not do your work well this Republic would not endure beyond the span of the generation.

Moreover, as an incident to your avowed work, you render some well-nigh unbelievable services to the country. For instance, you render to the Republic the prime, the vital service of amalgamating into one homogeneous body the children alike of those who are born here and of those who come here from so many different lands abroad. You furnish a common training and common ideals for the children of all the mixed peoples who are here being fused into one nationality. It is in no small degree due to you and to your efforts that we of this great American Republic form one people instead of a group of jarring peoples. The pupils, no matter where they or their parents were born, who are being educated in our public schools will be sure to become imbued with that mutual sympathy, that mutual respect and understanding which is absolutely indispensable for the working out of the problems we as people have before us.

And one service you render which I regard as wholly indispensable. In our country, where altogether too much prominence is given to the mere possession of wealth, we are under heavy obligations to such a body as this, which substitutes for the ideal of accumulating money the infinitely loftier, non-materialistic ideal of devotion to work worth doing simply for that work's sake.

I do not in the least underestimate the need of having material prosperity as the basis of our civilization, but I most earnestly insist that if our civilization does not build a loftier superstructure on this basis, we can never rank among the really great peoples.

A certain amount of money is of course an necessary thing, as much for the nation as for the individual; and there are few movements in which I more thoroly believe than in the movement to secure better remuneration for our teachers. But, after all, the service you render is uncalculable because of the very fact that by your lives you show that you believe ideals to be worth sacrifice and that you are splendidly eager to do non-remunerative work if this work is of good to your fellowmen.

To furnish in your lives such a realized high ideal is to do a great service to the country. The chief harm done by the men of swollen fortune to the community is not the harm that the demagog is apt to depict as springing from their actions, but the fact that their success sets up a false standard, and so serves as a bad example for the rest of us. If we did not ourselves attach an exaggerated importance to the rich man who is distinguished only by his riches, this rich man would have a most insignificant influence over us.

I want to interject something here that will make you keep your mind on the real meaning of my words. I am speaking of the rich man who thinks only of his riches, not of the rich man who uses his wealth rightly and regards it as means to an end. It is well, in this connection, to remember the explanation of the parable in the Bible about the difficulty encountered by the rich man who wants to get into heaven. It says that such entrance shall be difficult for "the

rich man who trusteth in riches." I am here talking just of rich men who trust in their riches, not of those who are good citizens and first-class men, for those of the latter class are entitled to the same respect as any other men.

* * * * *

Thrice fortunate are you to whom it is given to lead lives of resolute endeavor for the achievement of lofty ideals, and, furthermore, to instill both by your lives and by your teachings, these ideals into the minds of those who in the next generation will, as the men and women of that generation, determine the position which this nation is to hold in the history of mankind.

* * * * *

The chance to do good work is the greatest chance that can come to any man or any woman in our generation or in any other generation. If such work can be well done it is in itself the amplest reward and the amplest prize.

The Teacher's Reward.

By NEWELL DWIGHT HILLIS.

[Part of Address to the N. E. A.]

IT is given to the merchant to feed the state and clothe it. The soldier keeps the state in liberty, the physician keeps the state in health. It is the province of the teacher to keep the state in wisdom and knowledge, that the sons and daughters of the Republic may be wise, strong, and self-sufficing. The great institutions of our country are four—the American family, it is the very spring of national life. Then comes the free church that makes a man a Christian. The institutions of liberty make the citizen a patriot. Last of all, the school-house, makes the man a scholar, wise toward all the relations of home and market-place and forum.

The teacher's work is to manufacture manhood of a good quality. You take the child when he is a mere bundle of roots and a handful of seed. Week in and week out the teacher plies the child by all the facts of history, of science, of literature, of art, and of ethics, and makes the little large, the raw ripe, the crude is brought to the full development and perfect symmetry of mind and heart. Whose task is the greatest? Is that man first who works in things, or that one who works in souls? What stuff endures? Soul stuff. Put your thought, your intelligence into wood, and it rots, into iron and it rusts. Put it into childhood and youth, and so it abides. Would you make your influence immortal? Futurity is vulnerable only at one point—a point named childhood. Civilization would perish, were it not for the fact that we have educators, who gather up all the achievements of society, and give them over to the plastic minds of the children and youth of the land. It is this that makes the educator immortal in his influence.

Is Arnold of Rugby dead? His educational reforms were never so potent. Is Horace Mann

dead? That man who taught us that the doing that makes commerce is born of the thinking that makes scholars? No educator dies. He lives like the trees and the vineyards his hands have planted. How can those who taught us wisdom ever die? Why, in my dreams their souls flash thru the air like the wings of the angel of God. Those who sow the land with the good seed of wisdom and knowledge belong to the generations. Death itself only lends them knighthood, and lifts them to the heavenly battlements, from whence they rain love and inspiration upon us. God be praised for the teachers of our youth. Blessed are these educators who now are teaching our own children and youth! These instructors have grasped the levers of the future. They are laboring, but the merchants of to-morrow will enter into the fruits of their labors.

Magnify your calling. Remember that you are not one, but two, for the stars in their courses fight with you. Joyfully place the chart of life in the hands of these little pilgrims, who are committed to your care. Show them the pathway that leads across the continent of the years. Give your wisdom and influence as freely as the summer gives itself to this zone. Carry your atmosphere of sweetness and light with you, and pour forth your treasures of character, as flowers pour forth their perfume. Remember that the winds that blow across the western prairies are laden with invisible spores and seeds for future harvest. Be not niggardly, but overflow with bounty.

Live in your school-rooms like princes. Glow and sparkle upon those who dwell in your presence as yonder planet in the sky glows with ten thousand radiant effects. Make beautiful the threshold of the school-house. Clothe the library with allurements. Clear all obstacles from the highways that young feet may run joyfully along the paths of wisdom. Remember that it is better to have served a little child, and saved him, than to have won a kingdom. Do not expect honors here; it will be honor enough for you to hear the words, "In as much as you did it unto one of My little ones, ye did it unto Me." You may be sowing with tears, but remember that you shall reap with joy.

On the tomb of the old English hero they carved these words: "Here lies one who by the inspiration of God drained the fens of England." And the great abbey: the epitaph tells us that the architect's monument is the cathedral itself. But let your work be higher still. Manufacture manhood of good quality, that the very substance of the nation, with its law and liberty, and self-sufficing life, may publish your achievement as a teacher. Then, those whom you have served will greet you beyond, and give you gratitude. Perchance, a great host of earthly pilgrims whom you have taught and whom have gone on before, shall come out to meet and greet you, and bring you in with trumpets and banners. For they that be wise shall shine as the brightness of the firmament, and they that turn children to righteousness and manhood, as the stars for ever and ever.

Robbie and the Others: Tales of a Real School-Room

Chapter I: In Which Robbie is Introduced.

By M. A. Grant, Denver, Col.

HERE is Robbie, Miss Howard. He wants a place in school. Is there room for him?" asked Robbie's big brother, just as the opening exercises had given place to other morning work.

"Yes," said Anne. "Here is a nice seat he can have here near the front of the room," turning down one of the seats that until then had remained unoccupied. A very tiny boy sat up, not down, in the seat, and his big brother placed a slate and pencil on the little desk in front of him.

"Can he find his way home alone?" inquired the teacher.

"Oh yes," said his brother. "It is only one block away, but I will come and get him when school is out."

Then after sundry looks, pats, and gestures of encouragement, the older brother left.

Robbie gazed around the room at the seventy other little children, who all seemed very much at home and quite happy. All were at work, some smiling at each other, as if there was something going on there that they understood all about. Others were writing words on lined paper, while about twenty of the newest were near a blackboard in front of which the teacher was standing. Robbie was given a place with them.

This group was eagerly watching the crayon that was in the teacher's hand. A large fish pond was being rapidly filled with fishes, each receiving a word on its back, while great interest and excitement were manifest each time a fish was named. When the pond was filled, two of the children were given a pointer each and played they were fishermen. The one who first put his pointer on the word asked for was the successful fisherman, each in turn having a chance to try for five words.

Robbie looked on for a while, and then, all at once, without any warning he stretched his mouth wide open and began to cry so loudly that everyone was startled.

"Why Robbie!" said the teacher. "Does

something hurt you? What is the matter?"

"Ow, ow, ow, oh, oh, oh!" yelled Robbie, louder than before.

"Do you want anything? What do you want?" asked Miss Howard. "Why do you cry so?"

"Ow, ow, owoo! Ow, ow, owooo! I want to go home! I don't want to go to school!" stopping abruptly to speak in a high, shrill voice, that could be heard to the remotest corners of the unusually large school-room and in the corridors without, as well,—a voice that was soon recognized as belonging to Robbie, and to Robbie only.

"Why do you want to go home?"

"I can't work de examples," said he, beginning afresh with loud yells, but sitting perfectly still. "Ow, ow, ooo! Ow, ow, ow, ow, ooo!"

"Stop screaming so at once, Robbie. You don't have to work any examples."

"Yes, I do! Da all has to work de examples, and I *can't* work de examples, and I don't want to go to school! I want to go home! Ow, oo! Ow, ow, owooo!" the piercing screams bursting out in rapid and deafening succession.

"Robbie, you must stop that dreadful noise at once," said Miss Howard decidedly. "It hurts our ears."

"Ow, ow, ow, ooo! Ow, ow, ow, ooo!" reiterated Robbie with the force of a newly ignited explosive behind each expression of woe.

"This is absurd! What a silly boy you are! What did you come here for, if you did not want to? The boys and girls who are in this school

Curate.—Now, children, let us have "Little Drops of Water" again, and try to put in more spirit this time. — *Tatler.*

all want to be here. They would know enough to stay away if they did not, and if you were so silly as to come to school when you did not want to you must go right back home now, and stay there. You must stay as the babies do. They have to wait to get old enough to know how to behave, before they may come here. Now take your hat and slate and run home, and never be so silly as to come to school again when you don't want to come," said Miss Howard smiling pleasantly at the small boy.

"We are all very sorry for you," she continued, helping him on with his hat, and putting his slate in his hand. "We all have a good time here, but I suppose you will just go and stay in your house where there is nobody to play with, or else stand about in the street. But never mind, we can't help that. Run along!"

Robbie, very much surprised at getting his own way so quickly, and quite unprepared for anything but battle, felt that he was being considered of hardly enough importance to suit his expectations. Certainly, being disposed of with so much expedition was not at all what he had looked for.

The door closed behind him and he went on his homeward way, and quietness and peace were again restored. The different expressions on the children's faces during this scene were interesting. Quite a number evinced an unholy joy in the unusual uproar. A general sentiment of recititude was in the atmosphere, however, for there were the good little children who would never act like that in school, under any circumstances. By elevated eyebrows, wrinkled foreheads, mouths firmly closed when they were not in the unvoiced form of the fifteenth letter of the alphabet, they expressed sentiments of unmistakable disapproval of such reprehensible conduct.

Then the regular work went on, calisthenics, marching, and singing, the latter the especial delight of all. Recess was followed by number work, with colored crayon pencils and papers distributed to each for the lesson. Two hours had quickly flown by, when, glancing thru a window, Anne noticed a woman with a shawl over her head coming toward the outside door. With her was Robbie. Evidently his mother was bringing him back to school. She let him enter alone and stood waiting to see if he was going to stay there this time.

As Anne recognized the small boy, the recent experience in which he had taken a part flashed, like one of those moving pictures with a phonographic attachment, thru her mind, and she quaked inwardly at the thought of a possible repetition of the noisy scene of the morning, with the attendant loss of more of her precious time. But courageously bracing up to meet the coming events she found the unexpected was what was in store this time.

The door opened and Robbie entered. "I want to go to school," he announced in tones calculated to carry conviction to the deaf, his face bright with a smile.

"Why, Robbie, you must be one of my nice

little boys after all," said Miss Howard. "Now, if you are good, and can act like the rest, you will like school too, and will have a fine time here with the other children."

"I want to catch a fish," said the young man.

"Very well, when it is time, you may, just as the other boys do. You will be a fine fisherman some day. Now, make a fish for me on this paper. It must a gold fish," giving him a large piece of paper on which a fish had been traced, and a box of yellow lentils with which to cover the lines. So Robbie caught the spirit of the work, and the fish, at the same time.

Before the day was ended he had so far overcome any feeling of shyness as to be willing to converse freely on the subject that was then uppermost in his mind, with any one near him. But his preference was distinctly for his teacher, being quite won by her engaging manner, and he called for her help in ways unexpected and often unpleasant to his mates.

Herr Muller.—I don't see how the teacher can tell the twins apart, Mrs. Schulze. They look so much alike.

Frau Schulze.—Ach, die deachern toes choost as I make mineself. I calls wan Chawn and the udder Fritzie, und dat is the vay to tell dem apart.

Mary Kingwood's School.—Story of a Teacher's Success

By Corinne Johnson, Pennsylvania

The First Month.

ONE bright September morning Miss Mary Kingwood hastened toward the Longport public school building, which was to be her school home for the next ten months.

"The old brick," as the children called it, was the place that had, in the dreams ever since her election, played hide and seek in her busy brain. This morning she was in a very interesting state of anxiety about the beginning which must be made. The school was reputed to be the best in the county in the work of the higher grades. It was said to be far above the average in the formal work of the intermediate classes, and very little good had been said for several years about the work of the primary room.

Miss Kingwood was not a beginner. She had a reputation sufficient to secure her election and the promise to the people by the school board that "things will be better." Very soon after her appointment she ascertained all the facts available concerning the school, and she wisely consulted the superintendent about the new conditions with which she was to deal. Later she had several interviews with the principal,—several seemed to her to be necessary. He had opinions. So had she, but at the final interview she received the assurance that she had freedom to follow any plan she deemed wise, provided, of course, she kept in mind that the principal, the school board, and the patrons of the school expected great improvement in "Number One." The law, as she was given to understand it, was, "The children must come from Number One better equipped for the work of Number Two than has heretofore been the case."

But there was a more hopeful agreement reached at these interviews. Miss Kingwood asked to be allowed one half day each week to see the work of the other grades. When asked why she made such a request she replied, "Because I want to have in mind the work to be done by my children next term and the next and the next, till they quit the school."

This demand seemed extraordinary to the principal, but he agreed to try it for one month, saying that he or one of his pupils would teach in Number One when Miss Kingwood was in the other rooms. She left the conference at which this agreement was reached with very great satisfaction, while the more experienced participant had, as he afterward said, very grave doubts in his mind.

The experiences with the superintendent, the principal, and with a few of the patrons she had met were memories to Miss Kingwood this September morning, that somehow seemed to her to have an important influence on her work. At every step as she approached the building, her foot came to the sidewalk more firmly, and before she had entered she

had resolved—what the form of the resolve was need not be set down here—but her appearance indicated that she knew her power and would not abuse it. She had confidence in the principal and expected his guidance over difficult places.

She had come to the school-house early. As she entered she met the janitor coming out of the school-room that for the next ten months was to be hers. She approached him with outstretched hand and a "Good morning, Mr. Harvey," with an expression of good will and a look of neighborly kindness that warmed the old man's heart, so that he murmured to himself as he passed into Number Two, "They told the truth, they did, she's all right."

The teacher was the first to arrive, but soon the children came. Some skipped in with music in voice and action, while others stole in quietly as if in fear. They came singly, by twos, by groups, till more than fifty thronged the not too spacious school-room. Miss Kingwood's heart throbbed in sympathy with the little ones, and as she looked over her school she breathed a mute prayer for a bountiful harvest from this as yet almost unbroken field of human motive.

She made a quick inventory of the expectancy beaming from the children's eyes. How anxious had they been to get a first look at the teacher! How she wished that she knew the verdict of this most critical of juries! But she must wait, for had she not yet to reveal the motives surging in her heart and urging her to effort? She must wait. So she quietly, very much like a child, moved among the children as they came, and by word and touch set at rest many an anxious inquiry.

"Would she be like mamma?" In a well-regulated school this question ought to be answered right. Miss Kingwood knew the power of touch, and by touch as much as by word she answered this question in such a way that the little strangers felt that here was a woman who would love them as mamma loved them. It is the act of love by the teacher that assures the child that love from them will be a welcome offering, and many were the pure young lives that brought this offering to the new teacher this first morning of the term. Love for the pupil is the great power in the school, especially in the primary school. The child coming for the first time to the school to enter upon the experiences of the school with peace of mind! A healthful, hopeful state! How much it means! And love for mother! Eliminate from the ranks any teacher who by word or act so far forgets her mission as to lessen the faith of the little one in mother.

To the child entering school mother is the ideal woman. Mother is the sweetest, holiest name on earth. Oh, for more implicit faith in, and love for the mothers of this country!

It is a part of the business of the school to enlarge that faith and deepen that love.

This September morning several mothers came to the school, as one of them said, "just to get a look at the new teacher," and some came because the ones in whom they were most interested were timid and needed encouragement. Meeting these mothers was a helpful incident for Miss Kingwood. By a few words with the mother she got a glimpse of the inner life of the child. For this she was indeed thankful. And by casual remarks she learned some things of other children; one always does in school work.

At length the hour for the real work of the school was signaled, the mothers departed, and the little ones hurried and scurried thru the room to get the places which each thought suited him or her best. It was a short period of trial, for there were disappointments, but the spirit of kindness had somehow got abroad and in a little while the more than half a hundred sat looking into teacher's face, expectant, eager, ready for whatever might occur.

Miss Kingwood had taught, but as she met this assembly new visions passed before her, visions of responsibility for unshaped human lives. She did not hesitate. Every moment was vital. She promptly moved to take the citadel of every little heart throbbing so anxiously in her presence. She had lived near to nature. She loved nature. Children were of nature, and she loved them because they were children, more to her than all the rocks, trees, birds, everything. Here she differed from some other worthy teachers I have seen work, who loved *some* children because they are "so nice." Miss Kingwood loved children because to her the one great fact of nature is life, its source, its need, its destiny.

This thought was with her at this hour, and as she met the gaze of the children the light of her countenance was a smile, not a "made to order shaping of lines and twitching of muscles," but a smile that was the index of the light of life illumining her face so that it shone with such beauty (she was not pretty) that every child felt it was real and that it would "not wash off." Nearly all the little ones smiled back their good will.

So far not a word had been uttered, but the first link in the chain of unity had been forged, and without the soul-killing process of asking

names Miss Kingwood asked, "Do you know any songs?" She got the ready answer, and when she said; "Would you like to sing?" she seemed to say to the children, "I am here to let you do your will. Only will to do some right thing." And the children never thought of the other side of the shield. What is the need of showing the wrong side anyway?

Nearly every child had been to Sunday school. After the home, the Sunday school is the next great influence toward righteousness, and sad as it is to say it, it is often the first. Of course they wanted to sing. All normal children sing. If they don't sing with their voices they do sing with their souls, and so they are in unison with those who do sing with voice. One little girl, a born leader, with a manner worthy of a queen, said, "Please, teacher, may we sing 'Precious Jewels'?" Yes, that would be their first song. How the eyes sparkled! How the full hearts leaped in the joy of expectation of utterance! How eagerly each one waited for the signal and the keynote! With equal fullness Miss Kingwood gave the answer. That song had cheered her on her way many a time before, and they sang,

"When He cometh, when He cometh,
To make up His jewels,
All the pure ones, all the bright ones,
His loved and His own.
Like the stars of the morning,
His bright crown adorning,
They shall shine in their beauty,
Bright gems for his crown."

When the singing was ended and the children had repeated the sentence "Little children, love one another," Miss Kingwood knew that the beautiful gate of service had been opened. Cynics may sneer, and wise statesmen shake their heads for fear of too much religion in this sort of teaching, but it is, after all, the only way to civic righteousness.

This introductory exercise gave Miss Kingwood an opportunity to talk with the children. She moved around among them asking them questions, for the purpose of learning individual experiences from one and another of them so that she might be able to "hitch on" new things to these experiences. Wise girl, I thought. Incidentally, she learned the names of a number of the children and carefully noted them down. The work of this period was the first of a continued series of informal exer-

Two thousand colored pupils of the public schools of Little Rock, Arkansas, in a gymnastic drill under the direction of Supervisor Hans Ballin. (The first exhibition of the kind in America.)

cises which from day to day were so directed as to reveal to her the experiences and motives of every child under her care. The knowledge of these experiences was treasured up as her most valuable resource, and hour by hour it was drawn upon at the proper time and was in her hands the means of arousing the most intense interest in the minds of the children.

I noticed that opportunity was given to every child in the school at some time to state some experience, and the story told by one child quickened the imagination of the other children, or caused some one to recall a like experience, or prompted the teacher to tell something that she had seen or of which she had read, or perhaps it suggested the teaching of a new song. Be

Learning how to properly serve at table: a practical lesson taught in the school home of Augusta.

A class studying the science of cookery in the kitchen of the school-house. A public school in Augusta, Ga., owns a small house, in which the pupils learn how to be fine housekeepers. An article about this school home will appear next month.

what it may, an observing one could easily see that with all the excitement and enthusiasm of this hour there was a deep-laid plan back of it all, simple, it is true, but far-reaching in its purpose. Miss Kingwood said one day that she had a conviction that a child learns more in the first six years of its life than in any succeeding six years, and said she, "believing this, how necessary it is that these foundation experiences be set in right relation to what is to come after." And again I said, "A wise girl."

I observed also that the teacher improved every opportunity to encourage the children, as she said, "to utter *themselves*," with peculiar emphasis on the "selves." It was a delight to her, and I thought to the whole school, to have a child bring to the recitation a story of some particular experience that had made *good* impressions on the child who related the experience, and it was a joy to her to have a child hold up some bright picture which had been found along its pathway from early consciousness to the present

experiences of the school. The knowledge of these experiences was kept on the lower shelf of her brain, because she considered it the fundamental means for all the work of the term.

Every morning after the singing, sometimes a short exercise, sometimes longer, this hour of counsel was on. It was the great hour of the day. It furnished the material and the motive for all the rest of the day's work, not the ultimate motive, that was permanent, but the immediate motive was found in this important hour.

(To be continued.)

Special attention is called to the "Publishers Talks," on the first page facing the cover of each number. Important business matters are discussed, and many questions asked by subscribers are answered there. Much wasteful correspondence may be avoided by a careful reading of these "Talks" each month. In that department the president and business manager of the United Educational Company presents announcements and explanations which ought to be of general interest to the readers of Teachers Magazine.

"After Tea."—A lesson acted out in the school at Hyannis, Mass. A description of the work in this famous institution appeared in the June TEACHERS MAGAZINE.

How to Decorate a Class-Room

By Selma Van-Praag, New York

MANY of us remember the frigid simplicity of our youthful school-rooms, when cold, bare walls, often even soiled and pencil marked, presented their dispiriting fronts to our inquiring eyes. When we grew up to become teachers we determined that in our rooms the children should find more cheerful walls.

To use a simile supplied by history, it was in the time of the Restoration of the Stuarts in England. After the frigid and intolerant coldness of the "Roundhead" jurisdiction, the people, glad to find that pleasures are not sinful, indulged in the most foolish excesses. Withhold your wrath, my dear teachers, for I am about to say that you, too, have indulged in the most foolish excesses in room decoration. Again and again on entering a room has my eye been greeted with pictures of impossible children and animals in impossible postures, and under these *chefs d'oeuvres* of art I was informed that the — Brewery sold beer, or that — Soap was the best. I think I need go no further to tell you about the tinsel ornaments, the dusty specimens of work, etc., etc., which so often prove eyesores. Have you ever entered the library or

study of a wealthy man of good taste, and felt that to study in such a place must be a pleasure? Let me tell you that your class-room can show quite as good taste as the rich man's study. It can be just as refined in its beauty, altho we employ the simplest means.

In the first place take everything you now have in your room out of it. Store your numerous decorations away, and draw on your treasures gradually. Appoint one or two of your children as monitors, according to the size of the room. Present each monitor with a tiny feather duster and an old soft silk or muslin dust rag. Have these children dust your room every morning, as the cleaners generally forget this duty. Have each child in the room supply himself with a tiny dust rag to be kept in a corner of the desk and have him dust the wood and iron of his desk when he comes in every morning. Can you not see already, what this little scheme engenders? Not only is cleanliness (without which our decorations are tawdry) assured, but each child is a helper, each boy or girl is a housekeeper, has a responsibility, and helps to decorate the room!

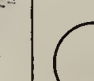

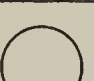

And now teachers, a word in regard to your own desk. No books and papers littered about. Have one drawer reserved just for papers which are collected, then rearrange them at your leisure. Look at the color scheme of the paint in your room. Many of the schools

are garnet and mauve, a delightful combination if the teacher uses it properly. Perhaps the darker color is green or blue. At any rate buy a felt desk cover to match, have this pinked and put it on the desk. See that it is dusted and put away every day at three, and taken out again in the morning.

On the center of your desk have a large piece of blotting paper. This can be bought mounted on leather, but you need not use your money for this, keep it for things you cannot make yourself. Buy two sheets of white blotting paper (about 24x30 inches or somewhat smaller). Paste the lower one on a piece of cardboard or oaktag, then make, or have your children make, the corner pieces so easy to fold, and using a little paste at the corners fasten on the other piece of blotting paper. The cost will be about ten cents.

Buy as large an oak inkstand (double, if possible) as you can get for twenty-five cents. Fill one side with red ink, the other one with black. Have two pens (nothing else) on the ledge of the inkstand, one with a black

This charming and suggestive calendar was given in *Primary School* six years ago. It is reproduced here by special request. The calendar is to be drawn upon the blackboard, leaving the spaces for the various days to be filled in during the month. The general subject taken up during each week is to be drawn in the spaces for that week, in place of dates. For example: if, since it is the beginning of school life, the home is the topic of the first week, pictures of houses are sketched in the squares. If the Indian is to be studied later in the month, the tepee—the Indian home—will indicate the line of thought for the second week, followed the next week by Indian child life as indicated by the papoose pictures; and then, in the fourth week, by Indian boyhood and out-of-door life.

This plan for calendars is an excellent one, and may be followed, by slight adaptation, thruout the year.

A Pittsburg Boys' Reading Club in Compromise Alley.

The shack shown in the picture is the meeting place of the club. This is a result of the work of an enthusiastic librarian.

[A note of the great work carried on under the auspices of the Carnegie Library will be found on another page.]

holder, one with a red holder; to be used respectively for black and red ink. Make a penwiper of an old glove or chamois by pinking the edges and tying it in the middle. Another smaller blotter with some tasteful cover may complete the desk outfit. Of course if you have a carved wooden paper knife or something of the sort you may use that. *Never* allow anything else to be on your desk. This outfit should not cost altogether more than one dollar and should last for years.

We may now turn to the decoration proper of the room. Do not start in by using a great number of new things. Do not put up or use more than one new decoration in a week (otherwise you will pamper your children). The first day anything new arrives, talk about it, or better, let the children talk about it. Give a two-minute recess, and allow the children to go up in groups of ten or fifteen to look at it and *talk about it then among themselves*. The teacher must expect the first year she starts decorating according to my rules to spend about a dollar a month. Do you not think it is worth while?

The first thing I would buy is a small table of oak. Have it severely simple. If you have a girls' class show two or three how to make a simple square, hemmed linen doilie, to preserve the varnish of the top. Have two made, and let some child take the one in use home each Monday, to wash and iron it. Select a different child each time. The table should cost about seventy-five cents. The next week buy either a plant or an aquarium for the top. If there is an aquarium in the school

buy a plant; and vice versa. A fine healthy Boston fern can be bought for seventy-five cents. An aquarium (a small round one with aquatic plants, fishes, etc.) costs a dollar and a quarter. Select a part of your room which has not too much in it for the table. See however that the table is in a conspicuous place. Select a child (a different one each two weeks or month) as caretaker under your guidance.

The next point of decoration is one of the most important, the use of pictures. The first rule is this: Never put up an unmounted picture, seldom put up a framed picture. One large picture is sufficient until the teacher has funds for more. The choice of the picture is difficult. The rules I would advise are these: "Do not buy a picture which has not the open air combined with either figures or animals." The size of the picture should be about 30x36, or even larger. The frame should be oak, the picture a celebrated one. Any

well-known work of the following artists, would be highly suitable: Lerolle, Millet, Jules Breton, Rosa Bonheur, Landseer.

A good copy of the picture very simply framed and of this size should cost from three to four dollars. It is a splendid investment. After a while, if the teacher desires to buy another, she may duplicate the size and frame and hang the two as companion pictures, or else totally change the style of the picture and frame (but keep it oak) and hang the two separately. Be sure that for at least three feet on all sides of your picture your wall is absolutely bare. Let the picture stand on its own merits. Have the children speak constantly of the picture, and write about it until it becomes endeared to them and a necessity for their class-room happiness.

The Teaching of English. I

By Emma L. Johnston, Principal of the Brooklyn Training School for Teachers

IT seems to me that what the teacher of English in the lower grades—and in the higher also—needs to do is to study the English work done in the grades above and below hers. The work of all the grades is needed by each one. The teacher of arithmetic in an upper grade is constantly making use of the knowledge of number her pupils have acquired in lower grades. The teacher of geography compares the new continent to be studied feature by feature with the continent studied in the grade below. But the teacher of composition in the seventh or eighth year does not depend upon the work accomplished in composition by the teacher in the second or third year; the upper grade teacher does not make frequent allusion to the friends and acquaintances her pupils have already made in literature, she does not often point a moral or impress an intellectual truth with a couplet that her pupils learned by heart a year or more ago. Among ourselves we allude naturally to Hamlet, to Don Quixote, to Faust, to Uriah Heep, to David Harum; but the fifth-year teacher seldom mentions the Pied Piper or Boy Blue. The eighth year teacher lets her pupils memorize Tennyson's "Brook" without inquiring whether they have already learned "Stop, Stop, Pretty Water."

Nowadays, the teacher in the elementary

school has much to do to prepare herself to teach properly the subject matter prescribed for her particular grade, and one hesitates to add to her burdens by requiring her to study the work of other grades as well. But to do properly any portion of the work in composition and literature it is absolutely necessary to understand the relation that this portion bears to the whole. It has been my experience that when teachers have given time to the study of the whole elementary course in English they have gained an insight into the work of their own grade which has more than repaid them for the time apparently given up to the work of other grades.

Granted that it is a desirable thing for teachers in elementary schools to study the complete course in English, how can it be accomplished? Here are three devices that are being used with success in some of our schools:

1. The fortnightly English study class over which the principal presides. A portion of the hour is devoted to the reading and discussion of some book on the teaching of English, the rest of the hour to the presentation by a teacher of some part of her grade work, her aim being to show the relation of this part to the whole of the course. When the topic is composition, for instance, the 2A teacher is bound to show that in her conversational lessons she bears in mind

everything the 8B teacher will have to make explicit with regard to the structure of narratives, descriptions, and expositions; that in training her pupils to speak she considers first the thought, then the motive for expressing it, and then the audience; and that she never loses sight of the fact that oral speech as well as written must have clearness and force and beauty. The best book I know of for these study classes, the best book for giving a second, third, fourth, or fifth year teacher a realizing sense of her importance as a teacher of English, is Mr. Chubb's "The Teaching of English."

2. The second device is the textbook library made up entirely of the regular class reading books used by the children of the successive grades of a school, the books read to the children by the teachers, and a scrap book containing copies of the poems memorized in the successive grades. These books should be properly labeled and arranged by grades, and they should be easily accessible to all the teachers. I have frequently asked teachers what reader was used by their pupils when these pupils were in the grade just be-

Ojibway Indians in Camp near Petoskey, Mich. The performance of the play of Hiawatha by these Indians attracts many tourists to this charming region. [See also pages iv and v.]

low, and they have not been able to tell me.

3. The third device is the teacher's visit to the grades above or below her own. Teachers frequently visit grades corresponding to their own, but they seldom visit the class-room where the children are whom they taught last year or year before last. It ought to be helpful to a teacher to hear her former pupils speak and read. This matter of visiting can be managed easily in schools where there is a teacher-in-training at hand to take a class for an hour.

I believe that the teacher of the lower grades is learning how to utilize the play impulse which is so strong in children. She realizes that altho objectively work and play can not always be distinguished, subjectively an act is play in so far as the activity itself is enjoyed; while it is work in so far as the end gained is the chief thing desired. I say that teachers in the lower grades are beginning to appreciate the educational value of play, and are practically,—even if they are not conscious of holding any theory on the subject—they are practically drawing a sharp line between the form of active play that produces accuracy, permanency, facility in the use of natural powers, and that form of passive play called amusement, “where some one else does the work and the seeker after pleasure enjoys it if he can.” (Kirkpatrick.)

It is amusements, not games, that our critics have in mind when they accuse us of making school life so easy for children that they do not learn to work. Perhaps a second Froebel will arise to organize the games of the primary class as the kindergarten games have been organized, and then the drilling so necessary in learning to speak, to read, and to write will be delightful to all children.

The course of study for the first four years in school affords many opportunities for legitimate educational play. The syllabus suggests that during the second year the children read, from the blackboard, matter suggested by the other work of the grade. Here is the place for ingenious exercises similar to those described by Dr. McMurry in his chapter called “Primary Reading thru Incidental Exercises and Games” (in “Special Method in Primary Reading”). As he says, “The teacher abstains from the use of oral speech to a considerable extent and substitutes the written forms of the words on the blackboard in giving directions, in games, and in teaching topics in literature and science,” her aim being “to present the lesson in such a way that the child shall quicken into life in its presence—shall reach forward to grasp this much-desired thing.”

Here too is the place for spelling games. With his box of letter tablets

the child will in fifteen minutes learn more of the forms of words than he will learn in an hour from the ordinary exercises in oral spelling, while at the same time his fingers are being trained in the nice adjustment of the small tablets.

Here is the place for dramatic performances. Most children have the dramatizing instinct strong in them. In their training it would be

“Barred with streaks of red and yellow,
Streaks of blue and bright vermillion,
Shone the face of Pau-Puk-Keewis.”

easy to afford this instinct too much encouragement, but we might utilize it to advantage during the first three years in school to give reality to the training in language. The trouble with many teachers is that they cannot do this simply enough. They believe that rehearsals, elaborate scenery, and many stage properties are necessary, and in consequence they find it impracticable to have dramatizing in the school-room.

The day after Washington's birthday I asked a 1A class of boys to tell me something about Washington, and the boys responded with the information, "We can play Washington." I was directed to choose three players. The first came forward and stretched out his arms. He was the tree. Then the second actor came and gave the tree some smart raps with a ruler, whereupon the tree tumbled to the floor. Now the second actor beat a hasty retreat to his seat. The third actor came strutting along; he paused by the side of the prostrate tree and exclaimed with the spirit, the well-feigned naturalness that we work so hard to get from children in their reading exercises, "Ah! some one has cut down my cherry tree. George, George, come here. Do you know who did this?" "Father," said George, "I cannot tell a lie," etc., etc. This is an illustration of the simple way of going with the child into his world of make-believe for the purpose of acquainting him with that world, so shadowy and vague to him, which we call real. It is a way of letting a child use his many languages in order that he may use with naturalness and sureness the language of words.

The work in English as prescribed by the course of study falls under five heads—composition, penmanship, reading, spelling, and memorizing. I shall venture to comment briefly upon each of these topics, beginning with the last.

Memorizing.

At the risk of appearing old-fashioned I want to make a plea for concert recitation of poetry in the lowest grades. Children like to sing together much better than to sing alone. The poem suitable for a child to learn by heart is very like a song. Why should he not be allowed to say it with his companions? Suppose he does, beguiled by the rhyme, emphasize the wrong word occasionally, is that very bad? What a poem makes you think is often of so little importance compared to how it makes you feel. Ask a class of children to repeat in concert a poem they know by heart, look at their faces as they recite, and then see if you have the heart and the conscience to forbid the teacher's use of this kind of exercise. When a poem is recited in concert by a class some simple and appropriate gestures may be allowed. I was once opposed to this because the gestures were often awkward or grotesque, but the children themselves have converted me by showing how much gesturing adds to their appreciation of the poem.

In the lower grades the children should always get from the teacher's recitation or her reading,

their first impression of the poem to be memorized. The best training in memorizing of poetry that I have observed was done by a certain group of teachers who were in charge of second, third, and fourth year classes. Not one of them was a remarkably good teacher, not one was above the average primary teacher in power to appreciate literature; but all trained the children in their classes to recite Stevenson, Longfellow, and Bryant so that the recitations were delightful to hear. And this is how they managed it. Having selected a poem the teacher would read it aloud at home, not once only but many times, in many moods. If she had any doubt with regard to the emphasis here, the inflection there, she would consult other teachers or her principal until at last she knew exactly how she meant to read the poem to the class. It might seem that by this time her presentation would be mechanical, but so was Edwin Booth's Hamlet. The teacher's audience did not notice anything mechanical, they were impressed and delighted; and, because they were instinctively imitative, they were presently giving the same interpretation without having to be told to say a line in this way rather than in that. I have seen teachers possessing much more power in literary interpretation fail to produce the effects just described because at the psychological moment their attention was partly distracted or because their mood was not right when they gave their pupils the first auditory impression of the poem to be memorized.

(To be continued.)

Increasing One's Vocabulary.

Barrett Wendell tells us that Shakespeare had a vocabulary of 15,000 words, and Milton 8,000. This statement is interesting when we read that the collection of words at the command of the contemporary young man is sixty-five or less. This is probably the lowest estimate ever made, and is astonishing, when we remember that every new edition of a dictionary always contains a few hundred more words than the previous one. The only inference to be made is, then, that there are plenty of words,—which we do not use.

Sixty-five words, if wisely used, may make a man a useful citizen, but one should be on speaking terms with as many as possible. Many methods have been employed in order to arrive at the number of words at the command of the average intelligent American. The true way is yet to be found, but it is hoped that it will be, for if one could actually test his capacity it might stimulate him to further study. How can one increase his vocabulary, is another interesting question. One means is the dictionary habit of each day finding a new word and incorporating it in conversation or writing until it is at hand for instant use.

★ National Holidays and Patriotic Exercises

Peace Exercise for Higher Grades.

By JANE A. STEWART.

The teacher may add facts relative to the Russo-Japanese war gleaned from the daily press, with a map to show what has been done in Manchuria.

Singing—Peace Hymn.

“Thy kingdom come—on bended knee
The passing ages pray,
And faithful souls have yearned to see
On earth that kingdom’s day.

“But the slow watches of the night
Not less to God belong,
And for the everlasting right
The silent stars are strong.

“And, lo! already on the hills
The flags of dawn appear;
Gird up your loins, ye prophet souls,
Proclaim the day is near.

“The day in whose clear-shining light
All wrong shall stand revealed;
When justice shall be throned in might,
And every hurt be healed;

“When knowledge hand in hand with peace
Shall walk the earth abroad,—
The day of perfect righteousness,
The promised day of God!”

The Twentieth Century for Peace.

(For three boys.)

First Boy.—The outlook for the peace of the world, altho it looks very dark when we think of the dreadful struggle in Asia between the Russians and the Japanese, is in reality much more encouraging at the opening of the twentieth century than it was a hundred years ago. At the beginning of the nineteenth century war was the fashion everywhere; duels between men were the common thing, and every dispute was settled by a fight.

Second Boy.—That state of things will soon be over and gone, we all hope and believe. Just think what the advance has been in the last century! In the first ten years of the nineteenth century there were no disputes between nations that were settled by peaceful methods. Such an idea would have been laughed at by the majority of people. But in the last ten years of the nineteenth century sixty-three quarrels between nations were adjusted by arbitration,—which means to refer the difficulty to other nations not interested to decide fairly as to how the matter shall be settled, and then for all parties to stand by the decision.

Third Boy.—The great plan for the twentieth

century is to have the whole world at peace and to do away with all the wicked bloodshed. With our terrible guns and other machinery for killing, war has really become what some people have always said it was, murder.

Things are going to be different at the close of the twentieth century, and, altho we may not live to see the whole world at peace, we can do a great deal to bring this about. We have made a good beginning in all the agencies which are at work to lessen the horrors of war, to prevent plundering, and to give care to the wounded. The next thing is to get all the nations to come in with us and to agree to settle their differences by arbitration. Then, as Tennyson predicted long ago, will

Universal peace
Lie like a shaft of light across the land,
And like a lane of beams athwart the sea.

Why Do We Want Peace?

(Dialog for three boys and three girls.)

First Boy.—The great cost of war in money and lives is enough to make everybody want peace, even if they do not think war is wrong in itself, and that differences should be settled in some other way than by killing people. Our great Civil war caused the loss of 280,000 northern soldiers, 520,000 southern soldiers, and an expenditure of \$7,860,000,000 by both North and South.

First Girl.—It is said that if Joseph Chamberlain, the English political leader, had agreed to refer the difficulty with the Boer republic to an arbitration board of two Dutch and three British chief justices, England would have been saved three years of bitter feelings and sorrow, the lives of many soldiers, and the vast sum of \$1,100,000,000 which would have enabled the starving poor, who are now crowded in Great Britain’s almshouses, to live in happiness and comfort.

Second Boy.—It costs the English government \$400,000 a week to keep up its present army in South Africa, to meet the hatred of a people who lost 20,000 women and children in the concentration camps. It has cost our government, during the last eight years, \$1,625,000,000 to keep up the war and navy departments, or nearly four times what it cost in the previous period of seven years before we began to be a warlike nation.

Second Girl.—More than eight millions a month are spent by our government in support of a navy to defend us from imaginary enemies. Were this great sum devoted to education, each one of the six million illiterates in the United States over ten years of age might have three years’ schooling. In Washington’s time our

army and navy cost \$1,000,000 a year. To-day, with a population only twenty times as great as it was then, we are spending two hundred times as much for army and navy.

Third Boy.—And what is true of the United States is true of all other countries, which are spending two-thirds of their national revenues to keep up the vast military systems in each land, this money paid by the common people in taxes on food, clothing, rents, etc. A first-rate battle-ship costs six and a half million dollars, and after thirteen years is practically useless because of new inventions. This amount, it is estimated, would give us a duplicate of Harvard university's equipment of ninety-four buildings, with the land and buildings of Tuskegee and Hampton institutes thrown in.

Third Girl.—The cost of war can never be set down in figures alone. We want peace because of the vast army of sorrows and tribulations which war brings in its train. Homes are broken up; little children are left fatherless; suffering and want come upon the country which is at war. There is everything to be said in favor of peace and nothing for war. Some one has well said, "There never was a good war or a bad peace."

What Causes War?

(For a boy and a girl.)

Boy.—I think the chief cause of war is that nations want to grab land that belongs to some other weaker nation, just as a big boy does when he comes along and takes a smaller boy's ball away from him. That is why we had the Boer war; the British wanted to rule the Boers' country which is rich in diamonds and minerals, and the Russo-Japanese war has been due to the same thing. The Russians thought they could seize and hold Manchuria, which is the home of the Koreans. The Japanese, fearing danger to

their own island home, determined to stop the Russians in time and to protect the Koreans, much as we did the Cubans when they were oppressed by Spain.

Girl.—I have heard it said, and I believe it is true, that many wars are brought about, which could otherwise be prevented, by the existence of large standing armies and navies which have nothing to do in times of peace and are eager for war in order to earn what they conceive to be glory. Injustice causes war, too, and the way the nations have of regarding each other as enemies instead of as friends, so that they get to thinking the worst things possible of each other and easily get to fighting. The money-lenders like war, too, because they get large interest on their loans. When all the world is joined together as in one happy, loving family, we shall certainly then not have any more war. I hope that time will soon come.

Recitation.

(By a girl.)

"These things shall be!—a loftier race
Than e'er the world hath known shall rise
With flame of freedom in their souls
And light of knowledge in their eyes.

"They shall be gentle, brave, and strong,
Not to spill human blood, but dare
All that may plant man's lordship firm
On earth, and fire, and sea, and air.

"Nation with nation, land with land,
Unarmed shall live as comrades free;
In every heart and brain shall throb
The pulse of one fraternity."

The Hague Court of Arbitration.

(By two boys.)

First Boy.—One of the greatest things which the nineteenth century has bequeathed to the twentieth is the Hague Court of Arbitration, or the Hague Tribunal, which was formed in 1899 as a result of the famous Rescript of the czar of Russia, calling for the conference of all nations in the interests of peace. The Hague court is organized on the plan of the New York supreme court, which consists of seventy judges, a certain number being detailed for duty in any given case. The Hague court has more than one hundred and fifty judges and forty nations enrolled. Each nation concerned has four members of the court.

In a case of arbitration between two na-

"My Country, 'Tis of of Thee."

tions, each nation chooses two judges, and the four thus appointed choose the fifth. The two nations divide the expenses incurred.

Second Boy.—Andrew Carnegie has given one and a half million dollars for a noble building for the Hague court, which will also be an international library. I am glad to say that the United States has the honor of being the first to go to the Hague court. The first case sent to it and which opened the court was the "Pius Fund" case between the United States and Mexico. The second was the Venezuela dispute in which eleven countries were interested. The third case is between Japan and England, France and Germany. Germany has always been most opposed to arbitration. Great Britain, France, Switzerland, Italy, and the United States have done most to forward it.

Memory Gems.

"The more I study the world, the more am I convinced of the inability of brute force to create anything durable."—NAPOLEON at St. Helena.

"I confess, without shame, that I am tired and sick of the war. Its glory is all moonshine. It is only those who have neither heard a shot nor heard the shrieks and groans of the wounded, who cry aloud for more blood, more vengeance, more desolation." "War is hell," said General Sherman.

It was General Sheridan who prophesied: "War will eliminate itself. By the next centennial arbitration will rule the world."

General Miles says: "The contrast between war and peace is illustrated by the fact that what has been expended on the Philippines would have put water on every quarter section of arable land in our country where it is required; it would have built for the farmers a splendid system of good roads, or for commerce two ship canals across the isthmus."

George Washington said of war: "It is my first wish to see this plague to mankind banished from the earth."

The Duke of Wellington said to Lord Shaftesbury: "War is a most detestable thing. If you had seen but one day of war you would pray God that you might never see another."

Closing Song.

"Oh, beautiful my country,"
Be thine a nobler care
Than all thy wealth of commerce,
Thy harvests waving fair;
Be it thy pride to lift up
The manhood of the poor;
Be then to the oppressed
Fair freedom's open door!

For thee our fathers suffered;
For thee they toiled and prayed;
Upon thy holy altar
Their willing lives they laid.
Thou hast no common birthright;
Grand memories on thee shine;
The blood of pilgrim nations
Commingle flows in thine.

Oh, beautiful our country!
'Round thee in love we draw;
Thine is the grace of freedom,
The majesty of law.
Be righteousness thy scepter,
Justice thy diadem;
And in thy shining forehead
Be peace the crowning gem.

The Corn.

A small green feather
From the earth shot slowly upward;
Then another and another,
And before the summer ended
Stood the maize in all its beauty,—
With its shining robes about it,
With its long, soft, yellow tresses.

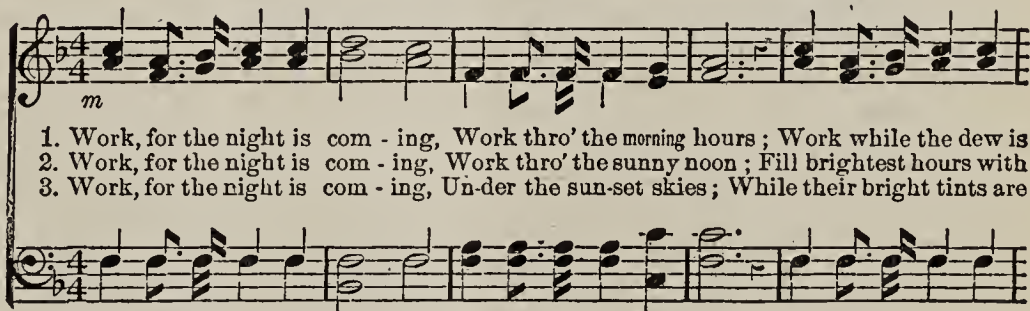

—LONGFELLOW.

Common School Hymns

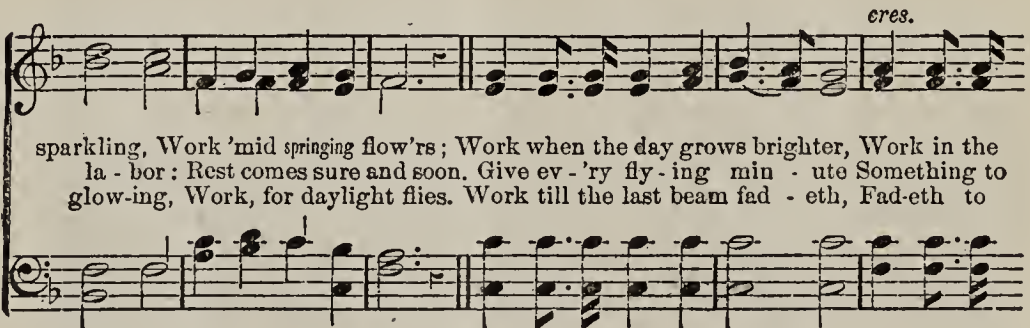

TEACHERS MAGAZINE gives each month at least one hymn suitable for the common schools where children of all religious beliefs are gathered together. These hymns have been selected with great care, and the editor feels confident that they will prove a welcome collection to teachers everywhere. If you know of any favorite hymn which might be included please tell us about it. We want all the best things to be had in this magazine.

WORK, FOR THE NIGHT IS COMING.

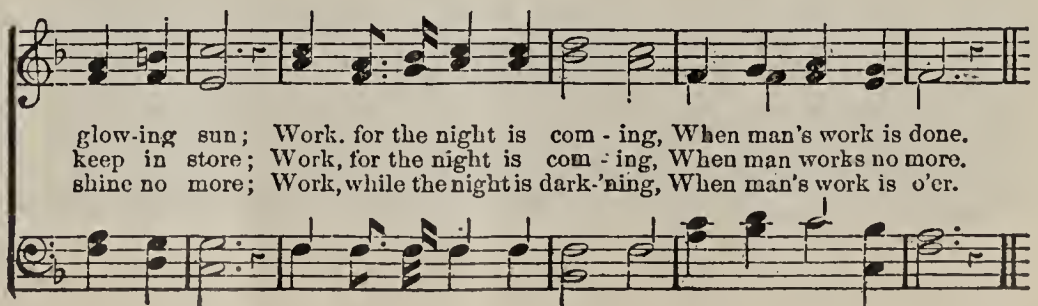

LOWELL MASON.

1. Work, for the night is com - ing, Work thro' the morning hours; Work while the dew is
2. Work, for the night is com - ing, Work thro' the sunny noon; Fill brightest hours with
3. Work, for the night is com - ing, Un - der the sun - set skies; While their bright tints are

sparkling, Work 'mid springing flow'rs; Work when the day grows brighter, Work in the
la - bor: Rest comes sure and soon. Give ev - 'ry fly - ing min - ute Something to
glow-ing, Work, for daylight flies. Work till the last beam fad - eth, Fad-eth to

glow-ing sun; Work, for the night is com - ing, When man's work is done.
keep in store; Work, for the night is com - ing, When man works no more.
shine no more; Work, while the night is dark-ning, When man's work is o'er.

Plymouth Arbutus.—A Colonial Exercise

By Anna Stevens Perkins

This exercise can be given at any time during the year appropriately. It is perhaps especially suitable for Thanksgiving day. But the hints of the colonists' spring and summer make it just as desirable in May, and its historical nature adapts it for use at any school entertainment.

Decorations.—Elaborate decorations are not needed. Pine boughs should be used, if available, in memory of the "rocking pines of the forest" at Plymouth. The school flags in standards should, of course, be in evidence, and all the pictures attainable that illustrate Plymouth history. The Perry Pictures set of Plymouth Pictures will be needed. The beautiful copies of the Priscilla paintings will be wanted, also. In worn-out history books, in magazines, and papers will be found many illustrations that can be used. The pupils may be asked to bring any pictures they find. These can be attractively mounted and will be useful in the history class subsequently.

Relics.—Any relics, such as a large spinning-wheel, a flax-wheel, a wooden cradle, and some old-fashioned chairs will be needed. If other colonial relics can be borrowed from a collection, it will add much to the interest and profit of the occasion. Time should be given for an examination of these and a word of explanation about each. All should have reference to the Plymouth colony.

Costumes.—Pictures give ideas. Alice Morse Earle's, "A Century of Dress in America" will assist. English dress at the time of the colonies is spoken of therein.

It is felt that too much effort cannot be given to the task of "making real" colonial days. An exercise of this kind will be productive of worth-while results in the hearts of listeners and participants. The readings have been carefully chosen; they are pithy, suggestive, and not too long.

Song by the School.

(Tune: Auld Lang Syne.)

Should we forget colonial days
And all that happened then?
Ah! noble deeds we should rehearse
Again and yet again.

Forever as we backward glance
Along the winding ways,
We prize the stories of the past,—
Our country's early days.

Oh, may our hearts to-day be thrilled
With inspiration true,
As grand achievements of old days
We here recall anew!

Oh, may we learn to seek the best
And truest things of life,
Well knowing it is good alone
That stands the test of strife.

Living Pictures Illustrating Plymouth History.

Each of these pictures should be preceded by a short reading from "Stories of Colonial Children," by Mara L. Pratt. Pages and lines are here indicated for convenience.

THE MAYFLOWER BABIES.

Reading.—The first paragraph of the book, continuing with the last two lines on page 10, and reading thru three lines on page 12; subject, Oceanus Hopkins and Peregrine White, born on the Mayflower.

Picture.—A group of boys and girls in costumes patterned after pictures of Plymouth days. Two large dolls dressed as babies and wrapped in shawls, held in arms. If practicable, have a boat partially shown at side of platform. A log cabin is seen at back. (David C. Cook Co., Boston, Chicago, etc., supply log cabin paper, windows, fireplace effects, and other accessories at very reasonable prices.)

THE FIRST WASHING DAY.

Reading.—Last two paragraphs on page 14 thru first eight lines on page 17. (One page of this section is used for the illustration which will serve as an aid for the picture to be given.)

Picture.—Use blue cambric of a dark shade, rippled over pillows, for water, at the rear. The small boat will be needed and should be occupied, as in the illustration given. Brown cambric should cover the front of the stage. Sand and stones should be scattered over it. If the brush of a local artist can sketch the "Mayflower" realistically in the background this will add to the effect. The rude paraphernalia required for the rest of the picture can be easily secured,—tubs, props, lines, clothes, etc.

A Country School in Nassau County, Long Island.

This school is located at Bethpage. Dr. Cooley is the school commissioner of the county.

MARY CHILTON AT PLYMOUTH ROCK.

Reading.—Page 20, line 12 thru line 16, page 21.

Picture.—Scenery as in previous picture. The small boat is seen at rear, Pilgrims standing. One is on shore, assisting “Mary Chilton” to step upon a great rock. “Mary” should wear hood and shawl, and have a merry, glad look in her eyes.

SWEET HOME AT LAST.

Reading.—Page 25, line 13 (last paragraph) to last two lines on page 26.

Picture.—A rude interior. The fireplace (crane of some sort as shown on page 31), cradle and chairs and table will be needed. Older girl should sit with hand on cradle; “mother” should be seen spinning; “father” cleaning gun. Old-fashioned mats should be spread upon the floor.

TWO LITTLE PLYMOUTH COLONY GIRLS, BETTY ALDEN AND LORA STANDISH.

Reading.—Page 51, first paragraph; page 56, last paragraph, continuing thru first half of line fourteen on page 57. Page 58, line 10 thru line 18, same page; line 6, page 59, thru to last paragraph on same page.

Picture.—Betty, a bright, rosy, healthful appearing child; Lora, a fair, delicate little girl. Both seen setting stitches in old-fashioned worsted work. Betty looks off gaily, Lora works demurely. (The reading contains a reference to the “very sampler” that “this child” wrought, seen in Pilgrim Hall.) The children should sit on “crickets.” An older girl may be shown overlooking the work. If so, copy the picture on page 60.

Song by the school, “The Breaking Waves Dashed High.”

Arbutus Drill.

The drill is to be given by twelve little girls. They should wear simple white dresses and each should carry a long strip of whalebone covered with pink and white tissue paper and twined with arbutus flowers. The flowers can be easily made of crepe paper. Paper of the exact shades required, stamens, stems, and all needed accessories can be had of the Denison Co., New York, Boston, Chicago, St. Louis. If the entertainment is given in the spring, send to some Plymouth school for a box of arbutus, giving in exchange a box of some desired flower of your own locality. (This can be done very pleasantly, anyway, to enhance interest in the history class.) Use the real arbutus as effectively as possible in a prominent place. A tiny spray in the hair of each child participating in the drill would be effective.

The song is first rendered, with motions as indicated, the little girls standing in four rows of three each. The tune to which the words have been written is found upon page 250 of Uncle Sam’s School Songs, “There’s Music in the Air.”

ARBUTUS FLOWERS.

Oh, (1) shy and sweet arbutus, (2)
Hiding (3) in the leafy dell, (4)
There is (5) no other flower (6)
We (7) can ever love so well. (8)

Chorus.—

Rosy (9) Plymouth blossoms (10) fair
We (11) shall ever hold (12) you dear.
Not (13) a lovelier flow’ret (14) blooms

Thru the happy, (15) changeful year. (16)

The little (17) maids of Plymouth (18)

Oh, (19) so very long ago, (20)

In days (21) of early springtime (22)

(23) Loved to find and watch you grow. (24)

Chorus.—

Oh, sweetly (25) yet ye speak, (26)

Listening, (27) we seem to hear (28)

Of olden (29) days whose light (30)

Ever (31) glows more bright and clear. (32)

Chorus.—

Motions to Accompany Song.

The motions should be executed with decision. The whalebones should not be simply moved from one position to another but the time should be definitely marked by their placing in the position designated.

- 1. Whalebone grasped in both hands forming a semi-circle. Place at high left.
- 2. Place curved whalebone at high right.
- 3. Same at low left.
- 4. Same at low right.
- 5. Same at shoulder-height, left.
- 6. “ “ “ right.
- 7. Same, direct front, shoulder-height.
- 8. “ “ “ low.

Chorus:—

- 9. Curved whalebones held directly above head.
- 10. Curved whalebones held in front, shoulder height.
- 11. At left, shoulder height.
- 12. At right, “
- 13. Low left.
- 14. Low right.
- 15. In front, shoulder-height.
- 16. Directly above head.

Interlude. Whalebones are placed in one hand, forming a circle, at a given chord. This should be done at shoulder-height, front. They must be firmly grasped so as not to fly apart. A winding of cotton will give a better chance to hold. This can be covered. The rows will hold the circles in opposite hands, thus:

*left hand *right hand *left hand *right hand
* “ “ * “ “ * “ “ * “ “
* “ “ * “ “ * “ “ * “ “

- 17. Hold circles, or hoops, at high front.
- 18. Swing outward. This will bring the arms of two standing side by side across each other. The participants should stand near enough together to effect this.
- 19. Bring hoops to shoulder-height, front.
- 20. Swing outward, same level.
- 21. Hoops at low front.
- 22. Swing outward, same level.
- 23. Hoops at low front.
- 24. Hoops at high front.

Chorus.—Repeat the movements as given, for chorus. It will be easy to grasp the whalebone again with two hands, at high front, after a little practice. At 9, the arched whalebone should be placed directly above the head, as previously directed. A chord should be played for the movement necessary for grasping the whalebone with both hands.

Interlude after Chorus.

25. Let whalebones be held straight, as rods, in same hand as previously, hooped. Low front.
26. Swing outward, arms of neighbors crossing.
27. Shoulder-height, front.
28. Swing outward.
29. High front.
30. Swing outward.
31. Shoulder-height, front.
32. Rest wand on shoulder, right shoulder if rod is held in left hand, and *vice versa*.

Chord. Grasp wand in both hands, at shoulder height, and proceed to chorus, as before. When held straight, the wands should be grasped a little way from the end. Chorus.

March and Drill

During the march the rods should be held in the left hand and laid across the right shoulder. March around the stage singly, in doubles, in threes, and in fours. Then let the first four march to center back, separate into twos and march to center front, meet, facing audience; the second and third four follow, taking places at right and left, until all are in line at front of stage. At chord separate a little. Give the movements of the chorus in time to the music of the march that is being played. At chord face for march.

March around the stage in a circle; come to front and pause. At chord face front. At chord face for marching, half to right, half to left. March in two circles at each side, then march in two circles, one inside the other. Then let outer circle march to position near front and face audience, while inner circle girls weave in and out between them and back several times. Inner circle girls then go to back (not too far back) and take position while the others march to back and weave in and out among them as was done at front. Then these girls, followed by the others, march in serpentine curves to front of stage.

At chord all face toward center of stage. March in twos to back, separate and march to front, the first two taking position, somewhat separated at center front, and lifting the whalebone wands to form an arch, the tops resting across each other. The other twos pass under the arch, separate and march to back, then come down again. The second two then take position behind the first two, with wands in same position. The other twos follow suit after marching thru the arch once (or twice, if preferred).

Wands in position as at first of march, at chord. March again around the stage, singly. Come to front. At chord face audience. At chord take wands into left hands. At chord half the participants take wands into right hands, *i. e.*, every alternating girl. At chord hook wands about those of partners, each wand a circle. Hold very firmly. At chord face for marching. March in serpentine curves, circles, and, finally, the rectangular march as at first. Come to front. At chord face front. At chord release wands from hoop-shape. At chord grasp with both hands, in semi-circle. At chord lift to position above head. At chord face for

marching. At the chord which starts the march tilt the semi-circles toward back and front, alternating, so that they touch each other, two and two, above. March only once around in this way as it is a bit of a strain. Come to front. At chord bring whalebones to vertical, at chord drop them to low front. If it is desired to prolong the march any of the movements may be repeated. If not, march to rear and leave stage.

Song by the School—The Ship of State.

Reading.—Selections from the "Courtship of Miles Standish" by H. W. Longfellow.

Living Pictures Illustrating Colonial Ballads.

The two poems are taken from Margaret J. Preston's "Colonial Ballads," and as the book is one which most teachers use, we have not taken space to give the poems entire.

DORIS' SPINNING. 1740.

Reading of the poem. Little maidens urge Doris to leave her spinning, but she refuses.

"So the frolicsome maidens left her with something of mild surprise
That Doris should choose a duty with a pleasure before her eyes,
Not dreaming that when her mother her "dozens" should count upstairs
And kiss her and say, 'My darling!' her day would be glad as theirs."

This verse is easily learned and the poem of not too great length.

Picture.—An upper room, neatly spread bed. Doris in quaint garb seated at the spinning or flax-wheel near a window. She should wear a sweet, contented look. A pile of white work should lie near.

THE PURITAN MAIDEN'S MAY-DAY.

Reading.—The following verses will give the idea.

"Ah, well-a-day! The grandams say
That they had merry times
When they were young and gaily rung
The May-day morning chimes."

If Bess and I should dress
A May-pole with our wreath
And just for play this holiday
Should dare to dance beneath,

My father's brow would frown enow:
"Child! why hast thou a mind
For Popish days, and Romish ways
And lusts we've left behind?"

If, as I ween, upon the green
She danced with merry din,
Yet lived to be the saint I see,
How can I count it sin?

Picture.—The poem should be given by a little girl dressed in Puritan fashion, wistfully holding a wreath of flowers.

The picture should show a May-pole and five or six little girls, fancifully dressed, playing about it. A clothes-pole set in a standard can be used. Cover all with green and pink tissue paper. Suspend a hoop a little way from the top by wires run to the top and covered. From the hoop ribbons should fall and the little girls should hold these. The costumes should be as "English" in character as possible, and tissue paper wreaths and "streamers" should be added.

The entertainment can be closed with remarks by special visitors and the singing of America.

Favorite Games for Primary Grades. II*

By Emma B. Olwin, Illinois

The first instalment of Miss Olwin's charming games was published in June. While especially adapted to primary classes they suggest what may be done higher up.
EDITOR.

The Animal Game

teaches close observation, encourages the study of animals and their habits, and improves oral language.

A pupil personates an animal. He comes to the front of the room and describes the animal he represents.

(In games as well as recitations, it is a wise thing to have pupils come to the front of the room, and stand before their classmates. It gives self-confidence, also teaches dignified position, doing away with the stork-like fashion of standing on one foot, and the dependent manner of holding to or leaning against a desk.)

To make the game instructive, insist on clear, concise statements. For example:

Child: "I am a wild animal.

I am brown, with long, shaggy hair.

I live in the woods.

Sometimes, I climb trees.

I would eat people, if I had a chance.

I sleep all winter in hollow trees.

I am quite thin when I come out in the spring.

Guess what I am."

It is surprising to notice the queer guesses that are sometimes given, showing how vague an idea some pupils have of the various animals.

Quite often this game encourages pupils who have been timid, to express themselves more freely.

Simon

is an old friend in a new dress.

We are all familiar with the old game, "Simon says thumbs up," etc. We have applied this to gymnastic work, and the pupils enjoy it greatly. For example:

Simon says hands on shoulders.

Simon says hands on hips.

Hands on shoulders. In this instance, as the command did not come from *Simon*, you are not expected to obey. Those who placed hands on shoulders, without noticing that *Simon* had not given the order, are expected to sit down and have another turn later on.

This very simple little game has the virtue of causing pupils to listen closely to the order given.

*Teachers who have other games which children especially enjoy are requested to describe them for TEACHERS MAGAZINE.

The Toy Shop

is a delightful game for very young children.

Perched on tables, chairs, window seats, and other available places are children, each one representing a different kind of toy.

The remaining pupils are pretending to be fathers and mothers, who have come to the shop to purchase toys.

The teacher is the clerk who "shows off" these wonderful toys.

Here is a "really little girl," who is a pink and white doll, but when the clerk touches a mysterious spot in her chest, she says "mamma—pa-pa" in true doll fashion.

Next to this doll, is a brown-haired one who opens and closes her eyes in the most energetic manner.

Then there is a wonderful Jack-in-the-box, who is stooping in a waste paper basket and jumps up with a bound and a funny face when a spring in the basket is touched.

Next we find five boys holding on to each other's coats, a larger boy is in front. This is supposed to be a locomotive and a train of cars, and after much "winding up" the whistle blows, the train starts with the familiar "choo-choo" sound, and the "lightning 'spress" goes rapidly across the floor (I mean the country) to the great delight of the spectators. A funny little fat boy caused much amusement by pretending to be a donkey. He made long ears with his hands and when wound up ran a short distance and then began to balk.

Very often the children will suggest being a certain toy. Wild horses, gentle cows, sheep that cried "baa-a, baa-a," automobiles and many other toys are sold in this wonderful shop, and finally the toys are loaded on a delivery wagon (chairs placed together) to be sent home.

A TEA-LEAF

FROM THE PAST

Morals and Manners

Playing Baseball.

An Ethics Story.

By ALICE MAY DOUGLAS, Bath, Maine.

HAVE you got acquainted with the new girl?" asked Edwin, as the children of the Mayville school came trooping out to recess, which was to be spent in the field upon whose edge the school-house stood.

"Haven't had time yet," replied Lucinda, as she took a bite from the big apple she had just taken from her pocket.

"She seems kind of bashful," remarked Lena, as she stepped forward a few feet to get into the shade of the large elm which threw its protecting arms over the red school-house. "She hasn't left her seat yet."

"So she is!" exclaimed several of the children, as they stood on tip-toe and looked thru the window into the school-room.

"Let's ask her to come out and play ball with us," suggested Edwin. "Her name is Marie, isn't it?"

"Yes," replied Gilbert.

"What did the yes refer to?" asked Edwin, laughing.

"Yes, her name is Marie—that's what I meant."

"But what about her playing with us?" asked Gilbert.

"All that we are playing now is baseball," said Kate Brown, "and there are just nine in our class and just nine in the game. I don't see how we can find room in it for anybody else, so there now!"

"When we said we'd let the girls into our 'nine' because there were not boys enough, we didn't intend to make our nine a ten," protested Leon.

"Course not," assented Edwin with emphasis, "but we might as well settle the question now. Shall we let her play ball with us?"

"I think we'd better take Marie into our game," said Gilbert. "She seems a nice girl and she won't have anyone to play with, if we don't. Think how we should feel to be in a new school and be treated the way some of you are talking of treating her. But we must decide soon, before she comes and hears us."

"But we don't need any more in our game," cried Edwin, "so I say let's have a game now and say nothing more about that new girl."

"But we should remember the Golden Rule," said little Ida. "Marie can take my place for today. One of us might give up our place to her every day." Ida was Edwin's sister.

"So we might," said Edwin, suddenly chang-

ing his mind. It was wonderful what an influence this little blue-eyed girl had over her big brother, who thought that everything about the school yard should always go just as he said.

"Well, I don't know," said Leon, "our set is our set. What is the use of taking in somebody else?"

"Come, Gilbert," said Edwin, "let's take the bat and count up. If my hand comes last on the bat Marie can't be in the game. If yours comes last, she can."

"O please don't do it that way," pleaded Ida. "If you do, Marie will think that she is either in or out of the game because one of your hands just happened to be the last on the bat. I say let all who want Marie to be in the game to raise their hands, and all who don't want her keep their hands down."

"All right," cried the others. Then the hands began to go up.

I have never heard how the vote went, but I think that you can tell me. At any rate we will vote, and the ten pupils I name may come to the front and pretend to be the boys and girls of Mayville.

(The pupils step to the front.)

Now who will be Marie?

Very well, but are you sure that you want to be Marie. If the others don't vote you into the game, think how you will feel.

Those who want Marie to play in the ball game will raise the hand, and those who don't want her to play will keep their hands down.

"Ah, Marie, they do want you, so let us see who will be the first to give up his place to you for one day.

(Doubtless all will respond to this request.)

If all give up their places to you there will not be enough left to play ball, so, Marie, I think you will have to choose the one whose place you will take first. By the way, when is your turn coming to give up your place to another?

The child makes her choice. Perhaps she will say that she will be the first to give up her place.

See, children, I am making nine straight lines on the board. What do you think these stand for?

"For the boys and girls of the school." Yes, you have guessed right; and now I will make out of every straight line a cross to stand for whom do you suppose?

Yes, you have told me what these stand for. They stand for the boys and girls who want Marie to play in the game. Will the children in front please raise their hands again, so I can

see if I have you all. That is well; now you may return to your seats for we have found out that the children let Marie join the game.

(Perhaps the required number of commendable characteristics cannot be given, but if several which in reality mean the same thing are proffered, write them upon the board. The pupils are too young to go into details concerning synonyms.

Let us now find nine nice things to say about these boys and girls.

Now those of you who have blank books may

copy in them what I am writing on the board. Please watch me and see if I am writing what you have told me about those boys and girls.

The result of the discussion to be written upon the board will be like this:

The children let Marie play in their game because it was

U. G. W.

The Teaching of Civics

By Flora Helm, Head Assistant, Robert Morris School, Chicago

HUXLEY says the Ego is the center of the universe.

Borrowing this idea for an educational application, let us radiate outwards with it.

The child-ego is the center of the universe, his circumference is his social environment, and the radius which swings around the center and creates the circle is his education in civics.

His circumference is then great or small in proportion to his radius.

We cannot conceive a center without a circumference, and a circumference cannot be generated without a radius. No finite being lives for, or by, himself alone. It is as axiomatic in sociological philosophy that he must have a social environment as the foregoing mathematical statement is axiomatic.

And since the circumference depends on the radius, the inference is that the radius is of great educational value. Education in civics (we use the last word in its sociological as well as political sense) is, as stated before, the radius which swings around the child and creates for him his universe. In the complex and highly evolved condition of our present civilization, the Ego's circumference covers many varieties of relationships to the center. There is the generic or family arc, the social arc, the industrial arc, the commercial arc, the political arc, and the arcs of letters, art, and artizanship. All these are spanned by the one radius—civics.

Since this line of education is of such great importance, what should be its nature?

It goes without argument that it should be of a nature to produce great breadth, since the scope of the child's potentiality is based upon it.

It should be altruistic or moral in its character, for the development of a being is reflex in its nature.

What a person radiates will be reflected back on himself. This is a truism so universally recognized that it has passed into various forms of proverb—bread cast upon the waters—honesty is the best policy, etc. As a witty Frenchman has said, if there were no such thing as honesty it would be invented as a business principle because it would pay.

So the educational principle of civics should be based on altruism, if for no broader reason than that it involves the success of the person so educated. The development of the individual is reciprocal to the development of his race. Religions and philosophies of all times recognize this.

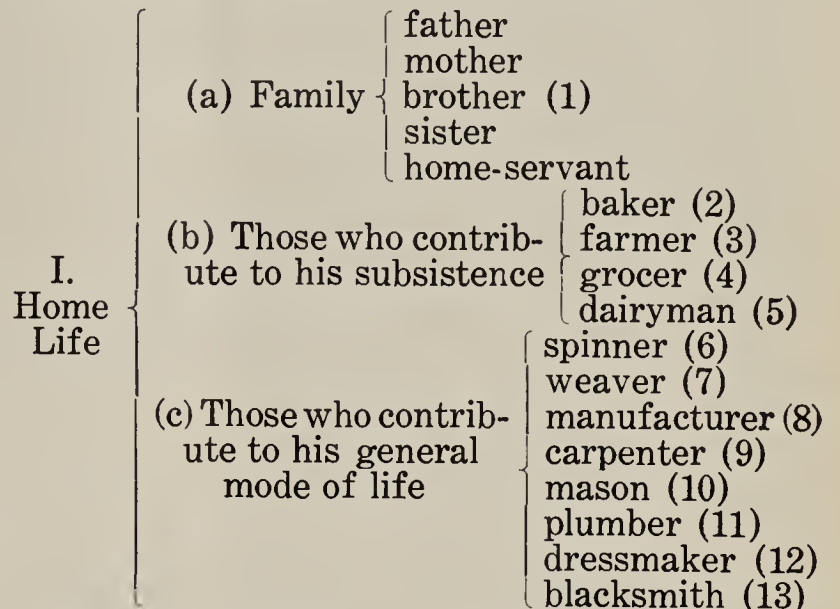

So civics, that branch of education which develops a child with relation to his sociological environment should be the *Science of Ethics*.

To summarize,—Civics is that branch of education which relates a child to the universe; it should be broad in its ultimate scope; it should be ethical in its character.

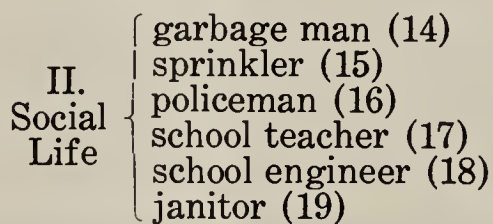

First Grade Civics.

The nearest circumference to the child is his

home life. His home life has three arcs or aspects: the family members, those persons who contribute to his subsistence, and those who contribute to his general mode of life.

The next circumference takes a little longer radius, a little wider sweep, and we find the child-ego looking out upon the first rim that bounds a universe radiating towards him in help and labor and love. But also radiating from him, for he must be made to feel that they only serve him and love him because he will some day do his share.

This double diagram covers nineteen subjects. Suppose we say that each subject covers two lessons, and, allowing for two extra lessons mentioned later on, adopt the following outline,—one lesson a week, four a month, forty a year,—twenty minutes to each lesson, eight hundred minutes a year.

It is desirable to present the different subjects in a variety of ways, and of course each subject in a way that should bring out its differentiating character. For *family life* let the children talk. For *grocer* play a shop game in which one is owner, another salesman, another clerk, another deliverer, and others buyers. For *farmer* take "garden-day" for its illustration and let it be an out-door lesson if possible, or if not, plant seeds and do miniature gardening inside. For *dairyman* bring in pictures of the cow and correlate the nature study lesson. For *baker* bring in the construction work with its mud pies. Nearly all the members of group C of the first diagram can best be evolved by manual activity.

The needle, wheel, hammer, trowel, saw, straw, cloth, yarn, wool, paper, and clay may be the individual instrument to unfold a special field of industry in this little microcosm of primitive industrialism.

He can best understand humanity and best be inspired with the human breath that sighs for divinity, who passes thru all the stages that lead primitive man up the Excelsior Heights of evolution and progress. It is on this principle that the Talmud enjoined all the Jewish philosophers to learn a trade. This principle is the keystone to the great institution of philosophical fraternity—the Masonic Order. It is the instigation of this idea that has established the system of having most European rulers taught a manual trade in their youth.

So the child can best absorb the spirit of fraternal co-operation which inspires the human universe by experiencing those especial activities by which individual man is expressed.

Blessed that child of humanity, happiest man among men,
Who, with hammer or chisel or pencil, with rudder or plowshare or pen,
Laboreth ever and ever with hope thru the morning of life.
Round swings the hammer of industry, quickly the sharp chisel rings,
And the heart of the toiler has throbblings that stir not the bosom of kings.

Group II. can be brought out by talks, pictures, and games.

After each individual labor or duty has been evolved in its two lessons, let there be two lesson days for exchange: Lessons to illustrate co-operative industry. Each child contributes to the general market the work he especially excels

Drawn by U. G. Wilson: [See also the "Apple Lesson" on page 54.]

in, emphasizing the political economy point of industrial interdependence. Let these, as well as every lesson, be a subtle and philosophical working out in the child's primitive way of the fraternal principle of the universe,—of the fact that the Golden Rule is absolute, not relative,—that life to the individual is only secured by life to the whole.

Let the teacher of civics—be the civics primitive or complex—bear always in mind that the center exists only in relation to the circumference,—that the *ego* is only an existence relative to the *alter*,—in a word, that civics implies altruism.

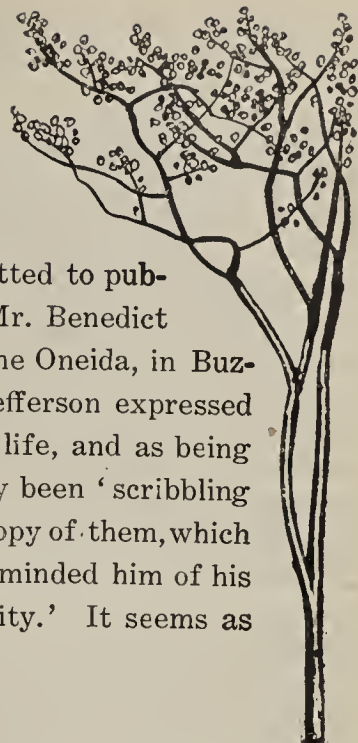

An easy way to draw a ship.—Blackboard Drawing by W. E. Sparks.

Immortality

By Joseph Jefferson

Thru the courtesy of Mr. E. C. Benedict, a close friend of the late Joseph Jefferson, TEACHERS MAGAZINE is permitted to publish these lines by the dead actor. "One day last summer," Mr. Benedict says, "when Mr. Jefferson and Mr. Cleveland were taking luncheon on board the Oneida, in Buzzard's bay, the conversation drifted to the subject of a future life. Mr. Jefferson expressed himself as very grateful for having had more than his share of the joys of this life, and as being prepared to meet, at any moment, the common fate of all. He said he had lately been 'scribbling some doggerel' on the subject, and he recited his lines to us. I asked him for a copy of them, which he said he did not possess, but he promised to send me one. In February I reminded him of his promise, and received a signed copy of the verses, which he entitled 'Immortality.' It seems as tho these lines construct a beautiful bridge between faith and reason."

Two caterpillars crawling on a leaf,
By some strange accident in contact
came;
Their conversation, passing all belief,
Was that same argument, the very same,
That has been "proed and conned" from man
to man,
Yea, ever since this wondrous world began.

The ugly creatures,
Deaf and dumb and blind,
Devoid of features
That adorn mankind,
Were vain enough, in dull and wordy strife,
To speculate upon a future life.
The first was optimistic, full of hope;
The second, quite dyspeptic, seemed to mope.
Said number one, "I'm sure of our salvation;"
Said number two, "I'm sure of our damnation.
Our ugly forms alone would seal our fates
And bar our entrance thru the golden gates.
Suppose that death should take us unawares,
How would we climb the golden stairs?
If maidens shun us as they pass us by,
Would angels bid us welcome in the sky?
I wonder what great crimes we have committed,
That leave us so forlorn and so unpitied.
Perhaps we've been ungrateful, unforgiving;
'Tis plain to me that life's not worth the living."

"Come, come, cheer up," the jovial worm replied,
"Let's take a look upon the other side;
Suppose we cannot fly like moths or millers,
Are we to blame for being caterpillars?
Will that same God that doomed us crawl the
earth,
A prey to every bird that's given birth,
Forgive our captor as he eats and sings,
And damn poor us because we have not wings?
If we can't skim the air like owl or bat,
A worm will turn 'for a' that.'"

They argued thru the summer; autumn nigh,
The ugly things composed themselves to die;
And so to make their funeral quite complete,
Each wrapped him in his little winding sheet.

The tangled web encompassed them full soon,
Each for his coffin made him a cocoon;
Al thru the winter's chilling blast they lay
Dead to the world, aye, dead as human clay.

Lo, spring comes forth with all her warmth and
love;
She brings sweet justice from the realms above;
She breaks the chrysalis, she resurrects the
dead;

Two butterflies ascend encircling her head.
And so this emblem shall forever be
A sign of immortality.

The Sand Table in the Class-Room

By Florence V. Farmer, Newark, N. J.

TEACHERS in the lower primary grades will find a sand table of great value in connection with nature study, language, reading, and history, as well as with geography. By its use we give life and interest to these subjects, thus making it a means of growth to the child. If it is used simply to amuse, to let the child play with the sand aimlessly, it is almost valueless. Neither should it serve for modeling, except in the grades where geographical forms are taught. In the first and second grades it may be a means of expression. Stories which have been told by the teacher, or read by the pupils, may be reproduced on the sand table, the sand being the ground work on which to build up the story. This is a most valuable aid in oral language work. It emphasizes the story so effectively that the duller pupil becomes interested and even enthusiastic.

With the children in the imaginative stage of development, it is well to encourage the building up of the story entirely thru their own efforts; but with the older children, who are studying historical and geographical subjects, many things will suggest themselves to the teacher which are not within the child's experience. These may be supplied by the teacher as models from which the pupil makes similar objects. Thus the sand table—itsself one form of expression—brings into activity several other forms. It also provides the children with interesting and profitable seat work.

In the early fall, when nature work is related to the preparation of plant and animal life for winter, the sand table is invaluable. Besides the multitude of stories adapted to illustration, there is the convenience of turning the table into a miniature meadow for the closer study of insect life. The sand is removed and sod substituted. As it is the life and environment, rather than the scientific investigation of the parts of the insect, which is of most importance in our early studies, we must make the new home of the

insect as much like its native home as possible. Slats about two feet long are tacked upright at the corners of the table and the whole is covered with mosquito netting. Black netting is more easily seen thru than white or colored.

Later in the fall we learn of the harvest, the farmer's life, and our dependence upon him. The sand table is now converted into a tiny farm and interesting and instructive scenes are represented. On one part of the table are broad fields enclosed by neat fences of toothpicks or sticks. A farmhouse with a flower garden in front, and woods and orchards in the rear, a barn, wagons, hayricks, and corncribs take their places in the landscape. Toys are used for the farming implements, or they are cut from stiff paper or modeled in clay. The animals generally found on a farm are made in the same way. Dolls are used for the farmer's family and for the harvest men. When the subject of planting, cultivating, and harvesting of grains are discussed, the fields are planted with small pieces of dry grain or grasses.

Another part of the table shows the wheat stacked ready to be taken in the little paper wagons to the barn where it is to be threshed.

On another part of the table stands an old-fashioned flour mill, with a water-wheel. The mill stream, made of paper or of ground glass, runs thru green moss to the dam above the water-wheel. A few tiny bags of flour are piled near the door of the mill.

During November, when historical narrative takes the most prominent place in morning talks and language work, a great transformation is made in the sand table. England appears a little to the right of the center. Small paper houses, with tiny gardens in front, are arranged in rows to look like streets. The King's palace, made of blocks, stands on a hill overlooking the town. To the right of England, with a small expanse of blue paper water between, is Holland, the country of dykes, canals, and windmills.

The Story of the Ugly Duckling.—Arranged on a Sand Table at the Ridge Street School, Newark, N. J.

On the extreme left, beyond a paper ocean, lies the new country—America. A large stone is conspicuous on the shore and nearby is a cardboard ship marked "Mayflower." Among the twigs of evergreen on the shore are log cabins built with rolled paper which has been gone over lightly with black crayon. Tripods made of twigs and kettles of clay stand near the cabins. A short distance away is an Indian village.

The wigwams are made of paper painted in bright colors. The farmer's family and the harvestmen now do duty as Pilgrims and Indians. The farmer wears somber gray, and the latter chamois skin with gay bead trimmings.

December is full of suggestions for sand table illustration. The Christmas stories, the celebration of Christmas in other countries, and the life and home of our old friend Santa Claus are represented as time permits.

During the cold winter months comes the study of snow, its uses, and its pleasures. The sand table now appears white with cotton batting. A little artificial snow or salt is used to give a more realistic appearance. There are hills for coasting, horses and sleighs for driving, ponds of ground glass for skating, men on raffia snow shoes, and houses and trees covered with snow.

From this frozen landscape our minds are directed toward the Eskimos who live where ice and snow abound the greater part of the year. The sand table, with but little alteration, represents a scene in the Northland. Eskimo dolls take the place of the boys and girls coasting and skating; dogs with sledges are substituted for the horses and sleighs; igloos are made of clay and covered with cotton and salt; clay bears and seals are found on the glass ice, and Eskimo weapons of warfare are near the igloos.

In February the log cabin of the Pilgrims is placed in pioneer surroundings and becomes the home of Abraham Lincoln.

After the study of heroism by means of our own great men, we talk of the heroes of olden times,—the knights. A story particularly good for this subject is Miss Harrison's "How Cedric Became a Knight." A castle, made of paper lightly crayoned with black to represent stone, stands on a high hill overlooking the surrounding city. Stone walls made of paper enclose the city and castle. Cedric's home is a small paper house at the foot of the hill. There is a flower garden in front and an old-fashioned well with sweep. Toy knights on their fine horses ride down the hill, and Cedric's plain clothes are changed to a velvet suit and a hat with plumes.

The windy month of March is a most enjoyable one for sand table illustration. All the uses of wind to man appear on the table. A weather-vane stands on the top of a stable; from a flag pole a miniature American flag floats in the breeze; in the back yard of a small paper house, clothes are hung to dry; boys are running about flying their kites; tiny sailboats are tossed about on the waves of paper water; tall windmills lift their arms to the sky.

Besides the spring winds other forces of nature are at work.

The warm rain and sunshine will soon waken

plant life and we must make a study of germination. The sand is removed from the table and good soil substituted. It now becomes our garden and we plant our seeds, some in hills, some in furrows, and some scattered. The period of waiting is enlivened by the necessity for frequent waterings and some fence building and repairing. Soon we find here and there tiny mounds raised from the surrounding level. Now we begin to watch the habits of growth in the various plants as they develop. As each plant stretches itself and lengthens, it pushes its way above the ground and turns toward the light.

It takes so long for the plants to mature that they must be transplanted to the out-of-door garden after the early stages of growth have been observed.

As summer approaches the children cast aside their heavy clothing and appear in cotton and linen. The sand table shows a cotton plantation in the sunny south. The cotton is represented by small plants with balls of cotton batting tied on to look like bursting pods. A few real pods are fastened here and there on the larger plants. Colored dolls are among the plants picking the cotton and filling their baskets. A wagon

stands ready to take it to the shed where the seeds are separated from the cotton. Some bales of cotton are piled nearby. These will be sent to the mills where the cotton will be spun and woven into thin goods for our summer clothing.

First Steps in Reading.

Extract from an address by MRS. ALICE WOODWORTH COOLEY, University of North Dakota, before the N. E. A.

The first steps in learning to read must then be:

Getting vivid pictures of objects and events worth thinking and reading about; larger, clearer, more definite thoughts; and higher ideals of beauty of form and sound. This can only be done by (1) contact with real things worth while to know; (2) enlarged experience; (3) expression in word and by hand; (4) ear familiarity with literature; (5) increasingly accurate and distinct pronunciation with ever better voice modulation; (6) association of mental pictures with written forms and their sound; (7) increasing ability to instantly, at sight of the written form, give its meaning to others in spoken words.

Japanese Brush Strokes

By K. Grace Dawson, Supervisor of Drawing, Berkeley, Cal.

NO one can deny that the Japanese, of all our draughtsmen, is the most skilful in wielding his brush. His direction, strength, and length of line are very carefully studied before he ever touches his brush to the paper. Artists are continually using Japanese prints as examples of splendid composition and beauty of line.

When the child takes up painting for the first time, which is usually in the third grade, the question arises how best to instruct him in the preliminaries. After having used crayons for two years it is quite a new experience to handle the brush and to handle it successfully. It seems to be very discouraging to the class teacher to introduce painting to her small inexperienced children, because they are so awkward in handling their brushes.

The first thing to do is to teach them how to hold the brush. As a rule, children hold it too near the end. They will never obtain freedom of line if they persist in holding the brush in this manner. See that the child grasps it lightly about two inches from the bristles.

These Japanese brush strokes are splendid for

the beginner as he directs the brush to form his ideas, thus giving him practice with the brush and helping him to see form as well.

Ink is better than the wash for this work, and merely common school ink will suffice. Begin first with the horizontal line, then vertical, then oblique. Take a brush full of ink, press the brush on the paper, bearing down somewhat, and carry the brush as far as you wish the line to go, thus giving to the ends of the line a broadened effect. When practicing these straight strokes the teacher can help the children to space more evenly by counting one, two, three, etc.

After obtaining good results in these first attempts take different objects, such as the pail, dipper, leaf, and parasol.

Impress upon the child that he must know just what he wants his brush to do before he begins, for in this work one cannot patch up after the work is finished.

Give now a few lessons on curved objects. Curves are always more or less difficult, especially for little hands. Begin by making circles and interlacing them. Use as objects fruit, teapot, lantern, fan, etc.

An Example of Japanese Landscape Drawing for the Blackboard, by W. E. Sparkes.

One can readily see that the child is by this time not only learning to handle the brush, but is learning to see form as well, and the teacher feels that she can proceed to real water-colors.

The teacher always finds that better results follow if enough time is spent on the preliminaries. One can be sure that such time is not wasted.

Little Talks on School Management. II

By Randall N. Saunders, Hudson, N. Y.

Opening Exercises.

A MOMENT'S calm after the pupils are seated tends to ensure a receptive attitude in schools where the opening exercises are varied and the discipline is good. With the pupil fresh from exercise, that moment of expectant tranquillity is the opened vestibule for the earnest introduction of some sweet or noble guest of thought to the passive mind, ere the workmen, duties of the day or of the session, throng to their places.

As we have staples of diet ever present at the table, so I believe that the Great Teacher's injunction should be followed, in a broad and non-sectarian sense, and that His lambs should regularly be fed the bread of life without sermon or sanctimoniousness. The reading of the Bible, the greatest code of ethics and the grandest literature ever compiled, was the one staple ever present, and I always strove to make the morning lesson from the book of books one of the most interesting of the day. Reverence for things considered holy and to be respected, a reverence so much needed at the present time, —will grow out of the manner in which this thing is done. Treat the book with care,—put feeling into the rendition of its passages, and the children will catch the spirit of reverence and reflect, but *don't* be sanctimonious or you will be promptly and properly suspected, and the good influence to be desired will be dissipated.

I varied the reading of the Bible. For a week (for illustration) we would read the First Psalm every morning, or until we could repeat it from memory. In this way, in time, a school would learn many of the shorter songs of David and other short selections. Then, again, I would select a portion, reading it a few lines at a time, the lines to be repeated by the school,—a short responsive exercise that is good for fixing attention and that was most thoroly enjoyed whenever I used it. Then, again, I asked some of the older boys and girls occasionally to read, and being selected to read was always treated as a privilege,—a responsibility,—and the reading, without an exception, was always conducted in a manner nowise lowering the dignity of the office.

Sometimes the Bible text suggested an ethical lesson to be briefly and beneficially developed, and sometimes the text was chosen for the ethical lesson it contained and which I had in mind as needed by the school. We were like a big family at this exercise, and seldom did any mischief creep in to mar it all.

As to the singing. In some schools I had an instrument, and was fortunate in having several girls in each to play for me. Altho I knew something of both vocal and instrumental music, I believed that it was far better to employ the talents about me rather than to display those I possessed. It is better to have boys and girls

beg a musical treat (?) from you than to become a bore by constantly doing something that several in your school can do as well so far as the simple needs demand.

We varied our singing. The morning song would be in character a hymn, stirring or tender as the mood of the morning needed guiding, or as the nature of the Bible reading or the ethical lesson demanded. A song from the song book, patriotic or sentimental, opened the afternoon exercises, and this was varied occasionally by a solo or a duo, if I had a prospective "bella donna" or two among my charge. A short nature or information lesson followed the song, and I found my boys and girls never weary of learning facts, developed if possible thru objects, about the animals and things by which they were surrounded.

At this time boys and girls were given commissions of exploration and investigation, and at this time reports of research and expeditions were received. There could be, of course, no routine,—no succession,—no regular method; but rather an irregular method that was more effective from its very variability and novelty. At this time, new inventions and discoveries were explained briefly, and discussed in regard to their value to the world; and every day I demanded of each pupil old enough to read the papers a news item (excluding all record of crime), the more important of which received a word of comment.

Thus varied and conducted, my opening exercises were often the green spots in many a desert day, and I believe that they watered and made fertile many a day that would have been an arid Sahara without them. They engendered the growth and strengthening of attention, reverence and cheerfulness; three buds that are often blighted by a sharp rattling hail of fixed routine or a cold air of indifference at the very threshold of the dawn.

The King of the Autumn Woods.—A Paper-Cutting sent by Miss Cleo Kelliher, a teacher in Jefferson, Wis.

"The squirrel was going to saw off her hand to get her free."

Mr. and Mrs. Stout of Beaverdam

There was great excitement among the beavers of Timber Lake. The only daughter of Mr. and Mrs. Flat-Tail was going to be married. The young beaver who wanted her for his wife was named Stout.

Everybody who was anybody in the Timber Lake colony was invited to the wedding.

The men beavers were talking about nothing but the good things they would get to eat.

The women beavers were talking about the dresses they were going to wear, and how pretty the bride would look in her rich new furs.

Mrs. Flat-Tail was afraid that her daughter's wedding dress might be stolen. So she put it away in a dark corner of the garret. For this was the safest place in the Flat-Tail homestead.

Early one morning, on the day before the wedding, young Stout called at the Flat-Tail lodge to see if everything was ready.

It happened that the Flat-Tails had not yet finished their breakfast.

Father Flat-Tail invited young Stout to sit down at the table and eat with the family.

"I have had my breakfast, thank you," said Stout, "but I will sit down at the table with you." So he sat down next to Miss Flat-Tail.

After a while young Stout said, "I think I can eat something anyway. Seeing you all eat has made me hungry."

Miss Flat-Tail smiled as sweet a smile as a young beaver lady can smile and asked, "What shall I get you, dear?" Then she blushed because she had called him "dear" before the whole family.

Young Stout did not mind being called "dear" by Miss Flat-Tail. So he said, "Bring me a water-lily root, if you please."

Now there was no water-lily root on the table. So the bride went down to the cellar to get one.

After looking around for some time, she saw a root that had in some way been mixed in with the plaster and was stuck in the cellar wall.

Miss Flat-Tail picked and pulled until she got it out. But, oh horrors! There was a tiny hole left in the cellar wall where the lily root had been, and the water came trickling through.

Miss Flat-Tail sat down and cried, and said to herself, "What an unlucky girl I am! Now the water will fill up the cellar. Then it will go higher and higher until it gets up to the garret. Then my pretty wedding dress will be spoiled. And then I must get married in my old fur coat."

All the time she was crying the water kept trickling through the tiny hole in the cellar wall.

Young Stout wondered why his bride did not return. "I wish," he said, "I had asked for only half a water-lily root. Perhaps if I had, your daughter could have been back by this time."

Father Flat-Tail gave his wife a gentle punch in the ribs and said, "It ought not to take that girl so long to get a water-lily root from the cellar. I could have brought up half a dozen in this time."

"I will see what is the matter," said Mrs. Flat-Tail. So she left the room and went down to the cellar.

There she saw her daughter sitting with a water-lily root in her left hand and crying bitterly, while the water came trickling through the wall.

"What are you crying about?" Mother Flat-Tail asked the bride.

"Don't you see that the water is trickling through a tiny hole in the cellar wall?" the bride said. "By and by the whole cellar will be full. Then the water will go higher and higher and higher till it gets up to the garret. Then my pretty wedding dress will be spoiled. And then I must be married in my old fur coat."

When the mother heard this tale of woe, she took hold of her daugh-

While she was crying the water came trickling in

ters right hand, and cried, too. And all the time the water kept trickling through the tiny hole in the cellar wall.

When mother and daughter did not come back, young Stout remarked. "I wonder why the women stay so long?"

Then Father Flat-Tail said, "I will go and see what the matter is."

So he started for the cellar. There he saw his daughter holding a lily root in her left hand, and her mother holding her right hand. Both women were crying and the tears ran down their cheeks, while the water was trickling through the cellar wall.

When Father Flat-Tail heard what they were crying about, and how his daughter would have to be married in her old house-dress if the water should spoil her new wedding gown, he put his arms around his daughter and cried, too. And all the time the water kept on trickling through the cellar wall.

By and by young Stout thought he would see what had become of the Flat-Tail family. When he reached the cellar he found the whole floor covered with water, and his bride and his father-in-law and his mother-in-law crying.

He ran upstairs and got a handful of mud and put it over the hole in the wall. So the water stopped trickling into the cellar. Then the bridegroom asked Father Flat-Tail why he was crying. "Ask my wife," Father Flat-Tail said. "She can tell you."

So young Stout asked Mother Flat-Tail why she was crying. "Ask my daughter," Mother Flat-Tail said. "She can tell you."

So young Stout asked his bride why she was crying.

Miss Flat-Tail wiped away her tears, and sobbed, and said, "I cried because I was afraid the water would keep on trickling through the wall till the whole cellar was filled, and then it would go higher and higher and higher, and when it got into the garret it would spoil my new wedding dress, and then I would have to be married in my old house-dress."

Young Stout was angry when he heard this, and he said: "What fools you people are! Is that what you three are crying about? I will not stay here with you. I am going away and will not come back till I find three bigger fools than you." With that he left the Flat-Tail lodge and started out on a long journey.

Young Stout walked many miles, and could find no such fools as the Flat-Tails.

On the tenth day he saw a squirrel running around the ground carrying a saw.

"Where are you going with that saw?" he asked.

"My wife has caught her right hand in a hole and can't get it out," the squirrel answered. "So I am going to saw off her hand to set her free."

"Let me go with you and see whether I can help you," Stout said. And then he followed the squirrel.

When they came to the spot where Mrs. Squirrel was caught, Stout asked, "How did you get your hand in the hole?"

"It went in as easy as anything," said Mrs. Squirrel. "I saw there were nice nuts in the hole, so I put my hand in to take them, and now I

"And he named her from the river,
From the water-fall he named her,
Minnehaha, laughing water."

The Indian Play Hiawatha.

Ever since Longfellow wrote the famous song of Hiawatha, the swinging rhythm of the lines and powerful sweep of the story has held American readers with unabated interest. The story has taken hold not only of the white man, but the Indian, too, has caught the spirit of Hiawatha, and become equally enthusiastic over the poem.

One day there appeared along the shores of Lake Huron, in the Ojibway country in Canada, a white explorer, named L. O. Armstrong, and

here it was that he succeeded in arousing the interest of the red men in the story of Hiawatha. Soon the Ojibways began to tell the old story in their own tongue, and finally to act the play under the overhanging pines, and on the shining lakes of their native country. The fame of their performance spread abroad, and for six years it has been repeated before hundreds of people who have come to see it.

Fascinating as this Indian play is, its location in Canada proved to be too far away for many who would like to witness it. Finally, Mr. Armstrong

"With the deer upon his shoulder,
Suddenly from out the woodlands
Hiawatha stood before them."

determined to find a new home for the drama in the United States, and after some deliberation moved it to Yawaygamug Lake, near Petoskey, Mich.

The choice of this location is a fortunate one, for it was here the Ojibway tribe lived in the old days when they battled with the Iroquois. It was here, also, that they hunted the deer and fished in the deep waters of the lake for their favorite food, the bass. It was here the squaws of the tribe planted corn, beans and potatoes, and stripped from the birch trees the covering for

their lords' canoes; and it is here that they will present the story of the life of Hiawatha and his wooing of Minnehaha.

The Indians enter into the portrayal of the scenes with surprising dramatic ability and insight. As actors they seem to be superior in their simplicity and realism to their white brothers. The presenting of this picturesque period in the history of America by real sons of the forest, is sure to attract wide attention.

The season at Yawaygamug Lake opened July 4, and will close some time in September.

cannot get it out again. Poor, unlucky squirrel that I am! Now my hand must be cut off."

"Have you hold of the nuts now?" Stout asked.

"Yes," the squirrel answered, "but I cannot get my hand out of the hole."

"Drop the nuts!" Stout commanded.

Mrs. Squirrel did as she was told. And oh, joy! her hand could now be drawn out.

The squirrels were glad that the hand did not have to be sawed off after all. So they gave Stout a beautiful golden ring.

He took the present and started on his journey again, talking to himself as he went: "These squirrels are certainly greater fools than the Flat-Tails. But this is only the first foolish thing I have seen since I left Timber Lake. So I will search on. If I find two other such fools, I shall go back and marry Miss Flat-Tail."

After a time he came to a river. There he saw a sheep trying to dip up water with a sieve, and crying bitterly.

"What are you crying about?" Stout asked.

"Oh, my poor little lambkin must die of thirst if I do not bring him some water soon," the sheep answered. "Here I have been trying for four hours to dip up water to fill this pail. But I cannot do it. Oh, my poor little lambkin, my poor little lambkin!"

"What are you using for a dipper?" Stout asked.

"A sieve," the sheep answered.

"Let me have your pail," Stout said. Then he dipped the pail in the water, and gave it to the sheep filled to the top.

"How can I thank you enough for this?" the sheep said. "You have saved the life of my lambkin."

Then she gave Stout a golden chain. He took the present and continued his journey, saying to himself, "This sheep is certainly a greater fool than any one of the Flat-Tails. This is the second stupid thing I have seen since I left Timber Lake. One and one is two. If I find one other big fool, I shall go back and marry Miss Flat-Tail."

In the afternoon he came to a farmyard. He saw there was something

He saw a sheep trying to dip up water with a sieve.

unusual going on. All the animals were gathered before the barn door, watching a cow with a great big cornstalk in her mouth.

Stout asked a hen, "What is going on here?"

"The cow has been trying ever since this morning to get that cornstalk into the stable, but the door is not wide enough," the hen answered.

Stout decided to watch a while, and see how the thing would end.

He heard the pig say, "Let somebody get a saw or an axe and cut away a few boards so as to make the doorway wider."

"That won't do," the horse said. "Then the doors won't fit tight, and then we who have to live in the barn will all catch cold."

"I know what to do," the dog said. "Let the cow lie down on her right side with the great big cornstalk in her mouth. Then we will shove her into the barn."

There was no objection to this. So the cow lay down on her right side with the great big cornstalk in her mouth.

Now all the animals began to shove. But the cow did not budge.

At last young Stout went forward and said, "You will never get the cow with her cornstalk into the barn this way. Let the cow get up. So there! Now drop the stalk. Good! Now take hold of the flowers at the upper end."

Then he gave the cow a smart slap, and she ran into the barn with the cornstalk in her mouth and dangling between her front legs.

"Stalks as big as that one must be taken in lengthways," Stout said.

Then all the animals were glad that the cow was safely gotten through the barn door. Everyone wanted to give Stout a present for his help. He got bracelets and silver plates and golden candlesticks and ever so many other things, so that he could hardly carry them all.

"What fools there are in this world!" he said to himself. "I am sure

"The cow has been trying to get that cornstalk into the stable, but the door is not wide enough."

the Flat-Tails are no more stupid than the animals who have given me this gold and silver. Two and one are three. "Now I am going back to Timber Lake and marry Miss Flat-Tail."

And so he did. On the day after the wedding the postmaster got a card which read like this:

"Please forward all mail addressed to Miss Flat-Tail, Timber Lake, to Mrs. Stout, Beaverdam, Timber County, Castoria."

[This story has been told by Ossian Lang. The pictures were drawn by Margaret Ely Webb. The copyright is held by the Young American Publishing Company, New York.]

Here is sister Rose.
She is a very busy little girl.
She has a dolly.
Dolly needs clean clothes.
Rose has her wash bench and tub.
She is washing Dolly's clothes.
She will rub them until they are
clean.

She will hang them on the line.
The sunshine and wind will soon
dry them.
Then this little girl will take them
down.
She will fold them neatly.
She will iron them for dear Dolly,
to-morrow.

The children at Hyannis sometimes play at school that they are housekeepers. They sweep the room, clean the tables and do many other things. One day a little girl played that it was wash day. She brought a tub, a stand and a washboard to school. She showed the children how she washes the clothes of her dolls. All the children in the class then talked about her work. Miss Finley who is the teacher wrote the sentences upon the blackboard. In this way the class wrote the two composition exercises which are printed here. [See Teachers Magazine for June, pages 574 and 575.]

NOTE:—Hereafter, in response to the wish expressed by many subscribers, the CHILD WORLD pages will be so arranged that reading and full page pictures will alternate. Those who wish to use the stories may then mount them, and those who would rather preserve the pictures treat these in the same way.—THE EDITOR.

Hints and Helps

Plans,
Methods,
Devices, and
Suggestions

from the
Workshops
of many
Teachers

This feature, originally planned for *Institute* and *Primary School*, has proved so popular with teachers that it has been copied by nearly every educational periodical in the country. *TEACHERS MAGAZINE* will continue to publish the best to be had for this department. The Editor would like nothing better than that he might be able to visit the school-rooms of every one of the the hundred thousand teachers who will read this magazine. What an abundance of good things he would find! But that cannot be. The next best plan is to have the teachers aid each other by writing out the devices and plans and thoughts that have proved most helpful to them. Will you not contribute from the store of your experience? A good book will be sent for every contribution accepted for this department.

A School Museum.

We have been making a museum in our school for the last three years. My pupils are very enthusiastic over it. We think we have a very interesting collection already, but we are all the time on the lookout for something new.

Everything we have is labeled, and we keep our collection in an old bookcase, upon which glass doors have been placed. Perhaps there may be some teachers who would like to know what we have in our museum. This is the list, as nearly as I can give it from memory. (Today is Saturday, and I am writing from my own home.)

Grains.—Wheat, barley, oats, corn (also corn in husks), rice both hulled and unhulled.

Edible Seeds, Fruits, and Roots.—Coffee berries, cacao beans, vanilla beans, mustard seed, ginger root, cloves, caraway seed, coriander seed, cinnamon buds, tea, nutmegs.

Woods.—Elm, birch, black cherry, poplar, linden, cedar (piece of a cigar box), mahogany, California redwood, maple, oak, pine.

Other Products.—Castor bean, cotton boll, flax plant, flax seed, camphor, rubber, resin, gum tragacanth, wood pulp, sweet gum, raw spruce gum.

Products Suitable for Clothing.—Silk cocoons, raw silk, silk fabric, velvet, satin, wool, yarn, woolen fabric, horse hair, felt, angora hair, camel hair, cotton, cotton yarn, calico.

Minerals.—Sulphur, flint, marble, rock salt, quartz, asbestos, pumice stone, gold ore, limestone, sandstone, granite, gneiss, graphite, bituminous coal, anthracite coal, coal tar, coke, petroleum, paraffine.

We are finding new things for our museum constantly. Whenever a pupil brings us a new specimen we immediately set to work to find where it is obtained, what it is good for, etc. How much boys and girls enjoy making collections, and learning about them, only those who have tried to make a school museum really know.

Ohio.

A. G. WALTERS.

A Home-Made Hektograph.

I wonder if you teachers of small children, and larger children too, know what a help a hektograph is for school work? I hektograph reading lessons, pictures, composition subjects, examination questions, history topics, and other things too numerous to mention, but which add interest in an ungraded school.

My hektographs I make myself. The directions I found in an educational magazine several years ago. For the benefit of teachers who would like to make a hektograph, I copy it here. The cost is about seventy-five cents.

The materials required are a pint of glycerine, four ounces of gelatine, and a shallow caramel or flat tin pan about 8 by 12 inches.

Dissolve the gelatine in a pint of cold water, then add the glycerine. Heat gently on top of a stove, stirring, so that it may not burn. When the liquid comes to a boil pour it into the shallow pan. Beware of air bubbles, and when the contents of the pan are cool the surface will be smooth, hard, and sticky.

Blocks of unglazed paper especially adapted to hektograph use may be purchased at any stationery store. Use hektograph ink, and a coarse stub pen. See that every stroke of the pen shows a green, metallic luster when dry.

Write or print the matter to be used, and when the ink is dry lay the sheet face down upon the hektograph, first dampening the surface of the latter with a moist sponge. Press the paper gently upon the hektograph with the fingers, taking pains that every bit of the paper comes in contact with the gelatine.

After leaving the paper for from two to five minutes, peel it off. From the impression thus made reproduce as many copies as may be desired, laying one sheet of paper at a time upon the surface.

My older girls or boys usually do the hektographing for me, under my direction. After as many prints have been taken as may be desired, the surface of the hektograph must be washed with a sponge and cold water, until all the purple ink has been removed.

Indiana.

ADELAIDE PUFFER.

Hektograph Pictures.

Hektograph pictures are not new, but my little folks have enjoyed them so much this year that I want to call attention to them again.

In the first place, I know very little about art. The eyes of the cats I draw never have the right expression, and my rabbits are quite as likely to be taken for dogs, by my children, as for bunnies. Some misunderstandings of this kind were what made me turn to the hektograph for assistance.

Some of my friends have tried making their own hektographs, but I have never had any great success with those made at home. I prefer to pay a dollar once a year and have a really good one.

I get pictures from everywhere. More come from this magazine than any other one place. I trace the outline of any simple picture, from a sunbonnet baby to an American flag. I then transfer the outline to a piece of hektograph paper and trace around it once with a pen dipped in hektograph ink, and from this I print as many hektograph pictures as I wish.

We always celebrate special days with appropriate pictures. Last October we had an outline of the Santa Maria; for Thanksgiving a Puritan boy and girl; for Christmas a candle, a tree, and a star; for Washington's birthday a hatchet, cherries, etc.

I have collected my available pictures in a scrap book. Sometimes I allow the children to choose what they will have to write or read about.

MATTIE ARCHIBALD.

New Hampshire.

A Cat Day.

My second grade children were so much interested in "The Cat" (the cut-up story in the January number) that I decided to have some more stories of pussies. A search thru the back numbers of PRIMARY SCHOOL revealed plenty of these. "Towser and the Kitten" (June, 1903) was much appreciated, and we copied the illustrations on the board with great enthusiasm and "more or less" success.

"The Three Little Kittens" (Feb., 1904) was well read by the children, and it was interesting as well as amusing to notice the different ways the children imitated the mother cat's scolding, and the different expressions they gave to "meow."

At last we decided to have a "Cat Day," and I arranged the following program:

Song.—"The Old Black Cat."

Recitation.—"My Playmate" (Feb., 1904).

Recitation.—"Who?" (Feb., 1904).

Song.—"A Song of Pussy-Cats" (Jan., 1904).

Reading.—"Cat-Life" (April, 1904).

Recitation.—"My Little Gray Kitty and I" (Feb., 1904).

Concert Recitation with Motions.—"The Cats' Tea Party" (Jan., 1903).

Reading.—"Catechism" (Oct., 1904).

Composition.—Cat Pictures.

Recitation.—"Tell Me, Little Paper Cat" (May, 1904).

Recitation.—"The Lazy Cat" (Oct., 1904).

Song.—"I Love Little Pussy" (May, 1903).

Reading.—"The Owl and the Pussy Cat" (May, 1904).

Song.—"Once There Was a Little Kitty" (Songs and Games, by Jenks and Walker).

For Cat Day we had our blackboards ornamented with many drawings of cats. In making these we were greatly helped by the pictures of cats in several numbers of PRIMARY SCHOOL, especially by those in March, 1903. On the walls we had copies of several famous cat pictures,— "Playful Kittens," by Henriette Ronner; "A Fascinating Tale," by the same artist, "Puss in Boots," by Frank Paton, and "Wide Awake" and "Four Little Scamps Are We," by Adam.

California.

ANNA MCLANAHAN.

Township School Fairs in Iowa.

Several school fairs and literary contests have been held in Iowa during the past year. These fairs are the outgrowth of the boys' agriculture clubs and the girls' home culture clubs. The clubs have been the means of stimulating the efforts of the pupils in their work, and it is hoped that during the coming year many more of them will be conducted.

The Sigourney School Township fair and contest was held in the East Laffer school-house. It consisted of an exhibition of school work, including specimens of basketry, picture framing, sewing, and cooking. For the most part this was the contribution of the girls' home culture club, while the boys' agriculture club offered products from farm and garden.

The Prairie Township fair included similar contributions. The best specimens from these various school townships are taken to the county school fair, there forming a large and complete exhibition.

After the fair has been duly inspected by the visitors, the evening is devoted to a literary and declamation contest. Representatives of different schools thruout the townships enter into friendly rivalry for prizes. Such subjects are treated as, "The Pumpkin," "Sweet Pea," "Corn," "Wheat," "The Potato," "Celery," and "The Aster."

Usually a small admission fee is charged at the contests, the proceeds being used to meet general expenses and to help support the clubs of the school.

Surely, the boys and girls of Iowa deserve great credit for their energy and enthusiasm in promoting these instructive and interesting exhibitions.

Flower Books.

When the warm spring days began to come to us again and the woods were alive with flowers I found that the bright eyes of the children were searching out the wild flowers, and, even before I realized it was time for the violets and forget-me-nots, they were gathering them and bringing in handfuls each day.

They seemed to enjoy gathering them so much that I wondered if I could not make this pleasure a great help to them.

We prepared little books by cutting pieces of plain white paper six and a half by five inches, and then we made these into a book by cutting cardboard the same size for a back and tying them together with ribbon the same color as the back. The cover was decorated with a picture of beautiful wild flowers, cut from the Perry pictures, and this little verse was written on each cover.

"Springtime is coming! search for the flowers!
Brush off the brown leaves,—the darlings are here!
Joy of the spring hours, picking the May flowers,
Kiss the spring beauties,—the babes of the year."

In this book they were to record the wild flowers as they found them, giving a description of each flower, and also a description of the place where it was found. A margin was left for this on the right of the page, while on the left was pasted the flower.

I kept in a small box on my desk a quotation on every wild flower that grows in our section, and when they found their flower they were to take the quotation needed from this box and copy it under the flower in their books.

These little books had a fourfold purpose. They taught the children numberless things about the nature and life of the spring flowers. They helped to develop the esthetic nature, and it taught them to observe more closely, and last, but by no means least, it taught the little people to have a greater love for flowers.

When we had used these little books for about three weeks, I found one little boy talking to a small bunch of forget-me-nots and telling the legend of the little flower as if he were talking to a child. I noticed that he was not ruthlessly tearing the petals from the stem, but was caressing them in a delightfully appreciative way.

Virginia.

RUTH O. DYER.

Arithmetic Matches.

As a Friday afternoon exercise we often use the following game:

Select captains, then choose up as for a spelling match. After seating all where they can see the blackboard, give an example to the captains, the one getting the right answer first to remain at the blackboard and choose some one from the opposite side to come to the board. Any number of points may be made the game.

Every time one goes to his seat it counts one for the other side. I have used this game in all grades from the second to the eighth, and I find that pupils weak in some particular branch of arithmetic have put their extra time on studying that part, so that when they were called to the board they would be able to stay as long as possible.

M. WEIGEL.

Ohio.

Devices for Arithmetic.

I let different colors represent different quantities. Putting table on the board in colored chalk I give the children colored sticks, or tablets, to separate into piles representing a certain number. (Thus, if red=5, green=3, yellow=2,

a red, a green, and a yellow stick laid together equals 10.) For drill at recitation I lay down groups of sticks or tablets, (one group at a time), which are captured by the child who first gives the correct sum which they represent. At the close the child holding largest number of sticks wins the game.

Dominoes may be used in many ways. For busy work the children write "number stories" about given dominoes with cut-up numbers. A domino having 5 dots at one end and 4 at the other has written about it, " $5+4=9$."

Let the children look at a domino for an instant, then quickly write what they see, sometimes giving only answers.

For drill in multiplication, let the number of dots at one end be multiplied by the number at the other end.

ELLA B. HANSON.

(The editor would like to have the address of Miss Hanson.)

How I Keep Track of Assignments.

One of the many things that I have learned by practical experience in the school-room is the importance of keeping track of each day's assignments. This is especially necessary in a large school with numerous classes.

For this purpose I secure at the beginning of the year an ordinary composition book. One page is to be used for each day's assignments. Along the left side of each page I make a list of the classes in the order in which they occur upon my program. This leaves space upon each line for the assignment of work to each class. At the close of each recitation during the day I take a moment to enter in the book the lesson assigned for the next day.

After school, when making preparation for the work of the next day, other things may be inserted with each assignment, such as special drill to be conducted or references to be used in connection with the lesson. At this time I also plan on what lessons I will assign, for the next day.

Thus when any class is

called I know just what work was given the pupils to prepare, and there is no argument as to what lesson was assigned.

The plan is an excellent one for teachers in large district schools, especially where it is necessary to have some branches correlate. Every teacher likes to glance back to see what advancement her pupils have made within a given length of time. This can easily be done if the date has been entered on each page of the book.

The real value of this simple plan when used in district schools will not be known until it has been tried. It takes but little effort, and when once tried will not soon be forgotten or given up.

A RURAL SCHOOL TEACHER.

Clintonville, Wis.

Visits to Teachers' Workshops

Real Things at Watertown, Mass.

[Frank R. Page is a leader in the school field. The schools of Watertown, Mass., over which he presides, are working out many important experiments. Here is to be found a wealth of inspiration and practical suggestion. The spirit is sane and wholesome. The welfare of the children of Watertown is the first and supreme consideration. The teachers understand their leader's plans and work in cordial harmony with him. Here is an outline of several important departures that are well worth the interest of teachers, school officers, and parents, as nearly as possible in Mr. Page's own words.—EDITOR.]

OUR creed is this, says Mr. Page. We believe that the object of teaching is to prepare boys and girls for life. Preparation for life includes, first, naturally enough, acquaintance with its good art and good literature, with its good music, with its history and geography, acquaintance with nature, and with civic life. In so far as a boy or girl is deprived of this acquaintance so will his life be dwarfed and narrow. If he does not get it in school it is a matter of chance if he ever gets it.

If *acquainting* is the first essential in preparing for life, *awaking*, we believe, is the second. We believe that the things taught in school must be *real things*, things presented vividly and capable of being put to use outside school. We are preparing pupils to live in a world outside of

school, and we believe that "the primary object of teaching a child is to enable him to get along without his teacher."

Work With the Little Folks.

In the lowest grade *real things* form the entire basis of instruction. The formal lessons—reading, written and oral composition, writing, spelling, singing, drawing, and constructive work are developed from, and taught in correlation with, the real things. Among the ends sought with the youngest children are the cultivation of politeness, helpfulness, freedom from self-consciousness, and independence and freedom of expression, oral, written, and manual. It is felt that there is a great gap between home and school. The teacher tries to bridge this gap with the very little ones by talking about the things they are familiar with. She takes them on walks and they talk about the things they see, and thus they learn to use their eyes.

The Watertown Primer.

The children not only learn to read by reading, but they make their own readers—real things again. The sentences for the children to read are first written on the blackboard, then mimeographed on sheets of punched paper, and then these pages are bound together into books of the children's own making. Because they have made it themselves and consequently are deeply interested, they can read the primer easily.

Third Grade Plan for Teaching Arithmetic.

A store is fitted up in the corner of each room with sand and blocks and paper to represent real merchandise, with price lists and scales and measures and toy money. The pupils are interested; they are learning real things; they are learning arithmetic, too, and learning it better than they ever could when it was taught abstractly and unrelated to anything real or tangible.

A great need in school to-day is the relating of all our arithmetic to life, so that ciphering may follow and grow out of the concrete study of business practice, instead of preceding such study or taking its place altogether.

Illustration and Dramatization of Hiawatha.—Second Grade.

School Trips.

Our list of school trips includes visits to the town hall, engine house, library, freight office, local stores, Norumbega Park, the Peabody and Agassiz museums, the polls on election day, the foundry, the arsenal, the rubber works, the electric light station, a market garden, the Boston public library, the Art museum, the state house with the legislature in session, a Cunarder, a sightseeing trip about Boston, Concord, and Lexington. Pages and weeks of text-book study do not compare with information gotten at first hand from well-planned trips like these.

It is very likely that a trip to Niagara will be undertaken ere long. The pupils would be away from Watertown three days. They would travel in a special tourist car and would make that car their headquarters during the stay at the Falls. Meals could be brought from home. If this trip can be carried out, others can be looked forward to—trips to New York and Washington, for example.

The greatest obstacle would be the financial one. But if the pupils learned to look forward to a trip like this at the end of the year they would willingly make it the goal of their savings during the year, and there are few pupils but who could earn the cost of the trip.

Round the World Correspondence.

Plans for making geography real by imaginary journeys and by correspondence with pupils in different parts of the world have been further developed. The study is carried on with the aid of railroad time-tables and folders, excursion books, guide books, books of travel, and pictures.

In our effort to make geography a real thing there can be no more valuable aid to the pupil than illustrated lectures on the countries studied. Schools need stereopticons, collections of lantern slides for use by the teachers, and a fund to pay for annual courses of lectures for pupils. This year we began to meet the need by giving a course of lectures in the town hall, the object of which was to start a "lecture fund," which could be used to buy a stereopticon and slides and to provide lecturers. Tickets were sold by the pupils and we cleared \$104.

Debating Societies in Upper Grades.

The debating societies in our ninth grades give direct preparation for one side of life. They are live organizations; the pupils manage them themselves. They know the rules of parliamentary procedure; they elect officers by the Australian ballot.

The members are learning to be self-reliant; they are gaining fluency in speaking. They

have an acquaintance with current events that would put to shame some of us older ones.

Science in the Higher Grades.

We try to acquaint pupils with the simple machines, with the steam engine, and the applications of electricity in the electric bell, the electric car, the telephone, and the telegraph.

At one school during the past year the pupils raised, by means of a candy sale, over thirty dollars for the purchase of apparatus. With this there was bought a dynamo, a motor, a steam engine, an electric outfit, a telegraph outfit, an electric light, and other smaller pieces of apparatus.

Music as a Real Thing.

In our effort to make music more of a *real thing*, we had, last June, a Handel recital. The Women's club furnished accompanists and soloists. The choruses, sung by the eighth and ninth grades from the Grant school under Mr. Hadley's direction, included: "And the Glory of the Lord," and the "Hallelujah chorus" from the Messiah; "Father Whose Mighty Power," from Judas Maccabeus; "See the Conquering Hero Comes," from Joshua. An afternoon performance was given at which all the pupils in grades above the fifth were present.

The recital was preceded by talks in the schools on Handel, his interesting life, his works, and his place as a musician. The next evening the recital was repeated, with an admission fee sufficient to cover the cost of the production.

Book Composition Work.

Instead of "writing compositions" the pupils "make books." We use a special kind of paper without red margin lines and with the horizontal writing lines terminating an inch from either side of the sheet. Each sheet is punched in the

Barn made by manual training boys and furnished by first grade children.

left margin, one hole near the top and the other an equal distance from the bottom. There are covers of regular cover stock punched to correspond, and round head fasteners for binding.

Each composition makes a chapter in the book and is inserted when finished. The chapters are illustrated with drawings, pictures collected from magazines and guide books, and photographs taken by pupils. Decorative initial letters and head pieces and tail pieces are used. An appropriate cover is designed, and when the last chapter is inserted at the close of the year a preface and a table of contents are added and the book is complete.

In these real books the pupils take pride, and in the process of making them they take pains. The plan results in better work, and, more than that, it results in work that is worth while. A set of these books thru the nine grades is a record of the pupil's education.

Besides the book of stories, that is, compositions based on personal experiences, there are books of history, literature, science, geography, based on the school work in these subjects, information, a great deal of it, not found in the text-books, some of it secured at first hand. These books make up a little library, worth all the more because the pupil has made it himself, a library of usable books—text-books are free nowadays. These books are the only ones that can be taken home and kept.

The pupils of the elementary grades publish a

Leaf Song. —By BLANCHE WEYMOUTH.

Moderato.

1. See the pret - ty leaves are fall - ing, Gent - ly fall - ing all a - round,
2. They will keep the lit - tle flow - ers Cov - ered up all safe and warm,

Brown and red and green and yel - low, Cov - ring all the ground.
Guard - ed from the cold of win - ter, Shel - tered from the storm.

monthly *School Magazine*. There is nothing like seeing one's self in print to stimulate to the best effort, and to enable one to see his mistakes in their true light. The joy and pride the school children of Watertown take in their little publication are suggestive of what can be done along the line of composition work. The best stories, poems, and drawings of the month find their way, from all the schools, into the magazine. The latter is printed well, is illustrated with photographs showing the school work, and, one can imagine, is readily bought at the price (five cents) by fond parents and admiring friends.

Autumn

Nothing stirs the sunny silence,
Save the drowsy humming of the bees
Round the rich ripe peaches on the wall,
And the south wind sighing in the trees,
And the dead leaves rustling as they fall:
While the swallows, one by one, are gathering
All impatient to be on the wing,
And to wander from us seeking
Their beloved spring! —ADELAIDE ANNE PROCTER

Hy Mayer's idea of the great educational convention at Asbury Park.

[Cartoon in the New York Times for Sunday, July 9.]

Arithmetic and Reading

Arithmetic in Elementary Schools.

By M. A. BAILEY, Department of Mathematics, New York City Training School for Teachers.

[Extract from an address before the N. E. A.]

EVERY step in mathematics has been taken in response to a need and as a means to an end. The satisfaction of a need has given rise to other needs, their satisfaction to other needs, and so on. The first need in connection with number is to find how many individuals there are in a single group. After this need is satisfied there are only five primary problems and each may be solved by counting.

The plan of instruction to be followed both by the text-book and by the teacher should be the same, in order that the learner may acquire the power of mastering a subject from the printed page, and in order that he may be able to refer to a topic and to find a method of treatment with which he is familiar. Great care should be exercised in the selection of a text-book in the first place, but after the book has once been selected, the teacher should be required to follow its presentation. She may then supplement the explanation as she sees fit.

The steps are: Developing, to create the product in the mind; naming, to secure ease in reference; and defining, to give expression to the mental product.

An Example: Common Fractions.

Developing.—Fold a piece of paper thru its middle line. Into how many equal parts has the paper been divided? One of the folds is what part of the whole? We write one-half by placing the figure 1 above the line to show that one part is considered. Fold the paper again. Into how many equal parts has the paper been divided now? One of the folds is what part of the whole? Three of the folds are together what part of the whole? How shall we denote the number of equal parts into which the unit has been divided? How shall we denote the number of equal parts that are considered? Write three-fourths.

Naming.—The number written under the line is the denominator, the number above the line the numerator; the whole expression, a fraction.

Defining.—What is a fraction? the denominator? the numerator? Neither the book nor the teacher should give the definition directly, but the former should correct the learner by definitions arranged alphabetically in a glossary, and the latter, by word of mouth at the time of the development. Ability to define accurately and concisely should be gained by the study of arithmetic.

Problems.

Problems include all the examples in arithmetic in which the operations are not directly stated. They may be divided into simple, or those which involve only one operation, and into complex or those which involve more than one operation. Each of these methods may be illustrated by a single problem. If a certain number is increased by 4, the sum divided by 2, the quotient diminished by 3, and the remainder multiplied by 6, the result is 12. Find the number.

Direct. If x is increased by 4, what is the sum? *Ans.* $x+4$.

Indirect. If the result is 12 when a number is multiplied by 6, what is the number? *Ans.* 2.

If $x+4$ is divided by 2, what is the quotient? *Ans.* $x/2+2$.

If $x/2+2$ is diminished by 3, what is the remainder? *Ans.* $x/2-1$.

If $x/2-1$ is multiplied by 6, what is the product? *Ans.* $3x-6$.

If $3x-6=12$, what is the value of x ? *Ans.* 6.

If the result is 2 when a number is diminished by 3, what is the number? *Ans.* 5.

If the result is 5 when a number is divided by 2, what is the number? *Ans.* 10.

If the result is 10 when a number is increased by 4, what is the number? *Ans.* 6.

The complex problems which arise from the combinations of Forms 3 and 5, or Forms 4 and 5, may often be solved more easily by a single argument as in simple problems. Thus, at 3 for 5c. how many apples can be bought for 10c.?

10c. will buy 2 times as many apples as 5c.

5c. will buy 3 apples.

10c. will buy 2 times 3 apples

This may be abbreviated. Since 10c. will buy 2 times as many apples as 5c. 10c. will buy 2 times 3 apples.

It remains to consider the part in instruction which the teacher does not share with the text-book. This consists chiefly in studying the individual pupils, in order to discover what points they are failing to grasp, in order to direct their efforts, and in order to stimulate their interest. The teacher should prepare for each class exercise by answering the following questions:

1. What is the exact scope of the exercise?
2. For what purpose is it to be given?
3. What knowledge immediately leading up to the topic is now in the mind of the learner?
4. What steps must be taken by the learner to pass from his present condition to the condition of knowledge required?
5. What means must be employed by the teacher to induce these steps?

Teaching Phonics in the Lowest Grades

[The editor regrets not to be able to give the name of the writer of this very helpful article. The manuscript has been held for several months in the hope of finding out who sent it, but no clue has been found. The article is too good to keep out of this magazine. Perhaps this will meet the eyes of the author and induce her to acknowledge it as her own.]

Outline.

1st. Step.—Teaching of sounds.

2nd. Step.—Teaching of “helpers.”

3d. Step.—Use of “helpers” in studying out new words { 1st.—Teacher points out “helper” to child.
2nd.—Child is urged to discover “helper” for himself.

4th Step.—Child makes his own phonetic list of words, using a given helper.

5th. Step.—Child brings in words from home, discovering the helpers, and prepared to tell about the word.

Discussion.

The teaching of phonics has become almost universal, and still there are probably no two teachers who present the subject in exactly the same way. I believe that phonics should be taught as systematically as the “Three R’s,” and, to a new teacher, an outline would be very helpful.

1. The first few weeks are spent in teaching the sounds of the letters, and the first step, after the sounds are mastered, is to teach the names of the letters. While the sounds are being taught, the short sounds only, of the vowels are given. Then when they are learning the names of the letters, the teacher may tell the children, incidentally, that *a*, *e*, *i*, *o*, and *u* sometimes say their names and then they are called “long.” When they do not say their names they are called “short,” with the exception of *a* which sometimes says *ä*. Here may be taught the term “Italian *a*.” At the end of three weeks the child should have mastered the sounds of his letters, the names of his letters, and a few words.

2. Here is the time to teach the combinations of letters, calling them “helpers.” Thus the child has learned the word *see*, and he can now be taught that *ee* says *ē*. He has also learned the word “Kitty” and he may be taught what *it* and *t-y* say.

After the children have learned one helper such as “it,” the teacher’s next step is to make a list of words containing the little helper, and during the phonic period each child is given a chance to work out a word for himself, orally. A printed chart should be made by the teacher, each page of which should contain a helper with four or five of the words in which the helper occurs. Thus a page should look much like this:

at
mat
cat
rat
fat

Very soon three or four new helpers may be introduced in one day, and when the list has become large enough, each child may take a helper and work out a page of words orally. Thus he would begin, “My helper is *a-t* at. My first word is *mat*; my second, *cat*; my third, *rat*, etc.

The list of helpers which a beginner class had mastered at the end of three months is as follows; an, ow [cow], ind [kind], all, er [her], ear, air, old, ail, sh, ch, ing, ow, aw [paw] ea [each], ight [sight], un, ly [happily], atch, ai [pain], oi [toil], ide [hide], ake [take], ee [see], oo [spoon], ould [could]; aught [taught], ought, ook [book], ate, ike [like], ay [say], est, ir [bird], ice, it, le [on the end of a word as in little], on, or, ig, ty [pretty], in, im, at, who, ove [above], ilk [milk], ite [white], ace [face], ar [farmer], ap [apple], us, lu [Lulu], old, ew [few] alk [talk], ould, ph [Phebe], ang, ong, ung, ex, ough [trough] ild [child], um, ine [mine], one [tone], une [tune], ene, ane, ies [babies], ad, oss, oll, ec, qu [queen], igh [high], sion [pension], tion [attention], gn [gnaw], oft, kn [knit], ix, th.

In learning this list, the teacher may call attention to the fact that *e* on the end of a word is silent, usually, but *e* on the end of a helper makes the vowel preceding the consonant, long. Thus *at*, *it*, *ut* and *ot* become *āte*, *īte*, *ūte*, and *ōte* when *e* is added.

Of course the teacher’s preparation in teaching this list was to print lists of words under each helper, thus making the chart [spoken of before], with a helper and its words forming a page. Each day the children are given individual drill in the following way: As the card containing a new helper with its list of words is held up, the child whose turn it is, rises and says,

“The helper is *a-y*

The words are *say*, *may*, *way*, etc.”

3. After the child has learned his combinations, it is well, if he has difficulty in working out words for himself, for the teacher to ask him to discover for himself if there is a helper in the word. Thus she calls his attention to the construction of the word and at the same time makes him do his own thinking. In this way the child gets into the habit of looking for helpers in words, and is also gaining one step towards studying his lesson by himself. Right here a seat work period may be given in which the child may find new words in his reading lesson and underline the helpers.

4. Along with this drill on the helpers, should go the making of words with helpers. Thus a seat work period is given and the teacher puts a list of about ten helpers on the board. The children make as many words as they can under each word. When they have made as many as they can by themselves, I often let them take their books out and find words containing the given helpers from the books. This exercise makes very good seat work, and at the same time the child is getting a review of his phonics and is learning to create.

5. At the end of the fourth month the children have mastered their phonics so well that they may bring in words from home each day.

Here a little language drill may be introduced. The child may give his word in the following manner.—

"My word is *sunlight*

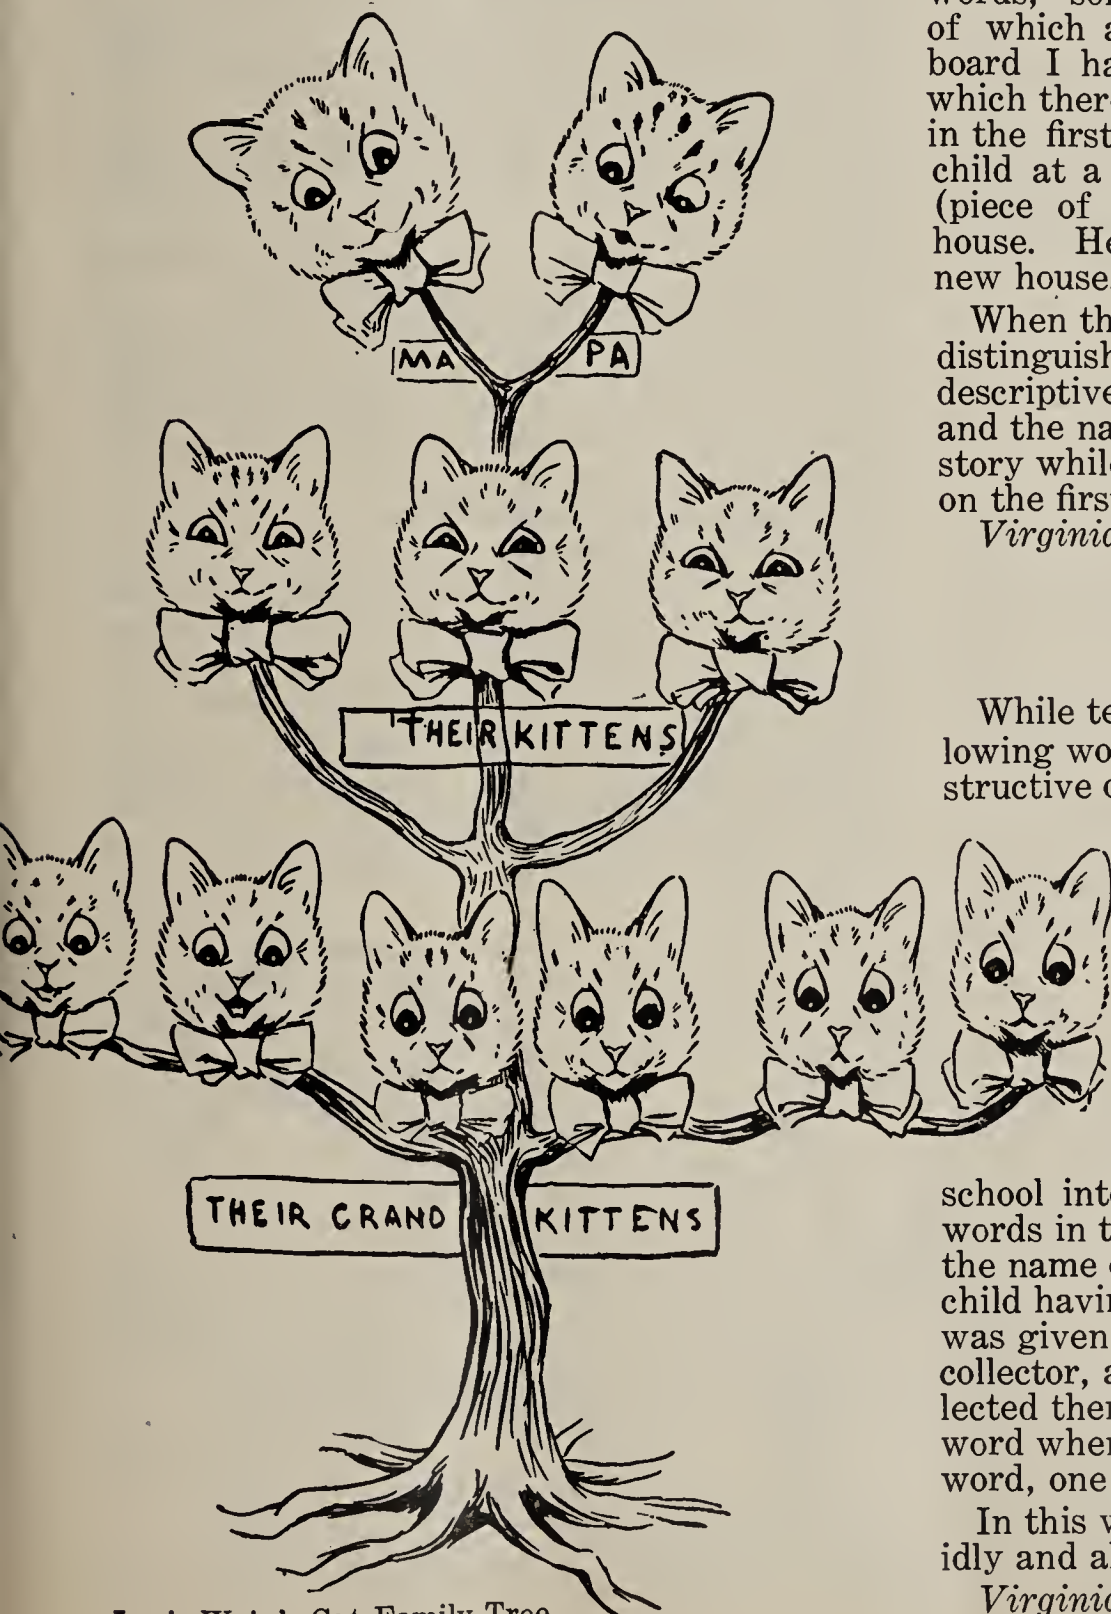

My first helper is *u-n*, and *u-n* says ũn.

My second helper is *i-g-h-t* and *i-g-h-t* says ight."

The children like to see who can find the longest word, and yet they understand that no word may be brought in, the meaning of which they do not know.

All this time they have been gaining a training in spelling, and have also been increasing their vocabulary.

Perhaps another step under division 5, would be the bringing in of large words for the other children to work out. If a child has a new word, he is allowed to place the word upon the board and he may ask the children for the helpers in it.

Louis Wain's Cat Family-Tree.

The underlying purpose of all this is really to make the children independent in studying out their reading lesson. It gives the child a foundation upon which he may work.

Often times, when the child is far enough advanced, to study his lesson at his seat, he may be given a piece of paper upon which he may write the hard words of the lesson, underlining the helpers in the words. I might add here, that I have found when children have been in school five months they are able to study their lesson by themselves.

Moving Word Game.

The moving word game is one of which my little pupils never tire. There is always a look of pleasure on their faces when I announce that we will have "to move to-day."

I draw on the board the outline of a house, and place within this outline a number of words, some of which they know and some of which are new. On another part of the board I have an outline of another house in which there are no words. We call the words in the first house pieces of furniture and one child at a time is called on to select a word (piece of furniture) and carry it to the new house. He erases the word and writes it in the new house.

When the children were advanced enough to distinguish between nouns (name words) and descriptive words they had houses of two stories and the name words were placed in the second story while the descriptive words were placed on the first floor.

RUTH O. DYER.

Virginia.

Word Game.

While teaching the first grade I found the following word game a very interesting and instructive one for the children.

When they were able to recognize as many as sixty words I cut little two-inch squares of cardboard and placed on each, one of the words with which they were acquainted. I mixed with these some new words.

When we were ready for the game I gave each child an equal number of words and divided the school into equal sides. I then called for the words in this way: "I want the word that tells the name of an animal that catches mice." The child having the word "cat" raised his hand and was given credit for one. A pupil was appointed collector, and, as the words were used, he collected them. If any one failed to recognize his word when it was called, or gave in the wrong word, one was taken from his side.

In this way they learn to recognize words rapidly and also learn the meaning of many words.

Virginia.

RUTH O. DYER.

Nature Study and Geography

An Apple Lesson with Little Folks.

By ANNIE SHANE, Butler, Mo.

WHAT have I here?
You have an apple.
On what does the apple grow?
It grows on an apple tree.
The tree is large. It is about as high as our room.

See our apple tree on the board.
What part is under the ground?
The roots are under the ground.
Trees are like little boys and girls; they get thirsty, and must have water to drink.

The roots drink for the tree. They take the water from the ground. They hold the tree in place. If the roots did not take the water they would die. When the water gets into the tree we call it sap.

Where is the trunk?
The trunk is just above the ground.
Let us make a trunk of a tree with our arms.
Now let us make the branches and limbs. Each one we must make smaller.

Now let us measure on our finger the size of a leaf. Let us draw a leaf in the air.
Name the parts of this tree.

The parts of the tree are roots, trunk, branches, limbs, and leaves.

What is the trunk for?
The trunk is to hold the branches, limbs, leaves, and fruit. The trunk has bark on it.

Of what use are the limbs?
The limbs hold the branches and fruit.

Of what use are leaves?
The leaves make shade, and help to keep the ground moist. They make the tree beautiful.

The leaf has a stem, mid-rib, and veins. These carry sap thru the leaf.

The leaf is not very large. It has little notches around the edges. The leaf is green.

What does the blossom look like?
It is a small pink flower.

Did you ever take one of the little parts away? Those little parts are called petals. Would it be right to decorate our room with beautiful apple blossoms?

Why not?
The blossoms make little apples.

Here we have an apple.
Let us with our fingers make a little apple.

Shall we eat this apple? Why not? It is a little green one and the juice is sour.

Let us make another and bend our thumb in just a little.

What is wrong with this apple? This apple has a worm in it.

Let us make another.

This one is fine. It is a large, red, juicy apple.

Are little boys and girls ever like apples?

The little green apple is like our little ones who do not know very much now, but are growing, learning, and trying every day.

The apple with the worm is like some of our hearts when we do wrong things or say bad words.

The big, red apple is like the boys and girls we want to be,—good, pure, and sweet.

One child stands. We play she is a little Eskimo girl who has never seen an apple. They do not grow in her cold land. We must be very careful to explain so that she may know how an apple looks.

The apple is red and round.

The peeling is smooth.

It has a stem to hold it on the tree.

The parts of the apple are stem, peeling, meat, core, seed-box, and seeds.

There are about seven little brown seeds.

The seeds make the apple tree.

The apple is used to eat, for cooking, for pies, apple-butter, and vinegar.

The apple tree is good to burn when cut or broken down.

Studies of North America. II

A Series of Lesson Outlines by Adelaide R. Pender, Connecticut

(To be used with any geography.)

Soil.

To the Pupils.—What different kinds of soil have you ever seen? Let us note the names and places where you saw them.

Soil in gardens and lots.

Turfy soil in meadows.

Rocky pasture soil.

Red soil where rocks have been.

Dark, moist, leafy soil in woods.

Sandy soil on the shore; also in sandy, barren tracts on plains.

Clayey soil near a river or lake.

Black, mucky soil in a swamp.

Alluvial, rich soil on river bottoms.

Spongy, mossy soil in swamps.

How is soil formed? (Decay of rocks, water freezing to make rocks split, plants creeping into rocks, decay of plants and animals.)

Have you ever thought that the plant which grew in these different soils was adapted to that particular soil and that alone? That in order to live in some other soil it must change its characteristics? There are plants that live only in ponds; those that live among rocks; those that live in loose soils; swamp plants; moor plants; thicket plants; sand plants; plants that live on plains, in deserts, in forests, meadows, on top of bleak, snow-covered mountains, in salt and alkaline deserts.

Nearly all these soils you can find right around your own home town. Some you cannot, of course. Look for as many different kinds as you can during the summer. Let us see what kinds are near the school-house, in your own yards.

Now the soil in your town is the same kind as any in the United States. So if you know your own soils pretty well you will know the soil of the rest of the United States. Let us turn to the map and find sections where we would expect to find a great deal of sandy soil. Why? What kind of plants would we expect to find growing there?

Find sections where there is rich alluvial soil. Why there? What kind of vegetation grows there? Think of your soil conditions all the time.

Where is there dark, deep soil? What use to the farmers of that region?

Where are there large sandy tracts? Use?

Where are there sections of clayey soil? Use?

Where is there much rocky soil? Use?

In all this work on soil you will see that the occupations of the people in a section bear a direct relation to the soil; that the plants are all related to the soil; that often the animals found in a place have a direct relation to the soil. The study of soil is a broad one, as you will readily see.

Commercial Routes.

To the Pupils.—How do the people from one side of the Rockies get to the other? In the early days before railroads were built across the

great plains and prairies, how did the people reach distant points?

Turn to the map of the United States and we will trace the great railroads that cross the Rockies.

To the Teacher.—The *World Almanac* gives a list of all the important railroads of the United States. Select those which cross the Rocky mountains and have the children follow the routes until they are quite familiar with them; Southern Pacific, Union Pacific, Northern Pacific, Canadian Pacific, Atchison, Topeka & Santa Fe, Great Northern, and so on.

Have the pupils imagine an immigrant train on its way across the plains, the prairie schooners laden with the necessities of life, the tired horses, men, women, and children, the Indian surprisals, the camps at night, the various incidents of such a journey.

Beside this picture, place one of our long express trains made up of many palace cars and sleepers, rushing over and thru these great mountains.

Develop the story of the building of the first trans-continental railroad. Trace the Lewis and Clark route and develop the story of the adventures of this journey to Oregon. How are current events this year connected with this trail?

Uses.

To the Pupils.—Of what use are the mountains of North America to its people? (As protection, barriers, modify air, source of streams, source of waste matter that furnishes fertile topsoil, homes of useful animals and plants, timber, minerals, homes of sturdy, industrious citizens, summer resorts, health resorts, interesting for geographer, travelers, magazine writers, etc.)

Select all the mountains that are noted for mining, for timber, for health resorts, interesting points for travelers.

Mention all the uses of the mountains or hills that are nearest your own home.

Pictures.

To the Teacher.—Make a list of all the North America mountain pictures in the geography, also of any that occur in any supplementary geographies.

Also make a list of your mountain pictures among the pictures that you have collected for geography work. In a collection which I have made I find between twenty or thirty, and I have but to think that list to recall many beautiful pictures of North American mountains. In connection with the mountain and valley list make one of pictures which have many rocks in them. In the list will appear the pictured rocks of Lake Superior, the Yosemite rocks, the rocks in the Yellowstone, and others.

How are these picture lists to be used? First, they should be memorized. Then when the class

is reviewing mountain work conduct an exercise similar to the following:

Give the names of all the mountain pictures that you have ever seen, those in North America, I mean. Now take each picture as you mention it and analyze its features, in other words, tell what you see in it. For example: In my picture of a Rocky mountain stage route, I can see a narrow road winding around the mountain, with a gradual slope which tells me that the road is built for passage from one side to the other. There is a wooden bridge over a deep gully, and as I look at this bridge I recall stories I have read of the perils of stage-coach riding among the Rockies before railroads. Drivers used to send their horses along those roads at breakneck speed, endangering the lives of travelers. Perhaps this bridge was the scene of a holdup by bandits such as our early histories tell of. Or it may be there have been Indian surprisals at this point. The mountain sides are covered with big and little rocks, that look much like the rocks on a mountain near my home. In the distance I see pine trees. There is not much vegetation. Perhaps there are wild animals not far from this bridge.

Each picture may be analyzed in this way for an oral language lesson. As the children read stories or supplemental histories of these mountains, they may be able to vary the stories they tell about their pictures from time to time.

Literature.

To the Teacher.—Every geographical reader which is used by either teacher or pupil should be made a part of the lesson. For example: Suppose "Carpenter's Geographical Reader of North America" has been placed in the hands of the pupils. Have them make notes as they read and save these for future memory work. Such notes as the following will recall a vivid picture of the interesting description Mr. Carpenter gives of a journey over the mountains.

Thirty-six hours to go from Denver to San Francisco—Gorges, cliffs, dry, clear air, rocks, snowsheds, mines, herds of cattle, sheep, and prairie dogs.

Salt Lake City—Valley, mountains, meadows, orchards, vineyards, gardens, streets, temple, tabernacle, 6,000 people, lake 100 miles long, irrigation, Wasatch mountains, lake salt, soda, no fish.

Each note will recall the series of pictures until the whole is complete. It is the custom of the writer to keep a note record of this nature of geographical books read. The principal features of the book are recalled by means of the notes, as readily as a poem that has been memorized is recalled.

Read to the pupils descriptions of mountains found in Lorna Doone—a beautiful series of word pictures where John Ridd goes into the valley of the Doones; or portions of Black Rock by Connor; of Last Days of Pompeii when studying volcanoes under mountains; or the account of Paul and Virginia being lost on the mountain in the story "Paul and Virginia."

Hawthorne, Bryant, Wordsworth, Tennyson,

all have mountain poems that may be read with interest.

Short quotations which the children may readily learn and have at their tongue's end when looking at a mountain or a mountain picture are helpful. One is given below. Others are found in the works of the poets mentioned above.

"And mountains that like giants stand
To sentinel enchanted land.
High on the south, huge Benvenue
Down to the lake in masses threw
Craggs, knolls, and mounds, confusedly hurled,
The fragments of an earlier world;
A wildering forest feathered o'er
His ruined sides and summit hoar;
While on the north thru middle air,
Ben-an heaved high his forehead bare."

—From Canto I., Scott's "Lady of the Lake."

While at work on mountains develop the study of standard time in the arithmetic lessons. Use the *World Almanac* for facts.

Talk about the mountains or hills or valleys in North America that are closely identified with our history: Among these are Bemis heights, Bunker hill, Cumberland mountains, South mountain, Shenandoah valley, the hills that figured in the Gettysburg struggles, and so on.

Science.

The three elements of which the earth is composed are solids, liquids, and gases. Where are they found on a mountain?

Where are atoms and molecules found in a mountain?

Some of the qualities of a substance are hardness, crystalline, cohesion, adhesion, elasticity, capillarity, brittleness, diffusibility, and so on. How in your study of mountains can you illustrate these?

Illustrate the subject of gravitation in your mountain study.

What will happen to a thermometer or a barometer if either is carried from the valley to the top of a high mountain? Why?

How are echoes formed on a mountain?

The hardest substances found on the globe in order are, from the softest: Talc, gypsum, calcite, fluorite, apatite, feldspar, quartz, beryl, corundum, diamond. Can you find any of these around your home or on the mountain nearest you?

What is the force which breaks mountain rocks? (Crystallizing of water.)

What keeps the rocks from falling to pieces? (Cohesion of molecules.)

What makes the dew cling to leaves and rocks? (Adhesion of molecules.)

Did you ever watch a civil engineer surveying?

Mountain Topics.

How mountains were formed. Range, system, peak. Location. Height. Climate. Soil. Commerce. Uses. Compare animals, vegetation, and so forth with mountains nearest your own home. Pictures. Literature. Science.

Valley topics are similar.

New Brunswick—the Land of Acadia

By Nessie Ferguson, Richibucto, New Brunswick, Canada

Some time ago the Editor of this magazine received a bright letter from Miss Nessie Ferguson, in which she said that the people of the United States are most of them woefully ignorant of conditions in Canada, and especially ignorant as regards Canadian geography. The Editor pleaded guilty, and asked Miss Ferguson to tell TEACHERS MAGAZINE readers something about the section of Canada in which she lived—New Brunswick. Teachers and pupils will alike be interested in the facts Miss Ferguson has written down for their benefit. The writer suggests that New Brunswick—once a part of Acadia of “Evangeline” fame, is a delightfully cool, interesting section of country in which to spend one’s summer vacation. Read what she tells us of her home-land, and you will surely plan to visit there as soon as opportunity shall admit of your doing so.

A Little History.

THE province of New Brunswick once formed a part of old Acadia.

On the 20th of April, 1534, Jacques Cartier left St. Malo on his first voyage to America, and on June 30 came in sight of the coast of what was later called Acadia. Sailing along the eastern coast of what is now New Brunswick, he entered a large bay on the north, which he named Baie de Chaleur, on account of the excessive heat.

Cartier landed and erecting a wooden cross took possession of the country in the name of the French king.

On June 24, 1604, De Monts and Champlain discovered and named the St. John river.

Acadia was several times seized by the English and as often given back to France. In 1713 it was finally ceded to Britain by the Treaty of Utrecht, and it was then called Nova Scotia. France still claimed the country north of the Isthmus of Chignecto; this led to endless trouble until the final treaty in 1763.

In 1783, after the coming of the Loyalists the country north of the isthmus was made a separate province and called New Brunswick. On July 1, 1867, New Brunswick, along with Quebec, Ontario, and Nova Scotia, entered into confederation as the Dominion of Canada.

Geography.

New Brunswick is bounded on the north by Quebec and Bay Chaleur; on the east by the Gulf of St. Lawrence and Northumberland Strait; on the south by Nova Scotia and Bay of Fundy; on the west by the state of Maine. It is connected with Nova Scotia by the Isthmus of Chignecto, one of the most historic spots in Canada.

Prominent among the physical features of New Brunswick are its rivers. The largest is the St. John, 450 miles long, which rises in Maine and flows into the Bay of Fundy. This river is famed for its beautiful scenery and for the “Reversible Falls” at its mouth.

Many of the rivers have retained their Indian names, as the Miramichi, Restigouche, Petitcodiac, Richibucto, and many others. The Miramichi is two hundred miles long; its name means “Happy Retreat,” and no more fitting name could have been given to it. It has most charming scenery and is the haunt of sportsmen from all over Canada and the United States. The same may be said of the Restigouche which has even more beautiful scenery and is the most famous trout and salmon river in the world. The Petitcodiac is noted for its tidal wave or

“Bore;” the name meaning “Place where the tide comes up.”

People and Occupations.

The principal occupations of the people are lumbering, fishing, farming, and manufacturing.

The fisheries of New Brunswick are very valuable, especially in the northern and eastern parts. Large quantities of salmon, mackerel, herring, cod, and lobsters are caught.

In winter smelt fishing is an important industry. After the ice has formed in the rivers and harbors the fishermen put out their nets and haul little houses out on the ice to where their nets are placed. These tiny houses serve as shelter for the fishermen during the season, which lasts from December to the middle of February.

Lumbering is carried on all over the province. The lumber is shipped principally to European ports.

The soil is fertile and the province abounds in fine farms.

The people of New Brunswick are of English, Irish, Scotch, and French descent. The Acadians form a large percentage of the population in the north and east. A large portion of the population is descended from the United Empire Loyalists who came in 1783. The descendants of these people have been the leaders in every profession. The Indians belong to the Micmac and Maliseet tribes; they live in government reservations.

The Cities.

The largest city is St. John, at the mouth of the St. John river. The capital is Fredericton, beautifully situated on the St. John about eighty miles from its mouth. Moncton on the Petitcodiac is an important railway center.

New Brunswick has excellent railway facilities. Two of the most important Canadian railways, the Intercolonial and the Canada Pacific, run thru the province and these have branch lines running to all parts of the province. The new trans-continental railway, the Grand Trunk Pacific, is to go across the province, with terminus at Moncton.

As St. John harbor is *never* closed by ice, it is with Halifax, one of the Canadian winter ports and has excellent steamship communication with European and United States ports thruout the year.

New Brunswick sends thirteen representatives to the general parliament at Ottawa, and has a local government consisting of a legislative assembly, an executive council, and lieutenant-governor.

Seed Tramps and Other Autumn Folk

By Bertha Helen Bosse, Tacoma, Wash.

SHOULD you travel east or west, north or south in the fall of the year, you will meet a class of restless vagabonds. They walk, they fly, they steal a ride, they swim, travel by rail, by flood, by wind, by hook or crook, fair means or foul, always struggling on a voyage of discovery.

Forever they thrust their card upon you, lie in wait for you. Every boy, every gust of wind, every rain, every passing herd of sheep or cows gives them a lift in their pilgrimage on earth.

It is always a fresh surprise and delight to come upon these restless products of nature. We know them all, and year after year we welcome these vagabonds again and again on their annual tramp.

Maple Keys.

The maple seed is one of this class. It is a type of the winged seed. In early summer these winged fruits hang in clusters from the trees, and later they are thickly scattered under the trees.

When autumn comes with magic brush
Dyed in the sunset's tawny flush,
And scatters with a hand unstinting
The bounteous gold of fairy minting,
Then oak and elm and chestnut vie
Which shall be dressed most splendidly.

But none may match his garments rare
With those the lordly maples wear;
Even the sumach cannot claim
So deep a glow, so bright a flame,
But seems to droop and pale beside
The maple in his autumn pride.

Have the children gather the red maple "Keys"; they are ripe in September. The red is the smallest and most delicate of all maples. The keys are red and are found hanging in pairs from stems two or three inches long. The wings of the "Keys" diverge slightly, and are about one inch long.

The white maples, the most graceful of all the maple family, will dot the wayside with their long wings, arranged in pairs and set at right angles. Many varieties of maples are found in every locality.

Expression Work.

Have a child bring in about one hundred maple keys. Do not talk or explain, but let pupils see you draw the maple keys on the blackboard. The most effective way of teaching drawing is by example.

You step to the blackboard with a seed between your thumb and forefinger and draw it on the board. They will then have something for comparison. Your drawing is not for them to copy, but to show them how, to lead, to encourage.

The pupils see you draw, see the drawing on the board, and try to make a similar one. There may be a tendency to copy your drawing, but a little leading in the other direction will get them to draw directly from their own seeds.

Give a pair of seeds to each pupil and let each begin to draw at once. Teach them to hold the

seed in the left hand and draw it with the right. Teach them to look carefully at the seed and then draw, then to look again and do the same.

Have the pupils draw from two to four seeds in different positions, making each as well as they would if only one were drawn.

A child is perhaps least interested in form of all the characteristics of objects. He loves the color, the use, the expression, the action of form, but the form itself is dry and uninteresting. But he loves expression and action of form in the superlative degree. Therefore, interest may be revived and carried thru several lessons by a judicious use of devices.

As children are so fond of life, connect life with the object you are drawing in some way. Children love to associate life with almost everything they do. We see that in their play. A little girl playing house will pass thru all the household activities of her mother. Children love this activity in their work as well as in their play. They love to use their imagination in connection with form and clothe it with the semblance of life.

The sports of children are suitable for representation in action, as shooting a gun, shooting a bow, paddling a canoe, rolling a hoop, a game of ball. Write on the blackboard the different actions used in playing ball and lead the pupils to illustrate them, as catching, tossing, knocking, "stealing a base," the umpire, etc.

Do not let the device be primary, and the form you are teaching, secondary. This may be guarded against by using the device at the end of the lesson. The device amuses and instructs at the same time. Often the greatest truths are taught in this simple way.

Caterpillars.

Have the children keep a lookout on the walks and roads and garden beds for the crawlers looking for winter quarters, and watch them spin or change. The maples, lilacs, poplars, willows, and many other trees generally yield a harvest.

These wandering crawlers you can place without any food in a tin box closed up tight. Under a screen cover they will change just as well as in the ground or on it.

The large green caterpillars of the cecropia, polyphemus, and promethea moths, found on woodbine, grapevine, lilac, and many fruit and forest trees, are not attractive in appearance, but are excellent for showing the children the process of spinning the cocoon. They make their cocoon in early fall, but do not transform into moths until spring.

The hairy caterpillars are more attractive. Among the prettiest are those of the tussock-moths, characterized by the conspicuous tufts and pencils of bright-colored hairs on their backs. The Isabella caterpillar is covered with stiff hairs arranged in tufts, the middle two-thirds of the body reddish-brown, and either end black. These hairy caterpillars spin a cocoon, lining it with hairs, but do not transform to moths until

spring. Do not collect the fox-colored "woolly bears," for they hibernate instead of changing, and do not bear house heat well. All hairy caterpillars are apt to form their cocoons in dark places.

Place a smooth-skinned caterpillar under a wire screen and watch him fasten himself by a tuft of silk at the "tail end" and a rope of silk around his shoulders as he makes his beautiful chrysalis. It is worthy a morning's work to see him hang himself up, and another to see the chrysalis cast the caterpillar skin and settle himself for the winter. He is held in place very much as a papoose is held on the back of an Indian squaw by a strap over her shoulders. The caterpillars of several kinds which hang themselves in this way for the pupa state are called girdle caterpillars, or belted caterpillars. The specimen is also held fast by his tail as well as by his body belt. When thus tied his body shortens and thickens.

Children can always find these crawlers until the leaves have fallen and the frosts are hard.

Chrysalis.

The skin hardens into a little case and contracts, changing, at the same time, its color to an obscure gray resembling old weather-beaten wood. Now he neither moves nor eats. The case is angular, with knob-like processes at the head. During this apparent sleep the chrysalis undergoes remarkable changes, which finally result in the true butterfly.

The segments of the body are ensheathed in the corresponding segments of the chrysalis, and soldered over these segments are ensheathing plates of chitinous matter under which the wings of the butterfly are developed. Many other internal changes take place, resulting in new organs necessary to its existence in the airy realm to which it enters after emergence from the chrysalis.

Movements of the Caterpillar.

How does the caterpillar crawl? This can be seen by putting it on a stalk of a leaf or of glass, or by watching it crawl on grass. Watch the movements of the feet. How many? (Eight pairs.) Notice the two kinds of legs, the first three pairs

black, shiny, slender, and pointed, jointed, difficult to see without a microscope, the other five pairs soft, thick pads, each divided in the middle. Notice the movements of the hair-like projections near the head. For what are these used?

Specifically the stages of a butterfly are: the egg, the caterpillar, the chrysalis, the butterfly. Of the moth, the egg, caterpillar, the pupa, the moth. The stages of insects are the egg, the larva, the pupa, the imago.

You see that larva and pupa are more general than chrysalis. It would be more technically correct to say "the pupa of a butterfly," but incorrect to say the "chrysalis of a moth." Use chrysalis for butterflies and pupa for moths, and no one can object. Make these facts clear to the children.

Other Seeds.

At this season of the year ash-seed may occasionally be found still clinging to the tree. Note when and how they are fastened, how they separate from the mother tree, how they sail away with their trim contour and shapely symmetry and soft tints of olives and brown, fluttering down by a whirling flight and settling lightly upon the dry leaves.

Examine one seed closely. You will not wonder that the ash is the favorite and most ancient timber from which the oar and paddle are made. Is it not a perfect model for the Indian paddle or the blade of the modern oar?

THE ACORN.

It was only a little acorn
That fell from the bough of a tree.
Of what use are you? said the wind and rain,
As they buried it up in the lea.
A giant oak sprang up to tell
Of the spot where the little acorn fell.

The acorn, the seed of the oak-tree, is a pretty plaything and a fine model for design. Only

the squirrel seems to find it fair eating. This nut is hoarded as winter food by the squirrels. These little creatures often drop them across by the wayside. Again, they forget just where they deposited their hoard, and thus many nuts are scattered and live to change into trees.

THE CHESTNUT.

The leaves of the chestnut have we,
In colors of gold and brown;
We come with the nuts bringing glee
For all of the youth in the town.

You cannot imagine our pride,
When, deep on the earth reclined,
The children may brush aside
The hidden brown nuts to find.

There is nothing more perfect in its way than an open chestnut burr still holding its two or three fine nuts. The rich, green, prickly outer

covering makes a fine contrast to the rich brown of the nuts within, resting on the soft, velvety lining that forms a cushion for the young nuts. The chestnut burr is a mine of suggestion in the school-room.

Your children can easily gather the milkweed pods, the seeds of which are widely spread by means of feathery hairs. These nests of seeds with their silken hair are attractive objects for teaching both seed protection and dispersal.

This is my lady elm,
whose supple grace
Curtsies a greeting to
the lightest breeze,
The wide, green meadow
is the chosen place
Of dainty elm, the lady
of the trees.

Every little child
will recognize the
graceful elm by its
vase and umbrella

shape, and the large amount of fine, drooping foliage. Each seed of the elm is winged nearly all the way around.

Specimens of these seed tramps should be brought to the school-room for examination. The highest function of nature study is to inspire the pupils to go right into the woods and fields where these strange vagabonds live and thus study for themselves their manners and customs. With a vital interest in the ways of nature, a love for the true and beautiful is sure to come.

For the excellent autumn suggestions in the way of paper cutting on this page, TEACHERS MAGAZINE is indebted to the Misses E. M. Clarke, of Sheboygan, Mich., and Cleo F. O'Kellier, of Jefferson, Wis., whose pupils did the work in paper cutting.

No Place for Fiction

A year's report of the books called for at the Imperial Library of Japan shows that 166,677 volumes, or 21.6 per cent., related to mathematics, science, and medicine; 153,711, or 20 per cent., to literature and language; theology and religion 12,486, or 1.6 per cent., while 18 per cent. of the applications were for books on history and geography. Fiction finds no place in the classified tablet of books in demand by readers in this Japanese library. Works on art, industries, engineering, military and naval science, figure prominently in the lists of additions made in recent years to the shelves of the library.

October

A birdnote sounding here and there,
A bloom, where leaves are brown and sober,
Warm noons, and nights with frosty air,
And loaded wagons say,—October.

—THOMAS STEPHENS COLLIER

Spanish Colonization in America.

By G. B. COFFMAN, Mt. Pulaski, Ill.

THERE were three strong nations that attempted to colonize America, Spain, France, and England. For three centuries these nations struggled for supremacy. At the close of the eighteenth century it was clear that the English people, the Teutonic ideas, were to rule the New World. Spain and France failed because they tried to plant medieval ideas in America. On the other hand the English came to this shore full of new ideas, ideas that the Renaissance, the English Parliament, the printing press, and the public school represented.

Let us look to the early history of Spain. She was conquered by the Romans in 133 B. C. These people brought with them Roman ideas of government and established them there. They worked the mines and sent the gold and silver back to Rome. They used Spain as a means of enriching Rome. When the ruler sent out by Rome became rich, he returned to Spain and others were sent. When the Germans took possession they adopted many of the Roman ways of ruling. They held very closely to the arbitrary way of ruling. The people were not consulted, neither were they allowed to vote.

About the beginning of the eighth century the Moors conquered almost all of Spain, and established their religion there. They were industrious and well educated. At this time they were the most learned people in Europe. They made religion the principal feature of their rule. Finally, the Moors were driven out and Ferdinand and Isabella became the rulers of almost all of Spain. The king and queen were supreme. They decided the religious worship, made the laws, and governed to suit themselves.

The crusades caused Spain to broaden her trade. She commenced to look to Asia for trade. When this was cut off by Constantinople, Columbus tried to find another way, and instead discovered America. Following Columbus came Cortez, Pizarro and De Soto, who are types of the Spanish explorers. They were all brave and cruel, and they carried this spirit and planted it wherever they went. Their only object was to win glory and riches. Following these came the priests, whose object was to hold the country for Spain, extend the territory, become rich, get as much gold as possible for the king, and convert the Indians.

In this way Spain laid claim to almost all of South America, and a greater portion of North America. She established missions all over this country and converted a great many of the Indians. The soil along the Amazon river and many other places was very rich, and it was easy to raise an abundance of grain and other products with but little effort. It was the custom for the converts to become property of the mission, and they were required to do the work and raise the crops. Thus the Indian practically became the slave of the Spaniard. With nothing to do the Spanish became indolent and selfish.

The plan for ruling the colonies was as follows: The country was divided into four districts called viceroyalties. The king appointed a vice-

roy over each division. These divisions were subdivided, and over each a governor was appointed. In many cases, and especially in later years, these offices were sold, the king selling them to the highest bidder. The buyer was given the privilege of making out of the office all he could. He in turn would sell the minor offices. It was the duty of every officer to watch every officer and report to the king. This brought on strife and often blood was shed. At no time did the common people have anything to say in making the

A Very Rare Portrait of Christopher Columbus

laws or electing officers.

One thing especially the officers were to watch, and that was that the colonists should not raise anything that Spain could raise, so that Spain would have a market for her produce. Likewise, they were forbidden to manufacture anything. They must not trade with each other, but look to Spain for all they needed. Everything must be sent to Spain.

This plan brought Spain an abundance of gold and riches. The people began to think they could live without work. They closed their manufactures and to a limited extent quit farming, so that they became a dependent people. They could not even supply the colonies with implements, clothing, etc. They were compelled to import in order to supply the demand. In this state schools were neglected, men ceased thinking and gave themselves over to pleasure. But few of the people could read and those who could cared little for it. Thus the colonies were used as we use a horse, as a means of support. It was Spain's intention to sap the colonies. She had no idea of developing them.

The social life that grew up in the colonies was bad. The Spaniard considered himself better than the Indian. There were sharp class distinctions among the colonists themselves. The object of the highest class was to get rich and return to Spain. This they did. Those born in America were considered inferior, they were no better than the Indians.

Spain began her settlement a hundred years before France planted a single permanent settlement. She was much earlier than the English. She traveled much faster and settled in the richest of the valleys, where wealth could be had with little effort. With this start Spain could have ruled the world. Why did she fail? She failed because she did not bring ideas of self-support, self-dependence. She did not teach her colonists to till the soil, build manufactories, and establish trade. These all make a people strong, free, and self-reliant.

The Spanish colonists had no freedom of thought. They were held by the strongest grip to the one religion. While England was establishing schools in her colonies, Spain was robbing the natives of their wealth. While England was planting the best thoughts in the new world and teaching the colonies how to support and govern themselves, Spain was enslaving her colonies.

When we look to the true condition of the Spanish colonies we sometimes wonder how she held them in that state so long. But the tyranny

of the king, the oppression of the clergy, and the unjust laws of trade finally led to the rebellion and the independence of her possessions in the new world, and later our war with Spain snatched the last vestige from her, and to-day Spain is one of the weaker nations of the world.

It is well for pupils in the public schools to know these conditions. They should know what caused the downfall. Pupils are apt to think it just happened so. They should be taught that there is a cause for all historical events, and that each thing as it occurred, produced in turn an effect. It is true a great many of these things are not found in our histories, but if the teacher in a plain simple way will tell the class about them it will add interest and cause the pupil to ask for more, and then the teacher has a chance to point the pupil to such history outside of the text.

Teachers give too much of the dry bones of history. They leave the real history out. If they would lead the child out into the lives of the people and cause the student to live thru such lives, cause them to fight the tariff or slavery as they did at that time, there would always be interest and a desire for more history. History to be worth anything to the pupil must cause him to see the relation of the cause to the effect. Let him be a real boy of the Revolution and help fight the British, and when he gets thru the war he will know all that is worth knowing.

Poems for Autumn Study.

October's Bright Blue Weather.

(This poem, by Mrs. Helen Hunt Jackson, should be read, and learned, and discussed and enjoyed, in every school-room above the third grade, every single year.)

Suns and skies and clouds of June,
And flowers of June together,
Ye cannot rival for one hour,
October's bright blue weather.

When loud the bumblebee makes haste,
Belated, thriftless vagrant,
And goldenrod is dying fast,
And leaves with grapes are fragrant.

When gentians roll their fingers tight
To save them for the morning,
And chestnuts fall from satin burrs
Without a sound of warning;

When on the ground red apples lie
In piles like jewels shining,
And redder still on old stone walls
Are leaves of woodbine twining;

When all the lovely wayside things
Their white-winged seeds are sowing,
And in the fields, still green and fair,
Late aftermaths are growing;

When springs run low, and on the brooks,
In idle golden freighting,
Bright leaves sink noiseless in the hush
Of woods, for winter waiting;

When comrades seek sweet country haunts,
By twos and twos together,
And count like misers, hour by hour,
October's bright blue weather.

O sun and skies and flowers of June,
Count all your boasts together,
Love loveth best of all the year
October's bright blue weather.

— HELEN HUNT JACKSON.

The Voice of Autumn.

There comes, from yonder height,
A soft repining sound,
Where forest-leaves are bright,
And fall, like flakes of light,
To the ground.

It is the autumn breeze,
That, lightly floating on,
Just skims the weedy leas,
Just stirs the glowing trees.
And it is gone.

He moans by sedgy brook,
And visits with a sigh,
The last pale flowers that look,
From out their sunny nook,
At the sky.

O'er shouting children flies
That light October wind,
And kissing cheeks and eyes,
He leaves their merry cries
Far behind.

And wanders on to make
That soft uneasy sound
By distant wood and lake,
Where distant fountains break
From the ground.

— WILLIAM CULLEN BRYANT.

Pieces to Speak

for

Old and Young Children

Apple-Tree Town.

Three wise men lived in Apple-Tree Town,
So wise, each wore a big, big frown,
But they couldn't tell whether—

Ahem! Ahem!

An apple seed points to the flower
Or the stem;

'Tis sad, but true,
That none of them knew,
Do you? Do you? Do you?

—CARRIE SHAW RICE.

Thoughts in Church.

Oh, to be a sailor
And sail to foreign lands—
To Greenland's icy mountains
And India's coral strands!
To sail upon the Ganges
And see the crocodile,
Where every prospect pleases,
And only man is vile.

I'd love to see the heathen
Bow down to wood and stone,
But his wicked graven image
I'd knock from off its throne!
The heathen-in-his-blindness
Should see a thing or two!
He'd know before I left him
What a Yankee boy can do!
—Lucy Fitch Perkins in May
St. Nicholas.

An Owl Problem.

By JOSEPHINE E. TOAL.

I thought I lived among the owls,
Within a hollow tree;
It was so queer so strange and odd,
And funny as could be.

My hair stuck up in tufts like ears,
My arms turned into wings,
And feathers grew all over me—
Soft, gray, downy, fuzzy things.

Instead of nose I had a bill;
My eyes were oh, so big!
We sat upon a limb, and curled
Our toes about a twig.

We went to bed when it was day,
And stayed awake all night;
The man in the moon came 'round at ten,
With lantern shining bright.

Of course, I meant to be polite,
And so, I think, would you;
But when I tried to speak to him
I only said, "Tu-whoo!"

And when I mentioned supper—oh!
What do you think they brought?
A horrid, wriggling, live gray mouse
Some wicked owl had caught!

I screamed right out, and then I woke.
"You dreamed it," mama said.
But, sure's you're born, I found—I—
did—
A feather in my bed!

It came out of my pillow-tick
Matilda's certain quite,—
But I'm not sure—perhaps I was
A truly owl last night.

"Dad."

Some boys they call their Dad—Papa,
Oh, Gee! That makes me mad.
It sounds so stiff and like a book—
You bet I call mine Dad.

And he's a ripper too, you bet,
The boys all wish they had
A father that would laugh and joke,
And love them like my Dad.

Of course, sometimes, when all the bills
Come in he's mighty mad,
And then we sit as still as mice
And hear him jaw, poor Dad.

It's always over soon, and then
You bet we all feel glad,
And then we all climb on his lap
And hug and kiss our Dad.

"You can't have kids and money too,"
He says, and so he's glad
The good Lord made him poor, or else
He mightn't been our Dad.

I don't want to be president,
Like every little tad!
When I'm grown up, I'd rather be
A nice man just like Dad.
—May Kelly, in July Lippincott's.

The Tea Kettle's Song.

O, I am a tea-kettle fat,
And merrily singing away;
A song that is full of contentment and
mirth,

As I sit on the stove all day.
My sides they are jolly and round,
And there never could, I'll be bound,
Such a happy old fellow be found,
As I sit on the stove all day.

Singing, singing,
Merrily singing,
O, merrily singing away.

I'm only a kettle fat,
But under my bobbing lid,
'Twas found years ago by a lad,
A famous old giant was hid.
Tho fragile and fair to the sight,
Yet a giant of wonderful might,
And when men learned to use him aright,
Ho, ho, what wonders he did—
Flashing, dashing,
Around the world flashing—
Ho, ho, what wonders he did!

The steamer that ploughs the deep,
The train with its iron steed,
The whirling looms and the busy mills,
All move with terrible speed.
These all are the wonders of steam,
Who awakened by Watt from his dream,
Rushed forth, with a whistle and scream
To work with terrible speed—
Working, working,
His duty ne'er shirking,
A famous old giant indeed.

—Selected.

The Kicker.

Away daown East, in a backwoods taown,
Lived a lanky critter, named Jabez
Braown;
'Nd nothin' suited him under the sun—
Whatever wuz sed or whatever wuz done,
By gum, he'd kick.

Ef he went ter meetin' on the Sabbath
day
Ter hear aour minister preach 'nd pray,
The sarmon warn't good, 'nd the prar
warn't right
He'd jest pitch in with all his might
'Nd kick, 'nd kick.

When he set daown to eat a meal,
Whether 'twas roast turkey er chicken er
veal,
It made no diff'runce ef 'twas ever so
good—
All the while that he wuz swallerin' his
food—
By gum, he'd kick.

He'd kick at the rain, 'nd he kick at the
snow,
He'd kick at the wind, er 'cause it
didn't blow.
'Twas either too wet er too bloomin'
dry—
To be contented he never would try,
But jest kick.

'Nd so he keep 'kickin' all his life,
Tormentin' his neighbors 'nd worryin'
his wife;
Complainin' of everything under the sun—
Haow this wuz sed er that wuz done—
'Nd so he'd kick.

Till one day he met Aunt Nancy Green,
The pleasantest critter thet ever yeou
seen.
She see on his braow that turrible fraown,
'Nd she sez, sez she, "Naow, Jabez
Braown"
You needn't kick.

"Jest take a little advice from me,
'Nd practice it allurs, wherever ye be;
Whatever folks do er whatever they say,
Onless you can do it much better'n they,
Don't you kick."
—Boston Globe.

Poems for the Teachers

Helen Hunt Jackson's Last Poem.

Father, I scarcely dare to pray,
So clear I see, now it is done
That I have wasted half my day,
And left my work but just begun.

So clear I see the things I thought
Were right or harmless are a sin;
So clear I see that I have sought,
Unconscious, selfish aims to win.

So clear I see that I have hurt
The souls I might have helped to save;
That I have slothful been, inert,
Deaf to the calls thy leaders gave.

In outskirts of thy kingdom vast,
Father, the humblest spot give me;
Set me the lowliest task thou hast;
Let me, repentant, work for thee.

Haven't You Felt That Way?

Haven't you often worn goggles of blue,
And seeing Life's sham and its shame,
Felt it was all a big scramble, and you
Might as well get into the game?
That nothing much mattered but a big
bunch of cash,
And the man who was good was a jay,
And the whole blooming country was
going to smash;
Haven't you, haven't you felt that
way?

Haven't you felt it was hardly worth
while
To try to live up to your best?
And haven't you smiled a cynical smile—
And something way down in your
breast
Whispered Life had a prize that was
higher than gold
And sweeter than fame or display?
And the faith that had slipped took a
brand new hold,
Haven't you, haven't you felt that way?

And didn't peace come near that was far
And urge you to strive toward it still?
And didn't you turn your face to a star
And didn't you say: "I will"?
And weren't you stronger, and didn't you find
The world was better, and didn't it pay
To be brave and patient and cheery and kind,
Haven't you, haven't you felt that way?

—Selected.

The Call of the Hills.

For some the summons of the streets,
For some the calling of the sea
Whose song unceasing beats and beats—
But my green hills they call to me.

The green hills that I used to know,
Whose trees reach up slim fingertips
To touch the clouds that hover low
To kiss the wild red roses' lips,
And drink their dew in honey sips.

The green hills whisper all the time
Across the distance life has set,
A subtle call that swings in rhyme
No rhymer ever captured yet,
A song that one may not forget.

The green hills—aye, they have a song
That none may fashion into words;
Now faintly soft, now surging strong,
Now blended melody of birds
And eve calls of the lowing herds.

So in my dreams I wander still
To where the little path is flung
From vale to vale and hill to hill,
The nodding, drowsing blooms among—
Where that clear call is given tongue.

For some the hailing of the street,
For some the calling of the sea—
But ever soft and low and sweet,
My good green hills they call to me.

—W. D. N. in Chicago Tribune.

CHILDREN OF OTHER LANDS.

Boys and Girls of Japan.

By DOROTHY WELLS, New Hampshire.

WE are going this morning on a long journey. Let us start from Seattle, away up in the Northwest corner of the United States. Down by this great dock is the steamship "Empress of India." She is to carry us over the Pacific Ocean to the group of islands known as Japan. In three weeks we shall land at Yokohama. Can you find Japan and Yokohama on the map?

Here we are at Yokohama, where we shall visit dear little Taku San in her own home. I think we had better ride over to the house in jinrikishas.

There come men drawing the empty carriages now. How much they look like large baby carriages, do they not? Climb in, and the men will run with us to our journey's end in a very short time. A jinrikisha is light, and its two wheels run smoothly and easily.

There is Taku San standing at the door, ready to greet us. We must leave our shoes outside before we may step in. It would never do to carry

that dust from the street on to those spotless rugs. Does it not seem funny to unbutton or unlace your shoes and walk about in your stocking feet? You can understand now why Taku San and her mother and all the people of the country have shoes that slip on and off so easily. They are not obliged even to stoop down to take the shoes off or put them on.

Let us sit down on these low stools and see what Taku San and her Japanese home are like. Little Taku cannot talk English very well, tho she has begun to study our language at school. She smiles a hearty welcome, and her little black eyes gleam with delight, she is so glad to see us. Her gayly colored dress, held in place by a wide blue sash covered with gold embroidery is very becoming. That sash belonged to her grandmother when she was a little girl, and Taku wears it only on very special occasions. The

little girl is very proud of it. Her dress is bright red, figured with green maple leaves and little white fans. It is long and loose, with large flowing sleeves. Taku wears her hair combed up on her head, and not a hair is out of place.

The room in which we are sitting is as tidy as Taku's hair. The floor is covered with straw rugs all of a size. The room is so built that by laying the rugs in different positions the floor space is completely covered. The walls are simply sliding screens that can be pushed back to throw several small rooms into one large one. Against one side hangs a single picture. In one corner of the room there is a small table with a slender vase on it, which contains pretty flowers. Except the low chairs on which we sit, there is no other furniture in the room.

The whole house would seem very small to us. There are no special rooms corresponding to our bedrooms. When night comes, the two or three large rooms are divided into several small apartments by sliding to some of the screens. A soft rug is spread on the floor for each sleeper, and a wooden pillow, with a place cut out for the

head, or a hard cushion, takes the place of a pillow.

Everybody takes a bath before dressing in the morning. All take turns in using the large wooden bath tub, which is kept as clean and white as thoro daily scrubbing can make it.

No wonder you think the kitchen stove is just right for a plaything. It is so low that Miss Japanese Cook has to kneel or sit cross-legged in front of it to do her cooking, but she sends into the dining room many delicious dainties from that little stove.

Altho Taku San cannot speak much English, she can say "Come," and at her bidding we will follow her lead into the garden behind the house. Such a charming, tiny garden it is! In all, it is not more than ten feet one way, by seven or eight the other, yet it is as complete as if built for dolls to play in. Here is a bit of a fountain

Procession of Japanese Boys on their Feast of Lanterns.

that sends up a stream of water about ten inches high. Gravel walks, just wide enough for us to step on, lead up to a hill about large enough for a small flower bed, thru a hollow covered with grass and over a round bridge shaped almost like a circle, instead of being flat on top, as are American bridges.

The wonder of this dainty garden is the trees. At one side there is a little maple about three feet high, with leaves an inch or less long; it is fifty years old. But Taku San is proudest of a little cedar tree not more than half as tall as she is, that belonged to her great-great-aunt, and was more than two hundred years old then!

Beyond the garden, yet still in the houseyard, is the family treasure

Little girls with their baby brothers and sisters on their backs.

Japanese Boys on their way to School.

Photographed in Japan by Dr. Nathan L. Griffen.

house. It is like a safe, so strongly built that there is no danger from burglars. All the valuables are put into it every night, and in the morning Taku San's mother selects a beautiful vase, or a lacquer ornament or some other work of art as a decoration for the front room thru the day. The Japanese think the Americans show very poor taste in keeping all their pretty things on view at the same time. They say we cannot enjoy anything where there is so much to see.

Taku keeps her dolls in a cabinet. She often plays with one or another of them, but they are never all taken

out at the same time, except once a year—on the dolls' feast day. On that day all the dolls of Japan are dressed in their best and spread about to be admired. All the tables, dishes, and other pieces of doll furniture are taken out and arranged as prettily as possible, and dolls and their little owners hold a grand reception part of the day and visit their friends to admire their dolls the rest of the day. Taku San has several dolls of her own, besides all those her mother had when she was a little girl, and others belonging to grown-up aunts and cousins and grandmothers. Her doll family is a very large one.

Lantern day is when the Japanese boys have their fun. Every house, in every city and town of Japan, is decorated with lanterns on that day. Strings of the paper lanterns are festooned across the streets and over the boats in the rivers and the harbors. In the evening when the Japanese lanterns are all lighted, the sight is one of the prettiest in the world. A person standing on the top of a building in Tokio, during the festival, can see more than a hundred thousand paper lanterns all lighted at once.

The Japanese are very fond of flowers. The chrysanthemum is, of course, the national flower.

View of Japanese Kitchen.

But the people are equally fond of cherry blossoms. Many of the Japanese fans brought to America have on them pictures of cherry blossoms, and behind the flowers, in a lighter tint, the pointed top of a snow-capped mountain. This is Fujiyama, the highest mountain of Japan and the pride of the whole nation.

Japanese women and girls are taught, as a part of their education, how to arrange flowers artistically. Instead of stuffing a great bunch of chrysanthemums or other flowers into a vase, they take two or three of the blossoms, with leaves and leafy branches, and arrange the blossoms so that they will look as if they were growing. The girls of Japan are taught other accomplishments as well. Taku San is learning how to embroider, how to play the samosan, and all the rules of etiquette of her people, besides the reading, writing, and arithmetic which everybody needs to know. The boys have to study very hard. They learn just about what the boys and girls of the United States do, except that they study their lessons in the Japanese language instead of English. Many of them learn also to speak, read, and write English.

In some countries fathers and mothers are more pleased when they have a baby son than they are with a little daughter. This is not true of Japan. Fathers and mothers are as proud of their girls as of their boys. Japan is often called the paradise of children, so much is done there to make the little folks happy. The children must be taught to know what they will need to know when they are grown up; but they have happy holiday times, too. As we walk thru the streets we can see the children at play all around us. Often little girls of eight or ten years have baby brothers or sisters strapped to their backs. Neither the "little mothers" nor the babies themselves seem to object to this arrangement, for the games go on uninterrupted, while the babies clench their little fists and smile as if they were enjoying the play as much as the older ones. If they get tired they drop off to sleep, still fastened to their sisters' backs. Sometimes they may be seen munching rice cookies, of which the Japanese children are very fond.

In the carved cabinet which holds her dolls and other playthings, Taku San keeps a wooden box. Taku's mother told her little daughter to bring us the box and let us see if we could

open it. We tried and tried, but tho we could hear a rattling inside, we could not succeed in getting the box open. Finally Taku took the box to show us. She slid back the bottom of the box, and that loosened the front. She slipped off the front, and inside was a little bureau, with two cunning little drawers. Taku opened one of the drawers and showed us two clam shells.

Taku's mother, who had been educated in the United States, told us how Taku happened to have the shells. A short time before, the little girl's aunt had been married. At the wedding, according to Japanese custom, clam shells were passed to all the guests. Every man or boy present had a shell that matched one held by some woman or girl. When the two whose shells matched found each other, they went up together and offered their best wishes to the bride and groom. Taku's shell had matched the one her grandpapa held. After the wedding her grandfather had given his shell to Taku, so now she had them both.

Taku says that when she is grown-up and ready to be married she will invite us all to her wedding, and we can get some clam shells of our own. Will you go?

Wrong Sort.

PERHAPS PLAIN OLD MEAT, POTATOES, AND
BREAD MAY BE AGAINST YOU
FOR A TIME.

A change to the right kind of food can lift one from a sick bed. A lady in Welden, Ill., says:

"Last spring I became bed-fast with severe stomach trouble accompanied by sick headache. I got worse and worse until I became so low I could scarcely retain any food at all, although I tried every kind. I had become completely discouraged, had given up all hope and thought I was doomed to starve to death, till one day my husband trying to find something I could retain brought home some Grape-Nuts.

"To my surprise the food agreed with me, digested perfectly and without distress. I began to gain strength at once, my flesh (which had been flabby) grew firmer, my health improved in every way and every day, and in a very few weeks I gained 20 pounds in weight. I liked Grape-Nuts so well that for four months I ate no other food, and always felt as well satisfied after eating as if I had sat down to a fine banquet.

"I had no return of the miserable sick stomach nor of the headaches, that I used to have when I ate other food. I am now a well woman, doing all my own work again, and feel that life is worth living.

"Grape-Nuts food has been a god-send to my family; it surely saved my life and my two little boys have thriven on it wonderfully." Name given by Postum Co., Battle Creek, Mich.

There's a reason.

Get the little book, "The Road to Wellville;" in each package.

Simple brush drawing of the Santa Maria, the good ship of Columbus. Designed by Helen M. Handrich, Brooklyn.

Among Ourselves

The Editor's Round Table

TEACHERS MAGAZINE has an extraordinary treat in store for its subscribers. C. Hanford Henderson, one of the very best of the American writers, will contribute to these pages a series of ten or more chapters under the general head of "Autobiography of a Teacher." Dr. Henderson is a teacher of remarkable power, broadminded, keen, and large-hearted. As a writer he probably has no equal among the literary people of the present, in the masterful handling of the English language. His is the rare merit of combining with fine culture a careful—I might almost say reverential—choice of words. Not only is the reader's interest fascinated by the story, but there is nourishment for that something in him which longs for beauty, beauty in the old sense of artistic perfection. The "Autobiography" will be of untold value to teachers, and thru them it is hoped to the young, to whose well-being our best selves are consecrated. The first installment will appear in October and after that each number will contain a chapter.

I want to call special attention to Mrs. Perkins' beautiful colonial exercise for a Thanksgiving or Christmas entertainment, on page 30. The costumes and stage settings required are very simple. The exercise includes charming songs, an arbutus drill, and dainty little living pictures, all for children from the primary rooms up to high school age. Plan your autumn work to include this entertainment. The children will enjoy it immensely and so will their parents and friends.

These are days crowded with great historic happenings. The contact of nation with nation, of governments with political antagonism, of churches with churches and the opponents of all ecclesiasticism, wars and rumors of wars, I wonder whether many of us realize the meaning of the times. The newspapers have long ceased to be a reliable key to the history of the day. They strain after the sensational rather than the significant. The problem of selecting for consideration in the schools the things that the children ought to know is not an easy one. One thing is certain: the really great events cannot be passed by unnoticed in the live school-room. In fact, by a wise use of them the program may be linked with the interests most directly engaging the pupils' minds. Geography and history in particular, must draw light and life from the occurrences of the present. Some teachers have a short period each day set apart for current events, others devote Friday afternoon to them. Whatever the plan may be is of

less consequence than there be a fixed time somewhere for a review of the history of each week. The questions published on page 72 will be found a valuable help in the work.

It is well not to be too hasty. The first reports of great events are apt to be inaccurate and misleading. Furthermore, when the feelings are stirred, the intellect is not likely to judge with justice. Wait till the smoke has cleared. Brief weekly reviews, such as are supplied in *Our Times*, are better for school-room use than are the accounts of the news-frantic daily papers.

Activity is not a synonym for work. There are schools where the children are kept busy every minute and yet suffer from under-work. Wasteful activities exhaust the energy of children quite as rapidly as solid work. At this point is the parting of the ways of poor and good schools. The so-called "busy work" is not infrequently a series of devices for killing precious time. The penalty of wasteful activity is scatterbrainedness and arrest of mental development. Here are serious problems which should be well considered when the schools open again. They are worth being chosen as the principal texts for the first teachers' meeting after vacation.

A remarkable feature of the enrollment of the N. E. A. at Asbury Park was the large numbers of new active members from New York, which will probably bring the total active membership of the State above one thousand. This gives New York more than four times the membership of the State next highest in the active list. Asbury Park has the record of highest attendance of active members. The 1905 convention was not quite twelve thousand behind Boston in total enrollment. But it should be remembered that New England was chiefly responsible for the falling off, sending only 227 members, or 9,089 less than enrolled at Boston.

Parents do want to give good gifts to their children. This has been proved whenever the issue is squarely put. A woman was recently elected to the school board on a platform calling for a liberal course of study for the elementary schools and for increased taxation for public educational purposes. The worshippers of the "Three R's" made as much pre-election noise as the prophets of Baal in Elijah's time, but the simple appeal to the hearts of the parents won the day for

the children. Constructive manual work, music, art instruction, gymnastics, and living contact with nature and with history and literature have come to stay. The parents believe in them. Why talk against the wind?

The real question is not of "the three Rs" *vs.* "fads and frills," but of "grind and drill" *vs.* "education." Where the reactionaries often have the advantage over the advocates of a liberal course of study for the elementary school is in the poor showing made by some of the new education schools in comparative tests in spelling, English composition, and arithmetic. It does not necessarily follow that the school with a fine program will do fine work. Some very poor circuses have been known to herald their advent by most promising posters. The quality of the work depends upon the quality of the worker. Changing from a narrow to a broad gauged curriculum is not going to turn drudges into inspiring forces. The teacher must change. Teachers who do not grow and make no effort to grow in educational efficiency will keep the schools inefficient whatever the official program may be. One can have as much gradgrind with nature study as with multiplication tables.

Supt. James M. Greenwood is a most interesting and helpful writer. He talks straight from his generous heart. He has served from the district school up thru high schools and normal schools, and as superintendent of the schools of Kansas city, Mo., he has set lessons for the schools of the whole country. Everything he writes has body and vigor to it. When *TEACHERS MAGAZINE* was committed to my care I wrote to Mr. Greenwood for a message by him for your inspiration to carry with you into your year's work. But these are Mr. Greenwood's busiest days and so his article has been deferred. I feel safe in promising that the message will come to you in good time, and I am certain that you will enjoy his witty, original manner of giving the best sort of advice.

United Educational Exhibit at N. E. A.

TEACHERS MAGAZINE had a fine exhibit at Asbury Park during the convention of the National Educational Association. It was located in the registration headquarters at the Casino. The teachers were especially interested in the three large colored Hiawatha pictures which the great Indian artist Mr. E. W. Deming, painted especially for this magazine. The illustration on this page gives a faint idea of what the exhibit was like, the booth being festive with its gay decorations in the national red, white, and blue.

Many of you, more particularly the readers of *Primary School*, will remember the excellent lesson plans by Miss Alice Bridgham, published every month for a year or more some time ago. I received a letter from her early in the summer, saying that she was going to take a vacation trip to Canada, spending some little time in Montreal. I am going to try to get her to write something about her trip that you can use this year with your geography classes. We all know what helpful, practical lessons she can write, and I am sure you will enjoy taking that delightful trip with your children in school, aided by pictures and maps.

The Renewal A Strain

The school vacation is over, and the hardest kind of work has begun again, the renewal of which is a mental and physical strain.

Hood's Sarsaparilla and Pills

give strength and tone and build up the whole system, and are just the medicines to take at this time.

"I had a complication of troubles, was all run down and had that tired feeling. Hood's Sarsaparilla cured me."
Miss Cora L. Cox, Jamestown, N. C.

"I was all run down and my mother advised me to take Hood's Sarsaparilla. I did so and now I am strong and well." Mrs. Carrie Slowson, Evansville, Wis.

The Professional and Financial Side

Conducted by William McAndrew, New York

Teachers' Interests and the N.E.A.

UNTIL the Boston meeting two years ago, the National Educational Association seemed averse to taking up salary questions and kindred subjects. To suggestions that this side of education is in need of improvement, various gentlemen who had been actively connected with the management of the Association gave various answers, a composite of which would be that the Association has never interfered in these matters; they are local affairs; they are not dignified; they are school board concerns. What's the use?

That is natural enough. The management of the N. E. A. is in the hands of men who are at the head of educational systems. To such men the public seems to be ever demanding economy in the public schools. Most superintendents, presidents, principals, and directors feel that it is a part of their duty to get the schools manned and womaned at an economical rate. This idea, or some other thought, prevented the leaders of the N. E. A. from looking with a kindly eye upon the proposition to take up so materialistic a question as the pay of the teachers.

But President Harper was writing magazine articles on the low remuneration of teachers, so was President Schurman. President Butler was publishing similar discussions. President Eliot issued a book on the subject. Superintendent Maxwell had been an open advocate of well-paid teachers for fourteen years. It was only a question of time for the N. E. A.

At the Boston meeting, the New York city delegation talked with the above named gentlemen and renewed the request made by some at the Detroit convention, that the Association make a study of the financial condition of the teacher. Mr. Augustus Downing brought the request before the board of directors. Mr. N. C. Dougherty and the gentleman already mentioned favored it. An appropriation was made and a committee appointed to study the whole question of teachers' wages, security of tenure, pension systems, etc. THE SCHOOL JOURNAL has spoken of this committee from time to time. It is a vast mass of statistical material patiently and methodically collected, presenting the exact economic conditions which surround the teaching profession to-day. A study of its pages must unspeakably distress every lover of his country, and every one hopeful of the advancement of the nation thru education.

In avoiding the sensational, the emotional, and the sentimental, Col. Wright's committee has presented facts, it is true, but they are cold facts. They will do little good unless applied with the warmth of enthusiasm. The report is a good lever, but will of itself supply no force. It is academic, not reformatory. Three thousand copies of it will be printed and will lie in the storehouse at Winona, to be mailed by Secretary Shephard when asked for.

Among the New York city members of the

Association, there is still as much of the active desire to assist the teachers of the country at large, as was evident at the Boston meeting.

The same teachers who petitioned the N. E. A. to take up teachers' financial interests, now are petitioning the Association to continue to make a specialty of these things. At the first gathering of the New York city teachers at their headquarters at the Asbury Park meeting the need of continued attention to wages thruout the country was declared to be evident. A petition to the executive committee of the N. E. A., asking it to create a permanent department concerned with the matters covered by Col. Wright's committee's report was drawn up. The requisite twenty active members were secured in ten minutes; in a few minutes more some other active members who happened to be conveniently near were enrolled, including Supts. Dougherty, Cooley, and Ben Blewett, and in all, about eighty members from various parts of the country.

The petitioners want a department with an organization and officers, in order that salary, tenure, pension, and kindred matters may be continually looked after, and adequately presented at each convention. Well established, well paid, well prepared teachers, we have always held to be a national consideration, and so vital that its neglect has brought education to a point described by President Eliot, where the theoretical perfection of teaching is unapproachable by the teaching body.

A Spoon Shaker

STRAIGHT FROM COFFEEDOM.

Coffee can marshal a good squadron of enemies and some very hard ones to overcome. A lady in Florida writes:

"I have always been very fond of good coffee, and for years drank it at least three times a day. At last, however, I found that it was injuring me.

"I became bilious, subject to frequent and violent headaches, and so very nervous, that I could not lift a spoon to my mouth without spilling part of its contents; my heart got 'rickety' and beat so fast and so hard that I could scarcely breathe, while my skin got thick and dingy, with yellow blotches on my face, caused by the condition of my liver and blood. I made up my mind that all these afflictions came from the coffee, and I determined to experiment and see.

"So I quit coffee and got a package of Postum, which furnished my hot morning beverage. After a little time I was rewarded by a complete restoration of my health in every respect. I do not suffer from biliousness any more, my headaches have disappeared, my nerves are as steady as could be desired, my heart beats regularly, and my complexion has cleared up beautifully—the blotches have been wiped out and it is such a pleasure to be well again." Name given by Postum Co., Battle Creek, Mich.

There's a reason.

Famous Men
of Greece

Famous Men
of Rome

Famous Men
OF THE
Middle Ages

These Biographies of Famous Men are historical stories and are told in a way to attract and hold the child's interest. They have been prepared to meet the recommendations of the Committee of Ten and the Committee of Fifteen, and the practice of the best schools, and are preparatory for the later formal study of history. Three things are notable concerning the books:—

1. The style of the language is simple, which adapts them to the third and fourth reader grades.
2. These stories are arranged in chronological order and are connected so that, together, they make complete histories of the times.
3. The illustrations present the most complete collection of photographs of historical paintings ever published.

By using these books as supplemental readers and making the stories the basis for conversation and composition work the pupils will be able, by the time they reach United States History, to recognize its proper historic relation to the world's history.

Questions on Current Events

The answers to these questions will be found in late issues of Our Times.

What safeguards does Sweden require in case the union with Norway is dissolved? A. 1. The establishment of a zone on the frontier on which the defenses shall be razed. 2. The pasturing of reindeer of Swedish Laplanders in Norway. 3. The securing of transit trade thru both countries from obstruction. 4. The freedom of Sweden from responsibility for Norway to other states.

Under what terms did France agree to the conference over Morocco that was asked for by Germany? A. On condition that the conference should not sit in judgment on the late agreement between France and England. 699.

Why does General Kitchener insist on putting the Indian army on a war footing? A. On the theory that Russia, having been balked in her designs in Eastern Asia, is all the more likely to attack India. 676.

In what fields did John Hay win unusual success? A. In journalism, oratory, authorship, and diplomacy. 678.

What is the most important work of John Hay while secretary of state? A. The saving of the Monroe doctrine and the preservation of the integrity of the Chinese empire at the time of the Boxer outbreak. 678.

How was Carson Sink in Nevada reclaimed? A. By the building of an irrigation canal under the supervision of the federal government. 682.

Who is the new secretary of state? A. Elihu Root.

How will the pope protest against the proposed separation of church and state in France? A. By an encyclical letter to the French bishops. He will claim that the Concordat cannot be ended without the consent of the church, one of the parties to the treaty; that the church has property claims which must be considered. 676.

Where will the body of John Paul Jones finally rest? A. In a chapel on the academy grounds in Annapolis.

What former cabinet officer lately died? A. Col. Daniel S. Lamont.

What historic boundary was lately resurveyed and marked? A. Mason and Dixon's line.

When did Peary's ship sail for the north? A. On July 16, from New York.

Why do the planters of the South want a cotton bureau? A. They think such a bureau is needed on account of the great importance of the cotton industry. Its reports would be more reliable than those they get now.

What is the main features of the treaty with China? A. It excludes Chinese laborers, except from the insular possessions of the United States.

What naval accident occurred at San Diego, Cal.? A. The explosion of the boiler of the Bennington by which over a hundred men were killed or injured.

Who were the Japanese and Russian envoys that met recently at Portsmouth, N. H.? A. Baron Komura and Mr. Takahira, Japanese minister at Washington, for Japan; M. Witte and Baron de Rosen, Russian ambassador at Washington, for Russia. 707.

What was Great Britain's attitude towards Japan's demands? A. Great Britain decided to stand by her ally, no matter how severe her demands on Russia might be. She was all the more ready to do this because of the fact that British business in the East has never been so good as it has in the past eighteen months.

How was Mr. Balfour beaten recently, and why did he not resign? A. He was beaten in parliament on an item in the estimates by four votes. Usually when there is an adverse vote the prime minister resigns. In this case no notice had been given and the attendance was small. Four days later Mr. Balfour showed an overwhelming majority. From this it is inferred that the present parliament may stand till autumn of 1907.

How did the teamsters strike in Chicago end? A. By a

Chicago

RAND, McNALLY & COMPANY

New York

vote of the Teamster's Joint Council, on July 20. It was an unconditional defeat for the union.

Where did the meeting between the emperors of Germany and Russia take place? A. On board the German yacht Hohenzollern near an island in the Gulf of Finland.

What was the purpose of the meeting? A. It was arranged at the request of the czar, who wished the advice of some one of equal rank with himself outside of Russia. Emperor William is reported to have counseled him to do all in his power to restore order in his dominions, as the disorders in Russian Poland might easily extend to German Poland.

What is the Platt amendment? A. An amendment added to the Cuban constitution by Senator Platt of Connecticut, providing, among other things, that the United States may intervene to preserve healthful conditions and good order in the island, and prevent too great a debt from being contracted.

Has Cuba accepted this? A. It has refused and still refuses, to circulate it as part of the Cuban constitution.

When will the Russian national assembly meet? A. In St. Petersburg on Nov. 14.

What powers will this assembly possess? A. It will pass upon all government bills and items of the budget, and have the right to approval or disapproval of all companies having unusual privileges.

What nations have successively held the island of Sakhalin? A. First the Chinese; then the Russians and Japanese the northern and southern sections respectively; then the Russians the whole island, which has, in the past few weeks, been occupied by the Japanese.

What distinguished man died in New Orleans of yellow fever? A. Archbishop Chapelle.

What work was performed by the Davies commission? A. In the ten years of its existence it overturned the government and commercial civilization of five tribes of Indian territory and allotted their lands in severalty.

When will the extra session of congress convene? What matters will be brought before it? A. November 11. The Panama canal and anti-rebate legislation.

What was done at the Russian zemstvo congress in Moscow? A. A movement was started away from the throne and toward the people.

To LADIES ONLY.—The wish to be beautiful is predominant in every woman, and none can say she does not care whether she is beautiful or not. Dr. T. F. Gouraud's Oriental Cream, or Magical Beautifier elicits a clear, transparent complexion, free from Tan, Freckles, or Moth Patches, and so closely imitating nature as to defy detection. It has the highest medical testimony, as well as professional celebrities, and on its own merits it has become one of the largest and a popular specialty in the trade. FERD T. HOPKINS, Sole Proprietor, 37 Great Jones street, New York. For sale by all Druggists and Fancy Goods Dealers thruout the United States, Canada, and Europe.

A Regular Church Attendant.

A gentleman in the north of Scotland had a fine Newfoundland dog called Rover. The dog insisted upon going to the parish church every Sunday. Many plans were tried for keeping him at home, without success. At last, as the minister did not object, the animal was allowed to attend. He did not go to his owner's seat, but took his station on one of the steps of the pulpit. He conducted himself during the whole service in a most becoming manner, standing up at prayers, listening attentively, and walking slowly out at the close of the service.

One day the church was burned down and, while it was being rebuilt, the congregation met in a school-room. Rover attended the first Sunday, but he did not seem to feel at home. The next Sunday he walked slowly around the building and then marched out. He joined the Free Church, where he continued to attend regularly, sitting on the pulpit stairs, until his own church was rebuilt, when he returned to his former place.

Saved by a Dog.

The captain of a small American trading vessel was the possessor of a little terrier dog named Neptune. Neptune always knew from his keen scent when land was near.

His master after a long and weary watch had retired to rest, and had requested the mate to rouse him when the ship was off a certain lighthouse. The mate and some of the sailors, wearied out with their labors, had fallen asleep, and none of the watch was awake except a young boy at the wheel.

A breeze sprang up, the ship's sails filled, and she went forward at a good rate. The boy could not see ahead because of the sails, but he kept the course the mate had laid down. Neptune knew there was danger, for he scented land. He bolted down to his master's cabin and pulled at his arm to awaken him. After several efforts he succeeded, and the captain rushing on deck, was just in time to turn the ship from a course which in a few minutes would have led upon a very dangerous rock ahead.

Lamb and Lion.

A lamb is the playmate of one of the fiercest lions in Bostock's Hippodrome in Paris. Mr. Bostock says it took nine months to bring about the friendly relationship.

"I lost a whole carload of lambs," he explains, "before succeeding—lambs of the kind children play with. I placed in the cage all sorts of toys of the animal variety—cotton sheep, horses, rabbits—in fact, a regular Noah's ark.

"Then I specialized on sheep, but it took a long time for the lion to find out that they were not good to eat. Finally a live lamb was introduced. At first the lion looked surprised, and then laid down and gently pawed the stranger. The lamb did not like this, and drawing back a pace or two, butted the lion in the mane.

"This appeared to greatly amuse the lion, who playfully rolled over on his back, while the lamb butted again.

"Now," says Mr. Bostock, "they are fast friends, and an insurance company would be justified in taking the lamb as a first-class risk."

It's *wise*
to use
RUBIFOAM

Yes, and doubly wise to begin *now* if you have never tried it. It is *wise* because you are not experimenting with an untried article of no reputation. Rubifoam is the delicious liquid dentifrice that all Americans know and trust. It is *wise* because you avoid pain and disfigurement and secure comfort and beauty. Its antiseptic power insures mouth health.

THE FASCINATING PRESENT AND THE HISTORIC PAST

Replies to Questions

By AMOS M. KELLOGG.

One of the distinctive features of the *Teachers' Institute* (which was absorbed and succeeded by this magazine) was, that it aroused a spirit of inquiry. Many of the editorials and articles in it were answers to questions voiced in letters from subscribers; this gave the paper peculiar value and endeared it to thousands of earnest teachers. TEACHERS MAGAZINE desires to preserve this feature. The editor would like to hear whatever serious questions are in the minds of readers. Many of these questions will receive attention in this special department to be conducted by Amos M. Kellogg, the founder, and, for many years the editor, of the *Teachers' Institute*. Whenever desirable and possible all letters will be promptly answered by mail, provided a self-addressed and stamped envelope accompanies the question. Direct all letters to "Editor TEACHERS MAGAZINE." If information concerning subscription or business matters is desired be sure to put this on a separate sheet. Put at head of this "To Business Manager", at the head of the other sheet, "To the Editor."

I began to teach in 1848 at eleven dollars per month, and needed to know whether my control (made with but one of the trustees) was binding on the others, and so I wrote to the education department of the state of New York. I thus early learned the value of an appeal to an authority when troublesome questions arose. During the past thirty years I have written replies, and have forgotten the matter entirely, but it has been recalled at a convention (as at Asbury Park this summer) by some stranger who was thus assisted to solve a troublesome problem.

The questions I shall answer (for not all can be replied to) will (1) be typical ones—that is represent the problems, teachers of every grade, of each sex, in all sections of the country, are wrestling with; (2) be educational ones, that is relate to the work of the teacher, and not be of a miscellaneous character such as the length of rivers, or the cost of the Panama canal, etc. I would suggest to every teacher to keep a book in which he writes down his own views on pedagogical matters; such a book David P. Page calls a "Common Plan Book." I have before me as I write, one I began in 1851; on the first page appears the title, "Thoughts on Teaching." Then follows a page on "Order of Teaching Geography;" one on "Elements of Success," copied from Dickens, (this I have read over probably a hundred times); then the solution of some very difficult arithmetical problems; then "Grammar" is discussed; then "Teaching;" then "School Organization;" then "The Teacher's Spirit;" the "Teacher's Manner," "School Government," some "Troublesome Equations of Two Unknowns," (these appear to have been sent me by a teacher who was re-writing Robinson's Algebra); "Reciprocals," "New Geometrical Problems—Theorems," "Compositions," "Programs,"—these appear for several years, "Teacher's Difficulties," "Intellectual Education," "Magic Squares," "School Management," "Arithmetical Principles," "Least Common Multiple," "Greatest Common Divisor," "Singing," "Alligation," "Tardiness," "Apothegms"—these are short extracts from speeches by prominent men; "Moral Educa-

BABY STUART
(The One Cent Pictures are 5 to 7 times this size)

tion," "Square Root," "Penmanship;"—this gave the ideas of Platt R. Spencer, one of the most remarkable teachers America has produced. At the time written (about 1855) these were entirely new; they are now understood by nearly all teachers.

I have given the above account because the book was of real service to me, and I think a similar book would be of benefit to every teacher. It is plain that the teacher is compelled to put his mind upon his work; he grasps the underlying ideas, an indispensable matter for one who makes teaching a life-long matter.

The Brownie Premeer, prepared by N. Moore Banta and Alpha Banta Benson, and printed in the gayest colors, comes to hand with the imprint of the A. Flanagan Co., publishers. The Brownies—Messrs. Red-Cap, Blue-Cap, Green-Cap, Red-Coat, Blue-Coat, Yellow-Coat, and their friends, tell, in very simple words, the stories of their work and play, who they are, and where they live. The book is delightful, and will be much enjoyed by the little lovers of the Brownies, either as a regular textbook for learning to read or for supplementary reading. The A. Flanagan Co., publishers, Chicago, Ill.

That tired feeling is a burden you need not carry. Hood's Sarsaparilla will rid you of it and renew your courage.

Milkweed.

By S. ALTA PAGE, Minneapolis.

In a large field there grew a plant.

At first it simply did what all plants do. It smiled back at the sun day by day. It drank in all the rain that came.

It sipped the dew drops, and sent its roots deeper down to hunt for the best good the black dark earth was willing to give it.

But later it began to think, and from somewhere in the air, whis- pers came to it saying, "Do your best, my plant, I care for you, I want you to be perfect."

Now this plant was only a weed, but as soon as it heard the soft whisper, it tried to answer. It could not speak in words, but it answered in something better, in its life.

It thought, "I will watch my leaves. I have many, all up my tall stem, and every one has a companion leaf right beside it. I wonder if I could find them better food.

So it talked to the dark, under earth. It sent its strong, large root away down deep and searched and tried each day to make from the good it found the best meals a plant ever had.

At last, one day the food made a milk-white juice. The stem car- ried it quickly up to the leaves and when they tasted it they laughed and shook, it was so good.

The plant said, "I will work hard every day. My leaves shall always have this milk-white juice."

And day by day the leaves grew larger and larger. They grew glossy and soft and velvety be- neath.

COMPETENT HELP FOR THE TEACHER

The opportunities and responsibilities of a new school year are just before you. Whether your success will measure up to present hope and ambition is for you to determine. In advancing from present ability to higher standards you will need competent, painstaking, sympathetic assistance. Our School is giving such service to thousands of teachers, helping them to raise their grades of county certificates, prepare for state examinations, or to keep far in advance of their classes in subjects taught

WHAT SHOULD YOU STUDY?

Almost every branch needed by the teacher is offered in our various departments. The course in PRIMARY METHODS covers thoroughly all work of first three grades of school; it offers advantages of normal school training, with your practice classes always before you. The NORMAL ELECTIVE Courses are very strong reviews in common school and high school branches. In the ACADEMIC DEPARTMENT each branch is a thorough, complete course in itself, carrying university entrance credits. Business, Shorthand, Typewriting, and Pharmacy for those preparing for commercial careers. Over Twenty-seven hundred graduates can testify to the effectiveness of our instruction. Four \$100 annual scholarships in North- western University are offered by our School for the best work in its correspondence courses.

Normal
Art School

Thorough preparation for teaching art in public schools and in private classes. Lectures upon art at Columbia University and Metropolitan Museum of Art. Address N. Y. NORMAL ART SCHOOL, Bryant Park Studios, 80 W. 40th St., N. Y.

They were so strong and so happy that they whispered back to all parts of the plant, "Let us all work, let us all work together and make—oh, we don't know just what, but something to give to this big world."

All the parts of the plant called in one sweet voice, "Let us work, let us work, let us give."

What do you think they made? Why, a little boat cradle began to grow, then another, then another and another, at last the brave little plant had five.

The cradles, too, grew larger and larger every day.

One morning, the little cradles found that many, many little people had somehow, from somewhere, come to live in them. These little folks had dark faces that grew browner and browner.

At last the milkweed brownies called loudly, "Oh, let us out, let us out, something tells us we can fly."

Then the cradles found that instead of being green any longer they had grown quite dry. They, too, wanted to help and do some good, so each burst open all along its upper edge.

At first the babies were frightened at all the light and noise and they lay very still, looking about them. Then one found that it really did have fluffy white wings and out it jumped calling to all the others, "Come, oh come, let us fly everywhere."

Off they went, the fluffy, dainty, white winged seed brownies, filling all the air.

The cradle boats were empty, but the weed plant watched its beautiful winged children and was very glad.

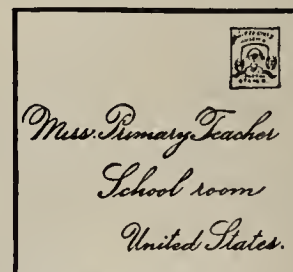

There are many important uses for antikamnia tablets. Everybody who is out in the sun should take an antikamnia tablet at breakfast and avoid entirely that demoralizing headache which frequently mars the pleasure of an outing. This applies equally to women on shopping tours and especially to those who invariably come home cross and out of sorts, with a wretched "sightseers' headache."—*The Chaperone*.

Miss Primary Teacher,
School Room.

DEAR MADAM:—We wish you would write us so that we will be sure you received this letter and incidentally send for our catalog. We have a Supplementary List which will be particularly interesting to you because it contains new books and material for Primary Teachers.

If your pupils furnish their own material why not have them order by mail from us, bunching their pennies together and send by Post Office Money Order. You will be able to get just what you want and it will get the pupils interested.

If your School Board purchases your materials look over our catalog and circulars. You will find many things which you need and very likely have not used before.

See our letter to your Superintendent (School Journal for September).

Yours truly,

ROHDE KINDERGARTEN SUPPLY CO.
411-413 Milwaukee St., Milwaukee, Wis.

Blackboard Stencils

Are the cheapest, handiest, most satisfactory means of Illustration in school. Our list comprises over 500 subjects. Send 10 cents in stamps and we will send you two samples for trial—a map of North America and a drawing or language lesson—together with catalog containing complete list.

The Bat : A Fable.
Why This Odd Little Animal Appears Only at Night.

A mouse, one time, rendered a service of some importance to one of the eagles of Jupiter. "Ask," said the grateful bird, "anything that you desire, and in the name of my master, Jove, I promise to grant it to you."

"Oh, sir," said the mouse, eagerly, "I have long felt the mortification of living among such vulgar creatures as the beasts, and have ardently desired to associate with the more refined society of the birds. If you could but grant me wings, my happiness would be complete."

"Consider well what you ask," said the eagle, gravely. "Nature has placed you in a certain grade of society, and you need not hope that wings alone will make you a bird."

"I have considered the matter thoroughly," said the mouse, "and feel certain that if I had but wings I could at least associate with those I have so long envied and admired."

"Very well," said the eagle, "be it so!" and, instantly, wings springing from the mouse's shoulders, the first bat was created.

His ambitious desires, however, were not realized, for the birds, perceiving that he still had ears and a tail and was, besides, covered with hair, would not associate with him. while, upon the other hand, his own pride had withdrawn him from his old companions.

"Alas!" said the poor, lonely animal, "why was I not contented with the humble sphere that nature intended me to fill? My very wings, that I hoped would be my pride, now prevent me from walking upon the ground, where I belong."

So mortified and disappointed was he that thenceforth he ventured out into the world no longer by daylight, but only at night, when all other creatures had retired.—*St. Nicholas* for May.

Story of a Painter.

A young Italian boy who had shown great skill in drawing became the pupil of the most famous painter of the time. He made great progress in his art, and his name became well known. He wished to marry his master's daughter; but her father anxious to spur him on to the greatest efforts in painting said, "My friend, when your skill is as great as mine, you shall have her."

Some time after this the pupil painted a fly on the nose of a figure in a great painting upon which his master was at work. The artist came into the studio, and thinking it a real fly made several attempts to brush it away. When the mistake was discovered he praised his pupil, and told him that now he could paint as well as his master.

A traveler in South Africa writes that the Boers are becoming interested in education. Since the war they have been paying particular attention to the study and purchase of educational books in Dutch, their object being to maintain their national independence. Parents are anxious to have their children receive as good an education as possible, and are sending them to the best Dutch colleges.

DENTACURA

MODENE

**HAIR ON
FACE
NECK
AND
ARMS
INSTANTLY
REMOVED
WITHOUT
INJURY TO
THE MOST
DELICATE SKIN**

IN COMPOUNDING, an incomplete mixture was accidentally spilled on the back of the hand, and on washing afterward it was discovered that the hair was completely removed. We named the new discovery MODENE. It is absolutely harmless, but works sure results. Apply for a few minutes and the hair disappears as if by magic. **IT CANNOT FAIL.** If the growth be light, one application will remove it; the heavy growth, such as the beard or growth on moles, may require two or more applications, and without slightest injury or unpleasant feeling when applied or ever afterward.

Modene supersedes electrolysis. Used by people of refinement, and recommended by all who have tested its merits. Modene sent by mail, in safety mailing-cases (securely sealed), on receipt of \$1.00 per bottle. Send money by letter with your full address written plainly. Postage stamps taken. **LOCAL and GENERAL AGENTS WANTED**

MODENE MANUFACTURING CO.
Dept. 51, Cincinnati, Ohio.
Every Bottle Guaranteed.
We offer \$1,000 for Failure or Slightest Injury.

Smiles.

"Sir," wrote an angry subscriber to a provincial journal, "I don't want your paper any longer." To which the editor replied: "I wouldn't make it any longer if you did."—*London Globe.*

Cheerfully Given.

Bobby's father had given him a dime and a quarter of a dollar, telling him he might put one or the other on the contribution plate.

"Which did you give, Bobby?" his father asked when the boy came home from church.

"Well, father, I thought at first I ought to put in the quarter," said Bobby, "but then just in time I remembered 'The Lord loveth a cheerful giver,' and I knew I could give the dime a great deal more cheerfully, so I put that in."—*Philadelphia Ledger.*

The Remnants.

"Yes, dear, that is the new moon."

"What becomes of all the old moons, mamma?" Do they cut 'em up an' make 'em over into stars?"—*Browning's Magazine.*

The Distinguished Guest.

"I have been wined and dined so much since coming to Indianapolis," said a prominent man, "that I have scarcely had my knife out of my mouth five minutes."—*Indianapolis News.*

What Irritates Him.

Mother—Willie, you must stop asking your father questions. Don't you see they annoy him?

Willie—No'm; it ain't my questions that annoy him. It's the answers he can't give that make him mad.—*Philadelphia Ledger.*

Much Ado About Nothing.

An old woman who entered a country savings bank not long ago was asked whether she wanted to draw or deposit.

"Nayther; Oi wants to put some money in," was the reply.

The clerk entered the amount and pushed the slip toward her to sign.

"Sign on this line, please," he said.

"Above or below it?"

"Just above it."

"Me whole name?"

"Yes."

"Before I was married?"

"No; just as it is now."

"Oi can't write."—*Harper's Weekly.*

Supply and Demand.

"I tell you," said the passenger with the skull cap, "there is something wrong with a country where a prize fighter can make more money in one night than a college professor can make in five years.

"You're right, pard," said the passenger with the loud check suit. "There's too blamed many college professors and too blamed few great prize fighters."—*Chicago Tribune.*

Rest and Health for Mother and Child

What is Castoria.

CASTORIA is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. It cures Diarrhoea and Wind Colic. It relieves Teething Troubles cures Constipation and Flatulency. It assimilates the Food, regulates the Stomach and Bowels, giving healthy and natural sleep. The children's Panacea—The Mother's Friend.

The Kind You Have Always Bought, and which has been in use for over 30 years, has borne the signature of Chas. H. Fletcher, and has been made under his personal supervision since its infancy. Allow no one to deceive you in this. All Counterfeits, Imitations and "Just-as-good" are but Experiments that trifle with and endanger the health of Infants and Children—Experience against Experiment.

Letters from Prominent Physicians addressed to Chas. H. Fletcher.

Dr. F. Gerald Blattner, of Buffalo, N. Y., says: "Your Castoria is good for children and I frequently prescribe it, always obtaining the desired results."

Dr. Gustave A. Eisengraeber, of St. Paul, Minn., says: "I have used your Castoria repeatedly in my practice with good results, and can recommend it as an excellent, mild and harmless remedy for children."

Dr. E. J. Dennis, of St. Louis, Mo., says: "I have used and prescribed your Castoria in my sanitarium and outside practice for a number of years and find it to be an excellent remedy for children."

Dr. S. A. Buchanan, of Philadelphia, Pa., says: "I have used your Castoria in the case of my own baby and find it pleasant to take, and have obtained excellent results from its use."

Dr. J. E. Simpson, of Chicago, Ill., says: "I have used your Castoria in cases of colic in children and have found it the best medicine of its kind on the market."

Dr. R. E. Eskildson, of Omaha, Neb., says: "I find your Castoria to be a standard family remedy. It is the best thing for infants and children I have ever known and I recommend it."

Dr. L. R. Robinson, of Kansas City, Mo., says: "Your Castoria certainly has merit. Is not its age, its continued use by mothers through all these years, and the many attempts to imitate it, sufficient recommendation? What can a physician add? Leave it to the mothers."

Dr. Edwin F. Pardee, of New York City, says: "For several years I have recommended your Castoria and shall always continue to do so, as it has invariably produced beneficial results."

Dr. N. B. Sizer, of Brooklyn, N. Y., says: "I object to what are called patent medicines, where maker alone knows what ingredients are put in them, but I know the formula of your Castoria and advise its use."

GENUINE CASTORIA ALWAYS
Bears the Signature of

Chas. H. Fletcher.

The Kind You Have Always Bought

In Use For Over 30 Years.

THE CENTAUR COMPANY, 77 MURRAY STREET, NEW YORK CITY.

AN EXPERT OPINION OF GRADED CLASSICS

"We have used the 'Graded Classics Readers' with marked success. As a series we find them possessing merit of a high order. From a literary standpoint the selections have been wisely made and the teachers, without exception, testify to the value of the readers in arousing and holding the child's interest as well as increasing knowledge and adding to the pupil's vocabulary.

"The entering into the life of the child, the selections of games, of child-like employments for the subject matter in the elementary books—these features accord with the best of modern ideas in Education.

"In the more advanced book the ethical side of the student is strongly appealed to, not only in the selections of prose and poetry but also by the beautiful illustrations.

"The reproduction of a lesson by an advanced pupil is one of the surest tests of the impressions received from a Reading book. This has been employed in each class in the Grammar Grades with excellent results.

"I do not hesitate to endorse the entire series of 'Graded Classics' because they stand the test of class-room use no less successfully than they appeal to the eye in their literary, artistic, and mechanical perfection."

MRS. N. R. BALDWIN, Principal School No. 9, Yonkers, N. Y.

Reproduction Stories

A Well-Behaved Dog.

When Queen Victoria first attended service in the parish church at Crathie, it was noticed that the minister was followed to the pulpit by a large dog. During the service it lay at the top of the pulpit stair, and waited there until the minister was ready to come down.

One of the gentlemen in attendance on Her Majesty objected to this proceeding, and next Sunday the dog did not appear. Some few days afterwards the minister was dining at Balmoral, and the Queen, who had seen the dog, asked the cause of its absence on the second Sunday. On learning that it had been supposed to annoy her, she was vexed and said, "Let him come as usual. I wish everybody behaved in church as well as your noble dog."

Jealous Elephants.

The following story is by a man who took a young friend to see some elephants in their stables. He had with him a number of oranges.

"There were eight elephants, and I found I had twenty-five oranges. I walked slowly along the line, giving one to each. When I got to the end I turned and was about to begin the distribution backwards, when I suddenly realized that if elephant No. 7 saw me give two oranges in succession to No. 8, he might imagine he was being cheated, and give me a smack with his trunk; so I went to the door and began as before.

"Three times I went along the line, and then I was in a fix. I had one orange left, and I had to get back to the door. Every elephant in the herd had his greedy gaze on that orange. It was as much as my life was worth to give it to any one of them. What was I to do? I held it up, peeled it, and sucked it myself. It was most amusing to notice the way those elephants nudged each other, and shook their ponderous sides. They certainly would have laughed if they could."

How to Study.

One of the greatest music teachers in Italy was very friendly to a young pupil, and asked him if he had patience to persevere in a course of study he would mark out for him, however wearisome it might seem, to which the pupil agreed. A paper was ruled and all kinds of scales and groups of notes were marked on it.

This page occupied teacher and pupil during an entire year, and the year following was also given to it. When the third year commenced, nothing was said of changing the lesson, and the pupil began to murmur, but the master reminded him of his promise. The fourth year slipped away, and the fifth followed, and always the same page.

The sixth year found them at the same task, but the master added some other lessons. At the end of this year, the pupil, who supposed himself still a beginner, was much surprised when his master said to him: "Go, my son, you have nothing more to learn. You are the best singer in Italy, and in the world."

An Impressive Petition.

Any West Indian governor can show a batch of queer petitions which he has received from the natives, but perhaps the most amusing one I ever saw was received by Sir William Robinson, when he ruled over Trinidad several years ago. It ran literally as follows:

"Your Petitioner now approaches Your Excellency to solicit, crave, and implore an inestimable boon, being aware that you have been delegated, nominated, and constituted, and appointed by the united voice of the distinguished Conclave or Cabinet of our Most Gracious and Illustrious Sovereign Lady the Queen, to preside over her liege subjects as Archon or Executive in this far dependency of Her vast Dominions. Greater is Her Majesty than the famed Semiramis, Queen of Babylon, or Her the Eastern Sheba, or the Egyptian glorious Cleopatra of celebrated memory, Anthony's loved Queen. You see the Queen, thou art representative of the revel of whose drum circles the world, and Sol or Phœbus never sets on. Pardon Your Excellency for the egotistical digression, and resumes subject. Your Petitioner's son, unfortunately by name Joseph Barrow, was sentenced for unlawfully cutting canes to six months' imprisonment, but unlike Prometheus, who stole fire from Heaven, her poor son was driven or induced by thirst to take of a reed containing saccharine, along with another aqueous fluid element. Your Petitioner now humbly appeals to that clemency, and trusts that Your Excellency may be pleased to take compassion on a poor, destitute, and bereaved widow, and restore Your Petitioner's son, as did the Prophet of Jehovah, the good Elijah, at Zarepath, the other widow's son, by remitting the time imposed. Had Your Petitioner the wings of Pegasus, fly she would to Parnassus to consult the Oracle of Delphi, to know of her son's liberation from Tartarus suffering the punishment of Sisyphus or a second Tantalus."

This petition, needless to say, was not written by the poor widow herself, but by the colored schoolmaster of the little village in which she lived.—William Thorpe in the New York *Evening Post*.

Health, a weekly journal published in London, England, in speaking of anti-kamnia tablets, says: "There is no remedy so useful, and attended with such satisfactory results in the treatment of melancholia, headaches, and emotional distress. We would suggest a few tablets for the family medicine chest, in readiness when needed."

Teachers' Agencies.

THE WEST TEXAS SCHOOL BUREAU

A System of Southern and Southwestern Teachers' Agencies

CENTRAL OFFICE, ABILENE, TEXAS

W. A. BYNUM, Manager

We let you decide as to what our facilities are, or should be, when we state we have live offices or agencies, in the states mentioned below. We want good teachers to test our facilities. Each agency is managed by an experienced school man, who knows HOW to serve the needs of both teacher and school. Vacancies for next session now coming in. Register NOW for first elections. Liberal proposition to representatives of the Agency, making it an institution "of the teachers, by the teachers and for the teachers."

Address THE WEST TEXAS SCHOOL BUREAU, at any place from this list: Union City, Tenn.; Macon, Ga.; Anniston, Ala.; Koscisko, Miss.; Benton, La.; Pine Bluff, Ark.; Phoenix, Arizona, or Central Office. W. A. BYNUM, Gen'l Mgr.

NEW LIST FOR LIVE TEACHERS

Start well, make good impression at beginning. It will help you during the entire year. You will find the following helpful.

Games, Seat Work and Sense Training Exercises. By Adelaide Holton, Primary Supervisor, Minneapolis, Minn. The exercises in this little book are the result of years of experience with thousands of children and hundreds of teachers. Great care has been taken to give a variety of educative exercises that cultivate attention, concentration, interest, judgment and reasoning, and that train along the lines of regular school work. It is a valuable book for any teacher to possess. 128 pages. Cloth 40 cents.

How Little Cedric Became a Knight. Little Cedric is a beautiful little story. It inculcates bravery, right, respect and love. The pupils' edition, 32 pages, 6 cents, 60 cents per dozen. Teachers' edition has hosts of suggestions and helps on the teaching and use of the story. Price 15 cents.

Suggestions For Seat Work. By Minnie M. George, author of the Plan Books. Here are 62 pages of busy work devices that will supply pupils with employment that will occupy head and hands; that will lead pupils to observe closely; lead pupils to be inventive; and, best of all, to relieve you of much care by furnishing your pupils something profitable to do. There are suggestions and devices to last from September to June, inclusive. Price 15 cents.

Young Folks' Book of Etiquette. By Caroline C. Griffin. Every boy training may be, will be benefited by the use of this little work in school. Many children do not have good home training or example set them. Their habits become formed and in after years are not easily broken. Issued in a handsome manner. Cloth. Price 35 cents.

Busy Work Language Cards. A set of seventy-five cards, each with from five to ten sentences, with one or more words omitted. The omitted words are to be selected from two or more words, which are at the head of the card and are similar in sound, but different in spelling and meaning. These will make splendid cards to hand to pupils who have completed given work, or as class drill in language, writing, etc. Price 15 cents.

Select Stories for Opening Exercises. A collection of striking and interesting anecdotes and poems, so grouped that they may have special bearing upon any of those attributes of the pupil which should be cultivated for future weal, and to build character on the broad basis of truth, honesty, benevolence, courage, and kindness, and to encourage politeness. Suitable for all grades, 256 pages. Price 30 cents.

The Primary Plan Books. Helpful suggestions, charming stories, appropriate illustrations, daily hints. A mine of valuable material for all enthusiastic workers. They also contain information as to where may be found that which they do not themselves contain. The purpose of the Plan Books is to assist the teacher in making her daily plans; to show how school work may be correlated; to enable her, from its references, to turn at once to the needed book for the appropriate song or story to be used in connection with the day's lesson; to provide seat work which will be of educational value. Each contains 112 large pages. The entire set of ten numbers 1,120 pages. A copy for any month, 25 cents; the ten months, September to June, \$2.25 prepaid.

OUR CATALOGUES SHOULD BE ON YOUR DESK.

THE GREATEST obstacle in the way of interesting a child in his studies lies in the fact that he is more interested in life, in present day events. By utilizing this interest you vitalize every study, so that even the dullest subject becomes illuminated and enlivened by its possible connection with world-events to-day. All progressive teachers realize the importance, therefore, of teaching current events in their schools.

Unquestionably the daily newspaper presents the greatest opportunity for information upon current events, but it is not fitted for school use; its defect is that it makes all facts of equal importance, the burglary, the homicide, the divorce and the scandal are given as much space as the really valuable achievements of men of power and genius.

- Because—
- 1 It gives all the news of the week, worth knowing, in brief space.
 - 2 It omits the worthless, the sensational and the pernicious.
 - 3 It illuminates the study of geography, history, civics, science, language, etc.
 - 4 It unites, as no other text book can, parent, teacher and scholar in one line of thought and discussion.
 - 5 It serves as a most excellent memorizer, promoting intelligence and discrimination in recalling and discussing the significance of the important events daily transpiring.

In the School Room there is hardly any study that is not illuminated and made increasingly interesting by illustrations and practical lessons taken from the history of the day as recorded in "Our Times" Geography, Reading, History, Language, Civics, Physics, Chemistry, Astronomy, Etc.

Each month "Our Times" will contain a Cumulative Index, showing at a glance the important events during the month, and also those of the past year—a most valuable aid to the study of the present day, history, literature, civics, science, art, etc., as well as a unique examination paper and memorizer for both teacher and pupil, thus making "Our Times" a text book up to the current month.

"Our Times" is published weekly. Terms as follows:

Single Subscriptions, 52 weeks, \$1.25; 40 weeks, \$1.00. Ten or more copies to one address, 52 weeks, 60 Cents Each; five or more copies, 75 Cents Each; two or more copies, 85 Cents Each

D. C. HEATH & CO.

*Publish over twelve hundred different text-books suited to meet the needs of all schools.
The following popular books are on their list. Use them and you use the best.*

FOR GRADED SCHOOLS

THE NEW WALSH ARITHMETIC

Adopted for exclusive use in the states of Indiana and Montana and in 1,000 cities and towns in the United States. *Adopted by the School Board by unanimous vote, for Newark, N. J., May 26, 1905.*

THE HEATH READERS

Containing more reading and better reading than any other series published. Adopted by three States and the leading educational cities. Ask to see samples before purchasing your next supply of readers.

HYDE'S TWO-BOOK COURSE IN ENGLISH

Adopted for exclusive use in eight States and in the public schools of Columbus, Detroit, Duluth, Jersey City, Greater New York, Philadelphia, etc. *Re-adopted March, 1905, by the State of Louisiana.*

THOMAS' HISTORY OF THE UNITED STATES

Simple, direct, impartial, and of surpassing interest. The most attractive as well as the most useful United States History published. Adopted by three States. Everywhere popular and effective.

THE NATURAL SYSTEM OF VERTICAL WRITING

Most popular system. Sales in 1904 larger than any other series of copy books, either vertical, medial, or slant. Excels all other systems in simplicity, legibility, and speed. The best writing for business purposes.

NORTON'S HEART OF OAK BOOKS

Old friends in new clothes. Entirely revised; a seven book edition, unequalled from the point of view of good literature, printed from new plates, illustrated, carefully graded, and handsomely and durably bound.

SUPPLEMENTARY READING

100 volumes selected for literary and educative value. Admirable to supplement the study of History, Geography, and nature work. *Recently issued: Hyde's Greek Myths; Fairbank's The Western United States.*

GORDON'S METHOD OF READING

Combines the best features of the best methods. Phonics are taught without the use of diacritical marks. Pupils in the first year average to read twelve to fourteen books. This system merits investigation.

FOR HIGH SCHOOLS

NEWELL'S DESCRIPTIVE CHEMISTRY

Gives special attention to industrial applications of Chemistry, to electrochemistry, and to chemical theory. Part II contains 150 experiments. *The leading chemistry text-book of the day.*

COLTON'S ZOOLOGY: Descriptive and Practical

Offers an adequate course for high schools. Part I is based on the study of types with due attention to life as well as structure. Part II gives explicit directions for field, home, or laboratory study.

STEVENS' INTRODUCTION TO BOTANY

Provides a complete introductory course sufficient to prepare for the entrance requirements of any college. Special emphasis is laid on the study of common flowering plants. A text-book that is deservedly popular.

COLTON'S PHYSIOLOGY: Briefer Course

Adapted to the capacity of the average high school pupils. Lays special emphasis upon hygiene and the principles on which depend good health. Sane in its treatment of stimulants and narcotics. Fully illustrated.

HEATH'S ENGLISH CLASSICS

Over fifty volumes, including college entrance requirements, in neat, attractive, serviceable editions, carefully edited and printed. In introductions, text, and notes they are practical class texts. Moderate in price.

THE ARDEN SHAKESPEARE

Nineteen plays now ready. Others in preparation. Each volume contains historical introduction. The notes emphasize literary and dramatic features. The text is based on the Globe edition. Uniform in price and binding.

THE WELLS MATHEMATICS

The best texts in Arithmetic, Algebra, Geometry, and Trigonometry. The books excel in accuracy of definitions and rules, careful grading, and number and variety of exercises. An unrivalled series.

HEATH'S MODERN LANGUAGE SERIES

Contains over four hundred books, including grammars, drill books, readers, etc., in neat, inexpensive, yet carefully selected, edited, and printed editions, and provides abundant material for all the needs of students.

Descriptive circulars and catalogues free on request. Send for Heath's Pedagogical Catalogue, Modern Language Catalogue, List of Home and School Classics, List of English Classics, etc.

Publishers' Talks

TO our thousands of new readers we extend a most cordial welcome. Every mail only serves to swell our list of subscribers, and to all of such we would express a sincere hope that their familiarity with this magazine and their relations with this company may be of such an agreeable character as to speedily convert them from mere acquaintances into sincere friends. We may possibly be a little old-fashioned, but we cling to the idea that the readers of a magazine—especially a class magazine such as this—should simply be, as it were, an enlarged family circle, the members of which may differ in individuality, tastes and opinions, and yet be dominated by a loyal, sympathetic, and helpful spirit. We beg, therefore, that our new readers will make themselves at home at once, and be free to criticize our faults, commend our virtues and suggest anything that will enable us to more effectively and certainly attain the ideal which we have before us as to the possible worth, usefulness, and attractiveness of this magazine.

Our Aim.

It is our aim to make this publication so excellent in every way as to instantly rivet your attention and admiration and to gradually win your affection. Whatever sentiment may thus be stimulated by the magazine itself, will, we trust, be sustained and encouraged by relations with other departments of our business. We will not tolerate any action in any branch of our enterprise that will occasion offence upon the part of any member of our circle of friends or that will lead to any estrangement. We want this fact to be distinctly stated and to be clearly understood. If any patron feels a grievance we hope that instant expression will be given to the facts in a letter addressed to the president and general manager of the company. Do not cherish up in your mind a little difficulty, to be gradually enlarged by meditation into a mountain of fault, when you can so easily have the matter adjusted to your complete satisfaction.

Considerate, Courteous, and Complete Attention Exacted for Every Detail of the Business.

The President and General Manager cannot personally handle the working details of so large a business, but he has exercised particular care to select for various departments officials who by their natural instincts and commercial training, are considerate, courteous, and thorough, and it will be our policy to give to every inquiry, request, or complaint, most careful and prompt attention.

A Frank Confession.

With this statement of our commercial policy, we may as well anticipate a complaint already framing itself in the minds of our readers. We are sorry beyond expression, to have started off the beginning of the scholastic year by any tardiness in getting our publications to subscribers on time, but when you realize that the delay was occasioned by our trying to place affairs in such shape as to better serve your interests in the future, we are certain that you will be charitable enough to forgive anything amiss on our part at this season of the year. The moving of a circus is an orderly procedure compared with the moving of a printing plant. Not only have we suffered the loss of six weeks' to two months' actual time in manufacturing, but the removal from one city to another has made it necessary to employ an almost entirely new clerical force in several departments. To get things into smooth working order after such a cataclysm is merely a question of time and patience. Every day, however, witnesses steady progress, and we hope very shortly

to be in perfect shape. Our plan is to have a specified day of publication for each of our four periodicals, and to respect such dates with impartial regularity. This magazine will be ready for mailing on the 20th day of the month, preceding that for which it is issued, so that subscribers may positively count upon receiving their copy before the first day of each month.

An Evidence of Worth.

We purpose sparing no reasonable expense to make this magazine the most beautiful, entertaining, and helpful publication dealing with the subject of education. Two evidences of this purpose are worthy of special notation:

Cover Designs.

The cover designs for this magazine, as printed in colors, are calling out expressions of the highest favor. Each design has an individuality of its own and presents some subject appropriate to the month for which it stands. By this method of treatment, each issue of the magazine stands forth in attractive and appropriate attire. The work is, of course, expensive, but if it adds to the satisfaction of our readers, or stimulates a pride in the magazine upon the part of teachers, whose profession it seeks to exalt with dignity and honor, the expenditure will prove most wise and desirable. Any suggestion for a cover design for any future month which can be submitted by any reader will be highly appreciated, and if accepted for service will be suitably rewarded.

The Autobiography of a Teacher.

The editorial policy of the magazine is to utilize only articles of the greatest worth. We shall seek to give you the best reading that can be procured. It is questionable whether there will be a series of articles in any magazine published in this country during the present year, of greater merit than the series entitled *The Autobiography of a Teacher*, which commences in this number. In the judgment of many, Dr. Henderson is the equal of any contemporary writer in the keenness of his analytical mind and the exquisite character of his literary style. Probably no other educational journal has ever carried so expensive a series of articles, but Dr. Henderson appealed to us very strongly in his previous books and especially in his *John Percyfield*, and we knew he must have a message for teachers, full of richness and beauty. For this reason we sought these articles, and if they give to you the same delight in reading as they do to us in publishing them, we shall feel amply repaid.

Subscription Expiration.

To our many new subscribers and possibly to our older friends as well, it may be wise to call attention to the dates upon the label on your magazine. The date there shown is that of the last month for which your subscription is paid, and when your subscription has expired you should promptly send us a renewal or ask us to cancel. We shall always reluctantly do the latter, and we hope you will never ask us to do so as long as you teach, but you may be positive that we shall respect your request should you ever find it necessary to ask us to take your name from our mailing list. Teachers have often told us how impossible it is with some publications to compel them to stop sending the journal to their address. Such a policy is wrong. It is both exasperating to the subscriber and injurious to the publisher. We even have some strong doubts as to the wisdom of continuing a subscription beyond the date of expiration without an actual renewal. There are strong reasons, however, in favor of both plans, which we cannot ignore, and which are having

our very serious consideration, but there can be no justification for failure to stop a magazine when requested to do so. Remember, however, that it takes about two weeks to make any change in our subscription lists, so complaint should not be made if failure to make any desired change as to your subscription does not appear at once. Give us two or three weeks and then write again if your request has been ignored. The task of extending the time of expiration on our mailing list of patrons who were subscribers to more than one periodical merged into *TEACHERS MAGAZINE* has been greater than we anticipated, and these extended expiration dates may not appear on wrappers before November or December, but we wish to assure such friends that their unexpired time to respective publications no longer issued separately, will be fully liquidated.

Book Department.

We are very much gratified to announce that our Book Department has been placed under the supervision of Mrs. Frances Hardin Hess, whose identification for many years with the Astor and Lenox libraries and later with large commercial book interests, peculiarly qualifies her to handle this feature of our business with particular satisfaction. Mrs. Hess has such a wide knowledge of general literature and of suitable reading for the teacher's requirements as to enable her to acceptably answer any questions that may be propounded or give such advice as may be sought in the realm of books. Each month Mrs. Hess will conduct a department in this magazine entitled *Book Talk*, which will, we hope, continually grow in interest and helpfulness to our patrons. We shall seek to supply the book requirements of teachers of whatsoever nature and regardless of their source of publication.

Investment.

To any teacher desirous of laying aside a small sum out of his ensuing yearly earnings, as a source of income for the future, we unequivocally and strongly recommend the preferred stock of this company, as described elsewhere. There are three things that should be carefully observed in making an investment. They are, first, invest no amount that you cannot consistently spare from your income; second, confine your investment to activities about which you know something and which you can understand; and third, invest in nothing that offers unreasonable and improbable financial returns. Judged by this standard, the preferred stock of this company should commend itself to your consideration. In the first place, any desired number of shares may be purchased and paid for at the rate of so much per month over a period of ten months. In the second place, this business is one you can understand, in which you have sympathy and pride and the solidity of which you can foresee, since two commercial activities, each having a continuous record of twenty-five to thirty years of prosperous operation, have been merged together thus creating a volume of patronage that can only result in added strength and earning power. In the third place, we do not promise visionary financial returns, but we do know that the profits of the business should easily protect the seven per cent. dividends on the preferred stock. The president of the company had given to him many years ago as a commercial motto for him to follow, a sentiment, which while homely, is conservative. "Hope all things, expect nothing, and work like Hercules." This principle he seeks to follow, and experience has confirmed his judgment that if the fundamentals of the business are properly conceived, established and diligently observed, the results cannot fail to be substantial and agreeable. These fundamentals, of which there are many and with varying ramifications, may be briefly stated as, first, merit; second, fair dealing; third, courtesy; fourth, promptness; fifth, system; sixth, originality, and seventh, diligence. In attaining that success for this company already so clearly foreshadowed, we recognize that it will be by virtue of the support we receive from the educational forces of this country, and we naturally would like such earnings as we may realize, to return by way of dividends on capital stock to those by whose allegiance and co-operation such earnings have been made possible.

Current Events.

To every reader of the magazine interested in the teaching of current events in connection with scholastic work, we will gladly send free upon application a little booklet entitled, *The Teaching of Current Events in Schools*. It is our firm conviction that the use in the class-room of the daily happenings of the world, is in its infancy, and it is our desire to organize and develop the very best plans for utilizing such events and applying them to the routine of the curriculum.

A study becomes infinitely more interesting and helpful when it can be given a practical application of some noted occurrence of daily life. In *Our Times* we are seeking to provide a weekly periodical dealing with current events in just the form to especially adapt it to school use, and in connection with this publication it is our purpose to bring out the best ideas of our pedagogical minds by conducting, as described elsewhere in an advertisement, a series of monthly contests, with suitable prizes for the best plans offered, as to methods of using current events in the teaching of respective studies.

Support Advertisers.

Do you carefully read advertisements? You ought to. They keep you posted on many things you should know, but in addition you benefit yourself by doing so. We could not make this magazine half so interesting or helpful without the financial support of advertisers, unless we charged you more for your subscription. For this reason, why not support such advertisers as support this magazine when you can do so with no loss to yourself? Many articles of the same class have the same merit and some of these articles you are compelled to use. Under the circumstances, why not patronize those advertisers who contribute to your benefit? It is a form of reciprocity that is mutually beneficial and logically just.

Versatility of Our Publications.

Through the medium of our various periodicals, we seek to cover the requirements of educators as we understand them to exist. This magazine is for the grade teacher. *OUR TIMES* deals with current events. *THE SCHOOL JOURNAL* is for superintendents, principals, and high school teachers, and *EDUCATIONAL FOUNDATIONS* has to do with the science of teaching. A brief description of the last two magazines may be timely and of interest to many subscribers.

The School Journal.

The *SCHOOL JOURNAL* is a weekly periodical giving a critical review of the significant Educational news, and presenting the plans, ideas, and experiences which are shaping the policy, organization, and management of schools and school systems. In its comprehensive scope is included whatever should be known to those who desire to be well informed concerning the progress of Education. It is indispensable to superintendents and principals and those who wish some day to occupy positions of responsibility in the school field. Teachers who have entered upon this work with a determination to advance ought to become regular subscribers. To high school teachers, *The School Journal* is especially recommended as the only periodical presenting the practical phases of the secondary school work in a practical form. In the current volume this latter subject is receiving more attention than ever before. A new feature will be editorial reviews of the practical workings of well known schools and school systems.

Educational Foundations.

From a pedagogical standpoint, there is no more interesting, helpful, or uplifting publication than *Educational Foundations*. It occupies a unique place among professional periodicals. It is really a series of monthly text-books on Pedagogy. As its name indicates, it deals primarily with fundamentals, seeking to enable the student to devise his own recipes and be his own master. It is a magazine for professional mastery. Whatever may tend to broaden the teacher's horizon and increase his professional usefulness to an appreciable degree, is included in its scope. Hundreds of city and country superintendents and principals are using *EDUCATIONAL FOUNDATIONS* as the basis of reading and study of their associates in teaching. They know it stimulates the correct attitude toward teaching, cultivates a sincere ambition for improvement, and makes increasingly clear the proper relation between teacher and pupil. Wherever this publication has been thus used, it has been found that the standard and proficiency of teachers has been materially advanced. Superintendents and principals should send for our booklet on "COURSES OF STUDY FOR TEACHERS" with a view to the adoption of some such plan of professional uplift.

A Comprehensive Expenditure.

We know of few expenditures that will more fully cover the mental and professional requirements of educators than a subscription to all four of our periodicals, viz: *TEACHERS MAGAZINE*, *SCHOOL JOURNAL*, *EDUCATIONAL FOUNDATIONS*, and *OUR TIMES*. By a combination rate these can be obtained yearly for \$5.00 and they are worth to any teacher many times their cost.

HELPS TO TEACHERS

PAINTER'S GREAT PEDAGOGICAL ESSAYS . \$1.25

This volume contains selections illustrating every period of educational history from Plato to Herbert Spencer. Selections from twenty-six of the world's most prominent educators are given, each introduced by a brief biographical sketch. The reader is thus enabled to secure an acquaintance with the original sources of information, and a correct critical estimate of each author's views and works.

ROARK'S ECONOMY IN EDUCATION . . . \$1.00

This book discusses the application of the principles of economy to the work of the school. It deals with the careful and economical use of time, money and energy in effecting the right education. The general divisions of the subject are the organization and management of the individual school, and the school system, and the useful direction of the other educational forces of the community.

The AMERICAN BOOK COMPANY publishes some thousands of text-books covering every branch of study pursued in schools and suitable for all grades. These books are the best of their respective kinds. They represent the best equipment for teachers who are pursuing different methods and holding different ideas of teaching, and who are desirous of obtaining books adapted to their special needs.

Wide-awake teachers are always seeking the best and are always striving for improvement. So is the American Book Company. There is no single step teachers can take, no single habit they can form, which can be more valuable than the habit of writing to this Company whenever they wish something standard, or something new or different, in the way of text-books.

Correspondence should be addressed to the nearest office of the Company.

FOR PRIMARY PUPILS

THE ROSE PRIMER = = = = = 30 cents

THE PEDAGOGICAL features of this primer will appeal to every teacher. The small vocabulary of common words, the frequent reviews, the short sentences, the simple language and phonetic exercises, and the carefully selected and well graded subject matter, are particularly noteworthy. Only two new words are introduced in each lesson, and constant repetition of those already learned is provided for.

GIBBS'S NATURAL NUMBER PRIMER = = = 25 cents

UNLIKE ALL other books, the Natural Number Primer teaches the most elementary ideas and forms of number and language at the same time. As a language primer it develops a simple, practical vocabulary, and the power of reading and expression. Each new term, as it is introduced, is illustrated and receives a due amount of drill. As a number primer it teaches in a very easy, logical way the first steps in number.

STEWART AND COE'S FIRST DAYS IN SCHOOL = 25 cents

THIS LITTLE book provides lessons in conversation, reading, and writing, and is designed to be placed in the child's hand on the first day of school. The gradation of the reading lessons is so easy that the youngest teacher will find no difficulty in using the book. The words are short and simple, and are used over and over again in a variety of pleasing combinations.

Specimen page from
THE ROSE PRIMER

Can you roll the ball?
Roll the pretty ball.
Roll it to me.
Roll it to Rose.
Rose can run to the ball.
I can run to it.
I like to run.
I like to roll the ball.
Do you like to roll it?

me *me* like *like*

Copyright, 1905, by Edna Henry Lee Turpin.

THE BALDWIN PRIMER, 30 cents

THE LESSONS in this primer have been prepared in accordance with the principles of mental science and child study. Beginning with easy words and simple forms, they lead by successive steps to the elementary principles of language, number, drawing, music, etc. In teaching reading the alphabetic, word, and sentence methods are employed simultaneously.

CROSBY'S OUR LITTLE BOOK FOR LITTLE FOLKS, 30 cents

THE WORK in this book is adapted to very young pupils. The lessons are in the form of connected stories, which maintain the child's interest from beginning to end. Reading, writing, number work, drawing, music, and nature study, are correlated in a pleasing and instructive manner, and sufficient exercises are furnished to supply every need.

THE WERNER PRIMER, 30 cents

THE WERNER PRIMER affords a practical correlation of work for the first term, or half year. Reading, writing, language, number, form, color, science, and literature are united in an attractive and appropriate manner. Each new word is first given in script, and many of the script lessons are duplicated in print. Special drill is provided in figures and word-building.

AMERICAN BOOK COMPANY

NEW YORK CINCINNATI CHICAGO BOSTON ATLANTA DALLAS SAN FRANCISCO

Useful Supplementary Reading

The Supplementary Reading Books published by the American Book Company number 170 volumes, on all subjects and for all grades. They are interesting in subject matter, and simple and attractive in style. Most of them are profusely illustrated; all are carefully printed and substantially bound.

Four of the newer volumes are mentioned below. A complete classified and graded list, with suggested courses for graded and ungraded schools, will be gladly sent free to any address on request. The suggestions given in this pamphlet can not fail to be helpful to teachers who are on the lookout for new ideas.

Carpenter's Geographical Reader

Africa—60 cents

Completes this well-known series, and tells, in an attractive manner, just those things about the "Dark Continent" which every child should know. The book is really a personally conducted tour. It is well supplied with maps, and profusely illustrated from photographs.

Holder's Half Hours with the Lower Animals

60 cents

The story of lower animal life, including the protozoans, sponges, corals, shells, and crustaceans, is here presented simply and on broad lines. The narrative is untechnical, and supplemented at almost every step by forceful and explanatory illustrations.

Baldwin's Fairy Reader

35 cents

Ten of the famous fairy stories of Grimm and Andersen appear, re-written in simple form, in this volume. The expressions are such as will be easily understood by the youngest, but the main thread of each narrative is left unaltered. The illustrations are numerous and attractive.

Walker's Our Birds and their Nestlings

60 cents

Short chapters or essays on twenty of our best known birds, describing their nesting habits, the care taken of their nestlings, their food, their songs, etc., with incidents from personal observation. A prominent and attractive feature of the book is its illustrations.

BEST BOOKS FOR SCHOOLS

SPENCERS' PRACTICAL WRITING

Six Books.

Each, per dozen, 60 cents

This new system of writing has been devised because of the distinct and wide-spread reaction from the use of vertical writing in the schools. It is thoroughly up to date, embodying all the advantages of the old and of the new. While it has many advantageous features, the following are especially noteworthy:

1. It teaches a plain, practical handwriting, moderate in slant and free from ornamental curves, shade, and meaningless lines.
2. Each word can be written by one continuous movement of the pen.
3. The stem letters are long enough to be clear and unmistakable.
4. The copies begin with words and gradually develop into sentences.
5. In the first two books the writing is somewhat larger than is customary because it is more easily learned by young children.
6. Books One and Two contain many illustrations in outline.
7. The ruling of the books is very simple and is a help, not a hindrance.
8. Instruction is offered showing how the pupil should sit at the desk and hold the pen and paper.
9. A series of drill movement exercises, thirty-three in number, with directions for their use, accompanies each book.

Steps in English

Book One. \$0.40. Book Two. \$0.60

These books present a new method of teaching language. They meet modern conditions in every respect, and teach the child how to express his thoughts in language rather than furnish an undue amount of grammar and rules. From the start, lessons in writing language are employed simultaneously with those in conversation. Picture-study, study of literary selections and letter writing are presented at frequent intervals. The lessons are of a proper length, well arranged and well graded. The books mark out the daily work for the teacher in a clearly defined manner by telling him what to do and when to do it.

Overton's Applied Physiologies

Primary, \$0.30 Intermediate, \$0.50
Advanced \$0.80

The fundamental principle of this series is that the study of anatomy and physiology should be the study of the cell, from the most elementary structure in organic life, to its highest and most complex forms in the human body. This treatment of the cell principle, the employment of laboratory methods, the adaptability of oral and pictorial demonstrations to every-day study, and the clearness of the author's style, give to these books a strength and individuality peculiarly their own. The effect of alcohol, tobacco, and other narcotics are treated sensibly and with sufficient fullness in each book.

Natural Music Course

Harmonic Series: Six Books

The Harmonic series, the newest of the well-known Natural Music Course, is unquestionably one of the most notable recent achievements in the educational world. It is the only system which meets adequately the needs of schools and aims to arouse and cultivate the aesthetic nature of the child; to give skill in aesthetic production; and to establish the power to express individual thought and feeling in musical language. From the first lesson to the last the child is kept in an atmosphere of pure music; he is trained to enjoy it; and he is carefully drilled in each step as it occurs in the books and charts.

Barnes's New Histories of the United States

Elementary, \$0.60 School, \$1.00

Every teacher knows well Barnes's History of the United States. No other books of a similar nature have ever attained so wide and constant a use as these. In their new form they are thoroughly up to date, both as to contents and as to dress. The Elementary History has been entirely rewritten in a series of biographies by that charming writer for children, Dr. James Baldwin. The School History has been completely revised, and gives greater prominence to the life of the people, and to the wonderful development of our industries. The illustrations in both books are numerous and notable.

NEW YORK

FOR A VERY LONG TIME many of our subscribers have been faithful to the Educational Work which has been accomplished by the predecessors of this company.

Teachers have come and teachers have gone, but our publications have steadily and consistently fulfilled their functions, guiding, directing, stimulating, and helping those who have been engaged in the trying and responsible duties of scholastic work.

We are proud of this record, and we appreciate the heritage to which we succeed.

Our Family of Readers engirdles the world, and our one aim is to do things in such a way, with such a purpose, and with such efficiency as to make an indelible impress upon Education for its uplifting and enriching benefit.

We are not satisfied to move along in the same old way. The law of life is progression. We want to expand, to steadily advance, to attain greater and greater development.

Whatever we shall accomplish will be through the co-operation and support of our subscribers. What more natural than that we should want our subscribers to share in our material prosperity?

AN ENLARGED OPPORTUNITY FOR PROFITS

By the consolidation into one company of the interests of our predecessors—interests that have existed commercially for twenty-five and thirty years—we are permitted to realize a very much increased patronage, which enables us to perfect the various branches of our business in such a manner as to gratify our present circle of friends and to materially increase the number of our subscribers.

INCREASED CAPITALIZATION

This enlargement and improvement of our operations has very naturally necessitated an increase in the capitalization of our business. To accomplish large things commercially plenty of capital is imperative. For this reason we have organized our present company with a capital of \$300,000, of which \$100,000 is Preferred stock.

PREFERRED 7 PER CENT. CUMULATIVE STOCK

The Preferred stock is non-assessable, of a par value of ten dollars a share, and carries a 7 per cent. cumulative clause. It is Preferred both as to Assets and Dividends. This preference means that the entire assets of the business after the payment of the current indebtedness of the company is pledged to the redemption of the Preferred stock at par before any of the assets can be applied to the common stock. Furthermore, the profits of the company must be devoted to the payment of 7 per cent. dividends upon the Preferred stock before the common stock can participate in the earnings. Furthermore, the cumulative clause means that 7 per cent. dividends must be paid upon the Preferred stock each year, otherwise such deferred dividends become an obligation upon the company, which must be subsequently paid just the same as any other liability. This form of investment thus partakes of a very substantial character.

ASSETS FULLY PROTECT

The Assets of the business are shown by valuations to be sufficient to protect the total issue of the Preferred stock, and the net earnings of the company should certainly insure the regular payment of the dividends required.

\$50 000 OF PREFERRED STOCK OFFERED FOR SALE

Of the \$100,000 of Preferred stock only \$75,000 will be issued at the present time, and of this amount \$50,000 is now offered for sale to our subscribers in shares of \$10.00, and upon such a basis as to make it reasonably possible for an investor to realize a return of from 7 per cent. to 10 per cent., and even more, upon his outlay.

SALE OF STOCK GUARANTEED

Every dollar of this Preferred stock that is now offered for sale has been guaranteed so that it does not affect us financially if not one share is purchased by our subscribers, but as it is our patrons who will enable us to pay dividends, so it is to our patrons that we should like the dividends to go.

EASY TERMS OF PAYMENT

For the benefit of those who would like to take advantage of such an opportunity, but who do not like to draw their savings from their bank, we have arranged to allow them the privilege of paying for each share of Preferred stock which they purchase at the rate of one dollar per month for a period of ten months. Five shares, five dollars per month. Ten shares, ten dollars per month.

THE DUTY OF SAVING

All teachers should plan to lay aside something each year as an investment out of their earnings, no matter how small such earnings may be. As a rule teachers do not have many opportunities for reliable investments in small amounts, and for this reason are sometimes inveigled into visionary and unstable propositions by the unjustifiable promise of large returns. It is because of this condition that we have decided to present this opportunity to our subscribers of becoming interested in a line of activity the stability of which has been proved by long years of operation and with which teachers are familiar, and in which they are interested. We do not submit it as a bonanza that offers marvellous returns, but as a safe, conservative, substantial investment that promises to produce regular and attractive dividends.

A REAL CYCLOPEDIA

FOR THE PRIMARY TEACHER

HERE is a new up-to-date series of books of Nature Study correlated with reading, literature, language, and drawing lessons, one for each month of the year from September to June inclusive, based on the best and most approved methods of teaching, and conforming with any course of study. The authors are experienced primary teachers.

Teachers of primary grades, as well as teachers in ungraded country schools, will find in these volumes a wealth of suggestive material.

A valuable permanent addition to the teacher's library.

Contents of the Autumn Volume--One of Three Books

A
U
T
U
M
N
VOL.

September

- FIRST WEEK—MISSION OF FLOWERS. The Nasturtium, Golden Rod, Aster and Sunflower; Forms of Expression; Bibliography; Songs, Poems, and Stories.
- SECOND WEEK—DISTRIBUTION OF SEEDS. Milkweed; Methods of Seed Distribution; Forms of Expression; Bibliography; Poems and Stories.
- THIRD WEEK—EDIBLE FRUITS. Outlines for Study; The Apple; Bibliography; Forms of Expression; Songs and Stories.
- FOURTH WEEK—INSECT LIFE. The Caterpillar; The Silkworm; The Japanese; The Grasshopper; The Cricket; Forms of Expression; Bibliography; Songs, Games, Poems, and Stories.
- CALENDARS. Various Kinds of Calendars; Calendar Mottoes for a Year.
- THE CHILDREN'S POET. Sketch of Eugene Field; Wynken, Blynken, and Nod; Little Boy Blue; The Sugar Plum Tree.
- SENSE TRAINING. PICTURE STUDY—Jean Geoffroy. RECEPTION DAYS.

October

- FIRST WEEK—TREES. Historic Trees, Leaves, Autumn Trees; Bibliography.
- SECOND WEEK—TREES. Buds, Nuts; Discovery Day; Stories, Bibliography, Busy Work, Poems, and Songs.

- THIRD WEEK—BIRDS. Coming and Going; King Wren; Bibliography and Poems.
- FOURTH WEEK—ANIMALS IN THE SCHOOL-ROOM. Squirrels; Picture Study; Domestic Animals—Cat, Dog, Stories; Bibliography, Poems, and Songs.
- THE BROWNIES. Busy Work, Poems, Songs; The Shoemaker and the Elves.
- HELEN HUNT JACKSON. Sketch of the Poet; Poems.
- PICTURE STUDY. Bertel Thorwaldsen.
- A CALENDAR FOR OCTOBER. OCTOBER EXERCISES. AUTUMN ENTERTAINMENT.

November

- FIRST WEEK—VEGETABLES.—Pumpkins, Potatoes.
- SECOND WEEK—GRAINS, THE TURKEY. Corn, Rye; Harvesting; Jack O'Lanterns; Gift of Corn; The Turkey; Picture Study; Psyche. Bibliography, Poems, Songs, and Games.
- THIRD WEEK—THANKSGIVING. Thanksgiving Story; Bibliography, Language Work, Poems, and Songs.
- FOURTH WEEK—PURITANS. Outline of Study; Puritan Customs; A Puritan Hero; Plymouth Rock; Picture Study; Bibliography; Busy Work, Language, Poems, and Songs; The Story of Prudence.
- HIAWATHA'S BROTHERS. REVIEW OF THE SEASONS. BRYANT'S BIRTHDAY. THANKSGIVING EXERCISES. SUPPLEMENTAL.

Price in paper, 25c. for each monthly part (75c. for three parts); in cloth, \$1.25.

Book Talk

By Mrs. Frances Harden Hess

Somewhere in his writings Walter Pater says "A book is fortunate or unfortunate, owing its success or failure, to the mood the reader finds himself in." Perhaps these are not his exact words, but Pater's idea was that we get out of a book only what we are in sympathy with.

As teachers are always on the lookout for that which will aid in their work, they are inclined to approach books too much from the utilitarian point of view. This shuts out the larger horizon of the universality of Life and its vitalizing force, the love of beauty.

The way out of this condition is to keep a two-fold purpose ever in view and read not only with relation to one's profession, but also with relation to Life in its most catholic sense. In order to do this one must have tools, and this leads me to my hobby: BOOKS.

In my experience with the Book Trade, which has extended over a number of years, I have found that teachers buy few tools. Many will question this statement, but facts sustain me. Physicians buy the latest and best medical books; lawyers will not attempt to try a case until they have at hand the newest reports; ministers want the last work on theology; scientists know it is unsafe to make a single statement without consulting the most recent printed data. And so it runs thru the gamut of the businesses of Life, but teachers (as a mass and as a class) content themselves with some single journal or at best with a handful of cheap pamphlets. There will be a strong protest from some wide awake teachers, whom I know to spend a tenth of their income each year on books both professional and for general culture. There will be a strong protest from a fine body of men and women who are doing yeoman service in country schools and who have only five months' work per year at \$25 per month. But before these divisions of the profession protest, let them look about and see thousands who simply draw salaries and *negatively* get thru the year, with as little as possible of expenditure of energy or resources.

Let it be laid down as a canon that you *will* advance in your profession. And let me help you find the surest way to do this by means of the tools of your profession.

THE UNITED EDUCATIONAL COMPANY has employed me for the *specific* purpose of aiding teachers to choose these tools, and in all of my professional career I have never had anything come to me that gives me such happiness as being able to render this service.

All are invited to ask information from this Department as to any book, and all possible assistance will be rendered promptly.

Write the request on only one side of the sheet of paper and in ink; number your questions and give your name and address plainly and you will have a prompt reply.

The following books are recommended for this month:

PROFESSIONAL—The Month by Month Books which are so practical and beautiful. They are only 25 cents per number and can be adapted to any grade in the elementary school. An idea or plan is all that any intelligent teacher ever wants. When teachers follow any plan book slavishly, every particle of spontaneity disappears and the child's growth is hindered instead of helped.

The How to Teach Manuals are especially desirable at this time, particularly No. 17, which is about Trees. At this season of the year when the foliage of the trees is so gorgeous in coloring it is most timely to call attention to the whole structure of the tree and the processes that it passes thru during the winter. In connection with this book may be used Joseph Jefferson's poem "Immortality" which appears in the September TEACHERS MAGAZINE.

Taylor's (J. S.) "Art of Class Management and Discipline" needs no recommendation to those who know District Superintendent Taylor, but to those who have not had the privilege and pleasure of coming in touch with him I am very happy to offer this little book as a Vade Mecum.

Griffin's (C. S.) "Little Primary Pieces" is an ideal collection, the purpose of which is fully explained in the introduction which is as follows:

"The poems gathered together in this collection have 'been selected from every available source by a teacher

"of many years' experience with little people. They are 'intended for the youngest boys and girls. Very few of 'the poems are more than sixteen lines in length, and 'every poem is suitable for recitation in school.

"There are hundreds of collections of poems suitable 'for older pupils to speak. A few of them are for the 'very little children, most of them containing poems 'that are either too old for those for whose use they are 'intended, or else with poems that are for one reason or 'another objectionable. Great pains have been taken to 'avoid what might be open to just objection on the part 'of teachers of little folks, in the compiling of this book. 'The simple exercises at the end of the book will be 'found suitable for special days or Friday afternoons.' If it had nothing else than George MacDonald's "Where Did You Come From, Baby Dear?" it would be worth the price charged for it. And the hundreds of illustrations make it especially available for a Christmas gift to some wee friend or pupil.

Sherwin Cody's "Story Composition" ought not only to be read but *studied* by layman as well as teacher, for it is a practical exposition prepared by a practical newspaper man, who has acted as judge in a number of competitions, the most notable of which was held in 1896 by a Chicago newspaper. Manuscripts by the thousand were passed upon; and in this little manual Mr. Cody tells us why so many failed, and points the way to success. As children are compelled to write, it does seem wise for teachers to have a definite policy in passing upon the material and in directing the efforts into the proper channel. Cody gives you a touchstone.

Munson's (J. P.) "Education Through Nature Study" will serve to correlate all the nature study that now is being handed out in a desultory way in many schools. So much trumpery has been written and talked of Nature Study, that one almost feels the subject is like crazy-patchwork, but Munson clears up the field and plats it as an expert.

If you need a dialog book "Tip-Top Dialogs" (humorous) is an excellent little collection.

Read Walter Neish's "A World in a Garden." This is a novel based on Nature Study in which the development of a little boy is brought about thru his association with his uncle, an old scientist. The sweetness that this child brings into the life of the old man touches one extremely.

"An Artist Creed" is published anonymously, has an exquisite analysis of poetry, and points a lesson to the part that beauty should play in our lives. Aside from whatever lesson it has to teach, it is an excellent study in fine English.

Chester (N.) "Stories from Dante" bears much the same relation to the Divina Comedia that Lamb's Tales do to the dramas of Shakespeare. Every teacher will want to be reading something that paves the way to the world's great books. Norris has rendered a distinct service to general culture in preparing the great Italian masterpiece in story form. If this book is read in connection with a study of the Pre-Raphaelite painters, a widening vista will open up before one.

Compayre's (G.) "Abelard and the Origin and Early History of Universities" is known to many teachers, but I have only recently read it, and I am so impressed with its value as a survey of the subject, that I must again call it to the attention of the readers of pedagogical literature.

As the coral bridges the gap between the animal and mineral kingdoms, so does Andre Hofer Proudfoot's "A Mother's Ideal" unite the home and school life. I would rather have written this book than all I have written in the past, or hope to write in the future. It is not often I give such unreserved praise to any printed matter, but when this book came into my hands I knew that I held the message of a seer. Not only every teacher, but every father and mother should read this book and filter it down into the impressionable minds of their dear little ones. All life would be sweeter and better thereby.

Any of these books can be obtained thru us, at the lowest possible rates and order will be filled promptly.

Table of Contents

FOR ALL GRADES

The Human Need of Growth. The Editor	101
The Autobiography of a Teacher. C. Hanford Henderson.	102
Robbie and the Others: Tales of a Real-School Room. M. A. Grant	108
What the Woman Teacher Needs: A Term Away from Home Mrs. R. A. Griffin	110
A School Cottage	112
Mary Kingwood's School. Corinne Johnson	113
Hints and Helps. <i>How to Win Pupils—Autumn Suggestions—School Scrap Books—The Reading Problem—Marking Down—Crude but Useful</i>	116
The Teaching of English. Emma L. Johnston	123
Study of "The Children's Hour." Melvin Hix	126
Common School Hymns - God Bless Our Native Land	129
Talks on School Management - Getting to Work. Randall N. Saunders	132
A Lesson on Cotton	133
Autumn Work for Character-Growing. Louie Henderson	140
Pieces to Speak for Young and Old	149
Home Bookbinding. I. Brooke-Alder	15
Poems for Teachers	153
Among Ourselves. The Editor	154
Replies to Questions. Amos M. Kellogg	162

FOR THE GRAMMAR GRADES

Hints and Helps:— <i>An Idea for Public Exhibition Day—Raising Money for Library Books</i>	116
The Harvest Carnival. Willis N. Bugbee	120
Literature in the District Schools. David Friar	125
The English Colonists in America. G. P. Coffman	128
The Turkey. Clarabel Gilman	135
Drainage of North America. Adelaide R. Pender	138
Penmanship. Charles T. Luthy	143
The Russo—Japanese War	157
Questions on Current Events	160
November and "Thanks" Quotations	167

FOR THE PRIMARY GRADES

Hints and Helps:— <i>Reading Helps—Dissected Map—The Writing Lesson—A Phonic Game— Song Games—Tick Tack—I Wish I Had a Little Fiddle</i>	121
Mr. Turkey's Enemies. Harriette Wilbur	122
Autumn Leaf Study. Sarah H. Willis	134
Construction Work for Autumn Days	141
How Ruth Ellen Learned to Read	145
Plays and Games in Japan. Dorothy Wells	147

No. 2

The Human Need of Growth

This is the season of fruition in nature. Earth has yielded her product, and man is rejoicing in the harvest. But there the story does not end. The law of life is growth, and growth means labor. Winter is a busy season in nature's chemical laboratory. The soil is revitalized, and the juices of the strawberry and the cherry are distilled. There can be no cessation in the process of growth without risk of speedy dissolution and death. That is true of the physical world and applies with equal force to the world of the mind and of the spirit.

I know of no sorrier individual than a teacher who has stopped growing. He is to inspire the young to labor for better and ever better understanding of the world; and for greater and ever increasing efficiency; yet he himself cares not to understand and to do better day by day. His example preaches indolence. Are there many such teachers? Alas! One of them told me only a few days ago: "Before I was given a permanent position in the schools I worked early and late to qualify myself. After that, somehow, I lost interest. My work is laid out for me and I do it as well as I can. Now and then the principal or a supervisor wants things done in a particular way, and I do as I am told. My superiors seem to be satisfied, and so the thought has never occurred to me that I ought to 'grow,' as you say, for my own salvation and that of my pupils. I am ashamed to say that I have not looked at an educational paper for a year." What a sad confession for a teacher to make!

Keep growing! If the routine of the school is too obstinate to permit of the introduction of new things, there may be room for the improvement of the old. The Great Teacher did not begin His great work by destroying the ceremonial routine of the Jews and the Romans—he came not to tear down. He put the spirit of life into the old forms. Wherever a freeman is placed and under whatever conditions, he can

find opportunities for growth. But if his restless spirit persuades him that the sun is brighter in the elsewhere, then let him fold his tent and go. Yes, better give up teaching altogether than run the risk of dying from the heart outward.

Growth is a human need. Humanity dies when growth ceases. The miserable carcasses may keep on moving and even draw salaries, after the flame is burned out, but—good Lord, deliver the school-rooms of them! The morgue is a more appropriate place for them.

The beginning of the end of one's growth is self-satisfaction. It is the worst thing that can befall an otherwise moral man. In the teacher it is a sin, for it dulls his work. And dull teaching defrauds the pupil out of the best fruits of education: interest and the desire for self-improvement.

It seems incredible that any human being should be so unmindful of his weaknesses as to feel supremely satisfied with himself. There may be difference of opinion as to the direction in which growth is most needful. But there can be no question about the absoluteness of the need of growth. Striving to come to one's best is inseparable from true humanity. Can a man be a teacher who starves his humanity? *Keep growing!*

Here is a word from Matthew Arnold for a teacher to ponder: "When people are interested in an object of pursuit, they cannot help feeling an enthusiasm for those who have already labored successfully at it, and for their success. Not only do they study them, but they also love and admire them. In this way a man who is interested in the art of war not only acquaints himself with the performance of great generals, but he has an admiration and an enthusiasm for them. So, too, one who wants to be a painter or a poet cannot help loving and admiring the great painters or poets who have gone before him, and shown him the way." How about the teacher?

The Autobiography of a Teacher

By C. Hanford Henderson

TO be at all willing to write one's autobiography is, I fear, to declare oneself garrulous; and to be garrulous is the undoubted hall-mark of old age. But in spite of this damaging testimony, I shall strenuously plead not guilty. In the first place, it is well known that teachers never grow old—the women remain girls, to the very end; and the men remain boys. When they fail to do this, they cease to be teachers. Despite the relative sedateness that comes when one reaches the forties, one must keep always a boy's heart. And then, in the second place, I do not propose to write a genuine many-chaptered autobiography. It is not to be the record of a life, even of one so adventurous and interesting. It is to be the very partial and fragmentary record of one function of a life, just the teacher part of it. In my own case, and constituting I think such value as it may claim, the teaching has been only one out of several voluntary activities.

In this first paper, I am minded to set down so much of my own early experiences, acted upon by the educational process, as afterwards gave color to my theory and practice when I came to be myself a teacher.

It is of little importance where and when I was born, and so I may as well say at once that it was in Philadelphia something over forty years ago. My mother had been born in Connecticut, and my father in Virginia. So it always seemed to me very natural and proper, geographically speaking, that I should be born in Philadelphia. But if it be true, as I am disposed to think, that girls very often resemble their fathers, and boys their mothers, this geographical accident counts for much less than does the fact that I had a New England mother.

In looking at teachers' lives in general it has always interested me to wonder why those particular men and women should chance to be teachers. Was it a mere accident, or was it deliberate choice; or was it a combination of the two, part fate and part volition? In my own case, it seems to me that both forces were at work. In a very deep sense it was all fate and could not have been otherwise, since faith itself—birth and the appointed hour—determined what I am pleased somewhat inflectively to call my choice. In an equally deep sense, it was all volition, since the will, wherever it originally gets its impulses, is the admitted arbiter, the caster of all final votes. At any rate, I like to feel that I am the representative of my ancestors, their ambassador to the present year of grace, but that I have, nevertheless, such large discretionary powers as to make possible some small individual contribution.

It is the time-spirit as well as the blood that determines a man's vocation. Every New Englander has the teaching passion in him: either active or latent. But under one set of circum-

stances the passion makes him a clergyman; under another, a school-master; under a third, a writer. It was with me a matter of a generation. One generation earlier, and doubtless I should have been a clergyman. My forebears for two hundred years back had been ministers in the Connecticut colony. I am afraid that sometimes the preaching habit comes out in their descendant. I even considered for as much as a month or two at a time the propriety of taking Orders. As a young man I had come under the influence of the high church movement. My Puritan ancestors would doubtless have been scandalized by so much show of ritualism. But, looking back upon the period thru the perspective of a score of years I cannot regret that the poetry and beauty of the church service kept alive in me what a stiffer logic might have failed to keep alive—a profound sense of reverence and of worship. It is quite thinkable that these might have gone under in the stress of newly accepted scientific knowledge, and in the dissolution of the more rigid forms of orthodox belief. It happened curiously enough, that during this entire high church period I was reading Spencer and Darwin and Matthew Arnold, that I was studying the various and rather perplexing sciences which go to make up the training of a geologist, and that above all, I was fairly steeped in the creed dissolving thought of Emerson.

I cannot claim any consistency for the thought life of that period. But on the whole, I think that truth had a better chance of ultimately finding me than if I had been more defensibly established.

Religion is so large a part of the present age of a teacher that I may be pardoned for dwelling a moment upon the conditions of that period. The younger teachers of America can hardly realize the very narrow theological atmosphere which prevailed about the year 1880, and especially in so conservative, half-southern a city as Philadelphia. The theological pressure was very strong. The higher criticism was regarded as heretical and dangerous. The new scientific light which followed upon the research work of the middle of the century was held to be more than doubtful. An extreme orthodoxy prevailed in all accredited circles.

It was not the illogic of the old position which first aroused my own doubts, for as a young person I think I could not have been particularly logical. The revolt came from the feelings, from the heart. One was asked quite seriously to believe things of the divine government which no human government would tolerate and no moral individual sanction. The more alert among the younger men of a religious turn of mind were finding the church position too unaccommodating to be permanently acceptable. The doubts raised by one's own heart, and by one's growing intelligence were strengthened

by such gentle iconoclasts as Emerson. The new light was in the open. The old darkness characterized the teachings of the orthodox churches. It seemed less and less possible to rank oneself with the resisting clergy. A generation earlier, these doubts would not have been uppermost. The same impulse which made me ultimately a teacher would then have made me a clergyman. I think the same might have been said of many another young man facing the life problem with any degree of earnestness in those confusing years which began the last quarter of the past century. It was not a lack of religion which kept them out of the pulpit, but an awakened and quickened sense of religion. God was outside, in the world, in the open. Within the sanctuary there was only a memory. Doubtless, some of these objections were theoretical and transient. But I have never regretted that I was not born the one generation earlier.

In addition to this general New England bent towards teaching, there were two very special individual forces at work. These centered in the personality of my mother. As a girl, my mother's one ambition was to teach. Such an ambition was common enough to New England girls in more intellectual families, but in my mother it amounted almost to a passion. Altho somewhat delicate, she persuaded her parents to allow the plan, and to send her to the well-known normal training school at New Britain. I have often wondered what the outcome would have been had my mother continued her course. That she would have been a great teacher, I have no doubt, for she saw things with astonishing lucidity; and, in addition, she had the divine gift of making every one love her. Perception and sympathy make great teachers. As it was, my mother's normal course was interrupted,—by delicate health, I think,—and before it was resumed, fate, in the person of my father, had persuaded her to a different destiny. Her interest in teaching never waned. I believe that she never taught officially a day in her life, and seldom gave my sister and me anything like formal lessons, but she was in effect our education. The opportunity for a highly intellectual life never came to my mother, but the essential impulse was always there. In looking back upon my boyhood I marvel that with the slender means at hand, she accomplished so much. She was fond of all the larger aspects of life, of travel, of horseback riding, of steamships, of music, of the drama, of reading, of the sea, of mountains, above all, of broad-minded and interesting persons. My mother was almost devoid of fear. She was an excellent horsewoman, and rode with perfect safety animals that would have been even dangerous for timid riders. She was also beautiful, and this not only to me, an absolutely devoted admirer, but as well to less prejudiced friends. Together with these purely human qualities, my mother possessed, as befitted the daughter of a long line of colonial clergymen, a very deeply religious nature, and an abiding interest in all the things of the spirit.

In spite of her strong personality, my mother

would have had little influence over me had it not been that I not only admired all she stood for in conduct and ideals, but loved her with a devotion which I may properly describe as boundless. Between us there existed an ideal comradeship which sanctified both lives. A man can never think meanly of himself if he has known the love of a mother at once good and brave and beautiful. While I was still a young man, my mother passed quite suddenly into the undiscovered country, and for some years I remained as one paralyzed. She was but fifty, in her very prime, and had never seemed to us so perfect. When at last the tide of life returned to me, devoid of bitterness but also devoid of the old eagerness, I found that the memory of this unique comradeship came to be a motive power in all my own activities. And gradually a sense of regained comradeship has taken its place among the realities of my life. Even now, after nearly a score of years, I feel the presence of this gracious spirit, and at times can hardly persuade myself that she is no longer in the flesh.

This intimate personal and spiritual bond made it almost inevitable that I should be a sometime teacher and a constant experimentalist. In finally declining the ministry, however, I did not at once take up teaching. Indeed, at college, I remember that I expressly scouted the idea of being a teacher. I never came under the influence of a really great teacher, and was much more impressed by the dreary monotony of the life than by its opportunities. Original research seemed to me not only more interesting, but on the whole a more commendable way of spending one's days. The beauty of the teacher's opportunity has since come to me in overwhelming force, and I count myself happy to have been a teacher for a full dozen years, to have my summer work still, and to have been, I hope, something of a teacher in all my writings. But the old feeling persists that teaching should be one function of a life, not the whole life. It is better to teach intermittently, let us say, or else to teach for a period, rendering one's best contribution, and then to pass on to some other serious occupation. This may be only a modern phase of the old New England anxiety about saving one's own soul; but if so, I should defend it on the double ground that it is a man's prime business to save his own soul, and also that it is only the souls that are saving themselves that can help to save others.

I had meant when I first went to college to be an architect. I think I might have been a fairly good one, for I have some native sense of proportion. This interest in form has never died and has added immensely to the pleasure of foreign travel. I still

design my own buildings and some of my own furniture. I am not sure that these efforts would meet the approval of more thoroughgoing artists, but they have given an interest and reality to my habitations that nothing else could quite give. The sense of color is relatively less developed and more uncertain; and I have noticed a curious parallelism in matters of sound, that is to say, a keener appreciation of rhythm than of pitch. I can detect any jolting in the time more surely than any sharpening or flattening of the notes. This developed sense of form is doubtless connected with the fact that I have what may be called a visual type of mind. Life presents itself to me as a panorama. I remember in pictures. It is also the probable basis of my uncomfortable passion for orderliness. But I never put my architectural pretensions to any official test. At college I met the natural sciences for really the first time in my life, and after something of a struggle yielded to their superior attractions and broader vistas. I went, as the majority of Philadelphia boys who essayed college at all also went, to our home institution, the University of Pennsylvania. I had always wanted to go to Harvard, but it suited the family better to have me remain at home. At the university, I had the good fortune to come in contact with several men born and trained in Germany. Being myself a pronounced dreamer and idealist, this contact with laboratory methods and results was a most valuable corrective, and kept me, I hope, from the looseness of thought which sometimes goes with the dreamy temperament. It seems to me that every student, whatever his ultimate plans, would do well to go in for at least one or two stiff laboratory courses. It does not take long to master the large and pregnant facts in physics and chemistry, biology and astronomy, and they do act as a very steadying ballast when one is embarked on later seas of speculation. My own knowledge of these sciences is still very elementary, but what little I do know has added much to the delight of life, and made the world one of greater order and beauty. The moral effect, too, is bracing. An imagination which ranges over the Solar System has little bent for petty and unworthy attitudes. The great lesson which the natural sciences have to teach is an appreciation of cause and effect, and this appreciation is, I think, a fair gauge of one's intellectual progress.

I graduated a few months after I was twenty, too young I think by at least two years, but the performance was in no way remarkable and indicated no precocity. The entrance requirements were much less exacting than at present. What was of interest as having a large influence upon my own subsequent teaching work was the curiously fragmentary

preparation that preceded college. In all my life—and I was then sixteen—I had been to school but two years. This was not the result of any definite plan on my parents' part, but was rather the accident of delicate health. At sixteen, I was a curiously undisciplined person intellectually speaking, but a very alert one. For one thing I was untired. I had all the enthusiasm for study which the average boy has for play. I had been to school so little, had had so little of the dull grind which then befell the luckless schoolboy, that study was to me the luxury, and I jumped into my college life with a zest which the better-prepared but less enthusiastic boys of today can hardly appreciate. The actual work of college preparation occupied but five months. I had not been inside of a school for something over a year. I had read. I had traveled a bit. Above all, I had been with my brave and beautiful mother. I began the work in January and the examination came in the following June.

I attended the so-called university class in one of the city grammar schools. I was fortunate in having a devoted master who treated me quite as a private pupil. His assistants were equally kind. I was not, I think, a lovable child, certainly not what I should now consider lovable, and I was at sixteen very much of a child. But I probably came as a rather refreshing specimen of the untired and still enthusiastic student. My comrades of that period had been to school for many years, and the most of them looked upon the whole process of education as both questionable and dreary. They knew vastly more than I did, but as I recall their attitudes, and compare it with my own joyous, intellectual curiosity, I am humbly grateful to the kind destiny which kept me ignorant but left me alert. At that time, however, I felt it a distinct disadvantage and rather pitied myself for being such an ignoramus. In particular, I remember looking with wonder and admiration upon certain boys who could parse with some degree of assurance. Parsing was to me a veritable black art, and I never mastered its mysteries, if I ever mastered them at all, until well into the college period. I studied French outside.

At school, I had the usual English branches, together with a couple now seldom separately taught—Greek and Latin etymology and ancient geography. We studied no other Latin and Greek, and no German. In mathematics, we had advanced arithmetic, elementary algebra, and plane geometry—a fairly stiff bit of work for five months. The geometry bothered me, and so I hit upon a device which has ever since struck me as foolish beyond most boyish devices. I must have had a good memory, for I learned the first four books of Chauvenet's geometry literally by heart. My sense of form made it easy for me to memorize the diagrams. I followed the exact lettering. A modern teacher would of course have detected so dangerous a practice and put a summary stop to it. If my own literalness was noticed, it was doubtless counted admirable scholarship and stamped me as a very good little boy. By this device, I might have passed a creditable entrance examination in

geometry without knowing the first thing about the subject. As a matter of fact, I believe I did understand all the propositions but one, and that came to me after I got to college. Afterwards I became so interested in the whole subject that I went in for the prize in modern geometry, and more surprising still, won first place.

The entrance examination came the middle of June. My father meanwhile was having rather serious business troubles, and the burden of my college expenses promised to fall for the most part upon my mother. In this emergency the chance to compete for a four-year scholarship was most welcome. The examinations were in some respects a trifle more difficult than those provided for the regular matriculants, but they must have been easy enough in all conscience, for I won the first scholarship and was proud accordingly. I mention the fact, not because I am still proud, for in reality the other boys were not dull, and I assuredly was not clever. I mention it solely because of its bearing upon my later educational views. The winning of the first scholarship was really a triumph but it was the triumph of a method, not a personal triumph. Before beginning the preparatory work, I had never been to school for five months consecutively. My total school life, then less than two years, was made up of very small fragments. Yet in five months it was possible for a delicate, technically ignorant boy to outstrip boys who had been to school for six or eight years continuously. The whole secret, I think, lay in the fact that in my case the spirit was involved, the heart, and such knowledge as I possessed was vivid and real. In a word, intellectual curiosity had never been killed, and the motive power for study was still strong.

In those early days, 1878-1882, there were no such things as electives as we now understand the term. In the scientific department, we all had the same studies for the first two years. At the end of that time, we all specialized, meeting for the culture studies, but separating into groups for the more special studies of our prospective professions. The selection was made at the beginning of the junior year. I shall always remember the stress and strain of that long vacation between the sophomore and junior years. I spent the greater part of the vacation with my mother and sister among the mountains of western Maryland. I was sadly torn between the rival claims of architecture, of geology, and civil engineering. I spent many perplexing days wandering over the beautiful hill country that surrounds McHenry, or riding hard, sometimes alone, sometimes in company with my mother. The experience gave me a large sympathy for the vast army of young men, who, with wholly insufficient knowledge, are called upon to make these fundamental and far-reaching decisions.

The final decision in my own case was for geology. The feather that turned the scale was the reading of Sir Charles Lyell's "Elements of Geology." It is published in two large volumes, bound in bright green, and has ever since seemed to me a fateful book. In reading Darwin's "Life and Letters" several years later I was

interested to find that the same book had practically determined him upon a scientific career. In my own case the determining cause was really subjective. It was not alone or even mainly the fascination of geology itself. The decision resulted from a study of the requirements of the geologist as outlined by Lyell. I read with enthusiasm that to be a good geologist, one must be proficient in eleven major branches! You will find them enumerated in the early part of the book. It was highly characteristic that such a consideration should settle the matter, for I have always been more enamored of the forest than of the trees.

In many ways it was a jump in the dark. I was much too young and inexperienced to make such a grave decision. That it turned out to be a fortunate decision hardly saves it from being merely a happy accident. My own strong impulse now is to keep boys from just such premature decisions. Unless some particular bent is so remarkable as to indicate undoubted genius, the wiser undergraduate course seems to me a general balanced scheme of study of the broadest possible kind. One must taste a varied knowledge before pronouncing for or against any particular branch. Modern life is far too complex to allow a mere boy to pass sound judgment upon it and decide his own acceptable share in its activities.

The college life of that period now looks distinctly old-fashioned. Having chosen geology, the next two years were given over to the prescribed studies of the course. In view of my own inexperience, I think this was for me the best possible plan. Geology in its broader aspects, crystallography, mineralogy, metallurgy, general and analytical chemistry, physics, civil engineering, drawing, mechanical engineering, a touch of paleontology and forestry, mathematics into the calculus, together with French, German, English, logic, economics, and few paler culture studies gave us a many-sided, and I think a wholesome, introduction into the more systematic life of the spirit.

We went to the university every morning at nine and worked usually until four o'clock, sometimes until six. Saturday mornings were given to surveying and laboratory work. It was a fairly strenuous life, but I cannot remember that we were over-worked. For one thing, it went with a very simple home life. My father had a deeply rooted aversion to weak eyes, and partly on account of my not very robust health, and partly to avoid the possibility of a red-eyed son, I was never allowed thruout my whole college course to study later than ten o'clock! It seemed to me a great hardship at the time, but I have since been very grateful for it. From what I have seen of modern undergraduate life at Harvard, I think that

very little study is done there until *after* ten.

The course in geology was undoubtedly a hard course, for it involved such long hours in the laboratory and drawing-room, and homework in so many and such varied branches. It was only the great simplicity of the home life that made such an exacting regime wholesome or even possible. I studied every night except Friday, and then we often had a small company of young people at our own house. Very rarely I went to a theater or to a concert. It amuses me to recall that with such an abstemious life I should have felt it necessary to observe Lent and practice such small austerities as going without sugar or butter. On Ash Wednesdays we Episcopal boys were rather the envy of the others, for the university granted us a holiday on condition that we attended morning service. It was a simple, industrious life, and slow as it might appear to present college boys, it was on the whole, a very happy life.

The great source of my own happiness was, of course, the ideal comradeship with my mother. It was literally true that she was interested in every detail of my life. Altho quite delicate herself, she was almost masculine in her contempt for all weakness and unmanliness. Such great love as she gave me might easily have blinded her to my otherwise very obvious faults, but I cannot recall a single instance where she lowered her standards or pampered me in any way. This is the more remarkable because I was a timid, shrinking boy, and must have been quite far from her ideal of what a boy ought to be. She wanted me to be strong and brave and good, and wanted it with such intensity, that she allowed, even encouraged me, to undertake adventures which must at the time have filled her with grave anxiety and would have appalled less sturdy mothers. As a teacher of boys I have come in contact with the mother-love in many forms and have come to rank it as one of the great forces of the world, but I have also come to discriminate, and to see that there is a mother-love which makes for strength, and a mother-love which makes for weakness. The one is so deep and wise that even the teacher catches only occasional glimpses of it. The other is one of the genuine obstacles with he must reckon. My mother had never read Emerson, I think, but she literally exemplified his great doctrine and feared nothing but fear. If I am myself reasonably devoid of fear, it is due wholly to the fact that my mother absolutely declined to allow it in either my sister or me. It was, in fact, my mother's help and sympathy that enabled me to pass thru college with credit, and to win first place eight out of the twelve terms which then constituted the undergraduate four years. This comradeship remains always as the great light of those boyish days, as it was of my early manhood. One who has never known such a perfect friendship has not known what it is to live; and one who has known it, can never again be poor, for he has at least the memory.

Looking back at my own college life and regarding the current college life around me, I cannot help feeling that despite its undoubted

THE LATE FRANCES MARY BUSS

The famous English teacher whose life and labors have left a deep impression upon the education of women in her country.

A biographical sketch of her appears in *Educational Foundations* for October.

beauty, it is eminently qualified to make boys very selfish. I am appalled when I recall my own selfishness. The duties are so exacting that by common consent the college boy is practically excused from all other duties. When he is not studying, it is the current theory that he ought to be playing. I was myself safeguarded on all sides. Other members of the family saw unwelcome visitors; other members of the family attended to the necessary errands of the household; other members of the family sacrificed their own time to those numberless concessions which even a well-to-do family must make to the practical side of life, and all that I might be spared and that my own time might be harbored. I did not do my proper share socially. The hopelessness of the situation was that none of us saw it, not even my far-seeing mother. I think I counted as a model son. I mention this aspect of college life, this grave defect from my present more social point of view, because I see the same thing going on all around me. I can see very plainly now that this complete absolution from all social and family duties gave me, all unconsciously, wholly false ideas of the value of my own time, and a much too great impatience of any interruption. It has taken many years to overcome this feeling, this quite unpardonable selfishness, and doubtless it will never be completely overcome until some succeeding incarnation. It is really too bad to teach boys and girls everything except

the one supreme art, the art of daily living. As then conducted, and as now conducted, college life does tend to make young people selfish. With the growth of a more social conscience, we shall soon be obliged to be finding an effective way out of the difficulty.

But this shadow on my college life is only a shadow in retrospect. I did not see it at the time. I was conscious only of my happy home life, of my genuine delight in all intellectual matters, and of the very wonderful adventures made possible by the long vacations. But of these latter I must speak in the next paper.

Seed Collections for the Schools.

By F. L. STEVENS, North Carolina College of Agriculture and Mechanic Arts.

MANY people are familiar with the common forms of plants of the door-yard, garden, and neighborhood when these plants are in full foliage or bloom. Some few people can recognize these same plants in their winter condition when stripped of their foliage and thus destitute of what is perhaps their most characteristic mark.

Few people can recognize even the most common species of wild plants from the seed alone. Still from the agricultural point of view the recognition of seed is of high importance, and from the point of view of pedagogy it has fully as high a value in arousing interest, training observation, developing judgment, etc. as does any other phase of nature study work.

Seeds are beautiful; beautiful in coloring, marvelous in sculpturing, and often bizarre in form. He who is pleased to regard every beauty of earth as made for the joy of mankind will find much to explain concerning the exquisite ornamentation of the neglected and usually unseen seeds of our wayside plants.

The instinct for collecting is inherent in all children, and this instinct may be utilized to good advantage in turning the attention of the children toward seeds. Let each individual make a seed collection, and let them contribute to a school collection. Collect seeds of every plant available. In many cases it will be difficult to discriminate between seeds and fruits. In such cases save both seeds and fruit, and even the investing part.

This you will do, for example, with the oat. The oat as found on the market consists of the grain, surrounded by much chaff which constitutes the floral organs and bracts of the oat blossom, and the kernel which is really a fruit, consisting as it does of ripened ovary and its contents, (in this case a single seed.) It is manifestly impossible to separate the oat seed from the ovary which encloses it. It is likewise ill-advised to exhibit the oat grain without exhibiting also some oats as ordinarily found on the market.

With many plants it will be necessary to dry the seeds before laying them away, otherwise they will mold. This will be true of all seeds coming from juicy fruits such as the apple, grape, tomato, cucumber, etc.

Many seeds, such as those of grasses and most herbs will not need to be dried at all. In the case of small berries, like the hack berry, barberry, grape, etc. it is well to preserve with the seed a dried specimen of the fruit from which the seed came.

In every case save a specimen of the plant from which the seed is collected (unless you are definitely and certainly sure that you know the name of the plant), the date of collection, and the name of the collector. If you do not know the name of the plant assign a number to the seed and the same number to the plant, and then endeavor in some way to find out what the name of the plant is. You will find that there are very many plants which you do know and from which you can get seeds properly named without difficulty. For example, the catnip, burdock, thistle, wild carrot, clover, timothy, grass, oat and many other plants may be found nearly everywhere and are known by nearly everybody. You will be surprised upon examining the catnip to see what a beautiful seed it has.

In case you do not know the name of the plant some nearby farmer, or gardener or some one else may be able to help you. If you can not name your plant otherwise, secure a good specimen showing flower, leaves, and if possible, fruit, press your specimen and, with a few facts concerning its height, color and general appearance, send it to the Botanist of your Experiment Station. He will be glad to name the plant for you. Encourage the children to secure a collection of seeds of both cultivated and wild plants.

Practical suggestions for storing and keeping seeds will be described by Mr. Stevens in Teachers Magazine next month.

Heart Cultivation.

It seems to me that too much which is written for the aid of teachers in their work is adapted for mind cultivation, leaving out of perspective the heart cultivation. Too much stress is being placed upon "marks," "grades," "ranks" and incentives in general. These are useful, but they should not receive all the attention of the teacher, causing her to forget that she is doing a work for eternity.

The pupil, then, must see not the school incentives only. He must get a better view of his duty than the winning of a certain grade in a certain class. Let him see the beauty around him and feel that God lends it, and requires him to do his best in life. Something which will awaken the noblest attributes of the soul must be given him.

Every day some of the old folk songs should be sung in school, their sweetness mentioned and their beauty pointed out. These will awaken the sentiment. "Flow Gently Sweet Afton," "Home Sweet Home," "Annie Laurie," and many others are appropriate.

The school-room should be adorned with copies of masterpieces, and not with the meaningless, worthless pictures seen in so many rooms. The Angelus, St. Cecelia, The Sistine Madonna, The Soul's Awakening, Pharaoh's Horses, The Horse Fair,—are all highly desirable and should be

Robbie and the Others: Tales of a Real School-Room

By M. A. Grant, Denver, Col.

Chapter II.—In School and Out.

ONE morning soon after Robbie's entrance into the school, the lowest division was again on the floor, and again Anne stood before them, a crayon in her hand, intent on augmenting their ever increasing vocabulary with the word "cow." An unexpected teachers' meeting the afternoon before having prolonged the day until six o'clock, little time had been left for putting the next morning's work on the blackboard. But if there was any one thing upon which Anne prided herself more than another it was rapid sketching upon the blackboard. So with a few telling strokes she drew what she thought would do very well for an illustration of the new word, taking a rear view of the animal as being most easily drawn in a short time. Then, turning to the children, she asked, "What is this picture on the board?" The perfectly blank expression on every face was discouraging.

"Why children," she said with spirit, trying to arouse their attention, "I want you to look at this picture and tell me its name." Still the same unmeaning stare, with no sign of recognition, "Why, surely, you can remember a large animal that looks like this. Sometimes it is all red. What does it make you think of?"—speaking in her most wheedling voice, and giving a sharper finish to the points of the horns as she waited a minute for an answer, which, however, was not forthcoming. Then with decision, and no smile she said, "Now, someone must tell me right away, what this makes you think of. You are all thinking of something, I know. Tell me what it is? Tell me," repeated Anne, insisting upon some answer to her question.

At length Robbie, with much hesitation and uncertainty, for him, raised his hand.

"Well, Robbie," said the teacher.

"I think it looks like a devil," he ventured.

Very much shocked, Annie surveyed her work of art in dismay. "Oh! no! it is something I thought everyone here had seen! Isn't there someone here who has seen a cow?"

"My aunt gots such a cow in the country, whole far from here," said Robbie. "I go by her with my ma, next summer in vacation. Then I can see it."

"Well," said Anne, quickly producing a large colored picture of a cow, "This is the way it looks when you can see its face and its eyes. All look at it and try to remember what it is until you see a really, truly, live cow, all covered with short, red hair." In her earnestness, dropping into their way of speaking, she continued, "As big as a horse, with sharp, white horns in its head."

These blessed children have never seen a cow, thought Anne, as she went on with the lesson.

The calisthenics ended with a pretty march, increasing in intricacy from week to week, and much enjoyed by all, especially, when as on Fridays they each carried a flag and marched in

time to Heine Dunke's drum, Tressa Esterhazy's triangle, and Leonora Whitehead's tambourine, which held high above her head, she shook and pounded, marking the time of the music with exact precision.

Leonora enjoyed the distinction of being the only African in the cosmopolitan class. The unusual crinkles in her black hair tied in many places with gay plaid ribbons, and her large shining eyes, which she delighted to roll in a way vainly imitated by the others, together with her picturesque possibilities, made her an object of much attention, and in some ways the most attractive member of the class. She could read only a word or two out of the entire number at the command of the majority of the class, altho she was eight years old. But she could sing, dance a cake walk, and stand for a pose better than any one else, while her unvarying good nature, and obliging disposition made everyone like her.

She had special duties of which she was very proud. It was she who kept the palm watered, and could wash its leaves to a polish better than any other child. And she delighted to put the rubber bands around the flags after they had been used, and to replace them in the closet. She so thoroly enjoyed doing the things she could do, that no one laid it up seriously against her when with splints, beads, or balls before her, she informed the rest of the class that $3+3=10$, or that $6-3=8$. Leonora was devoted to the school, and would have regarded it as a sad calamity to have had to stay at home for even a day.

* * * *

Nathan Jariwonski was also over eight, but he was so small that he looked younger than some of the other children who were not yet six. It was Friday. The calisthenics were over, and the march was in full progress, when "Ouch, Ow ooo! he kicked me hull in hint!" roared Robbie, who for some time had been very docile, but apparently was experiencing a relapse. "Oh," thought Anne, "if only 'gots' and in 'hint' could be obliterated from the vocabulary of this school!" Only that morning a girl in the hall from a higher class had asked her how to spell "in hint."

"Taint so, he lies," promptly spoke up the boy behind Robbie.

"What is it? What is the trouble?" inquired Miss Howard, leaving the piano and coming nearer the storm center.

"He all the time kicks me in hint," repeated Robbie.

"Taint so, at all," declared the other boy.

"Did you touch Robbie in any way, Nathan?" asked the teacher.

"Only shust a little, like dis, see!" My shoe went so, like sliding, and I couldn't help touching him."

"Well, Robbie, Nathan will have to be more careful," said Anne. "But I am sure he did not hurt you, did he? and then, just stepping a

little on your heel is not like kicking you, is it? Try it again and be more careful."

So the march went on, and with it Nathan, and the rest.

For some time, Robbie had lost no opportunity of convincing his teacher of the complete revolution that his mind had undergone in regard to his liking school. From being an outsider, and a newcomer, he seemed to consider himself established in a position of a sort of commander-in-chief of the host. Some of the other children resented the superior air with which he took possession of the field, and almost daily. Anne was called upon to settle difficulties arising from something he had done in the halls or on the play-ground.

The principal of the school soon made his acquaintance, as again and again the other boys reported Robbie for "trunning" them down, or "trunning" them with stones, or, more and worse than all the rest, "pushing a kid by the squirt wagon," it being a high crime and misdemeanor to run after any wagon, or ever to "catch a hitch," and to be pushed along where a water wagon was doing its full duty was an indignity not to be overlooked. So the principal "talked loud" to Robbie, but being unwilling to punish, or severely reprimand so diminutive a specimen of humanity, sent in to Anne, wisely judging that she could better enforce discipline or settle any trouble in that quarter than anyone else.

As in most primary classes the real government of the children indoors, and on the playground, usually devolved upon the class teacher. In a more advanced grade a child would be punished, suspended, or possibly expelled for approximately the same trying behavior that in a class of younger children would have to be met, and successfully coped with, by the teacher. This is perfectly right, and as it should be, but occasionally, when some child, ill-tempered or nervous, and ungoverned at home, showed by his conduct inherent "ways that were dark," for a time a cloud would dim the bright vibrating atmosphere of the school, and sorely try the soul of this resourceful young woman.

But as for Robbie, on this occasion he was not a bad boy, he was not even naughty. The boy he had so unceremoniously laid low, and inflicted with an application of water from the "squirt wagon," was much older and larger than he, and one who had made a point of bothering him, calling him "baby," knocking off his hat, and in other ways teasing him, until Robbie lost no chance to retaliate in the best manner that presented itself. It happened that in a moment of good fortune he was close behind his tormentor, who was venturing as near as safety would permit to investigate a watering cart then in a momentary state of inactivity. The boy had intended to jump out of the way in time to avoid a ducking, but somehow Robbie pushed him, and he fell just right to get the full force of the water as it came bursting from the retreating cart. When he was able to think, Robbie was well out of reach, and Reinhold was fairly drenched. The principal soon knew

that he had a duty to perform. Robbie was sent into his teacher, and with him the boy with the grievance and wet clothes.

Robbie was most fairly dealt with on this occasion. Reinhold was pretty well known to other small boys besides Robbie. This was by no means his first appearance before Anne, who now proceeded to make unpleasantly pointed remarks to him about the effect of the little boy's conduct on one day certainly coming back to him in unexpected ways on some other day, well rounded off with good advice to both.

Somehow the impression left on Robbie's mind was that Teacher was good to him. He felt that his rights were being protected, even while she was vigorously reproofing him, and using the golden rule to emphasize her remarks and make them clear. The watering cart episode, together with what teacher had said to Reinhold about ever again interfering with him at any time or place, settled future safety for Robbie as far as that boy was concerned. For though Teacher was kind and pleasant to the children, almost never being cross to any of them, yet when there arose a sufficient cause it took a very little time to have a boy's mother sent for. This was very apt to be followed by painful moments for the boy, for mothers do not always exclusively practice moral suasion, however strong may be their approval of that method, and Teacher had said the very next time she knew of Reinhold's molesting Robbie, or any of the boys in her class, she certainly would send for his father to come. Now in both boys' estimation fathers could be much more dangerous to one's personal comfort than even mothers, and the children said Reinhold had such a "heavy father."

Paper Cutting: Fable of the Crow and the Fox

What the Woman Teacher Needs: A Term Away from Home

By MRS. R. A. GRIFFIN

[Daughter of a Teacher, ex-teacher, wife of a teacher, and mother of three teachers.]

These eminently practical suggestions as to what a teacher needs to carry with her when she goes away from home were written by a woman whose daughters have many times had to be made ready for their work; she has tried it for herself as well, and knows from personal experience exactly what is required. Altho the article was received too late for insertion in September, it is given this month, for Christmas vacation will soon be here, when another term must be prepared for, and several of the suggestions can be carried out in leisure minutes outside of school hours.

SUMMER vacation is over for the prospective teacher and she must form her plans for her year of hard work. When she receives her notification of her appointment to a position that she has longed but hardly dared hope for, she feels that anxiety is all over for the present, particularly if she is entering upon the work for the first time. She has passed successfully the day of her graduation, her teachers' examinations, and the trying ordeal of getting a situation. All that is before her still is to make her work a success.

The position seems a lucrative one, for she has never had the care of providing wholly for herself and cannot know how expenses multiply when one is away from home. Now that preparations must be made, she finds that there are problems yet to be solved. What must she take with her to her new place of work to make herself comfortable and respectable, and how large a sum of money will be required till the first instalment of salary is paid?

She may have spent some years of her preparation at a boarding school, and may have ideas about the adornment of her room, and what is necessary for her wardrobe, but many girls have received their education at a high school and are leaving home this year for the first time. For such these suggestions are especially intended.

The first thing for you to decide is what you will need for your room, to make it as homelike and cheerful as possible, for here you must spend most of your sleeping and waking hours when not engaged in school-room work. You will feel when you have entered the room that is to be yours for the whole year, and have shut the door, that all the joy and brightness of the past are shut out forever, but you will soon feel that it is home, and will enjoy the quiet and seclusion after the annoyances of the day.

I would advise taking as many as possible from your own room at home of the little adornments that can be carried in your trunk; also, if you can, a low, easy rocker and a small book-case, or book-rack, that can be sent by freight for a small sum; or perhaps a folding book-rack packed with your books and other necessary articles that cannot be crowded into your trunk, in a box to be sent by freight.

Be sure to have at least two sofa pillows, for if you are not fortunate enough to have a couch in your room you will find them very restful when you are too weary to sit upright while at

work; or perhaps slipped into a pillow cover, they will serve for use at night, to replace or supplement pillows too large or too small.

If you wish something dainty and fresh for bed, bureau, and commode, and that can with care be used thru the whole term without laundering, get fifteen yards of white dotted muslin. This can be bought at the upholstery departments for twelve and a half cents a yard. A whole piece of lace edging can be bought for fifty cents. Make the bureau and commode covers for large size, bureau forty by eighteen inches, and commode thirty-two by eighteen inches. If a little too large, they can be folded under at the back. Sew a ruffle three inches deep across the front and sides, with the lace edge stitched onto the ruffle (by machine, so as to make the work as little as possible).

Take two widths of the material for the bed cover, making it sixty inches wide and two and one-eighth yards long; and sew a flounce fifteen inches deep around three sides. (If yours should be a box bedstead, the flounce at the foot would not be needed.) Leave it open at each side of the foot. Then make a flounce to cover the pillows twenty-seven inches deep and forty inches long. Turn down four inches for a hem at the top and stitch the lace edging all around. Run a tape across the top, leaving a heading three inches deep, and gather it up the width of the bed. A colored cambric under muslin makes it very dainty and pretty.

The addition of a few pictures, even cheap copies of famous works of art, and the photographs, pin trays, and little bric-a-brac from your own room at home, will make as attractive and homelike a room as you can wish, whatever the original furnishing may be.

The Teachers' Wardrobe.

The wardrobe is next in order. If you have been very conscientious and economical, and

have spent your summer at home "brushing up" in the studies you expect to teach, you will find the task before you an easy one. Your spring outfit will serve you very well for the autumn, with the addition of one tailor-made suit of smooth, one-toned material for church and street, and if possible two dark shirt waists, one of inexpensive silk, the other of soft wool of serviceable color. The cotton shirt waists of the summer will be needed for the early fall, but for dull and cold days you will find the dark waists comfortable, and they will reduce the laundry bills, an item of importance to a teacher.

If, as is the case with most girls, you return from a summer trip with your one tailor-made suit too shabby to be worn outside your own town, I would advise the purchase of an inexpensive jacket. With this, one tailor-made skirt and jacket, and one wool shirt waist suit you will manage very comfortably until the next vacation. Your summer silk or a dainty lawn or muslin, or your graduating dress, if this is your first year of teaching, will be suitable for any evening company you may be expected to meet. If you are fortunate enough to be able to do your own sewing, your expenditures for dress will not be very heavy.

The low prices of ready-made underwear make that item one easy to dispose of, except that you will bear in mind the carelessness of laundresses and the lack of the "stitch in time," which only mothers take note of till one learns its importance by the experience born of necessity. All that remains to be considered of your necessary preparations is the neckwear, and let me urge upon you the importance of keeping that immaculate. The necessary stocks and collarettes can be made very inexpensively by purchasing the materials and making them yourself. The item of laundry can be greatly reduced if you can send the collarettes home each week, with your handkerchiefs, to be done up with the home washing.

A square of heavy cardboard covered with outing flannel will be of great service to you for pressing or ironing little things in your room. Perhaps you may have a kindhearted landlady who will occasionally loan you a heated flatiron. If you have gas, you can easily heat an iron for yourself, or you can purchase a small alcohol lamp in which you can burn wood alcohol, which

is cheaper than the common alcohol, but unsafe for any internal use. This would enable you to save a few pennies by laundering your own collars.

The subject of dress may seem to you unimportant, in comparison with what will be expected of you in the matter of education, natural ability to teach, etc. But pupils, especially the younger ones, take more notice of their teacher's dress than she is aware of, and often their first likes and dislikes, before they have learned to love her, depend upon her personal appearance, and more upon the little accessories than upon the dress in general.

A successful teacher of experience said she had never worn a gray dress in the school-room since she began teaching, for the reason that the teacher with whom she spent the first few years of her school life always wore gray. She could never think of her without the association of that hated color. She said she always kept a good supply of bright ribbons, and seldom wore a new one without seeing a sparkle of delight

in the eyes of some of her little folks.

You must keep your own self-respect. The knowledge that you are neatly and appropriately dressed at all times will be of more moral support to you than high mental attainments with careless manners and an untidy appearance.

Visits to Teachers' Workshops

A School Cottage.

DOWN at Augusta, Georgia, the pupils of one of the public schools have a little house all their own. There the girls can "housekeep" and learn to be tidy little housewives, while the boys are taught gardening in their own little garden, or carpentering in making repairs and doing "odd jobs" that need attention inside the house or out.

Mr. Lawton B. Evans, superintendent of the Augusta schools, says of this home, which is the property of the Fifth Ward school:

"Just in front of the public school building we have rented a house that was formerly occupied by the family of a mill operative. The plan of the house is this: three rooms, one behind the other, and a wing-room off from the middle room.

"The front room has been fitted up as a reading-room, with a book case and a table of magazines and games, comfortable chairs and a cosy corner, appropriate pictures on the walls, dainty, simple ornaments, windows with white swiss curtains and white shades. The children love to come to this room, because it is "pretty," as they say, and because there are interesting books to read and games to play. Here they are unconsciously being trained in the proper conduct of a broader social life than they have before known.

The room just back of this is the dining-room. It is fitted with china closet, buffet, table, and

chairs, and a few well-chosen pictures and ornaments. This room is a delight to the children and here they are trained in the art of laying and serving a table, and in graceful conduct at the table.

"The rear room is the kitchen; cut off from one corner is the pantry, and here are kept the groceries. In the kitchen is a small coal stove, a sink, a large table, covered with white oil-cloth, and a few chairs. At the window is a

The School Cottage.

muslin curtain, and the walls are white. Here the girls are trained in cleanliness, economy, and practical cookery, with a foundation of the scientific principles that it is wise for all to have. The object of this department is to give the proper ideals for wholesome, simple living, and to make the work educative, to develop the *why* as well as the *how*.

"The wing-room is the sewing-room. In this a machine, a cutting-table, chairs, and work cabinet. Here, thru the medium of practical sewing, the children are developed intellectually, and trained in manual skill.

"In the small garden around the house the boys have had some training in horticulture.

"The boys have been the problem. In the school building some work with sloyd tools has been done, but the equipment is far from adequate, and it is here that much thoughtful experiment will be necessary.

"In a word, the object of this enterprise is to establish an ideal

A Group of the Cottagers.

home for the children in this section, an ideal towards which they may hopefully aspire, and thru this ideal to develop a more wholesome and intelligent citizenship.

"The teachers in the Fifth Ward building have undertaken to give instructions to the boys and girls of the upper grades in certain simple but valuable household and industrial matters. The house is open every afternoon of school days and the teachers take the classes in turn. Girls are taught plain sewing and cooking, and the pro-

prieties of the table. The boys are taught wood work and gardening. The reading-room is open for reading magazines and books, and for playing simple games. It is intended with simple things to teach the lessons of cleanliness, hygiene, daintiness, and beauty, not providing more than the average man and woman can have in their dwelling. The pupils have responded to the work of the home with great delight, and its progress has been highly satisfactory.

Mary Kingwood's School.—Story of a Teacher's Success

By Corinne Johnson, Pennsylvania.

(Continued from last month.)

The First Month.

IT was never a matter of concern to Miss Kingwood to find something to talk about. One child had a pet at home, another had seen a squirrel in a tree top the day before, this one had been to the brook and had seen the little fishes swimming in the clear water, and that one had some equally interesting experience to relate. Every one was eager, and some of them insistent, that he or she might express that which was urging for utterance. And the teacher so wisely directed this all-inspiring interest that it bore no semblance to that interest (?) which formerly hung over, and in some schools yet abides with, the everlasting story of the cat and the rat, whether those in themselves interesting creatures be in the hat or on the mat, or elsewhere.

In short, every "general information period," as one judge of good schools sneeringly called these sessions of "the congress of the children," as a more far-sighted one put it, was a period of most valuable legislation. In this congress hour Miss Kingwood might well be counted a child in her simple manner, but wisdom in simplicity marked her every action. It was an hour of intense interest, and everyday when this congress was in session, the living, urging interest was so intense that "mats" and "hats" had no place in the deliberations, at least the reports and the speeches bore no trace of the influence of such inactive objects.

Miss Kingwood ventured the explanation to me that this was because there was too much of the real thing in their cat stories and rat stories to allow conventional situations to enter into the discussions, and the way she said it, led me somehow to feel that she knew what she was talking about. She told me that once in a formal school she had asked a six-year-old boy if he could spell "cat," and he replied with just a bit of disgust in his manner, "certainly I can, I learned that years ago."

When this term of school of which I am writing began, the flowers were

in bloom, many of the lovely fall varieties. The fruits were ripening, and here and there a leaf had received the tints which always carry with them a tinge of sadness.

Miss Kingwood one morning told them that these tints were a wireless message from a very old and respected king called Jack Frost. This was only at the beginning of the vague talk of sending wireless telegrams, but it serves to show how this teacher lived in the present and linked the living realities with the beautiful imageries ever so dear to the human heart. She said that only very wise people could read the message in the colors of the leaf, but that when one became wise he could always find in them the words "cold weather is coming," and little Tom Baker immediately wrote on his tablet an order to "Mister Santa Claus," that he needed a new sled this winter.

This letter, coming to the teacher's attention, became common property by her writing it in large letters, correctly spelled, on the blackboard, so that all might see and understand, even if they could not spell out the words. Miss Kingwood told so kindly how the child heart uttered its desires to the good old saint, and the

Boys at Work in the Garden Connected with the School Cottage at Augusta, Ga.

little ones did not need to know the letters, for universal language is not confined to Roman script, and every child in the room put into this universal language a message that went up from the leaping heart to the source of every good and perfect gift. Paradoxical as it may seem not one of these messages had a trace of Tom Baker in it, yet every one of them was all Tom Baker.

Tom himself had a copyright on the letter, which he kept ever after among his most treasured possessions, but every child grew in this hour by eliminating "sled" from the equation and substituting "doll," or "hood," or some other ideal gift that filled the life that created it.

The teacher's way of putting it was that she would rather improve an opportunity to draw the child gently away from his desires by putting things in relation as nearly as may be,

formal instruction was about the apple, because the teacher preferred to be practical rather than poetical. She approached this lesson on the presumption that all children know something about the things they eat and wear, and out of which houses are built, "but," said she, "some of these dear little ones have not yet been touched by the wand of beauty. Some of them know only the animal needs, and I must of necessity talk to them of food, clothing, and shelter, but by and by you will see them climbing the heights.

That was a favorite expression of hers when she witnessed their aspirations. "Climbing the heights!" To hear her speak those words was to be thrilled thru and thru and she said them often to the children and somehow they seemed to understand. Indeed, I believe it was a phrase for her to conjure by.

But the apple, I almost forgot about it. It was round, red, and smooth. It served for food lessons, for a geography lesson, and before they were thru with it, for a temperance lesson, too. Miss Kingwood in speaking to Tom Baker one day, said, "Don't worry about strong drink, Tom. Be sure you know exactly what Tom Baker is worth and you will not have any time to think of hard cider."

It happened that day that Miss Kingwood was standing near Tom's seat and somehow his eager sparkling eyes were looking deep into hers. As she was about to give Tom the message, both her hands were brought lovingly to the sides of the curly head as she pressed his rosy cheeks, and by that act pressed home to the little heart the worth of Tom Baker. Tom got the meaning—rough, rollicking Tom, unruly Tom, who knew little of kindness, looked into the teacher's eyes again and said, "Not what goes into the mouth, but what comes out of the heart," is that what you mean, Miss Kingwood? And as something bright spark-

Part Owners of the School Cottage at Augusta, Ga.

than to set a hard and fast rule that December and not September, is the time to teach about Christmas, and that since the Christmas lesson is in the December plan there is where it must be taught. "True," she said to me one day, "it is somewhat easier to give the lesson on corn in the June time when the corn is growing in the fields, but sometimes things don't fit, and I would sooner make a corn field in an old box than to spoil a lesson by fixing a special date for it. Nature does not give us advance notice of our great experiences, and to me it seems that the spiritual growth of children must come without any pre-arranged plans. Pre-arrangement is all right for the multiplication table, but multiplication is another thing, don't you think?" And I did think so, wouldn't you? I said to the teacher, "You must believe in the new method called nature study," and she replied, "What else can a child study?" And I thought some more. I referred to the ripening fruit. The children brought in apples. The first lesson which in any manner took the nature of

A Sewing Class at Work in the School Cottage, Augusta, Ga.

led on the teacher's eyelashes, she replied, "That is it, Tom, and the beauty of it is that what comes out of the heart determines what shall go into the mouth. It is the heart, Tom, that I was thinking about."

Tom understood, and so did every other child in the room for had they not already learned that these messages were for them as well as for Tom?

The formal work of the school was not neglected, and of course the reading of the script on the blackboard was a most important and interesting exercise of every day's work. The teacher used the idiom "I see" very often, because she said it was the individualizing of the child after all, that was the work of the school. A long list of names and words used for names were learned in connection with these words, and the forms of the nouns, pronouns, and verbs were changed according to the various modifications of those parts of speech; but no child in that happy company ever saw those grimy skeletons labeled "noun," "pronoun," "verb," or any of their hideous brood.

Back in the busy workshop of her brain the teacher was shaping plans which she knew would bring into the consciousness of the little ones the living principles which she recognized as "parts of speech" and which she knew they would recognize when the time for their appearance should come. In this language work the one thing always present in the ideal child-student is the need felt for means to communicate with an absent friend. Miss Kingwood held this to be fundamental and to give this feeling of need to her pupils she brought them in imagination to commune with papa, mamma, baby, the birds and all that myriad of absent beings with which the child felt that he held fellowship.

The song, the poem, the story were ever at her call. She felt that the means for growth were largely stored in the songs, stories, and poems of long ago. These must be at the child's command. They were kept in books. Miss Kingwood read from books. She read well. Her reading inspired the children and everyone wanted to get for himself out of the books the things with which she had thrilled them. Oh, how they needed to read! And how soon they learned to read.

One day she told them a story. Oh, she often told them stories, that was a part of the great plan, but the day to which I refer she told them the story of the three bears. Why this story? Because Miss Kingwood believed that the work of the school is most effective when it continues the work of the home, of the right kind of a home. Every home worthy the name has a story-telling of some kind along the way, and to continue the development begun in the home the teacher should know the stories current in the homes. So she told the story of the three bears because it was a "neighborhood story." Nearly everyone in the school knew the story and could have told it thru, but as Miss Kingwood told it, how they lived thru the experiences of the growling papa bear, the

grumbling mamma bear, and the whining baby bear.

The play element so prominent in the child was utilized with this story. This element is strong in the child at this early age, and the teacher believed in directing force rather than in restraining it. Children have large powers of imitation. They act well, and in order to develop this power Miss Kingwood agrees with the children that the story should be acted out by certain ones of their number, and she wisely permitted them to make choice of certain parts to be taken by this child or that; and they, little philosophers, selected the teacher for a part.

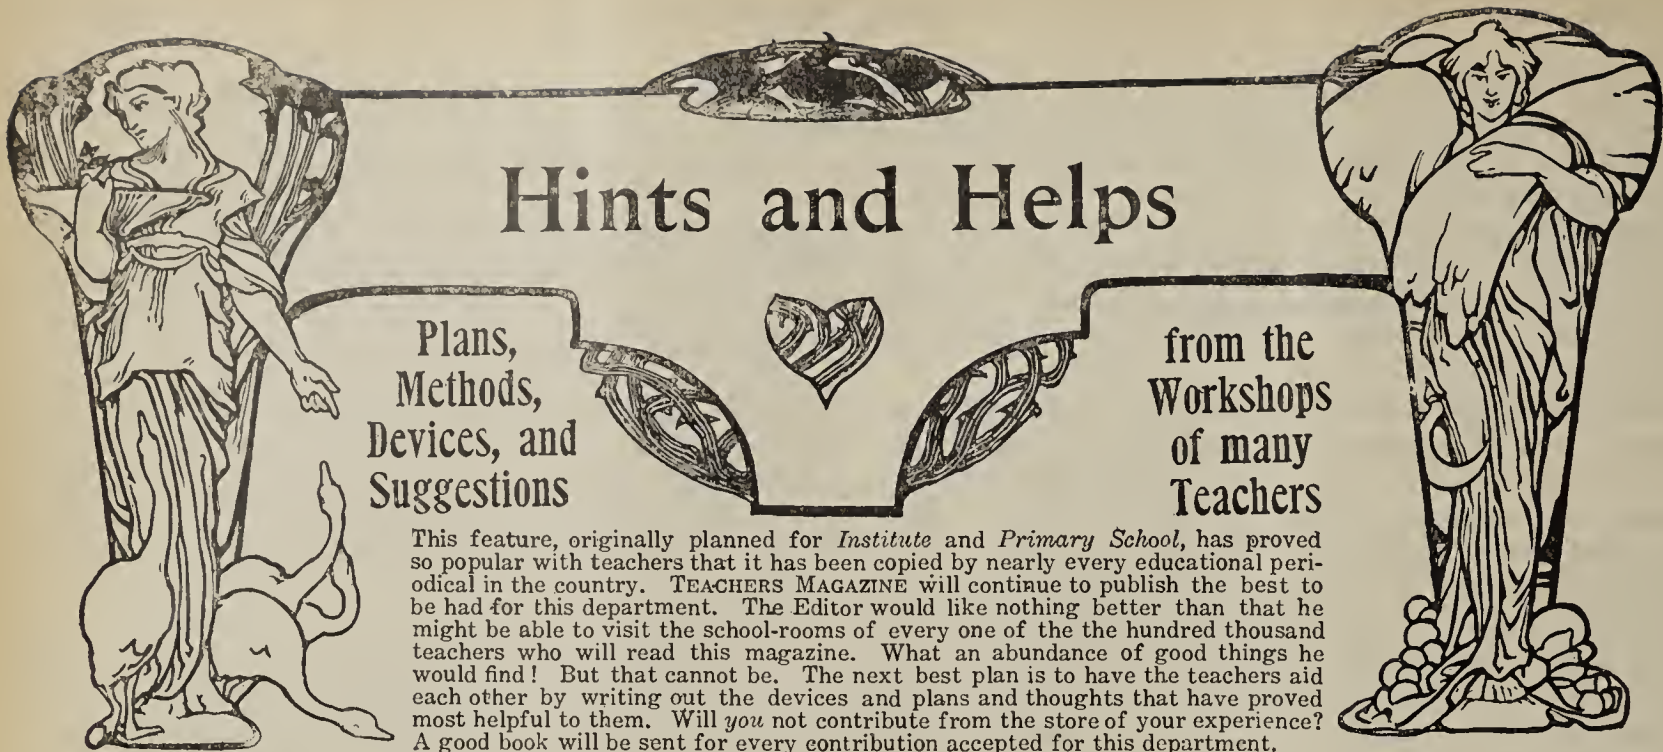

"The play's the thing," said Hamlet, and it is just as certain to reveal the bear as it is the king-killer. This bear play was a delight to the children, and they often asked the privilege of playing the bear story. This experience was a means of taking an inventory of stock in trade, and the teacher improved the opportunity many times. Her observations were of especial value in the succeeding months of the term. After acting the story, the children read it, read it by the whole sentences without missing a word, and this to Miss Kingwood's way of thinking was a very significant comment on all the "scientific" patent processes of teaching reading.

She always sought to create a feeling of need for the words and sentences, and somehow they always came when needed. Her explanation of the ease with which the children learned to read was, "When I need certain articles to do a piece of art work, and know where to get the articles, I go after them. I think that is the way with a child learning to read. When she feels that she needs words with which to read and knows where to find them, she will go after them. I believe in getting the child to go after things, and we must not forget that she gets words from others as well as from the teacher."

Thus the month went on. It drew to a close. But what a month! Noon hours and recesses were as fruitful if not more so than the hours of the sessions. The teacher joined in the plays of the children. They learned to know her better thru the play, and she them. In the games, they gave the place of honor and the place of difficulty to the teacher, and when the month closed she had won the hearts of the children, and she felt that by coming in contact with their pure lives she had become a nobler woman and a better teacher.

I observed also that her weekly visits to the other rooms were not without effect. She assumed no air of superiority. She met the other teachers as a learner and never as a critic. They were friends.

Plans,
Methods,
Devices, and
Suggestions

from the
Workshops
of many
Teachers

This feature, originally planned for *Institute* and *Primary School*, has proved so popular with teachers that it has been copied by nearly every educational periodical in the country. *TEACHERS MAGAZINE* will continue to publish the best to be had for this department. The Editor would like nothing better than that he might be able to visit the school-rooms of every one of the the hundred thousand teachers who will read this magazine. What an abundance of good things he would find! But that cannot be. The next best plan is to have the teachers aid each other by writing out the devices and plans and thoughts that have proved most helpful to them. Will you not contribute from the store of your experience? A good book will be sent for every contribution accepted for this department.

How to Win Pupils.

If we wish to do anything for boys and girls we must first get them where they feel that we are trying to do something for them. Let them feel that we are here to help them.

I believe that this spirit can be secured nowhere so easily as on the playground. In the first place do not excuse the pupils at noon or recess and say to them, "Now, children, you must not go across the road," or "You must not swing on the fence," or "You must not throw rocks over in Mr. R's cornfield."

Let the children care for it, drive it, ride it, and play with it as they desire.

The accompanying pictures were taken in the spring months of April and May. In picture No. 1 we had just returned from our nature study, which we had at noon, (on account of a crowded program, which is a disadvantage in a country school.) We often went several miles, hunting for flowers, birds, and insects, and studying their habits and characteristics. The children often enjoyed themselves riding, as in picture No. 2. When the playtime was spent in this way I found that I had no trouble at all to get the pupils interested, when they came in for study. ALVA WILLIAM DRAGOD.
Illinois.

Return from a Nature Study Trip.

Your place, instead of in the school-house, at these periods, is on the playground with the pupils. Introduce games, teach them how to fly kites, make whirligigs and weather vanes. Teach the girls to weave doll cradles and mats, out of raffia and rattan. (I am quite sure some of our readers teach in the country, so do not have time for this work in school hours. The problem of manual work can be worked out in this way.)

There is nothing a boy likes better than a kite or a whirligig. If you have a good, gentle horse, as I have, bring it to school with you.

Autumn Suggestions.

Place a large number of different leaves in a pan outside the school-room door, and send out one child at a time to bring in a certain leaf, as oak, orange, etc. If he does not find the right one

Riding "Teacher's" Horse.

another can try, making it of the nature of a game. The teacher talks about the leaves and shows their difference.

Leaves and flowers can be easily pressed at school, by having two cloth-covered boards and

a large sack of earth or sand to give a uniform pressure.

Cut colored vegetables from a seed catalog and paste at the top of sheets of manila paper, for the children to write all they know about them.

To see what the child's idea of color is make outline pictures with a duplicator, on cards, of common objects that he is familiar with, and let him color them with crayon pencils. This will do also for busy work.

Books for story writing may be made by cutting manila paper and placing outline pictures on each page. These the children can color and write about. A fancy cover design also pleases them, and can be made on plain paper with a duplicator.

California.

An Idea for Public Exhibition Day.

In preparing the program for the commencement exercises of the Santee (Nebr.) normal training school, the officials decided to abandon the usual program of essays, orations, and music, and use the occasion for demonstrating before the parents and friends of the pupils the practical work that the school actually does day by day.

Last year, writes Mr. F. B. Riggs, the editor of *The Word Carrier*, the official organ of the school, "an epitome of some subject that the class had studied was presented by a student of the graduating class, in the form of a simple recitation, a popular demonstration, with simple apparatus in the case of a laboratory subject. This year the idea was carried a step further, apparently with great success. The laws of physics as applied to the practical management of common stoves, economy of fuel by proper regulation of drafts, were demonstrated by apparatus that was partly diagram and partly working model.

"Cultivation of the soil to prevent evaporation was demonstrated by four boxes of earth. Each contained the same weight of earth, and the same amount of water had been added. The surface of the earth in one box had been covered with a stone for several weeks and still the earth proved to be damp below. A covering of straw gave the same result in another box, illustrating the advantage of much culture in gardening. And a covering of pulverized dry earth made by simply scratching the surface of the earth in another box, showed the same results in conservation of moisture, and contrasted greatly with the earth in the fourth box which had cracked and dried like a brick on account of having had no cultivation of the surface. The loss of moisture from the soil thru transpiration from the leaves of weeds was visibly demonstrated by exposition of plants used in the laboratory to prove the weight of water drawn from the soil for each pound of dry matter produced in the plant. For instance, it was shown that sunflowers take more than twice as much water from the ground per pound of dry matter as corn, and mustard four times as much water as wheat. Our pupils' farmer parents listened to these demonstrations with the most rapt attention."

School Scrap Books.

We are spending an hour each week on our school scrap books. On Saturday I make clippings from the various papers that have fallen to my lot. Keen is the interest in our pasting hour when the little pieces are handed round for final clipping and classification. Then as they are ready they are passed on to the pasters who are kept hard at work. The children take the pasting by turns, so all share in every way in making the reference library a success. We have now finished six books: Animals of all kinds, Fishes, Birds, Trees, Flowers, Miscellaneous Topics of Interest.

Raising Money for Library Books.

As a method of raising money for the school library, I can recommend a book social such as was given the pupils of our high school. It required comparatively little effort or expense in preparation, and netted a goodly sum for the fund.

An admittance fee of fifteen cents was charged and a literary and musical program well worth the price of admission occupied the first hour and a half of the evening. In addition to this feature each pupil (there were some seventy-five in all) represented by his or her costume a well-known book. This served as a basis of a guessing contest later in the evening.

The pupils also furnished light refreshments, the boys levying a ten-cent contribution on each of their number, with which they purchased choice apples and unpopped corn, popping the corn themselves and putting it in individual paper sacks of generous proportions, while the girls furnished ham sandwiches of home make, a uniform size and shape being agreed upon and each being daintily wrapped in waxed paper.

At the close of the literary program the refreshments were passed and an hour was given for conversation, during which time the pupils were passing among the audience in all parts of the room and acting out where possible the title of the book represented, to give all a good chance at the guessing.

When the audience was called to order again the pupils passed across the stage one by one, while all present wrote their guesses as to what book each represented on slips of paper. The papers were numbered one, two, three, etc. After the guesses had all been written, the papers were signed and exchanged for correction, the correct list of titles being read by the teacher in charge. A handsomely bound book was given to the lady and to the gentleman having the most correct answers, the prizes being bought with a five-cent contribution from each pupil.

Care was taken to select only standard works by well-known authors, and while many of the titles were easy to guess, others were correctly guessed by only a few, while no one had the entire list correct. A few of the titles chosen will serve as a suggestion. The list is easily en-

larged to fit the needs of any number of participants, and, as will be seen, many of the titles require little in the way of costume.

Among the girls—Under Two Flags, (tiny flags crossed in hair); A Girton Girl, (mortar-board and gown); A Border Shepherdess, (shepherd dress and crook); The Old-Fashioned Girl, (in costume of fifty years ago); In Silk Attire, (silk dress); A Golden Butterfly, (yellow butterflies on hair and shoulders); In Black and White, (black and white dress); Bow of Orange Ribbon, (wearing same); The Lilac Sunbonnet, (same hanging over shoulders).

Among the boys were—The Last of the Mohicans, (dressed as Indian); The Man in Black, (all black costume); The Professor, (high collar, spectacles, etc.); The Red Axe, (carrying same); The Train Boy, (with basket of literature, fruits, etc.); With Fife and Drum at Louisburg, (carrying fife and drum); Man of Millions, (laden with coin sacks stuffed and marked \$1,000,000).

Colorado.

The Reading Problem.

The teacher and the librarian were talking.

"The children do not patronize the public library," the librarian complained, "in spite of the fact that we do everything in our power to make it attractive to them; and when they do come, they ask for trash, not literature."

The teacher went home thinking. And when she had thought long she concluded that what the librarian inferred was true—the education was at fault. The children could glibly name the works of the standard authors, tell the particular excellencies of each, quote from them, but of literature they had absolutely no comprehension. They had learned to analyze parts of it, but not to love it in its entirety.

Friday afternoon she had an announcement for the class in reading.

"You will notice that I have copied the names of twenty-five books on the board. They are all in the public library. Each of you may spend as much time on any one of them as you are accustomed to spend on Monday's lesson, and be prepared to give an account of your reading to the class."

She then emphasized the value of the public library, explained the method of obtaining books, and recommended her pupils to patronize it.

Did the children spend a study period on Monday's lesson? To be sure they did; and

when that period was over they had become so engrossed in the book that they could not leave it. What boy could part with Tom Sawyer when once he had made his acquaintance? What girl could resist following Meg, Jo, Beth, and Amy thru their whole interesting career in "Little Women"?

Monday morning, all enthusiasm, these little men and women met.

"You should have read 'Little Men,'" said one.

"It couldn't beat 'In Darkest Africa,'" sang out another.

"'Tanglewood Tales' is fine," spoke an imaginative little fellow, "and there is another book of the stories called the 'Wonder Book.'"

The teacher smiled.

"They will each one read the whole list," she said to herself.

Reading Helps.

I enclose one dollar for my subscription to TEACHERS MAGAZINE. I don't believe I could get along without it. I get a great deal of help from the suggestions which the various teachers send in.

In my primary reading class (primer) we have a very nice little game for learning new phonetic words. The children stand while I write a word on the board, putting in all marks. The first one who tells what the word is sits down, and so on until all are seated. I can go around a class of ten three times in ten minutes.

In my second grade and advanced first grade we sometimes have a "guessing game" on Friday afternoon. Two members of the class stand with their backs to the board. A word is placed on the board (always a noun), then the other members of the class describe the object for which it stands. The one who guesses correctly sits down and another takes his place, and so on until the game is finished. These are very simple suggestions, but perhaps some busy teacher like myself can make use of them.

Maryland.

EVA W. WRIGHT.

Marking Down.

I have received the first issue of TEACHERS MAGAZINE, and the second weekly issue of *Our Times*. I think the change a great improvement, altho both papers were excellent before and have been a great help to me in my school work.

My mother, who is now eighty-four and was a teacher in her younger days, is much interested in these magazines and always reads nearly every article in them, often before I do myself. She says she would have appreciated them in her teaching days. She says that in those days the newspapers were full of politics and religion. Not much attention was given to methods in teaching.

Now a few words about my work. I have succeeded in overcoming the habit of whispering in my school in this way: At the beginning of each month I write the names of the pupils on

the board with bright colored crayon, and 100% opposite each name. If a pupil whispers or is disorderly in any way I put a cross against his name, and at the close of the school reduce his standing one per cent. for each cross. He has also lost his pretty bright color, and I write his name in plain white.

At first a few of the pupils did not seem to care much about this marking, but I find in every case that after they have lost a few per cents. they then begin to try to keep a good standing. It seems to be an advantage to have their names where they can see them. These markings help in making out the per cent. of deportment on report cards at the end of each month.

As I have not a very large school, I have blackboard room to use in this way.

Iowa.

PRUDENCE S. JACKSON.

Crude but Useful.

I have taken several different educational journals, and have always saved them. After I have received the June number I arrange the papers in order, beginning with September of the previous year. I press them together tightly, punch several holes thru them, and tie thru the holes with strong cord. Then I tie on a cover of pliable cardboard, and my binding is done.

These back numbers help me a great deal in planning entertainments, and still more in my daily school work.

ANNA McLANAHAN.

California.

Dissected Map.

I find the dissected map of the United States of much value to beginners in geography. We have great fun seeing who will make the best time in putting it together. So interested have the children become that several have purchased copies of the map, and now we engage in most exciting contests. I also have my pupils outline each little block, and soon they acquire a clear idea of the shape and size so that they readily draw from memory any state that I call for. Some of the maps in colored crayon are quite a success.

MARGARET H. TAYLOR.

Manila, Philippine Islands.

The Writing Lesson.

The letters sprawl in all directions ; run up hill and down ; are big and little—no wonder the children are not ambitious to be good writers !

Their attitude changes remarkably after this little story it told :

Children, do you know what I play when I am writing ? I play that each letter I make is something—I wonder if you know what it is ?

I call the letters all soldiers, and I make rows and rows of them, and if there are a great many I say that they are my army and I am the general.

You may all march around the room and show me just how straight and nice soldiers look.

Now I am going to make some writing soldiers on the board, and you may watch and see if they are good or if they run up and down hill. Here is a "t." We will say it is a soldier carrying a flag.

The children start their writing again, and as the work progresses I go about among them and remark to this boy that he is not a very good captain, for his men look as if they were running away from him. Many other things can be suggested by the teacher as the writing continues, and the children get fairly enthusiastic about it ; meanwhile their writing is certainly improving.

Illinois.

A Phonic Game.

I found that children enjoy this game, and it is also very instructive, in that it causes them to observe carefully and to become more familiar with the new words.

After we have thoroly sounded the words which are placed on the board, one child passes to the board, and while the others are blinded, erases some word. At the signal "Ready !" the children look at the board and see what word has been erased. The child who raises his hand first is called on to give the word. (Sometimes we sound the word as well as pronounce it.) If correct this child goes to the board and erases another word. In this way we continue until all the words have been used.

School Entertainment

The Harvest Carnival.

By WILLIS N. BUGBEE.

THE stage may be decorated with gaily colored autumn leaves, strings of horse chestnuts, fruits, flowers, or other symbols of autumn and the harvest time. In the center of the stage may be built a pyramid of fruits, flowers, and grains. At the opening of the play, however, only the framework of the pyramid is seen, the display to be arranged as the play progresses. The framework may be made by placing a large tub, bottom up, upon the floor. Upon this is placed a cheese box, and upon this a small pail or keg. The whole may be covered with bright cheese cloth or crepe paper. The display may be arranged as follows: Pumpkins placed equally distant apart on the floor around the front of the pyramid; shocks of corn stalks equally distant leaning against the tub; ears of corn, braided together by the husks, hung from the edge of the tub; on the second tier small sheaves of grain and small measures filled with shelled corn and other grains. The third tier is devoted to fancy baskets filled with fruit, with a place reserved for miniature loaves of bread and johnny-cake, gifts of the housewives. At the top is a bouquet of goldenrod, asters, or other autumn flowers. Other decorations may be added to suit the taste.

The number of boys or girls in each group may vary to suit the requirements of the one presenting it.

Enter two boys at right and two girls at left bearing jack-o'-lanterns.

All: Oh, ho! Oh, ho! for frolic and fun!

No more of work for lad or lass.

Boys—We know a secret!

Girls—So do we,

Both—And pretty soon 'twill come to pass.

1st Boy—For Uncle John,

2nd Boy—And Brother Ned,

1st Girl—And Cousin Sal,

2nd Girl—And Sister Sue

All—Are coming here this very night

To sing, I guess, and speak to you.

Hark! Here they come! They're coming now!

Oh, jolly! This will be great fun!

Let's set our jack-o'-lanterns here

And wait until the speaking's done.

Enter huskers, two girls wearing wreaths of corn husks and each carrying several ears of corn braided together.

Huskers—We are the huskers of the corn,

And a merry set are we;

We blend our work with laugh and song,

In the jolly husking bee.

Place corn as indicated before. Enter gleaners, two girls dressed in white with small sickle at the waist, and

bearing small sheaves of wheat. Whittier's "Corn Song" may be recited by one of the girls.

Gleaners—We are the gleaners of the field,
We bind the ripened grain,
That stronger arms which follow us
May load it on the main.

Enter fruit girls, bearing small baskets of red apples and other fruit.

Fruit Girls—Oh, see the ripe and luscious fruit!
No better gifts than these
Has generous autumn given us—
Our varied wants to please.

Enter farmers, dressed in frocks and overalls, and bringing small shocks of corn stalks.

Farmers—We are the farmers who plow the
ground,
And sow the seed in the spring,
And tend it well, that the autumn time
Will a bountiful harvest bring.

First Farmer—Just a word or two about corn, my good people. It is native to America, and America raises by far the most of it, Iowa being the banner state. Some one has figured out that if all the corn raised in America in one year were put into big two-horse wagons, it would make a procession 150,000 miles long. What do we do with it all? Why, use it to fatten cattle and hogs, of course, and once in a while the old lady makes a johnny-cake for us.

Second Farmer—In the matter of wheat, altho not native to this country, yet America leads the world in its production. If you could see one of the big wheat farms of the West where most of the work is done by steam you wouldn't wonder at it. Some of it is sent to those countries that do not raise enough for their own use, and the miller and good dames who follow will tell what is done with the rest.

Enter threshers, two boys wearing dark-colored or red blouses and short dark aprons, if desired. They bring small measures of corn and wheat.

Threshers—We are the threshers; when the
grain
Has all been garnered in,
We thresh it from the straw and chaff,
And store it in the bin.

Enter millers, wearing white blouses, caps and trousers, and short white aprons. They carry small sacks, opened at top to show the contents of flour and meal.

Millers—We are the jolly miller men,
With our busy waterwheel,
We grind the wheat to fluffy flour,
The corn to golden meal.

Enter housewives, with plain dresses and large work-aprons, bringing small loaf of bread and one of johnny-cake.

Housewives—And we the busy
housewives are,
We sweep and sew and bake,
The flour we turn to snow-
white bread,
The meal to johnny-cake.

All—And so, you see, that each
of us
Has a certain task to do,
With joyful hearts and willing
hands
We toil the whole day thru.

All—Sing to the tune or
"Marching Thru Georgia,"
and form in a ring while doing
so.

Ho! ye merry harvest work-
ers, gifts of autumn bring,
Fling away your cares and
sorrows, join our festive ring,
And to Him who gives us
plenty, we will praises sing.
Glad is the time of the
harvest.

Chorus.

Hurrah! Hurrah! The harvest
time is here,
Hurrah! Hurrah! We come
from far and near!
Singing songs of gladness,
that shall fill our hearts with
cheer,
Glad is the time of the
harvest.

Come ye lads and lasses, with
the health glow on your
cheek;
Come fair youth, both gay and
modest, maidens blithe and
meek,
Autumn's wreath has all been
garnered, let us pleasure
seek,

Glad is the time of the
harvest.

Other recitations and songs, as
"The Farm Yard Song," "The Mil-
ler of the Dee," "The Huskers,"
etc., may be added to lengthen the
program.

Tick Tack.

Words by WUCKE.

Music by FR. ARTES.

1. The clocks, you know, dear children, They never stop to rest; In
2. The church clocks in the stee - ple, So high up in the air, No
3. The clocks that in the kitch - en Hang tick - ing on the wall, They
4. The lit - tle watch - es hur - ry, As if their task to - day Were

summer and in winter, They tick their very best. Tick tack, tick tack, tick tack.
matter what the weather, They tell the time with care. Tick tack, tick tack, tick tack.
go a little faster; Let's count the strokes that fall. Tick tack, tick tack, tick tack.
thousand miles a minute; And stead-i-ly they say, Tick tack, tick tack. tick tack.

Actions for "Tick Tack" Song.

The children stand in a circle. They imitate with the right hand the movement of the pendulum, following the time of the song. The second stanza, representing the church clock, is sung slowly. The third stanza is sung with somewhat more speed, and the fourth is sung very fast, to the great enjoyment of the children. In repeating the song-game let the children swing the left arm, or, interchangeably, the left and right arms.

I Wish I Had a Little Fiddle.

Words by HOFFMANN VON FALLERSLEBEN.

1. I wish I had a lit - tle fid - dle, A fid - dle I would like to
2. A lit - tle fid - dle plays so sweet-ly, I like it bet - ter than a

have; Ev - 'ry ev' - ning I would play Three, four pie - ces light and
drum; All the chil - dren in our street And my dog would swing their

gay, And I'd dance and I'd sing, and I'd be mer - ry al - way.
feet, And they'd dance, and they'd sing, and they'd be mer - ry al - way,

We de we de we de we de wum dum bum, We de we de we de wum; wum.

Actions for "Little Fiddle" Song.

Two rings are formed, one inside the other. During the singing of the first stanza, girls form the outer circle, boys the inner circle. During the singing of the words the boys walk around, one behind the other, imitating the playing of a violin. When the "We-de-wum" is reached the boys stand still facing outward, while the children of the outer circle hold hands and dance side ways. The boys continue to imitate violin playing till the girls enter the circle with the second stanza. There need be no confusion in the changing of the children from inner to outer circle. A little practice will show how to arrange the change.

Mr. Turkey's Enemies.—Great Fun for Everybody

By Harriette Wilbur, Wisconsin

THIS exercise requires ten or twelve small boys, from three to eight years of age. Each one wears a cap and carries an immense hatchet made of tin or pasteboard. The blade of the latter may be covered with silver paper and the handle covered with red paper. If made of tin they should be strengthened by being tacked to pieces of lath, and the handle wrapped, or the boys may wear red mittens. They should also wear stocking caps or soldier caps.

The hatchets are carried over the right shoulders thruout the drill, unless otherwise designated. The boys walk briskly, stepping high at first, then rapidly, then they fairly run.

An essential actor in this would-be tragedy is "Mr. Turkey," who is heard, but not seen. He is, in reality, seven boys who can "gobble" well. They are stationed at various places behind the scenes—one at the rear, one at the rear left, one at the rear right, one at the center left, one at the center right, one at the left front and one at the right front.

The boys always march toward the place where Mr. Turkey is heard gobbling. To make the "gobble" sound far away, the boy puts his hands over his mouth.

The pianist plays quick music, but not too loudly, and pauses after each change and waits until the gobble is heard before beginning to play.

I. Prolog.

Curtain rises, disclosing the hatchet boys drawn up in line across the front of the stage. They stand with feet far apart and hatchets over shoulders, grasped with both hands.

The pianist strikes a chord and all raise hatchets high above their heads. At the next chord they bring the hatchets down to the floor with a great show of bravado and strength. On the third chord they raise hatchets to shoulders again; fourth chord they raise caps and bow. (Curtain.)

II. Drill.

Curtain rises showing stage clear. A far-away gobble is heard at the rear left and the line of boys enters at the rear right and marches across rear and off at rear left.

Gobble is heard at center right. Boys enter at center left and march across center to center right.

Gobble is heard at left front. Boys enter at right front and march past front and out at left front.

Gobble heard at rear right. Boys enter at left front and march diagonally across stage and off at rear right.

Loud gobble heard at center left. Boys enter at rear right and march diagonally across to center left.

Gobble heard at right front. Boys enter hurriedly at center left and march across to right front.

Gobble heard at rear left. Boys enter at right front and march diagonally across stage to rear left.

Gobble heard at center right. Boys enter at rear left and march across to center right.

Gobble heard at left front. Boys enter at center right and march across to left front.

Gobbles heard at left front and right front. Boys enter at rear and march up center brandishing hatchets. Head boy goes to left front, second boy to right front, third boy to left front, and so on.

Gobble heard at rear. Boys enter from left front and right front and march hastily to rear, falling into original line.

Gobbles heard at center right and center left. Boys enter at rear, brandishing hatchets, and hastily march off at sides.

Gobble heard at rear. Boys enter from sides and go off at rear in line.

Gobbles heard at center, sides, and front sides. Boys enter at rear. Head boy goes off at left center, second boy at right center, third boy at left front, fourth boy at right front, fifth boy at left center, and so on.

Gobble heard at rear and boys run back, falling in line as they go.

Gobbles heard from all sides and boys run in, brandishing hatchets and rush about distractedly. Here and there they slip about the stage, keeping time to rapid music, while gobbles are kept up loudly.

Gobbles stop, except the one in rear. The boys wave caps and hatchets and tumble out at rear.

Repeat the gobbles, the boys running about waving caps.

III. Epilog.

Curtain rises disclosing stage empty. Boys march in from left front, and form line. Pianist strikes chords and they repeat the prolog several times. Suddenly the gobbles break out everywhere and boys break ranks and run about in every direction (Curtain).

Play Like Land.

LUCIA B. COOK, Greenville, S. C.

Carol and Jonathon, hand in hand,
Wandered one day into Play Like Land.
In this wonderful country the very trees
Are covered with dollars, and in the breeze
They shake imploringly, "Pull me, please."

In this beautiful land is the brook a sea,
And bits of bark are the sailors wee,
And lumps of mud are tarts for tea.
A mountain grand is the wood-pile high,
And over the fields the fairies fly.

To grown-up travelers, sand is sand,
But Carol and Jonathon, hand in hand,
Have a golden carpet in Play Like Land.

The Teaching of English. II.

By Emma L. Johnston, Principal of the Brooklyn Training School for Teachers

Spelling.

PERHAPS the most debatable point in connection with spelling is the proper treatment of prefixes and suffixes. There are at least four theories regarding the teaching of etymology in the 5B grade, where the subject is introduced. The first theory would have the elements of words classified according to the languages they come from and so presented to the pupils. The second theory demands that the prefixes and suffixes be classified according to meaning—for instance, “one who,” “state of being,” etc.,—and so presented. The third theory—this Professor Laurie endorses—is that instruction in etymology should not be given formally but must arise casually from the daily reading.

In my opinion the first two of these theories are not applicable to the teaching of pupils in the fifth and sixth grades. The third theory presupposes more knowledge of etymology than

the average teacher possesses, and it leaves to chance instruction in a very valuable subject.

According to a fourth theory the pupil’s linguistic possessions and his linguistic needs are the guides to classification. Altho words are presented in series, not casually but systematically, thru the method of presentation they are made to widen the thought and to enrich the vocabulary of the learner. In applying the theory the 5B teacher begins in some such way as this: She opens her unabridged dictionary to *re* and makes a list of words beginning with this prefix, selecting those which her pupils know already, and those which it would be desirable for them to learn in this grade. She rejects all words consisting of the prefix *re* joined to syllables that cannot be used as words; for instance, she rejects *reflects*, but retains *recall*. Perhaps her complete list consists of twenty or thirty words; such as *recall*, *rearrange*, *rebound*, *reclaim*, *re-echo*, *reinforce*. Her

October

Mon.	Tues.	Wed.	Thurs.	Fri.

method of presentation is about as follows: She writes on the board a familiar word, *e. g.*, *enter*. Pupils use the word. Then she writes *re-enter*, and the pupils use the word. She repeats this process with other familiar words. Pupils discover and give the meaning of the prefix. Now she writes other familiar words. Pupils discover and give the meaning of the prefix. Now she writes other familiar words to which pupils add the prefix and then use the new words thus formed. Where it seems advisable she may teach unfamiliar words having the prefix.

If the teacher understands the simple principle of selection illustrated above, and the general method of presentation she may be trusted to teach all the etymology that should be presented in a 5B grade and to cultivate in her pupils a taste for word study; and this she may do well without knowing any Latin or Greek or Anglo-Saxon.

It is because I believe that the lists of words used in the study of etymology should be made in the way just illustrated that I am glad there are no lists given in the syllabus.

Reading.

The course of study prescribes reading to the pupils during their first four years in school. Fortunately, it does not state that all this reading must be done by the teacher. Here is a chance for the pupils of the upper grades to practice under perfectly natural conditions a fine and useful art. In a certain girls' school an experiment was tried with such success that I venture to suggest that it be tried by other girls' schools. I see no reason why, with some modification of the point of view given to the pupils, it would not be a good thing for a boys' school also.

In an informal talk with the girls of the 8B grade it was made clear, first, that no matter what their occupations or their positions in life might be in the future, they would probably as young women or as older women be called upon frequently to do three things; namely, to entertain children, to comfort the sick, and to minister to the aged. Secondly, it was shown that in many cases any of these three things could be done by one who had learned to read aloud well. After the girls had become properly impressed and enthusiastic they received their reading books, their programs, and their instructions; and then the affair ran itself during the whole term. Once a week, at two in the afternoon, two 8B girls would enter one of the primary classes, to be received with smiles and nods by the children. While one of the girls and the teacher sat in the rear of the room the other girl would read to an extremely attentive set of children. At the end of ten minutes the two girls would exchange places and the reading would go on for ten minutes longer. If the children's teacher had a criticism to make or a suggestion to offer she would politely invite the girls as they were leaving the room to call on her some time after school, and when they called the teacher would criticise—always from the standpoint of the effect on the audience, never from

the standpoint of the reader's art as a thing to be considered for its own sake. Such criticisms as the following were made:

"Read more slowly next time. Not all my children hear English spoken at home. It is therefore difficult for them to follow unless one speaks very slowly."

"Here is a list of the words you mispronounced to-day. My children believe that what you big girls say must be right, so you see you ought to be careful not to make mistakes for them to imitate."

"Next time stand erect and hold your head up. Then the children will follow the story with less effort."

That the plan succeeded was shown by these among other results:

1. No 8B girl grew tired of the exercise, and none ever slighted the task.

2. The children showed plainly that they considered themselves defrauded whenever the big girls failed to appear at the time appointed.

3. The teachers of the children testified that the 8B girls, almost without exception, improved from week to week in pronunciation, enunciation, use of voice, and general bearing.

In all grades of the elementary school, but especially in those of the first four or five years, teachers should regard the training of the children's voices, of their organs of speech, as a part of the regular course in physical education. The two-minute exercise in voice training should come as frequently as the two-minute setting up exercise. It should ~~come~~ be a relief to children who have been obliged to be silent while the teacher has done the talking.

Each school should have its graded exercises in phonics, exercises arranged to meet the special needs of the pupils. Each teacher should pass on to the teacher of the class immediately above hers her list of phonic exercises just as she passes on her spelling lists; and when teachers and principals judge of a child's fitness for promotion they should consider his enunciation and his pronunciation as well as his ability to recognize words at sight and to write them from dictation. In a recent number of *Educational Review* (March, 1905) we find the following: "If colleges refuse to admit boys who write *beleive* and *seperate*, and who punctuate ill, how can they accept those who say *comin'* and *gov'ment*, and *becus*, and who speak not thru their mouths but their noses? Point for point and letter for letter, is not one set of errors as gross and unworthy of a properly trained boy as the other?" "So far, however," concludes the writer, "unfortunately, colleges have not taken this stand." Neither have the elementary schools taken this stand." I respectfully suggest that we take it.

(To be continued next month.)

Reading and Literature

Literature in the District Schools.

By DAVID FRIAR.

THERE is no doubt about the progress we are making in educational work. Teachers, directors, and superintendents are working together to make the schools better every year. But there is one point on which I am far from being satisfied and there are many more of my opinion. This point is the reading matter for our children. Reading matter of some kind the average young persons must and will have, and if their minds are directed to it early enough and in the proper manner they will take the best, something that will be of lifelong benefit to them. If this is not done they will take what they can get and usually this will be anything but beneficial.

This is a matter which primarily concerns the parent, but which to a certain extent involves the director and teacher. I am speaking now of district schools, a branch of the educational system which is not receiving the attention its importance warrants. I say importance, for it is in the district school that the majority of our population begin and end their school life.

The parent manifestly neglects this duty of

providing proper literature for his children. This, I believe, throws more of the responsibility upon the director, but I am sorry to say the director either shirks or fails to see this responsibility. If it is the latter it can easily be remedied. Now it is not merely a question of reading for the schools. It is a question of making the schools pleasant and attractive, and it is a question of good lessons, too. It is not an easy matter to make clear to a twelve-year old boy or girl the benefit to be received a dozen years hence from memorizing a lesson of definitions or *the spelling of a long column of unrelated words.*

But if that boy or girl sees at the end of that column of words a half hour with a book in which he or she is interested, how much quicker and better the task is performed! With the opportunities that this system would give, our boys and girls at sixteen would have a greater knowledge of literature than many now acquire during life.

Many a boy goes to reading trashy detective stories and five-cent novels simply because he has nothing else to read. He has a craving for literature and satisfies it, not with what he should but with what he can. Can you blame him?

Glimpse of an Up-To-Date School Room.

Study of the "Children's Hour."

By MELVIN HIX, New York City.

Aim.—A thoro understanding and appreciation of the poem. To bring out the ethical content of the poem.

Preparation.—Look up the meaning of the following words: Lower—grave—raid—turret—banditti—scaled—fortress—dungeon.

The Poem.

How many remember about the little Indian boy, Hiawatha? Who wrote the poem called Hiawatha? We are now going to study another poem by the same author. What was his name?

Who was Longfellow? Where did he live?

What, so far as you know, was his occupation? What other poems of his have you read? Recite some of the poems.

Tell the story of the Bishop of Bingen. On what river is Bingen? Where is the Rhine? For what is it noted? (Castles—legends—scenery.)

Presentation.

Read the poem entire. Tell, in your own words, the story of the poem.

What custom of the Longfellow family is mentioned in the first stanza? When was it? Why? What two lines tell when? What one word means nearly the same thing as these two lines?

What did the children do at that time? Did the father enjoy it as well as the children? Select the lines or stanzas which make you think so. (Stanzas 2-9-10, etc.)

What kind of a girl was Alice? How do you know? (Grave.) Allegra? How do you know? (Laughing.) What is the meaning of Allegra? What do you know about the appearance of Edith? (Golden hair.) What does the last line of second stanza indicate about all of these children? (Voices soft and sweet.)

Think the poem thru the fourth stanza. What does the father pretend his study is? What words show this? (Castle wall—turret—scaled—fortress—dungeon—round-tower.) What is he then? (The garrison.) What are the children? What words show this? (Plotting—surprise—rush—escape—surround—banditti—scaled.) What does the father intend to do? (Escape.)

What story is Mr. Longfellow thinking of? Does Mr. Longfellow really resemble the Bishop? In what respect is his situation like that of the Bishop? (Surrounded—cannot escape.)

What is the meaning of "such an old mustache?" (An old man—not woman.)

What is the meaning of the next to the last

stanza? (Loves them with all his heart.) What is the meaning of the last stanza? (Will love them as long as he lives.) What is the meaning of the last two lines? According to Mr. Longfellow's "make-believe" the walls here spoken of are the walls of what? (His castle.) What do we call such an expression? (Figure of speech.)

Why does Mr. Longfellow love these children so much? Do you think they came into his study at all hours of the day? Why not? What does that show about the children? (Obedient—well brought up.) Do you suppose these children left their books on the floor, and their clothing anywhere it happened to fall? Do you suppose they did their work helter-skelter? What makes you think they did not? (Because they had an exact set time for the fun; so also they probably had a time and place for everything and tried to do things at the right time and put things in the right place.)

Do most families have Children's Hour? Why not? (Father and mother have to work too hard.) Would every father and mother spend an hour a day with their children? Why not? (Children disobedient, rough, peevish, quarrelsome, saucy, selfish, etc.)

Where father or mother have to work very hard, what can the children do so that all may have a good time together in the evening?

How must children behave so that their parents and other people will be willing to have a good time with them or help them to have a good time?

What rule in the Bible means just what we have said? (The Golden Rule.)

What other lesson can we learn from this poem? (Have a time for everything and do each thing at the right time.)

Application.

We have been talking about "Children." Does what we said apply to us? How should we behave if we want others to join in our games? What should we do for our parents if we want them to help us to have a good time?

Suppose one of us goes home and finds that mother wants us to run on an errand, what should we do? How should we do it? Should we scowl and frown and pout and sulk? Would one of Mr. Longfellow's girls have done that? How would you like your little girl or boy to act if you were mother or father?

If we want anyone to be nice to us what should we do? If we want people to love us, what should we do? If we want people to forgive us when we do wrong, what should we do?

Read "Father is Coming," by Mary Howitt.
Read "My Mother's Grave," by Mrs. Sigourney.

The Children's Hour.

Analysis.

1. Between the dark and the daylight,
When the night is beginning to lower,
Comes a pause in the day's occupations
That is known as the Children's Hour.

In the Longfellow household there is a time set apart for fun.

2. I hear in the chamber above me
The patter of little feet,
The sound of a door that is opened,
And voices soft and sweet.

When this time comes the children put aside their work and their playthings and prepare for it, quietly. The father hears them. He enjoys the play time.

3. From my study I see in the lamp-light,
Descending the broad hall stair,
Grave Alice, and laughing Allegra.
And Edith with golden hair.

They go down the stairs. There are three of them.

4. A whisper, and then a silence.
Yet I know by their merry eyes
They are plotting and planning together
To take me by surprise.

They plan to surprise their father who is probably yet busy. He pretends not to see them.

5. A sudden rush from the stairway,
A sudden rush from the hall!
By three doors left unguarded

Thru three doors they rush into his study which they pretend is a castle

They enter my castle wall!

6. They climb up into my turret
O'er the arms and back of my chair;
If I try to escape, they surround me;
They seem to be everywhere.

and climb upon his chair

7. They almost devour me with kisses,
Their arms about me entwined,
Till I think of the Bishop of Bingen
In his Mouse-Tower on the Rhine!

and almost devour him with kisses which make him think of the Bishop of Bingen.

8. Do you think, O blue-eyed banditti,
Because you have scaled the wall,
Such an old mustache as I am
Is not a match for you all!

But he is a match for them all.

9. I have you fast in the fortress,
And will not let you depart,
But put you down into the dungeon
In the round-tower of my heart.

He loves them with all his heart and always will

10. And there will I keep you forever,
Yes, forever and a day,
Till the walls shall crumble to ruin,
And molder in dust away!

so long as he lives.

History and Civics

The English Colonists in America.

By SUPT. G. P. COFFMAN, Illinois.

THE English were a liberty loving people. They took the lead in all matters of reform. In the crusades they learned much about travel and the commerce of the East. They early began to study the art and literature of Greece and Rome.

They commenced to demand more freedom both in state and church. The religious move came with more force and power than did the state. It spread all over Europe. It was known as the Reformation. Side by side with this move we find the English parliament growing in power and influence. The people held on to their ancient Teutonic rights which they had obtained in the German forests. The constant struggle between parliament and the king caused all classes to broaden their knowledge of governmental affairs.

The struggle of the church to free itself went hand and hand with parliament, until the Renaissance spread all over Europe. In Spain and France, the pope and kings were able, for a time, to hold back the wave. They were able for a time to keep the common people from thinking. But in England the wave was too strong. It flooded every nook and corner of the kingdom. It fired the souls of every class.

The Reformation caused the church of England to become divided. Many beliefs sprang up as the struggle went on. Many Englishmen were persecuted and thrown into prison on account of their belief. But the spirit of freedom was so deeply rooted in them that the prison did not cause them to relent. Some were even burned at the stake, but they steadfastly held to their faith to the last.

This persecution caused so much dissatisfaction that the dissenters commenced to think of leaving England. Accordingly, a little band was organized and went to Holland. They lived there about twelve years and then concluded to go to the New World. They called themselves Pilgrims. This story is familiar to every school pupil. They hoped to find in America a place where they could think and worship as they pleased.

This little band was made up of about one hundred of the middle class of people. They all knew how to work. Some were mechanics, some farmers, and some merchants. They were all Separatists, that is, they did not believe as did the church of England. They hoped to plant this new spirit in the new soil. Before landing

they elected their own officers and took the Bible for their law.

Many differences are noted between the English colonies and the Spanish and French. In the English they came of their own accord; sometimes the king refused to give them a permit to go. In the Spanish and French colonies they were sent by the king. In the English colonies they did not come for furs and gold, but to find better homes, where they could be free from the tyranny of the Old World. They made their own laws instead of having them made for them. They elected their officers instead of having them sent to them. They did not come over for fame and glory as did the Spanish and French.

The Spanish and French sought gold and honor, the Pilgrims sought a home and a place to worship and be free. To prove this spirit, they went to work, they built homes, they established schools and churches and cleared the land for farming. They made such laws as would promote the best interest of the colony. In the English colonies the people made the laws for the people; in the Spanish and French colonies the king made the laws for the king.

This little band of Pilgrims laid the foundation for the English settlement in America. It was fed by the dissatisfied element in England, mainly the Puritan element that did not like the English church. In a few years many other settlements were made in that part of the country. All sects and creeds and beliefs flocked

A First Home in the New Country.

to this part of the New World, until dissention arose among themselves. The same spirit that came up in the Old World came up here. They were unwilling to grant others the same freedom they took. They commenced to forget the object in coming to America. But their theory or ex-

planation was that each church should have a separate settlement. They felt that it was right for them to exclude other denominations.

Roger Williams was the central figure in this controversy. He claimed the right to worship at any place according to the dictates of his conscience. He was banished, and founded another colony where he carried out his convictions. Providence became a place where all could worship as they pleased.

Another thing tested the earnestness of purpose of these pilgrims. The soil was not adapted to farming. It was covered with stones and was not fertile. It was impossible to lay out big farms and commence to cultivate them as they did in Illinois. Their farms were small. Many of them came over in bands, often led by their favorite pastor. They settled near one another on small farms. This gave them the opportunity of using churches and school-houses in common. It afforded them the opportunity of protecting themselves against the Indians, as the Indians were hostile and refused to give up the land to the settlers. Thus the people early learned to sacrifice personal desires for the sake of the community in which they lived.

The school boy should be permitted to take a peep into one of these settlements, some Sunday morning, and see the steady old Puritan going to church, accompanied by his wife and family, and, for protection, carrying a flintlock gun. He should see the little church, surrounded by a board fence to keep away the Indians. He should see the people in the church at worship. (Sometimes they stayed all day).

He should see the farmer clearing his farm, and the carpenter building the houses. If he makes an exploration of the settlement he will find that all are at work. When he sees all of these things he will be able to forgive them for some of their peculiar beliefs. He will remember that Luther and Calvin punished reformers who wished to reform faster than they.

Principles of liberty are like century plants—they grow slowly. The Puritan, having come to the New World for liberty, had not enough of it, at first, to give to others that which he demanded himself. But this

dissention gave liberty a chance to grow. It caused Roger Williams to establish a colony where worship was free to all, the only such colony in the New World. It was the first nail in that constitution which says, "Congress shall make no laws respecting the establishing of religion, or prohibiting the free exercise thereof."

While the principle of free religious thought was slowly growing, the same freedom of thought was being developed in governmental affairs. The people were of the middle class and hated distinction. They therefore refused to recognize titles of nobility or rank. As the settlements were largely made up of groups, led by their pastors, these groups formed the unit of government. In England, such divisions were called townships, and the same name was given them here.

The township had a local government and elected representatives to the colonial govern-

COMMON SCHOOL HYMNS

TEACHERS MAGAZINE gives each month at least one hymn suitable for the common schools where children of all religious beliefs are gathered together. These hymns have been selected with great care, and the editor feels confident that they will prove a welcome collection to teachers everywhere. If you know of any favorite hymn which might be included please tell us about it. We want all the best things to be had in this magazine.

God Bless Our Native Land.

GIARDINI,

1. God bless our na - tive land! Firm may she ev - er stand,
2. For her our prayer shall rise To God a - bove the skies;

Thro' storm and night; When the wild tem - pests rave, Rul - er of
On Him we wait. Thou who hast heard each sigh, Watch - ing each

wind and wave, Do Thou our coun - try save By Thy great might.
weep - ing eye, Be Thou for - ev - er nigh— God save the State.

ment. This the English people had been doing for a long time.

The Building of a Democracy.

The New England township was governed by the town meeting. In early days this meeting was in the church, near the center of the township. Near the church was the common, with the school-house and the blockhouse or fort. All male church members twenty-one years old could vote, but in Rhode Island and Connecticut all males twenty-one years old could vote.

All the voters assembled once a year to make the laws and regulate the affairs of the township. In early days they were compelled to attend these meetings or pay a fine. In this meeting they elected their officers for the year, voted taxes, provided for education, arranged for the building of roads and for the care of the poor. This body also elected representatives of the colonial body.

This same body looked after the building of school-houses, the appointment of teachers and selecting subjects to be taught. They even compelled the parent to provide for the education of his children. A parent who refused to make this provision was fined. So we can see that compulsory education is not a new thing. People who visited the New England colonies were surprised to find that almost every person could read and write. In England, half of the people were deprived of this privilege. The fact that the schools were for all made it a common problem. They were brought together on common grounds, and the children were placed on equal footing. So, day by day, they were learning to spell out the Declaration of Independence and learning to write the Constitution of the United States.

Could we have journeyed over New England about 1750, have seen the prevailing extent to which every man owned his own farm, and observed the honor in which labor was held, we should have concluded that there was the same equality in industry as in religion. It made no difference about the degree of his education or the office that he held or the social position, in every walk of life he was a gentleman.

Difference in Spirit.

How different was the life in the Spanish and French colonies! There the laborer was almost driven to work and was allowed to share but little of the proceeds of his labor. He was regarded as an inferior being and was not allowed to associate in the best society. He was not in line for governmental positions. He could look forward to nothing but hard work. Therefore, he just existed. Is it any question why the Englishman made the best soldier, when it came to fighting for his country? The one had patriotic feeling for his country and was anxious to defend it; the other had to be driven into the fight.

An Aristocratic Colony.

In Virginia there was marked difference in the class of settlers, and some difference in the form of government. The men who settled in Virginia were gentlemen who came across the ocean to get rich and then return. They expected to find

plenty of gold for their trouble. Finding no gold they were forced to go to work. The soil of Virginia was good and produced excellent crops. Therefore, the settlers went to farming on a large scale. The Indians taught them the use of tobacco and they devoted the most of the time to raising it. There was a good market for it in England. Slaves were introduced and became profitable. They were used to work on the large farms and plantations as these were called. Out of this grew two classes, the laboring class and the gentleman. Society was divided, and one class was not allowed to associate with the other. This held down all classes of persons who labored.

Only the aristocratic people of Virginia took part in making the laws. As there were but few of this class the township system was not practicable. The county system was inaugurated. However, they had what was called the Court Day, which took the place of the town meeting. The people of every class came from far and near and gathered on the courthouse commons. Here they mingled together, settled their debts, made contracts, rented lands, and had a good time.

The county system recognized the county as the unit and held yearly meetings with but the higher class as representatives. The lower class was excluded. While the lower class was neglected, the higher class was trained thoroly in patriotism and was taught to love freedom. This was exemplified in Washington, Jefferson, Marshall, Madison, and Monroe. When the rights of the colonies were taken away no one saw it sooner than these brave Virginians. It was here in Virginia that the first representative body met in America.

Free schools were neglected in Virginia. Only the rich could afford to send their children away to school, or furnish a private teacher for them, so we can see that it was only the wealthy who were educated. While the South had liberty loving people, they could not see that this liberty should extend to all classes. Church restrictions were not so great, but all were taxed to support the English church.

If the student can be led to see the spirit of the whole movement in the colonial life in America, it will not be hard for him to see why Spain and France were crowded out and why England was victorious on the field of battle.

NOTE.—Miss Helm's valuable series on the teaching of citizenship in the schools will be continued next month.

Saved by Fried Chicken

THAT fried chicken should have been an important part of the American Revolution seems almost an absurd idea, and yet a dish of the toothsome dainty helped greatly to tide the country over a crisis. The story is preserved in the annals of the Walker family of Virginia. In the year 1781 the Virginia legislature moved from Richmond to Charlottesville. Colonel Tarleton, of the British Army, started with a large force of soldiers to capture it. He halted for breakfast at the plantation of Dr. Joseph Walker, some twenty miles from Charlottesville, his destination. Rations were given to the men, and the plantation cook set to work to prepare a real Virginia breakfast for the colonel and his staff.

Meanwhile a messenger started off in hot haste for Charlottesville to warn the legislature and Thomas Jefferson, then governor of Virginia, of the coming of the British force. Mr. Jefferson was at his home at Monticello, a short distance from the town.

Twice, Dinah, the cook, made ready a delicious dish of fried chicken with cream gravy—not at all hastening in the preparation of it—and twice when her back was turned some of the hungry British soldiers dashed into the kitchen and carried it off.

As Colonel Tarleton was very hungry, he became furious at the delay. The host explained the cause of the delay and offered to have a breakfast served at once, if the colonel would be satisfied with what there was. But under the circumstances, he added, fried chicken would be impossible unless he “set a corporal’s guard to protect the cook.”

Tarleton was more or less a glutton. He thought an instant and then concluded: “I am going to have fried chicken whatever may happen, and I will wait for it. Adjutant, set a guard over those rascally thieves.”

The guard was set, and in due time the chicken was fried and eaten. The delay had, however, enabled the messenger to reach Charlottesville and give the alarm. Both Jefferson and the legislature had escaped from the town before Tarleton with his men reached there.

The capture of the Virginia legislature and Gov-

ernor Jefferson would have been a stunning blow to the fortunes of the young republic.

American Policy According to Washington

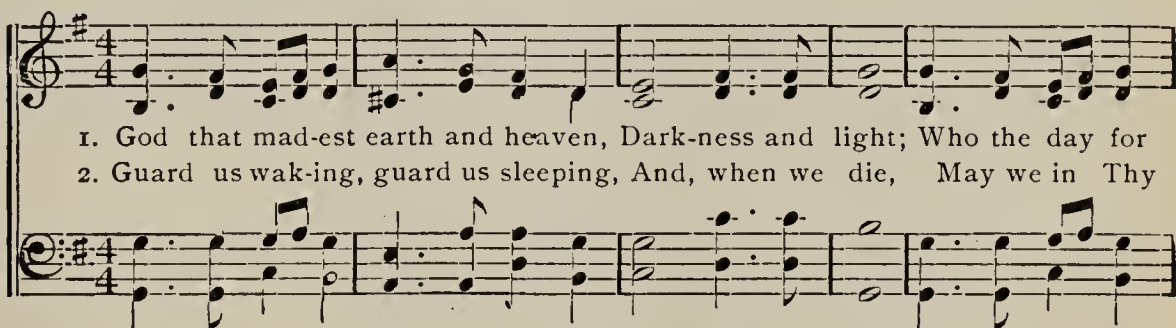

After peace had been formally proclaimed in the American Army in 1783, General Washington addressed a letter to each of the governors of the several states of the Union. He believed four things to be essential to the wellbeing of the nation. These essentials, he said, were: “An indissoluble union of the states under one general head; a sacred regard for public justice; the adoption of a proper peace establishment, and the prevalence of that pacific and friendly disposition among the people of the United States, which will induce them to forget their local prejudices and politics, to make those mutual concessions which are requisite to the general prosperity, and, in some instances, to sacrifice their individual advantages to the interest of the community. These,” he added, “are the pillars on which the glorious fabric of our independency and national character must be supported.”

Little Talks on School Management. III

By Randall N. Saunders, Hudson, N. Y.

Getting to Work.

I ASSUME that you agree with me that little of permanent value can be accomplished in school work without good order. The secret of obtaining this without being "cursed for a tyrant or kicked for a tool" is almost as difficult of discovery, for those who have it not, as the fabled philosopher's stone; and those who have become possessors of this magic property of turning all to bright and pleasing gold find it as difficult of description as it was of discovery. Yet this power can be attained, and quickly, by one who has a natural endowment for leadership, and also by one who is under good self-control and practices exactly what he preaches.

In a well regulated school the pupils come in quietly when the bell rings, without laughter, giggling or talking across the seats. After the opening exercises there are two ways of getting to work: One of a careless, noisy, petulant preparation, a hunting up of books, a sharpening of pencils, the doing of a hundred things that should have been done before school and that keeps the room in an uproar for from five to fifteen minutes, while the teacher stands helplessly rapping for calm; the other, of a quiet, orderly taking up of the implements at hand for use in the tasks of the session. For the attainment and maintaining of this latter condition we must strive.

What a shock it gives a school undisciplined to have an order compelling teacher take control! How injured the big boys look when they find they cannot go for the neglected pail of water! How dreadfully uncomfortable the hot, fussy, red-faced children look when they find they cannot spend ten, or fifteen minutes quarreling and splashing like greedy ducklings about the water pail, each in order or rather in disorder, to guzzle down a dipperful of water for no other purpose than to kill time! How they make blunt pencils squeak! How they will idle for want of the book for which they are not allowed to turn the school-room topsy turvy, and how the tardy ones open their eyes to find their lost time charged up to them to be made up out of play time—in short, how these little obstructionists will squirm and kick until they are satisfied that order is inevitable, and that the teacher is as kindly and inflexible as the power that brings in the days and the seasons with benign and undisturbed regularity.

It takes but a short time to create a "new heaven and a new earth" out of such a little chaos—a new regime of neatness, quiet, and punctuality that enables the teacher at five or ten minutes past nine to view his little charge silently at its individual tasks.

You demand that everything be in readiness. Desks in order, books arranged, pencils sharpened, hair combed, hands washed, thirst assuaged—everything in readiness for taking up

the work of the session; and, when this condition has been attained, there is nothing under the sun left to do after the opening exercises but to go to work.

Boys and girls are not infallible, neither is it to be expected that they will always be thoughtful, and, as one does not wish to seem unreasonable and may even desire to be indulgent, I have found that a warning bell rung five or ten minutes before the final call is an excellent means of reminding all of duties unperformed, while it removes often the necessity of speaking, and leaves no possible excuse for the pupils' not being prepared for work at the proper time.

Perfection in any condition will ever remain an ideal, yet it is worthy of a persistent attempt at attainment. There will always be the boy or the girl who dislikes school, and is forever tardy; there will ever be the innocently forgetful to deprive whom of some prized pleasure will bring tears to your own eyes; there will ever be the persistent one who spends the largest part of the time inventing excuses for breaking in on the regular order; but, by witchcraft (I have grave doubts about the value of switchcraft at any time), you may get these discordant elements harmonized—inspired with your own zeal for the general good, and make of them aids instead of hindrances in your plan, plea, and progress for good order.

There will ever be lots of little things to keep the school-house about seven doors below Paradise; but with the good Persian, you can walk the bridge Chinvat, which is said to be a hair in width, and ever strive with the Divs and the Jinns of disorder for the peace of your soul.

The Story of a Wee Gray Mouse.

BY ELLEN RUBY PERRY.

A wee, gray mouse wished to see the world. So he left the nest, in the warm barn, and ran through the yard to a wood pile.

When he heard a step he hid, and when no one was near, he ran up and down the pile of wood to see what there was that would be good to eat.

Soon he heard the old white hen, and this was what she said: “Cluck, cluck, cluck!” (it meant, “Come, come, come!”) and then “Cluck, cluck, cluck!” once more. Just one wee chick came and stood by the old white hen.

The gray mouse could see that she was buff, and that she looked like a soft ball with a head and two feet. The old white hen scratched, and scratched, and made the dirt fly, and the buff chick ate the worms which she dug out.

Then the gray mouse thought he would like a bit of good food, but he did not wish for a worm. He was not fond of worms.

Soon he saw a bird fly down to the foot of an old tree near the wood pile. He ran to see what the bird would do. Two doves, with their soft “Coo-roo-coo-roo,” were there as soon as he was, and he saw what they tried to reach.

Corn, as bright as gold, lay on the ground, and the gray mouse thought he would try to eat it. But when he got so near that he could pick it up, the bird and the doves drove him off.

But, oh, worse than birds, with stiff wings that can hurt so when they strike, was the old white, barn cat, named Tip, so close to him that he could feel her hot breath. Where could he, where should he go?

How would it feel to be held fast in those sharp claws? "Squeak, squeak, squeak!" cried the gray mouse, which meant, "Oh dear, what shall I do?"

"Bow, wow, wow, Bow, wow, wow!" he heard, and then old Tip spit at Gyp, the pet dog of the house, and he felt safe while they fought. Where could he hide?

An old hat lay half way up the wood pile, that John the hired man, threw off one day when he went to town to sell the cream. It saved him for that one time, but Tip knew, too well, the taste of a fat, young mouse. She would catch him soon, if she could.

The wee gray mouse had such a fright, when he found that Tip would try to catch him, that he made up his mind to find some other home. He ran up the road, when the moon shone that night. He wet his feet in the dew, but he felt safe from Tip, so he did not care.

He slept in a pile of grass and leaves till the sun shone bright. Then he heard a voice singing a sweet song. A little girl in a blue dress, was singing as she walked along. She had a bright tin pail in her hand, and the wee, gray mouse felt sure that there were good things to eat in it.

The girl, whose name was Ann, was on her way to school. She was but eight years old, yet she must walk a mile to get there. The wee gray mouse thought it would be quite safe for him to go, too. He did not lose

ow or Butter-Making. Cut the pictures from the page and let each child have one to paste on
g. The very wee folk will enjoy, most of all, having each a picture at the top of his own

sight of her at all, but he had to hide when he saw a cat or a dog. At last, he reached the house where the school was kept.

The boys and girls were at play in the yard when he got there, so he had to wait till Miss Day rang the bell that called them in. Then he ran close to the house and kept still till there was a chance for him to go in.

The small room which he saw was the hall where the boys and girls left their coats and hats. He saw ten tin pails, like Ann's, hung there.

High up on the wall was a long shelf, and on this shelf, was an old box. In this box the wee gray mouse hid to hear what the boys and girls did in school.

They were so noisy, that it made his head ache. His back and legs ached too, from his long run, and so he went to sleep, and slept so hard that he did not know when the boys and girls went home.

When he woke up, he saw that the big door was shut. As he heard no noise he got down for a run. He ran through a wide crack, and there he was in the room where the boys and girls had made so much noise.

He could smell bread, and fruit, and cheese, and meat, and cake. So he ran round to find them. Oh, such good crumbs! The wee gray mouse was sure that he should stay in such a fine home a long time.

For more than a week the wee gray mouse did not dare to come out when the boys and girls were at school. But one day the room was so still, when they wrote in their books, that he thought he would take a run to the back of the room and find what was there.

No one saw him at first, but soon a big boy spied him and laughed. Then the teacher looked, and she too saw the wee gray mouse.

Miss Day told the boys and girls to keep still, for the mouse could not hurt them, and she would like to tame him and keep him at school. So she put down some crumbs on the floor, and no one turned round.

By and by the wee gray mouse ran to the crumbs and picked up one. It was sweet, and it smelled of clove, so he picked up the next one, and the next, till all were gone.

Then he ran back to his place in the box on the long shelf on the wall. Not a boy or a girl saw just where he went.

One day a cat ran by the house. A boy who sat in front of the door asked Miss Day if he might shut it, as he feared the wee gray mouse would see the cat and run off. Not a boy or a girl would hurt or scare the gray mouse.

They tried to tame him, and they did. One day he ran up on the big globe by the side of Miss Day's desk. He sat there a while, and looked quite wise.

The boys and girls said that he loved school more than they did, for he stayed there all the time. They named him Nib.

But there came a sad day for Nib, when the boys and girls took their books, and their bright tin pails, and went to their homes for a long rest. Miss Day went off in the cars to her home.

Then the wee gray mouse found it very dull. He went out to the grove of green trees near the school, to find some mouse friends, with whom to spend the long, warm days.

When the boys and girls came back to school, the next term, they looked in the box, they put down nice crumbs, they called, but no Nib came.

COTTON

The cotton plant is cultivated in almost all warm countries.

The best quality is raised in the southern part of the United States.

As each flower drops from the plant a seed pod takes its place.

These pods are three-sided, and are about the size of a walnut. When ripe burst open, showing the cotton stored within.

Nature Study and Geography

A Lesson on Cotton.

Fair befall the cotton tree
Long may it grow,
Bearing in its seeded pod,
Cotton, white as snow.

THE cotton plant, from which we obtain the cotton that is made into so many articles of clothing, grows in the hot parts of the earth. Large quantities are raised in the southern states of our own country.

The plant grows wild in Asia, Africa, and also in America. In Asia, the countries where it is cultivated in quantity are Egypt, China, and India; in Africa, the region in the neighborhood of the Senegal and Niger.

Cotton is grown in America, in Mexico, and the West Indies, as well as in the United States. The best in the world is raised in Carolina and Georgia. It is called "Sea Island cotton" because it is grown in the sandy districts near the coast.

All varieties of cotton require a dry, sandy soil. It will thrive where the ground is too poor for any other crop. It likes to be near the ocean, because the salt water and mud from the marshes are a help in its growth; yet too much moisture will destroy the crop.

In general appearance the cotton plant is similar to the holyhock. Some species are very large, but the kinds in general cultivation grow to a height of from two to three feet.

The leaves are dark green, shaped much like those of the sycamore tree. (A picture of the sycamore leaf, blossom, and fruit is given in this magazine.)

The flowers are pale yellow, and purple in the center. They are shaped like the blossoms of the hollyhock.

The fruit has three cells or compartments. It holds a large number of seeds. When it has grown to about the size of an English walnut it bursts, exposing to view a soft, white material—the "cotton."

How Cotton is Made.

Before planting, the land on which cotton is to be raised is plowed into ridges and drills about five feet apart. Along the tops of the ridges the seeds are sown.

Soon after the first leaves appear above ground the plants are thinned out, so as to allow plenty of room for the strongest and healthiest. They are hoed and weeded continually.

The greatest danger to the growing plants is a destructive caterpillar, which eats into the stem. Sometimes a whole crop is ruined by the ravages of this worm.

The harvest is gathered in from five to six

months after planting. In some places the pod is gathered with the cotton, but the husk is brittle, and the bits break off and mix with the raw cotton, making this difficult to clean. People are accordingly usually hired to take out the cotton and seeds from the husks. To do this, they wait until the pods open. As some pods open later than others, several weeks are required for the harvesting.

The cotton is usually picked in the morning, because if left until the middle of the day the sun would discolor it. The gathering must be done in dry weather, for moisture would turn the cotton moldy. The picker carries a bag, suspended from his neck, in which he places the cotton.

The seeds are separated from the cotton wool by a gin such as is shown in the large picture. After being cleaned the "wool" is then packed in large bundles called "bales." The cotton is pressed very closely together to form the bales, usually by "hydraulic pressure." Pupils of the upper grades will enjoy studying up, from the cyclopedia or text-book on physics, just how work is done by hydraulic pressure, and the principles upon which it depends.

The following vivid description of a cotton plantation was written by an English visitor to America:

"Here I am in the land of cotton. As I look out of my window I see the fields all around me. The cotton fields of these southern states of America are among the finest of the world.

"The harvest is ready, and the soft white cotton is being picked by the negroes. I can lift up my head and see their black shining faces peeping over the great baskets filled with their snowy loads.

"We speak of the cotton plant; it is really more like a tree. Think of a field of currant bushes planted in rows, and you will have some idea of it, tho the bush sometimes grows seven feet high.

"The bolls which hold the cotton open when ripe, and out puffs the white down. You would think that the bushes were covered with large, white flowers.

"If you look very closely, you will find little seeds all thru the cotton. These must be removed before the cotton is fit to be spun, or woven into cloth. It was a long and difficult task to remove them until the cotton gin was invented. This is a machine that takes the seeds out very easily and quickly.

"These seeds are not the ones which are planted; there are others for that purpose. But these ground, and pressed, make fine oil, and what is left after the oil is out makes good food for cattle."

A great deal of raw cotton is shipped to Liverpool, England, the greatest cotton port in the world. Much of it goes to New England, to be made into cloth or thread in the mills of Fall River and Lowell, Mass., or Manchester, N. H. Large quantities are spun or woven in mills in the states where the cotton is raised.

A Dictation Lesson.

Cotton is the downy covering of the seeds of the cotton plant.

The cotton plant grows in hot countries, such as the southern part of North America, Egypt, and India.

Cotton is picked by hand out of the pod in which it grows. The seeds are separated from the cotton wool by a machine called a gin.

When the cotton wool has been freed from the seeds, it is pressed into bags or bales.

The cotton wool is twisted to form thread or yarn. Several yarns twisted together form sewing cotton.

Much of the cotton yarn is woven into calico.

Autumn Leaf Study.

By SARAH H. WILLIS New Jersey.

The early autumn, before they begin to change color, is the best time to study leaves. There is an endless variety of forms, but with young children a careful study may be made only of the most simple.

Children will readily respond if asked to bring in as many different shaped leaves as they can find. These may be selected according to their general shapes, as lance-shaped, oblong, heart-shaped, arrow-shaped, or shield-shaped. Differences will be noticed in the apex of the leaves and also in the margin, whether entire or toothed. Some will be found to be cut sharply, like the teeth of a saw, while others are scal-

loped. Then, too, there will appear the leaf that is lobed, like the hepatica, or one that is divided, as the clover.

The parts of the leaf are the stem, the blade, and the stipules. Not all leaves do have all of these parts. In some leaves the blade rests on the main stem of the plant. Many leaves do not have stipules.

It is interesting to study the veining of the leaves. The children will be

able to find leaves of parallel veining, as the lily-of-the-valley and Indian corn. The maple leaf is a good example of the radiate-veined leaf. The main ribs that radiate from the base of the leaf may be discovered, and the veins that branch off from these.

As the leaves are brought in and talked about it will be well to press them and mount them upon card-board, thus making a chart for our leaf study.

Making Blue-Prints.

Before mounting the leaves it is interesting to make a set of blue-prints of the various kinds. This work will be very much appreciated by the children, and some of the older pupils can assist in preparing the leaves. The blue-print paper is not expensive, and a frame costs only a few cents. If one wants to be truly economical, the blue-print paper may be easily made.

A plain white paper, not too heavy, is best for the purpose. The chemicals necessary are sixty grains of iron and ammonia and forty grains of red prussiate of potash. These should each be dissolved in a half ounce of water and when ready to apply to the paper the two solutions should be mixed together. With a small brush wash the paper with the solution and allow it to dry in a dark room.

To make the print place the leaf in the frame next to the glass. Then slip in a sheet of the blue-print paper and fasten the spring on the frame. Place outside of a window in the sunlight for ten or twenty minutes, according to the strength of the sun. (This can best be learned by experimenting.) Remove the paper from the frame and wash carefully in running water or allow it to stand in a bowl of water for a short time, changing the water frequently. Dry between blotting paper and let the blue-print remain in a book or under pressure so that the paper will be perfectly smooth when dry.

The Turkey.

By CLARABEL GILMAN, Boston.

A RECENT authority on American game birds calls the wild turkey the "largest and most magnificent game bird in the world, and one of the best, if not the best, of food birds." The common domestic turkey can hardly be called handsome, with its back and wings of a dull grayish bronze, and its head so small that the body looks heavy and clumsy. But whether beautiful or not, as the largest and the only purely American bird among our domestic poultry, and as inseparably connected with Thanksgiving and Christmas festivities, it is one of the most interesting subjects of the kind for study in our schools.

Striking Characteristics.

With the head and upper part of the neck entirely bare of feathers, the dewlap on the throat and the curious outgrowth on the crown, and the conspicuous tuft of long, hair-like feathers hanging from the breast, the turkey is indeed a strongly marked bird. To these striking points we must add also the broad, rounded tail of fourteen to eighteen feathers. While all fowls are easily recognized by the stout, solidly built body, the rather small head and long neck, in turkeys the disproportion between the head and the body is carried so far as almost to seem like a deformity, but the plumage is so fine in some varieties that one almost forgets this lack of symmetry.

Varieties.

The principal varieties of the domestic turkeys are Bronze, Narragansett, White Holland, Buff, State, and Black. The Narragansett is the variety so long raised in the state of Rhode Island that it became famous as the Rhode Island turkey, and the buff turkey is often considered the most beautiful, but the bronze turkey is the largest and hardiest, many two-year old birds weighing from thirty-five to forty pounds.

How Turkeys are Raised.

Wild turkeys roam widely in search of food, and the wild nature is still so strong in the domestic bird that it cannot be kept on small farms or in gardens, but is at its best only when allowed a wide range over pastures and cultivated land. Turkeys would only die in small yards where hens and chickens thrive. At the Rhode Island Experiment Station, where the best methods of raising turkeys have been carefully studied, the young birds have been found to do best when allowed to run on high, dry pasture with short grass and no trees—the old ones enjoy roosting in trees even in the severest winter weather and are much healthier if allowed this freedom than if housed in a comfortable shed.

Wild turkey hens have for so many centuries exhausted all their ingenuity in hiding their nest from the crow, which watches their movements and in their absence eats the eggs, that the instinct of secrecy is strong in the farm bird. A few dry leaves in a hollow that she scoops out in the ground serves her as a nest. Or she will

take advantage of a barrel that her wise owner has thoughtfully turned on its side in some secluded spot. Half-wild turkeys will often hide their nests so skilfully that the first indication that they have made them will be their appearance with a flock of little poults. Turkey hens lay more eggs than they can sit upon, so the first ones are placed under hens and only the last given to their rightful mother. Exactly four weeks are required for the hatching.

So delicate are very young turkey poults that for the first few weeks of their lives they require the most devoted and tender care. Lice, dampness, and filth are their worst enemies, and they must first and last be kept dry. To insure this, the coops should be often moved to fresh ground, and the little birds should not run thru tall, wet grass or be exposed to showers until they have a thick covering of feathers on their backs. A drenching may be fatal unless they are a once taken into a warm room to dry.

It is said, however, that "neglect to exterminate lice causes more loss among little turkeys than any other cause." This danger may be warded off by killing the pests on the mother before she is set, then putting her and the poults into a clean coop, dusting them three times a week with insect powder, and rubbing lard on the top of their heads.

Fig. 1. Pure wild gobbler bred in confinement. As the bird had to be placed in a small pen in order to get any picture of him at all, it was impossible to represent his naturally free carriage. It should be carefully noted that the beak is not open, but the comb falls over it in such a way as to look in a small picture like the upper jaw. (From Bulletin No. 25 of the Rhode Island Agricultural Experiment Station.)

cooped, they must have plenty of green food, such as chopped onions and lettuce, to keep them healthy, and they must be able to get fine gravel, bits of charcoal, and crushed shells whenever they wish.

Wild Turkeys.

The study of turkeys in their wild state would be most fascinating, if only we could have the living bird before us, strutting majestically in the sunlight, which gives to his bronze feathers a rich metallic sheen and plays over them in changing tints of red, deep purple, blue, and green. Not only is the wild turkey much hand-

somer than the tame bird, its flesh is also much more delicate for the table. The effect of the long warfare waged against wild turkeys by hunters has been to produce a race of splendidly developed, hardy birds, keen and alert in the continual presence of danger, and with their wits sharpened to a high degree of intelligence. But it has been no part of the hunter's plan to produce this noble race, and his only aim now is to shoot as many of them as possible. Hornaday says it is doubtful if a single flock of wild

Fig. 2. Trap for wild turkeys, made of logs, twelve or fourteen feet long and about four feet high. A trench a foot and a half wide and dug deep under one side of the pen leads into the enclosure. Indian corn is scattered in the trench and inside the cage, and a few grains are dropped here and there in the woods near by. The turkeys, eagerly looking for corn, pass thru the trench into the trap with their heads down; but when they have satisfied their hunger, they never think of searching for the narrow path by which they entered, but try in vain to force their way out thru the top and sides of the pen. — (From *Turkeys and How to Grow Them*, edited by Herbert Myrick.)

turkeys exists in the north anywhere west of Pennsylvania, and "the gunners of the cattle ranches are fast killing them off in Oklahoma and Texas."

Perhaps the most striking difference in the appearance of the wild and the domestic turkey is the just mentioned keenness and alertness of the former, its bright hazel eyes gleaming with suspicion and intelligence. To this we must add a development of chest, a breadth of shoulder, and a firmness of step, which, with his alertness of appearance, stamp the bird at once as the untamed child of the forest. Like other forest dwellers, whose food is at times uncertain, he has developed the power to thrive on less food than the domestic bird. The unrelenting persecution of the gunners has changed the wild turkey from a bird so tame as to be called stupid to the shyest and wariest of fowls, and the French Canadian saying, "As stupid as a turkey," is true only of the farm bird. When our Pilgrim fathers inaugurated the New England Thanksgiving feast, their boards may well have been graced by gobblers weighing nearly sixty pounds, but it has for many years been unusual to find

them of more than twenty-five pounds. When fully grown, they are about four feet high and weigh from fifteen to twenty pounds, though they may increase in weight later, while the hen weighs from nine to fifteen pounds.

There are two species of wild turkey, one found in the United States and Mexico, and the other in Honduras. The domestic bird is the descendant of the Mexican turkey.

Crosses between wild turkeys and the farm birds used to be very common in the days when the wild birds were plenty. A gobbler marching in from the woods would coolly take possession of a flock, killing the male in charge if he dared to resist. The young of such flocks are so much healthier and hardier that the crossing has often been brought about by catching young wild birds and bringing them up with the tame ones or by finding a nest in the woods and hatching out the eggs with the farm dwellers. The birds from these eggs are very gentle and more fearless than tame birds, but if frightened in any way they are quickly made shy and wild again, and they refuse to roost with the other turkeys, choosing the woods or the top of a house or barn for their perch. Wild birds brought up in this way on the farm are very seldom attacked by disease, and when wild turkeys are crossed with tame ones it is said that "the wild blood gives the cross an astonishing ability to care for themselves."

When North America was settled, wild turkeys were found everywhere in the east, and in Audubon's day they were still abundant throughout the Mississippi valley, migrating from one district to another as they needed in order to obtain food. The following account of their migrations is condensed from his writings:

Early in October the birds assemble in flocks, which move towards the rich bottom lands of the Ohio and Mississippi; the gobblers by themselves in parties of from ten to one hundred, the females advancing singly, each with its brood of young, then about two-thirds grown, or in connection with other families, forming companies of seventy or eighty individuals.

These bands are all intent on shunning the old cocks, which even when the young have reached this size, will fight them and often kill them by repeated blows on the head. Old and young, however, all move in the same course and on foot, unless a river has to be crossed or the hunter's dog forces them to take wing. When they come to a river they remain for a day or two on the highest points of land near it, the males gobbling, calling, and strutting about, as if trying to raise their courage to the proper pitch, and the young and females running round each other and taking extravagant leaps. Finally, all mount to the tops of the highest trees, the leader gives a single cluck, and the whole flock takes flight for the opposite shore, the old and fat birds easily flying across a river a mile wide. If the younger and weaker ones fall into the water, as they often do, with wings close to the body and the tail spread out as a support they strike out vigorously for the shore. If they find it too steep for a landing, they float down

the stream to a more accessible part, where they generally manage by a violent effort to raise themselves out of the water. After crossing a broad river in this way they wander about for a time as if bewildered and are then easily shot by the hunter. Once on their feeding grounds they separate into smaller flocks of both sexes and all ages mingled, and devour everything they can find, even sometimes entering stables and corn cribs in search of food. Audubon tells an interesting story of a wild gobbler which he caught when it was not more than two or three days old, and which became so tame under his care that it would follow any person who called it, and was the favorite of the village. Tho so tame, it would never roost with the domestic turkeys but regularly took up its perch on the roof of the house, where it remained till dawn. When two years old it began to fly off to the woods, where it would spend a large part of the day, returning home at night.

“It continued this practice,” he says, “until the following spring, when I saw it several times

fly to the top of a high cotton tree on the Ohio, from which after resting a little it would sail to the opposite shore, the river being nearly half a mile wide, and return towards night. One morning I saw it fly off at a very early hour to the woods in another direction, but took no particular notice of the circumstance. Several days elapsed, but the bird did not return. I was going towards some lakes near Green River to shoot, when having walked five miles I saw a fine large gobbler cross the path before me, moving leisurely along. Turkeys being then in prime condition for the table I ordered my dog to chase it and put it up. The animal went off with great rapidity, and as it approached the turkey I saw with much surprise that the latter paid little attention. Juno was on the point of seizing it, when she suddenly stopped and turned her head towards me. I hastened to them, but you may easily conceive my surprise when I saw my own favorite bird and discovered that it had recognized the dog and would not fly from it, altho the sight of a strange dog would have caused it to run off at once.”

November

Mon.	Tues.	Wed.	Thurs.	Fri.

A Calendar Suggestion for the November Blackboard.

Studies of North America

A Series of Lessons Outlined by Adelaide R. Pender, Connecticut

(To be used in geography.)

Drainage of North America.

LET us see what the relief map of North America has to tell us about drainage. Turn to the map in your geographies, and tell me what your first impression of the river system of the United States is, of North America. Draw your fingers down over a wide section where there are few mountains or none. Why are there so many rivers in this wide belt? Lay your hand across a section where the rivers seem to divide—some flowing north to the Arctic ocean and others south to the Atlantic waters.

Close your eyes and try to see a height of land in the central part of the continent which is a barrier to the river systems. Rain which falls on the north slope of this height will run down and form rivers that flow into the Arctic ocean, and rain which falls on the south will form the rivers that flow into the Atlantic ocean or the Gulf of Mexico.

Names—Lengths.

Let us turn to the supplement in our geographies and find the names and lengths of some of the North American rivers.

Missouri-Mississippi, 4,200.

Mackenzie, 2,400.

St. Lawrence, 2,000.

Yukon, 2,000.

Nelson, 1,800.

Rio Grande, 1,800.

Columbia, 1,400.

Colorado, 1,100.

Story of a River.

Turn to the relief map of the United States. Let us see what story the Missouri-Mississippi has to tell us. Find with your pencils a place where the farthest branch of this river rises. Your story of surface tells you that it is very high in Montana. Here is a question to consider. Why did not this little stream flow toward the Pacific ocean? If the relief had been such that it could, what river would it have joined? Why did it flow north instead of south? Account for its numberless tributaries in this state alone. Close your eyes now and think the picture of the Missouri-Mississippi. Keep your pencil on the extreme end of the farthest tributary, in other words, one of the sources of this big river. High up in the mountains there is a little spring, there may be or there is a little mountain lake fed by numberless springs. Your story of springs and their formation will help you to think this picture.

The little stream flows thru magnificent scenery; great mountain walls tower over it or off in the distance. It hurries thru the wildest kind of country, with rocks, waterfalls, steep cliffs. Perhaps it passes by a few of those mountain sheep that are fast disappearing from the Rockies. Perhaps a great grizzly fords our

little stream, or wildcats, or deer, or other animals of this section are encountered in its rush down steep declivities ever lower and lower and ever larger and larger as other streams dash out from their gorges to join it. It flows by the dwelling of man frequently, when the valley is reached. And so on, ever deeper and wider, it sweeps across the great state of Montana until the more level lands of Dakota are reached. The soil is fertile and vast acres are under cultivation. The river grows more and more useful, it carries boats on its surface, but on it flows to meet the sea. Close your eyes and listen to my story of the river after it is joined by the Mississippi.

Teacher.—Paint vividly the story of the Mississippi down to the sea—the levees, serpentine route, steamers, marshes, and bayous at the mouth, vegetation, animal life in the bayous, jetties in the gulf, all afford material for a series of beautiful word pictures.

Soil.

To the Pupils.—Thru what kinds of soil does this long river flow? Your knowledge of soil study under surface will help you to read your map understandingly here. Where is there rocky soil, sandy, alluvial soil, marshy or swampy soil? Did you ever see a place where a river or stream took its rise? What kind of soil was there? What kinds of soil are near the river in your own town?

Vegetation.

Begin with the source of the Missouri-Mississippi and mention any kinds of vegetation on the way to the mouth. Where shall we find cotton fields? Trace this section on the map with your pencils. Trace the wheat, corn, rice, sugar-cane sections. Trace the forest region.

Make a list of the trees and plants that grow along the river near your home. Would you see any of these along the Missouri-Mississippi?

Occupations.

What occupations do the people along this river follow? Mention all of them. Are they similar to any followed by the people who live near the river in your own town or state?

Mention all the uses of this river to the people of the United States. How is it useful to people in other countries? How is it at times a menace to the people who live upon its banks?

To the Teacher.—Study each large river in this way—always comparing it with the river that the child has seen or lived near all its life. Thus the connection between his own environment and that of far-away people and places, will seem closer.

Pictures.

Have the pupils make a list of the river pictures of North America in their geographies and in supplementary geographies, with the pages, and then see that they are memorized in detail. This furnishes splendid home work.

The following is a suggestive list:

Mississippi and Tributaries.—Jetties of Mississippi; New Orleans; Cincinnati; Cleveland; Scene at St. Louis; Falls of Yellowstone; Falls Yosemite; Falls Shoshone; Falls of Niagara; Rapids of St. Marys; St. Lawrence; Dalles of Wisconsin; Palisades of Hudson; Canyon of Colorado; Erie canal; Platte river and canal.

Many more will be found among the geography pictures which have been collected from time to time.

Literature.

There is a delightful description of a river scene in the early pages of "Mosses from an Old Manse." Read "Beaver Brook" and some of Wordsworth's poems on the Yarrow, Rhine, and others. Tennyson's "Brook" should be learned, for its beauties will be appreciated and applied to streams with delight in all the after years of one's life. Other poems are "Flow Gently, Sweet Afton," "Lady of Shalott," "Horatius at the Bridge," Bryant's "Green River," and perhaps best of all that charming story by Fouque, "Undine."

Among the novels that furnish graphic descriptions of river scenes are "Lorna Doone," "Mutual Friend," which gives us the seamy side of the river Thames, "Mill on the Floss."

Read these descriptions to the children and have them try to see the beautiful word pictures that follow, one after the other.

Falls, Mountains, Bridges.

In connection with the river study it is well to include a close study of pictures of falls and some literature bearing on this phase.

It is easy to collect pictures from geographies or elsewhere on falls in the Yellowstone, Yosemite falls, Niagara falls.

Among the poems the "Cataract of Lodore," by Southey, should be studied and learned. Then develop the beauty of falls; ask the children to try to think some of Southey's poem whenever they see a cataract "leaping in glory," to change Tennyson's words.

Study Herring's "Three Members of a Temperance Society" and also his "At the Pump" for fountain pictures. Among Meyer von Bremen's pictures are appealing ones with rills tumbling out of pumps like fountains.

A study of bridges is another topic that develops many interesting features. There are pictures of Brooklyn bridge, the Natural bridge in Virginia, and others in geographies. For literature read "Horatius at the Bridge," "Bridge of Sighs," Longfellow's "Bridge," and stories of bridges used for toll.

Descriptive Terms.

One of the most effective exercises for oral training in expression is to have the children describe a brook or river. The following words will help them to weave their thought into beautiful and graceful language. Words which describe the sounds that the brook makes: Chatters, murmurs over stony ways in little sharps and trebles, is music blent, low, faint beating on the rocks, is wild music gushing out, sings and chants, is

silent water, frets the tranquil banks, is a rumbling of mighty floods, has an eloquence deep.

The stream splutters, basks in the sunshine, beams in the sun's caresses, capers, caresses the flowers, dances, dips into hollows, flickers, flashes, flings out arms, follows little curves in the bank, leaps, hurries, pauses, rests, turns, twists, tumbles, weaves, wanders, sparkles bright in a luxury of sunny beams, has a cool, sweet brink. The breeze lingers idly, sunbeams dance on foamy flakes and silvery water.

Word Pictures from Notes.

One of the best exercises for strengthening the memory and furnishing vivid pictures of the country studied is to have the children read a few standard geographical books, making notes as they read. Then when a chapter is completed a summary of the pictures is made by means of the notes. At the conclusion of the entire book a summary is made of the whole, chapter by chapter.

The following notes were taken from Carpenter's "Geographical Reader" on North America, when the chapter on "Up the Mississippi" was read. Carpenter begins with the Gulf.

Cypress trees, moss, series of lakes, swamps, broad and extensive.

Thru Mississippi jetty to New Orleans, South Pass, soil of delta, how much silt brought down, James B. Eads and his work, how made the jetties, ships laden with cotton, grain, sugar, can see over city, cemeteries, houses, streets, size of cotton bale, cotton wharves, describe four pictures, Canal street, Natchez, Vicksburg, Memphis, windings of river, what Mark Twain said, 1,800 of levees, how mend break, floods, rafts, lumber from Red river, barges or flat boats, St. Louis.

Notes with pages where subjects were treated were also taken; these likewise suggested pictures.

Words like the following were used as the keynote to open up the series of pictures presented by Carpenter: Cotton bales, sugar, ships, levees, cemetery, population of New Orleans, houses, wharves, rice field, sugar field, cotton field, forests, animals, plants, cypress, steamers, and so on.

Scientific.

How may the geographical subject of rivers be used in the science talks? What scientific topics may be associated with rivers? Let us see. A river is a liquid, one of the three great divisions of matter. Motion, energy, momentum, velocity are all part of a river's story. Friction against banks and bed, erosion, science of pebbly bottom in swift currents and muddy bottom and shores of slow currents, salts and minerals that are carried in solution in rivers, why a river moves faster in the hill than in the level country, pressure of water in rivers, science of reservoirs, springs and their science, why people may not swim in Great Salt lake, how vessels float on rivers, color of water, and so on. The list of applicable topics here is long.

Morals and Manners

Autumn Work for Character-Growing

By LOUIE HENDERSON, Kansas.

HERE are a few things for children to do that will help to develop character: First of all, plants, green things agrowing. They have a softening influence over even the rudest boy. Chrysanthemums are a good flower for the school-room; have a few in buckets.

Some evening detain a couple of your largest boys and ask them if they will go by way of your house in the morning and help you carry over some flowers for the school-room. Be sure to ask for help, and if the boys you ask are the worst boys in the school, so much the better. With these leaders once won over as flower friends the rest will be easy.

That morning give a chrysanthemum talk as part of the opening exercises. Have some of the beautiful colored plates which are sent out by the seed companies; show the children the pictures and tell them which ones our flowers will be like when the tiny buds open. Have a general talk about the care which these beautiful fall flowers require, find out all the children know about chrysanthemums and let them tell it in their own way, then hold an election and elect two florists for the coming month. It shall be the duty of these florists to take care of the plants.

The teacher will, of course, advise and make suggestions, but let them do the work. The florists shall also keep a vase of fresh flowers on the teacher's desk. Wild flowers linger long in the fall, and sunflowers and golden rod brighten up a dingy school-room wonderfully, and after these are gone we still have the beautiful autumn leaves, and before the snow and sleet have overcome these, a winter bouquet may be gathered that will last almost until spring. If chrysanthemums are not your favorite flower any other flowering plants will do as well, only they should be in bud with no other flowers yet open, as the buds will arouse the curiosity of the children.

I know you wish to distil into your pupils' minds the very essence of kindness to dumb animals. Let it never be said that a pupil who attended your school, and so was under your influence for eight or nine months, ever abuses one of these helpless creatures who look to us for protection.

Begin with Bird Day, plan for it, get every pupil in your room interested, have some canaries

in cages if you can borrow them; let your artist pupils draw birds on the black-board with colored crayon,—not merely figures of birds, but certain birds, as blue jay, robin, and meadow lark. Invite the other pupils to bring pictures of birds, and you should furnish some nice large ones which can be put up around the room in various tasteful ways.

Let the pupils do the work and ask for suggestions from them. About a week before the program is to be given have a general talk about birds. You should prepare yourself thoroly for this talk, then ask one of your older girls to write an essay on "The Killing of Birds for Ornamental Purposes."

Appeal to your girls never to wear a hat the trimming of which has cost the life of a little feathered songster. It will be well to bring a few good farm journals to school and distribute them among the older pupils. Of course, you will select those numbers that contain articles on the bird question. These journals have great weight with farmers' sons. After reading and discussing the articles, some of the older boys will be willing to prepare a paper on "Birds as the Farmers' Friends."

Don't forget your little people. Many sweet little bird pieces can be found for them to recite.

Just one more suggestion. Organize the strong, sweet voices of your musically inclined pupils into a glee club, to furnish music for this and other entertainments. If you cannot drill them yourself get someone else to do so.

Bird Day comes in the spring, but you can have a Snow Bird Day any time this winter, and it will be a good foundation for the organization of a society for the prevention of cruelty to animals, and by all means organize such a society, taking for your motto the beautiful promise, "Blessed are the merciful for they shall obtain mercy."

Construction Work Drawing and Writing

Work for Autumn Days.

By ANNA LINEHAN, Supervisor of Manual Training,
Asheville, N. C.

In the following exercises work will be suggested for each month, consisting of two lessons a week, of one half-hour each. If more time can be given, however, much better results will be obtained. All the lessons have been tried and found to be within the ability of the average child, and they are so arranged that at least two-thirds of the pupils will finish the work carefully and well.

Where a teacher has to give much assistance to a class, either the lesson is too hard for the grade, or the children have not been properly prepared for the work.

As manual work is a relaxation after that which is purely mental, it is best to have the lessons at the last part of the morning or afternoon session. This will benefit the teacher as well as the children, for it will give her an opportunity to collect the material. Except in the case of careless work or disorder, a child's work should not be destroyed in his presence.

It is more satisfactory to preserve the work for an exhibit to be held at the end of the year, rather than to have the child take it home each week. It means more to parents and children to see the results as a whole. Of course this does not apply to special work for the holidays

when the children have been happy making gifts for the home people.

Children are always pleased to have their work help in the school-room decoration, and

this can be done effectively in using the paper-cutting to make posters. This subject will be taken up later.

A good understanding of the sphere, cube, cylinder, etc., as type-forms, helps the children to classify objects, and prepares them for the work in perspective and geometry done in the upper grades. Language and imagination can be developed in these lessons in form study, if carried on systematically.

Having learned that the sphere is round, they are pleased to find other objects like it, and in the stories they have to tell, complete sentences should be insisted upon. The best results are obtained when the child's imagination leads him away from the environment of the school-room for objects like the model. This is also true in the color lessons.

In preparing the following lessons it is supposed that the grades above the first have already become so familiar with the type-forms that it will not be necessary to spend any time on them, but no opportunity should be lost to give quick reviews on the terms, vertical, horizontal, and oblique; also, circular, square, and oblong faces, as well as the angles as they appear in the making of any object.

We will proceed psychologically by working from solids to surfaces, then to lines, and this plan should be adhered to, especially in the lowest grade.

As clay is the easiest medium to manipulate we will start with that, for the satisfaction derived from having made something gives a child courage to greater effort. Molding the solid in

clay fixes the form in the child's mind, and he is the more ready to make the flat representation of it either by paper-cutting, painting, or drawing.

Illustrative work and pose drawing should be encouraged from the first, and the child should be allowed perfect freedom until he draws easily and naturally, when his efforts should be directed. It is in the same way that a child is encouraged to talk before any effort is made to correct his language.

It is better to leave the drill in drawing circles and straight lines until the second year in school.

Work for October.

GRADE 1.

1st Week.—Lesson on sphere. Model same in clay. Also model apples.

2nd Week.—Lesson on the color—red. Paint red apples from nature.

3rd Week.—Folding red circles for umbrella.

4th Week.—Illustrating some familiar story.

Fold circle in halves, quarters, and eighths, calling the children's attention to the divisions as they fold. Section A B is to be cut out and the two edges of the remainder of the circle pasted one on the other, to give the droop to the umbrella. A tooth-pick fastened to the center with mucilage will answer for a handle.

GRADE 2.

1st Week.—Cutting trees from green paper.

2nd Week.—Cutting trees from manila paper and painting some green, others touched with red and yellow, to represent trees in autumn.

3rd Week.—Learning to recognize the six colors—red, blue, yellow, orange, green, and

violet. Making washes in water color to produce the last three.

4th Week.—Make hollow square and triangular prisms, pasting the latter on the former for houses. Save for future drawing lessons.

GRADE 3.

1st Week.—Cutting and coloring leaves to represent autumn tints, each child having a leaf to study. Afterwards these can be mounted, forming a background for a calendar for the month.

2nd Week.—Review twelve colors in order of red, red-orange, orange, orange-yellow, yellow, yellow-green, green, green-blue, blue, blue-violet, violet-red. Making charts of same with colored crayons, colored papers, or water colors.

3rd Week.—Modeling cone; also coffee-pot or tall pitcher.

4th Week.—Illustrate some story relating to Hallowe'en either with color or pen and ink.

4TH, 5TH, AND 6TH GRADES.

Have the children of the 4th grade gather, press, and mount grasses. It is surprising the variety that can be found, and the children are interested in learning the names of the different specimens. If the work of the class is done on uniform sheets they can be made into a book, the cover having a design of grasses, and the whole fastened with a piece of raffia.

The 5th grade can press and mount leaves, making a book like the 4th grade, having a color design in color of leaves.

The 6th grade will be interested in making a design for a calendar for the month, from the fall flowers that they collected and pressed.

Penmanship.

By CHAS. T. LUTHY, Peoria, Ill.

THERE is and there can be only one correct writing. This is not mine; I have simply discovered its principles.

Penmanship, as to its forms, is a mathematically exact art; that is, the literal forms are geometrically exact. Why, for example, the small *g* is made with an initial small *a* attachment and a lower loop, and not of some other combination of parts, I am not prepared to state, possibly the selection of this particular form to visibly represent the vocal *g* is an arbitrary matter; but this form, the small *a* attachment and the loop, when understood, are mathematically as exact, and physically as unalterable as are the forms and parts of an inch circle and an inch square. While out of one thousand persons not one makes the letter correct and no two make it exactly alike, the correct letter behind them all is simply the exact center of the target at which all shoot, and tho not one exactly hits the center, their very scattering shows the perfect design, the common aim, and the one thousand errors.

The literal forms are based on, that is, correspond with movemental, visual, and geometric principles. As my work is not yet copyrighted, I am not yet at liberty to publish a geometric analysis of a letter, and I will, therefore, attempt to make myself understood by explaining another geometric form, viz., a right angle. This figure is composed of a straight line meeting, at one end, the end of another straight line, perpendicular to the former. If we further assign to the line's length, making them, say, one inch long, the figure is geometrically exact. Not a dimension, not a proportion, not a relation can ever be bettered; if mechanically, correctly made, the figure is, geometrically, absolutely perfect.

But while in its dimensions, proportions, and lineal relations this angle is geometrically perfect, the letters are forms of a higher order, and they, therefore, in addition to complying with geometric principles, further comply with esthetic—that is, with visual principles. Let me explain:—

Each eye has six muscles to move it: one on the top and one on the bottom of the eye move it in a vertical plane; one on the left side and one on the right side move it in a horizontal plane. These two planes are the central planes of vision, which, because the eye is constructed with these muscles to move it, and because the eyes are moved by these muscles, functionally establish in the mind the direction of these two planes as no others are established. These two planes divide the field of view into four triangles, viz.: the upper left, upper right, lower left and lower right. When one looks north, north is in front of him; when he looks east, south or west, north is not in front of him. But no matter where one looks, the upper left, upper right, lower left and lower right are always in front of him. Vision has its positions. Now, while geometrically a right angle is a right angle

no matter how it is turned, to comply with visual principles, a right angle must be made with a vertical and a horizontal line, and there are and there can be, therefore, only four visually correct right angles, viz.: those corresponding with the upper left, upper right, lower left, and lower right quarter-fields of view. Therefore, while geometric principles establish geometric right angles with rectangular lines tilted in every direction, the visual factors of positionality and directionality accept only the four. No others conform to visual principles; no others are correct.

Let us keep on. The letters, in addition to being geometric and visual forms are also movemental forms—that is, comply with movemental principles. Movement leads us to think of both arms—bilaterality—and this points out dextrality. I pass briefly. In its normal position, the right arm hangs loosely at the right side. The natural lateral movement for this arm is not to the left, but to the right. Upward movement of the arm is not easy, because it opposes the force of gravitation; downward movement is easy, because it works with that force. Now, of the four visual triangles only two can, connectedly, be made downward and to the right or to the right and downward, viz.: the upper right and its opposite the lower left, both of which are chirographically appropriated in the figures four and seven, respectively. No others are movementally correct.

While the foregoing explanations converge towards the point that, as to penmanship forms, there is and there can be only one correct writing, to bring it to a focus would require an explanation of the make-up of the letters and the application thereto of the underlying movemental, visual and geometric principles in their

THE FRINGED
GENTIAN.

THOU blossom, bright with
autumn dew,
And colored with the heaven's own
blue,

That openest when the quiet light
Succeeds the keen and frosty night.

Thou comest not when violets lean
O'er wandering brooks and springs,
unseen,

Or columbines, in purple dressed,
Nod o'er the ground-bird's hidden nest.

various ways. This, for the reason alluded to, I cannot yet enter into.

The foregoing also tends to show that form and execution correspond. To show further, briefly, and in a general way, that, as to execution also, there can be only one correct writing, I will state: a correct process produces a correct result; an incorrect process produces an incorrect result. How can one expect a chirographically incorrect movement to produce a chirographically correct letter, for practice on an incorrect form-exercise to produce a correct movement habit? Correct form and correct movement correspond.

There is and there can be only one correct writing. This is not mine; I have simply discovered its principles.

A sample of Children's Work in Paper Cutting. Made by a pupil in a primary school of St. Paul, Minn.

My preceding article tended to show that the mathematically correct form of a letter was unalterable; that is, that behind the multiforms of each letter there is an ideal which is geometrically, visually, and movementally perfect, and which it is a physical impossibility to take from, add to, or change in any way whatever, and still have it correct.

The claim that in penmanship, as to execution also, there is and there can be only one correct writing seems incorrect. Let me state that there is only one *best* method of execution. This brings the proposition nearer to the usual conception of what precision of a manual operation is. But does that not, practically, amount to the same thing? The result to be obtained by the execu-

tion is a letter; that is, a form which is mathematically exact. Now, surely, the execution that makes an exact letter cannot be less exact than the letter, and that is mathematically exact. And does it not require a nice adjustment of position, holding the pen, and movements to produce, chirographically, a literal form that is mathematically exact according to its design, and that is esthetically, or visually, perfect? I cannot descend into the details of execution, for, as I stated in the preceding article, my work is not yet copyrighted.

Let me explain the matter in this way. Execution is a process which produces a letter. A correct process produces a correct result; an incorrect process produces an incorrect result. Result and process correspond. It cannot be otherwise. Twelve is the product of *multiplying* three by four. You cannot add to nor take away from the process and still have it produce twelve; neither can you add to nor take away from twelve and still have it be their product. Likewise, a correct letter is the result of the correct combination of position, holding the pen, movements, etc. If the process is incorrect the letter will be incorrect; if the letter is incorrect, the process was incorrect. Form and execution correspond.

I have accordingly found, among the basic, geometric forms which compose the letters, characters which are also fundamental movemental forms. These characters, when used as practice exercises, will develop actions in their naturally correct directions; and, if consistently followed for a sufficient length of time, will confirm correct movement into a life habit. Further, when one from predisposition or improper use has acquired an incorrect movement habit, such practice tends to draw him back into the right channel, and, if persisted in, will confirm correct movement into a second habit. This exercise is positive in its results. In a practical test made, I found that the exercise compels correct movement.

As correct movement is a habit, correct form begets correct movement and correct movement begets correct form. Therefore, when scholars in the fourth and fifth grades in the school write better than later, as is now said to be the case, it is because both the form and execution which they are learning are wrong, and the further they so proceed the worse they write, until they reach the low level of their bad form and execution. The exceptions simply prove the rule. Form and execution should both be correct; if either is wrong, it usually subverts the other.

As behind the multiforms of each letter there is an ideal which agrees with the principles of movement, vision and geometry, so behind the various movements there is a movement which is correct, because it agrees perfectly with the letters and with the principles of physiology.

How Ruth Ellen Learned to Read.

RUTH ELLEN sat on the floor completely absorbed in her play with a box of blocks. She had reached the age of two years, and the blocks had come to her in commemoration of that auspicious event.

It happened that each block had on one side a letter of the alphabet, and on the other the name of some object beginning with that letter, together with a picture of the object. One had "C," for example, with the word "cat," and a picture of a cat. The set of blocks had been purchased because of its cheapness, there being no educational motive whatever in connection therewith.

One day when Ruth had been rather fussy, for the sake of attracting the child's attention her mother picked up the block with "O" on it, and said, "Big, round 'O,' can little Ruth say 'O?'"

Ruth smiled, and echoed the "O." When mother had placed the "O" block on the floor with the others, Ruth Ellen picked it up once more, again saying, "O." This was repeated several times during the day, until before her mother realized the fact, the baby recognized the block whenever she saw it.

The mother was a busy woman, but Ruth Ellen was a good baby and often played with the blocks for an hour or two at a time. Hardly conscious that she was teaching the child, her mother picked up several of the blocks and called the name of their letters, or told little stories about the cat on the "C" block, or the nice dog on the "D" block, and first she knew Ruth Ellen could pick out nearly all the blocks as their letters were named.

Before the child's third birthday, she had learned the delights of scratching up sheets of paper with a lead pencil. One morning mother found the baby making a "C" on her paper, a crude, many-angled "C," to be sure, but copied from the block, and properly named by the delighted young writer.

From that time educational advancement was rapid. Ruth Ellen learned to recognize her own name, from the envelopes on the numerous letters from grandma and the spinster aunts. She insisted that her mother write "Ruth," for her to copy.

Thus, without apparent effort on the part of either mother or child, the little one had learned her letters, and to read and write her own name. To read the names under the pictures on the blocks, of the cat, dog, top, and pig, about which she so loved to hear, and to tell, stories was another art unconsciously mastered.

Then came the opening of a new epoch. Ruth Ellen came into possession of a copy of the "Arnold Primer," written by an aunt who knows the tastes of other little nieces and nephews, as well as those of her own. Ruth was perfectly carried away with both the pictures and stories in this charming book. She never wearied of hearing about Kate, and the cow, and playing at school, and Christmas—tho sometimes her mother did! Always she leaned

over the book while her mother read the stories, until she knew many of the words herself.

On her fifth birthday, Ruth Ellen sprung a surprise on grandma. She could read! It wasn't knowing the Primer stories by heart; she could really and truly read them. And she had learned without serious mental effort, with no tears and no sighs. It was all fun, and the best kind of fun. She was just a rational little five-year-old girl who had used her eyes, her wits, and her common sense to good purpose.

She was graduated from the Primer into Ellen Cyr's "First Reader," and then she was ready to conquer all sorts of worlds. The linen-covered books of "Cinderella," and "Mother Goose," and "Little Red Riding Hood" had a new lease of life. They could be read instead of listened to.

Ruth was six years old last May. She reads the stories on the Children's Page of *The Youth's Companion* nearly every week, and she has this

Ruth Ellen at the Age of Five.

summer been enjoying a nature story book called, "The Rock Frog." She writes interesting and very readable letters, asking no advice as to what she "shall say next," nor how letter or envelope shall be addressed. She insists upon writing with pen and ink.

Just now she is busily mastering the multiplication table, tho she thinks she is only playing a very delightful game. She writes on one side of bits of paper such hieroglyphics as these: $6 \times 7 =$; $4 + 2 =$; $10 \div 5 =$; $9 - 4 =$. On the reverse side of each slip she writes the answer to the problem she has propounded. If she is not sure of the correct answer she asks her mother, and then writes it down. Her game consists in seeing how many answers she can give correctly out of the whole number of slips she has written.

Ruth has learned by the "natural method," because it is the method she has unconsciously

worked out for herself. She has been neither restrained nor forced in her desire to learn, because of her interest in what she saw and heard.

Her tools were such as are available in every school-room—a box of cheap blocks, pencil and paper, a primer, and the heaven-born interest in

life, which was allowed to develop naturally, instead of being stifled.

Primary teachers, with their thirty, forty, or fifty Ruth Ellens, need only to lead in the beautiful game of learning. The children, with the aid of their watchful eyes and eager fingers, will do the rest.

This charming design may be placed on the blackboard, and after the story of Ruth Ellen has been read, the teacher may tell how the little folks of long ago all learned to read and write by themselves, with a little help from mother.

CHILDREN OF OTHER LANDS

Plays and Games in Japan.

By DOROTHY WELLS, New Hampshire.

CHILDREN play in Japan, just as they do everywhere else. And there is a lesson which American boys and girls could learn from them—they never quarrel about their games. They are taught at home the rules of the various games, and when there is any doubt as to who came out best, or who reached goal first, the oldest child decides, and that ends the matter.

When anybody gives a child sweets, he never eats them without first asking permission of father or mother. When permission has been given, the boy or girl smiles, then passes the sweets to those present before eating any.

At three years of age the children put on the kimono and girdle, just like the dress of their parents. Play in such garments is very difficult, but the little folks do not seem to mind. The girdle worn by the boys is about four inches wide, but the girls' sash is a foot wide and ten feet long. This great sash is passed twice around the waist and tied behind in a large bow. No woman or girl is ever seen out of doors without the sash, and learning to tie it properly is part of a girl's education.

But the boys and girls have plenty of pocket room for stowing away their playthings. Handkerchiefs, charms, fan, pen and ink and all sorts of treasures can be tucked into the folds of the sash, and then there are the enormous sleeves, that reach nearly from the shoulders to the bottom of the kimono. The lower part of sleeve is a real bag, large enough to hold all the toys a child will care for in a day.

When they are out of doors the little folks, like everybody else, wear high clogs made of wood and held on the feet by a strip of leather which passes between the great toe and the others. As the foot cannot be raised when one walks in these shoes, they do not allow much romping. Instead of stockings, foot mittens of white cloth are worn, with a separate place for the great toe.

The babies are often carried "pick-a-back," and when the girls have no small brother or sister to carry, they often have a doll strapped to their backs in similar fashion.

Mrs. Isabella Bird Bishop tells, in her "Unbeaten Tracks in Japan," about two boys whom she saw playing with beetles. They harnessed paper carts to the backs of the beetles with

gummed traces, so that eight of the insects drew a load of rice up an inclined plane. The other children looked on with admiring eyes, but never a thought of interfering with the play.

Instead of canary birds, katydids are kept in cages as pets. The children delight in feeding them. In almost every garden there is a small pond or tank for gold-fish. There are many shops in Japan where nothing is sold but gold-fish food.

Water flows at the sides of some of the streets, and this turns many toy water-wheels which in turn keep in motion various kinds of mechanical toys.

The Japanese boys are very fond of flying kites. The kites are made of tough paper on a bamboo frame. They are square, and on most of them huge faces are painted. Mrs. Bishop tells about a very interesting contest between two kites, which she watched when she was in Japan. The string of each kite, for thirty feet or more below the frame, was covered with pounded glass, made to adhere very closely by a strong glue. For two hours each kite-flyer tried to get his kite into proper position for cutting his opponent's kite-string in two. At last one was successful, and the severed kite became his property. The victor and the vanquished then bowed low to each other three times, and the contest was over.

A very popular game with the children is played with cards. One card has on it a proverb and a second card has a picture which illustrates it. Each proverb begins with a different Japanese letter. The cards are divided among the children, and one is appointed the reader. He reads the proverb from one of his

cards, and the player who has the corresponding picture calls out. The one who gets rid of his cards first wins the game; the one who has the last card is beaten.

Some of the Japanese proverbs, translated into English, are given in Mrs. Bishop's book.

Here are some of them :

"Speak of a man and his shadow comes."

"A tongue of three inches can kill a man of six feet."

"A small-minded man looks at the sky thru a reed."

"The putting-off man sharpens his arrows when he sees the lion."

"For a woman to rule is for a hen to crow in the morning."

"Many words, little sense."

"Let the preaching suit the hearer."

"To be over-polite is to be rude."

"The doctor cannot cure himself."

"There are thorns on all roses."

"The fortune-teller cannot tell his own fortune."

"Inquire seven times before you believe a report."

"He is a clever man who can preach a short sermon."

"A cur barks bravely before his own gate."

"Treat every old man as thy father."

"A good son makes a happy father."

"A wise man keeps his money."

The dog is greatly honored in Japan, and no one is allowed to kill one of these animals. Those which have special owners wear a wooden label, but there are a great many that are half wild, picking up food where they may, and finding a place to sleep for themselves.

On the fifth of May there is a special festival for boys, called "The Feast of Flags." Toys are bought for the youngsters imitating all the implements used in war, and the boys march around carrying flags.

The boys like to walk on stilts. Battledore and shuttlecock is a favorite game of the girls. All the children enjoy blowing soap bubbles. There are certain street stalls that delight the little girls very much. A man sells all the materials necessary for a cake, and then allows his little customers to make the cake and cook it on his stove.

There are many, many sweetmeat and confectionery shops in Japan, and the boys and girls there are as fond of sweets as American children. Some of the finer kinds of candy are made in the form of flowers. Men, women, children, drums, dogs, and many other objects are made in the cheaper coarse sugar.

The children often go shopping to do the errands or with their mothers. These are some of the things they buy: Dried fish, on sticks; cakes, made of rice, flour, and very little sugar; roots boiled in salt water; white jelly made from beans; ropes, straw shoes for people or the horses; straw rain-coats, paper umbrellas, hairpins, toothpicks, paper handkerchiefs, and other household necessities.

The people are very fond and very proud of their children. Sometimes in the early morning one can see ten or a dozen men sitting along a wall, each with a child or two, showing off to one another the smart sayings or deeds of their own little ones. Parents take their children with them to picnics and festivals, and never seem to be content anywhere without them.

Here is a picture of a Japanese school, as given

by Mrs. Bishop, in "Unbeaten Tracks in Japan": "At seven A. M. a drum beats to summon the children to a school whose buildings would not discredit any school board at home. The children looked very uncomfortable sitting on high benches in front of desks, instead of squatting.

native fashion. The school apparatus is very good, and there are fine maps on the walls. The teacher, a man of about twenty-five, made free use of the blackboard, and questioned his pupils with much rapidity. The best answer moved its giver to the head of the class, as with us.

Obedience is the foundation of the Japanese social order, and with children accustomed to unquestioning obedience at home the teacher has no trouble in securing quietness, attention, and docility. There was almost a painful earnestness in the old-fashioned faces which pored over the school books. The younger pupils were taught chiefly by object lessons, and the older were exercised in reading geographical and historical books aloud, a very high key being adopted, and a most disagreeable tone. Arithmetic and the elements of some of the branches of natural philosophy are also taught."

The older children prepare their lessons for the following day after they get home from school late in the afternoon by reciting them aloud. At dark the paper windows of the houses are shut, or outside wooden shutters are used, the lamp is lighted, and supper is eaten. Then the children play quiet games for a little while.

Pieces to Speak

for the
Young and Old.

Give.

See the rivers flowing
Downward to the sea,
Pouring all their treasures
Bountiful and free:
Yet to help their giving
Hidden springs arise;
Or, if need be, showers
Feed them from the skies!
Watch the princely flowers
Their rich fragrance spread,
Load the air with perfumes,
From their beauty shed:
Yet their lavish spending
Leaves them not in dearth,
With fresh life replenished
By their mother earth!
Give thy heart's best treasures,—
From fair Nature learn;
Give thy love—and ask not,
Wait not a return!
And the more thou spendest
From thy little store,
With a double bounty
God will give thee more.

—ADELAIDE PROCTER.

Sunshine.

If the day be dark and dreary
Look for sunshine.
If you're feeling sad and weary
Look for sunshine.
You will always find a path of blue
Where the sunbeams sparkle thru
If you look for sunshine.
Friends are falling every day
For want of sunshine.
Help them up along the way,
Show them sunshine.

If you help the world in seeing
You are always sure of being
In the sunshine.

—LOUISE PYE.

Conscious Ignorance.

I'm only ist a little girl,
An' w'en I want to play
An' Mamma says don't go outside
Our yard this livelong day,
An' w'en someother girls, they come
An' pester me to go,
It may be wrong, but I'm so young,
How does she s'pose I know?
An' 'en she goes out somet'imes
An' says: "Now go to bed
At eight o'clock this very night,"
I'member what she said.
But w'en the mantle clock strikes eight
An' I don't want to go,
It may be wrong, but I'm so young,
How does she s'pose I know?
An' when she says: "Now don't go near
The cookie jar this day,"
I want some cookies awful much
An' try to stay away.
But all the time I m hungry for
Some cookies, an' I go—
It may be wrong, but I'm so young,
How does she s'pose I know?
I'm only ist a little girl
Not mor'n six year old,
An' my, I always try to do
E'zactly as I'm told.
But w'en I make ist one mistake,
My Ma ought not to go
An' punish me, 'cause I'm so young,
How does she s'pose I know?

—J. W. FOLEY in *New York Times*.

A Moon Song.

"O Moon," said the children, "O Moon
that shineth fair,
Why do you stay so far away, so high
above us there?
O Moon, you must be very cold from
shining on the sea;
If you could come and play with us, how
happy we should be!"

"O Children," said the moon, "I shine
above your head,
That I may light the ships at night,
when the sun has gone to bed;
That I may show the beggar-boy his way
across the moor,
And bring the busy farmer home to his
own cottage door."

"O Moon," said the children, "may we
shine in your place?
They say that I have sunny hair, and I
a sparkling face,
To light the ships and beggar-boys, we
greatly do desire;
And you might come and warm yourself
before the nursery fire."

"O Children," said the moon, "we have
each allotted parts;
'Tis yours to shine by love divine, on
happy human hearts;
'Tis mine to make the pathway bright, of
wanderers that roam;
'Tis yours to scatter endless light, on
those that stay at home."

—From "*Poems Written for a Child.*"

Verses for Children.

There are books and books of poems for children, collected from various sources. Some of them are poor, more are indifferent, and a few of them are really good. In the latter class is *A Book of Verses for Children*, most of them old English, gathered and selected, evidently with great care, and certainly with wisdom and good taste, by Mr. Edward Verrall Lucas. From this collection the following verses are taken, with the suggestion that the book contains many others fully as interesting and valuable for teachers to have at hand. The book is published by Henry Holt & Co., New York city.

Golden Rules for the Young.

In batting, hold your bat upright,
Play every ball with all your might.

In bowling, never exceed your strength,
Keep straight, but vary pace and length.

In fielding, put two hands to the ball:
A butter-fingers is worst of all.

—From *The Boys Own Paper*.

Two Apple-Tree Songs.

I.

Here stands a good apple tree.
Stand fast at root,
Bear well at top;
Every little twig
Bear an apple big;
Every little bough
Bear an apple now;
Hats full, caps full,
Three score sacks full.
Hullo, boys hullo!

II.

Here's to thee, old apple tree,
Whence thou may'st bud, and
whence thou may'st blow
And whence thou may'st bear
apples enow.
Hats full, caps full,
Bushel—bushel—sacks full,
Old parson's breeches full!
And my pockets full, too!
Huzza!

Mine Host of "The Golden Apple."

A Goodly host one day was mine,
A Golden apple his only sign,
That hung from a long branch, ripe and
fine.

My host was the bountiful apple tree;
He gave me shelter and nourished me
With the best of fare, all fresh and free.

And light-winged guests came not a few,
To his leafy inn, and supped the dew,
And sang their best songs ere they flew

I slept at night, on a downy bed
Of moss, and my host benignly spread
His own cool shadow over my head.

When I asked what reckoning there
might be,
He shook his broad boughs cheerily:—
A blessing be thine, green apple tree.

—THOMAS WESTWOOD.

The Plum Cake.

"Oh, I've got a plum cake, and a fine
feast I'll make,
So nice to eat all to myself;
I can eat every day while the rest are at
play,
And then put it by on the shelf."

Thus said little John, and how soon it
was gone,
For with zeal to his cake he applied,
While fingers and thumbs, for the sweet-
meats and plums,
Were hunting and digging beside.

But, woeful to tell, a misfortune befell,
That shortly his folly reveal'd;
After eating his fill, he was taken so ill,
That the cause could not now be con-
cealed.

As he grew worse and worse, the doctor
and nurse,
To cure his disorder were sent;
And rightly you'll think, he had physic
to drink,
Which made him sincerely repent.
And while on the bed he rolled his hot
head,
Impatient with sickness and pain,
He could not but take this reproof from
his cake,
"Do not be such a glutton again."

—ANN and JOHN TAYLOR.

Looking Forward.

If no one ever marries me
I shan't mind very much;
I shall buy a squirrel in a cage
And a little rabbit-hutch.

I shall have a cottage near the wood,
And a pony all my own,
And a little lamb quite clean and tame
That I can take to town.

And when I'm getting really old,
At twenty-eight or nine,
I shall buy a little orphan girl
And bring her up as mine.

—LAURENS ALMA TADEMA.

The Greedy Boy.

Sammy Smith would drink and eat
From morning until night;
He filled his mouth so full of meat,
It was a shameful sight.

Sometimes he gave a book or toy
For apple, cake, or plum;
And grudged if any other boy
Should taste a single crumb.

Indeed he ate and drank so fast,
And used to stuff and cramb,
The name they called him by at last
Was often Greedy Sam.

—ELIZABETH TURNER.

Politeness.

Good little boys should never say
"I will," and "Give me these;"
O, no, that never is the way,
But "Mother, if you please."

And "If you please," to Sister Ann,
Good boys to say are ready;
And, "Yes, sir," to a gentleman,
And, "Yes, ma'am," to a lady.

—ELIZABETH TURNER.

The Sad Story of a Little Boy That Cried.

Once a little boy, Jack, oh, ever so good,
Till he took a strange notion to cry all he
could.

So he cried all the day, and he cried all
the night,
He cried in the morning and in the twi-
light;

He cried till his voice was as hoarse as a
crow,
And his mouth grew so large it looked
like a great O.

It grew at the bottom, and it grew at
the top;
It grew till they thought that it never
would stop.

Each day his great mouth grew taller
and taller,
And his dear little self grew smaller and
smaller.

At last the same mouth grew so big
that—alack--
It was only a mouth with a border of
Jack.

—From *St. Nicholas*.

The Wind in a Frolic.

The wind one morning sprang up from
sleep,
Saying, "Now for a frolic, now for a
leap.

Now for a madcap galloping chase,
I'll make a commotion in every place."
So it swept with a bustle right thru a
great town,

Cracking the signs and scattering down
Shutters; and whisking, with merciless
squalls,

Old women's bonnets and ginger bread
stalls.

There never was heard a much lustier
shout,
As the apples and oranges trundled
about;

And the urchins that stand with their
thievish eyes
Forever on watch, ran off each with a
prize.

Then away to the field it went, bluster-
ing and humming,
And the cattle all wondered whatever
was coming;
It plucked by the tails the grave matron-
ly cows,
And tossed the colts' manes all over their
brows;
Till, offended at such an unusual salute,
They all turned their backs, and stood
sulky and mute.

So on it went capering and playing its
pranks,
Whistling with reeds on the broad river's
banks,
Puffing the birds as they sat on the
spray,
Or the traveler grave on the king's high-
way.
It was not too nice to hustle the bags
Of the beggar, and flutter his dirty
rags;
'Twas so bold that it feared not to play
its joke

With the doctor's wig or the gentleman's
cloak.
Thru the forest it roared, and cried
gaily, "Now,
You sturdy old oaks, I'll make you bow."
And it made them bow without more
ado,
Or it cracked their great branches thru
and thru.
Then it rushed liked a monster on cottage
and farm,
Striking their dwellers with sudden
alarm;
And they ran out like bees in a midsum-
mer storm:—
There were dames with their kerchiefs
tied over their caps,
To see if their poultry were free from
mishaps;
The turkeys they gobbled, the geese
screamed aloud,
And the hens crept to roost in a terrified
crowd;
There was rearing of ladders, and log
laying on,

Where the thatch from the roof threat-
ened soon to be gone.
But the wind had swept on, and had met
in a lane
With a schoolboy, who panted and strug-
gled in vain;
For it tossed him and twirled him, then
passed, and he stood
With his hat in a pool and his shoes in
the mud.

Then away went the wind in its holiday
glee,
And now it was far on the billowy sea,
And the lordly ships felt its staggering
blow,
And the little boats darted to and fro,
But, lo, it was night and it sank to rest
On the sea-bird's rock in the gleaming
west,
Laughing to think, in its fearful fun,
How little of mischief it really had done.
—WILLIAM HOWITT.

Home Bookbinding.

By I. BROOKE-ALDER.

Very often teachers own long-cherished books that from long use become worn out. No new copy will ever seem the same as that arithmetic or history that had its place so long in the old desk in the little school-room where it was studied in years gone by. Yet the covers are loose and the pages fall out unless they are handled with great care. Here is a remedy.

BOOKBINDING is easy to learn, does not require the exercise of strength, nor demand specially artistic gifts. Neat-handedness and a fairly acute sense of proportion are really the only necessary endowments; the rest is only a matter of practice. Further, in bookbinding there is not the smallest excuse for injury to the hands, nor for the general "messiness" which is the inevitable accompaniment of some pursuits indulged in by amateurs of various arts and crafts—photography, for example—neither is there any serious amount of noise entailed, as when metal work is in course, and it does not necessitate a studio nor a vast array of implements.

Do not waste time and materials trying to find out for yourself the secrets of the craft, but take a few lessons from a really practical bookbinder to get the fundamental facts properly demonstrated. That done, you can strike out for yourself, taking just what line may appear most attractive, and following it with success to the farthest possible limit. The simpler these introductory lessons the better, for until they have been thoroly well-digested and subsequently put in practice, it is useless to acquire the more complicated elements—the elegancies of the craft.

Six lessons, given by a really competent teacher, would be quite enough to leave the amateur bookbinder in possession of all salient points, fully equipped for the conquest, in excellent style, of all the home belongings.

The list of necessary implements for the beginner is short—a bookbinder's hammer, large scissors, similar to those used by dress-makers for "cutting out," folders (rather like a blunt handleless paper knife), and a press. In regard to materials it is equally simple—mill board, binder's cloth, tape, needles and thread, paste and glue.

The process consists, roughly speaking, of four divisions, or, as somebody once said of it rather appropriately, "The play is divided into four acts, and the title is, 'New Books for Old; or, Many Words and One Blow.'" They are as follows: repairing, technically known as "guarding," the loose leaves

sewing them together; glueing sewn sections; and uniting leaves to cover. The first act comprises the repairing of any torn margins by the application of narrow strips of thin paper carefully matched in color to the tone of the dishevelled pages.

The second act (sewing) demands some little care, both in the precise amount of leaf edge that is taken on the needle at each stitch, and in the tension given to the tape that serves as security all down the back. The tightness of tape and of the threads that hold it to the leaves has much to account for in the future life of the book; be it overdone or underdone, the result is equally fatal. The leaves can be sewn while lying at the edge of an ordinary table (backs outwards, of course) and held firmly in position by the left elbow of the operator. But to those who would prefer an even easier method, one would recommend the use of a press.

The third act consists of glueing up and rounding the back of sewn sections, and it is a very important item of the undertaking, necessitating considerable care. Indeed, it is this act which decides the fate of the play—its triumph or its failure—for when the leaves are united by the glue the book is either made or marred. This it is which gives to the book the air of professional adept, or the deplorable aspect of bungling amateur. The signs that are the enviable privilege of the former are that the book opens well, does not crack, has a rounded (not a wedge-shaped) back, and that the lines of print run straight across the pages. The means whereby the amateur will learn to appropriate them are: care as to tightness of sewing; right use of glue in preparation of cover; accurate direction of blows when hammering the back, and proper placing of finished book in the press.

Young gardeners at work in an Attleboro, Mass., school garden. Mr. W. P. Kelly, now at Meriden, Conn., was Superintendent here last year.

Poems for the Teachers

The Gospel of Brotherhood.

I come to preach on the text of love
From the gospel of brotherhood,
To help if I may in finding a way
That leads to the higher good;
To picture the light that is shining bright
On the Future's upturned face;
And to whisper a hope whose breadth
and scope
Is as wide as the human race.

It is this: the hour is almost here
When the races shall rise as one,
And shall all join hands from the thous-
and lands
That are kissed by a common sun;
When the cannon's roar shall be heard
no more
And the war-flags shall be furled;
When the lily-white banner of peace
shall float
O'er a union of all the world.

There are glimpses of glory in Paradise,
But they all are not so bright
As our own dear earth will be, if we
Can open the reign of right;
If we, as brothers, will love each other,
And work as best we can
In the glorious labor of lifting our neigh-
bor
And helping our fellow man.

—J. A. EDGERTON.

The Two Mysteries.

We know not what it is, dear, this sleep
so deep and still;
The folded hands, the awful calm, the
cheek so pale and chill;
The lids that will not lift again, tho we
may call and call;
The strange white solitude of peace that
settles over all.
We know not what it means, dear, this
desolate heart-pain;
This dread to take our daily way, and
walk in it again;
We know not to what other sphere the
loved who leave us go,
Nor why we're left to wonder still, nor
why we do not know.
But this we know, our loved and dead,
if they should come this day—
Should come and ask us, "What is life?"
not one of us could say.

Life is a mystery as deep as ever death
can be;
Yet oh, how dear it is to us, this life we
live and see!

Then might they say—these vanished ones
—and blessed is the thought:
"So death is sweet to us beloved! tho
we may show you naught;
We may not to the quick reveal the mys-
tery of death—
Ye cannot tell us, if ye would, the mys-
tery of breath."

The child who enters life comes not with
knowledge or intect.
So all who enter death must go as little
children sent.
Nothing is known. But, nearing God,
what hath the soul to dread?
And as life is to the living, so death is to
the dead.

—MARY MAPES DODGE.

Wanderer's Song.

There will be, when I come home, thru
the hill-gap in the west,
The friendly smile of the sun on the fields
that I love best;
The red-topped clover here, and the
white-whorled daisy there,
And the bloom of the wilding brier that
attars the upland air;
There will be bird-mirth sweet (mellow
none may know!)—
The flute of the wild woodthrush, the call
of the vireo;
Pleasant gossip of the leaves, and from
the dawn to the gloam
The lyric laughter of brooks there will
be, when I come home.

There will be, when I come home, the
kindliness of the earth—
Ah, how I love it all, bounteous breadth
and girth!
The very sod will say—tendrils, fiber, and
root—
"Here is our foster-child, he of the wan-
dering foot.
Welcome! welcome!" And lo! I shall
pause at a gate ajar
That the leaning lilacs shade, where the
honeysuckles are;
I shall see the open door—O farer over
the foam,

The ease of this hunger of heart there
will be, when I come home!

—CLINTON SCOLLARD, in *The Outlook*.

Sweet Content.

Sweet are the thoughts that savor of
content;
The quiet mind is richer than a crown;
Sweet are the nights in careless slumber
spent;
The poor estate scorns Fortune's angry
frown:
Such sweet content, such minds, such
sleep, such bliss,
Beggars enjoy, when princes oft do miss.
The homely house that harbors quiet
rest,
The cottage that affords nor pride nor
care,
The mean that agrees with country music
best,
The sweet consort of mirth and modest
fare,—
Obscured life sets down a type of bliss:
A mind content both crown and kingdom
is.

—ROBERT GREENE.

Thoughts for Saturday.

It never will rain roses; if you want
more roses, you must plant more rose-
trees.

—GEORGE ELIOT.

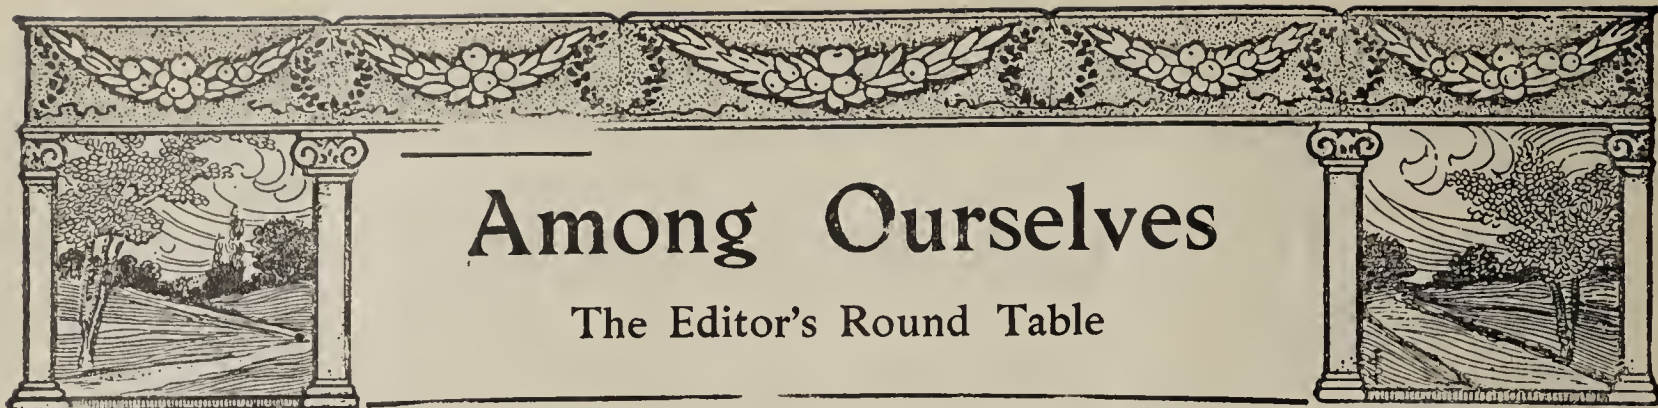

Step by step lifts bad to good,
Without halting, without rest,
Lifting better up to best;
Planting seeds of knowledge pure,
Thru earth to ripen, thru Heaven endure.

—RALPH WALDO EMERSON.

Be strong to *hope*, O Heart!
Tho day is bright,
The stars can only shine
In the dark night.
Be strong, O Heart of mine,
Look towards the light!

Be strong to *bear*, O Heart,
Nothing is vain;
Strive not, for life is care,
And God sends pain;
Heaven is above, and there
Rest will remain.

—ADELAIDE PROCTER.

Among Ourselves

The Editor's Round Table

Never exact work of your pupils which you do not purpose to examine with as much care as you expect them to put into it. Many teachers sin here unconsciously. Work must be regarded as something worthy of respect. If time cannot be found to look over the home tasks assigned to the pupils, let those tasks be reduced or do away with them altogether rather than permit the product to be slighted. The young people need the training in accuracy, neatness, and conscientiousness which strict educational supervision supplies. Care in the examination of children's work is a mighty educational force.

With the loyal devotion of the pupils to aid her, the teacher can accomplish wonders. "How to win the pupils," that is the problem. Mr. Dragod gives some excellent suggestions on page 116. The teacher need go but a short distance, if the heart is tuned aright, in making the first advances, to have the child heart respond. There are as many ways as there are teachers. One wise woman eats her noon-day lunch sitting in the shade of a large oak tree surrounded by her pupils. Another shares with her young folks her knowledge of the nature folk-lore in which children take such delight. A schoolma'am in a boarding school invites half-a-dozen girls to afternoon tea every Saturday. But whatever is done there must be a heart that beats for the children and something more—heartiness. That's it! Heart and heartiness.

For a barrel full of healthy fun, good measure and running over, let me commend to you Miss Wilbur's little exercise, "Mr. Turkey's Enemies." Very little effort is required to "stage" it properly. And it will be nip and tuck whether the audience enjoys it best or the actors. The small boys who "can't learn poetry to save their lives" will be found to be adepts at either gobbling or hunting the king of the barnyard. Here is a grand opportunity for them. The treat will long be remembered. Try it!

The story of "How Ruth Ellen Learned to Read," is the story of a real little girl! The portrait, too, is a true one. I am going to share another secret with you. The writer of the article on what a teacher needs for a term away from home is Ruth Ellen's grandmother. This grandmother well illustrates a significant remark in Dr. Henderson's charmingly written

autobiography to the effect that all New Englanders are born with a teaching instinct: she is the daughter of a teacher, wife of a teacher, and mother of three teachers; some day she may be the grandmother of teachers, who knows? Ruth Ellen is in the primary school, and she has two first cousins, both of them girls. So there are three probabilities.

I am sorry that Miss Flora Helm's article on civics was received too late for publication this month. It is as helpful, bright and interesting as the instalment published in June. Miss Helm is a master—or ought I to say mistress?—of the subject. History, civics, and literature are her favorite subjects, and she has an original way of presenting her ideas. She has been for several years assistant principal of a large Chicago public school, and knows well what will prove of greatest benefit to teachers. Civics will occupy an increasingly important place in the school programs. The wide awake teacher is preparing for the day when training for citizenship will be the chief anxiety of the schools thruout the land, from the first year up thru the high school.

One difficulty has been, heretofore, that the teachers did not know how to present civics to the younger children, and so many have concluded that the subject is beyond the elementary school, more especially the primary years. Miss Helm shows the groundlessness of the conclusion by showing how to make use of the materials near at hand: study about the baker, the farmer, the grocer, the policeman—and lo, we are in the midst of civics, while the children think they are playing games, singing delightful songs or molding in clay. Miss Helm's suggestions will pave the way over many rough places. Her series will prove an effectual means in spreading abroad intelligent teaching of citizenship.

It is not given to every teacher to win laurels as an artist in blackboard sketches. But any normal human being this side of ninety-four with senses, muscles, and fingers unimpaired can learn to draw simple designs. Like swimming, this kind of drawing is learned quickest if you feel you must learn it. Even if you never had a drawing lesson in your life you may do some pretty creditable work by going about it in the right way. Don't be afraid that your work will fail of appreciation as utterly as did the "cow drawn back to," described in

the "Robbie" story for this month. There are to be found in every number of *TEACHERS MAGAZINE* an abundance of simple outline drawings which any teacher with persistence can learn to transfer to the blackboard. However, the teacher does not necessarily have to do the work himself. A pupil may be found who will be delighted to be honored with the privilege of drawing on the board. If the design for an October calendar, on page 151, proves too complicated, it may easily be simplified by reducing to one bunch of grapes or even a single leaf. The paper cutting of the fox and the crow, on page 109, can be reproduced in white crayon by an amateur, and yet be greatly enjoyed. Draw—or let a pupil draw—a couple of upright stalks enlarged at the end (see page 144) and the imaginations of the children will do the rest. The same will be true of a log cabin copied from the one pictured on page 128. The plan of letting apt pupils take a hand at the blackboard sketching will be found most acceptable in many ways. Have you tried it? The "Hints and Helps" department is wide open for practical suggestions from teachers.

In the death of Hezekiah Butterworth, author of the well-known "Zig-zag Journeys," and for many years one of the editors of the *Youth's Companion*, the educational world has sustained a sad loss. Mr. Butterworth was an educator in every sense of the word. His whole life was given to teaching, by the spoken as well as by the written word. He was never too busy to leave his desk to give words of encouragement to young people preparing for life's work in the schools, and many a country boy owes to him the first awakening of an ambition to do, and to be somebody of value to the world. No boy ever appealed to him for assistance in vain. Had the schools been in session on the day of Mr. Butterworth's death, the flags on the schools might well have stood at half mast, for it was owing chiefly to his tireless efforts that the flags are there. He lived until his ambition was almost fulfilled—to see the day when the stars and stripes should float from every school-house in America. The school flag will always remain—the best monument to Hezekiah Butterworth's work. A sense of personal loss came over me when I heard of the death of this true patriot. He was a friend whose interest in the literature for teachers, especially in *THE SCHOOL JOURNAL* and *TEACHERS MAGAZINE* was inspired by the noblest motives.

The joy of going back to school is one of the new springs of happiness in the world. Here is a story from the *Youth's Companion*, which teachers might well read to their pupils in every school-room in the land:

On the first day of school in September a year or so ago the city editor of an afternoon paper in Chicago sent one of his newest reporters out to get a "story" of the event. After a tour thru the downtown wards the reporter wrote a description of happy, care-free children, dancing back to the reopened school-houses with all the gayety and delight of so many urchins going to a candy pull. When the article was in proof the managing editor sent for him.

"Here," he said, "this thing won't do. Children don't go to school that way. They lag. They loiter. It's like going into prison. All summer this first day of school has loomed ahead like some future punishment. It's the end of all happiness. I know. I was a boy once."

"But that is not true now," protested the reporter. "Here in the city, among the poor, vacation is the punishment and school the release from it. It may be that they find more to interest them there than outside; it may be that the teachers have learned the secret of inspiring them; it may be partly that they have so few pleasures at home. Anyway, they were the happiest children I have seen in a long time—just because they were coming back to school. Why, sir, half of those children were studying voluntarily till the middle of August in the 'vacation school.'"

The managing editor, growing interested, went and saw for himself, and the story "stood." It should have an inspiration in it for other boys and girls, and for their teachers, too. For these children who were going so merrily to the class-rooms were for the most part foreign-born themselves or the children of immigrants, who were turning to study with the avidity of those long deprived of all such privilege. The managing editor was just an American boy, and believed he was a typical one. Was he right? Every boy and girl who goes back to school after the long vacation might well ask whether he or she is as appreciative of that privilege as were those less fortunate urchins from other lands.

The American creed is that the safety of our institutions rest wholly upon the universal education of the people. The more generously the individual citizen is educated the better for the democracy. The development of the country's resources is wholly dependent upon education. Liberal provision for the extension of educational advantages is, therefore, nothing more nor less than a wise investment of the people's taxes. The future belongs to the resourceful mind, the trained intellect, the skilful hand, the man and woman who can master a situation. The State which fails to grasp the full significance of its educational duty is defrauding posterity out of a just portion of its dues. Not only should the State provide opportunities in the shape of schools and teachers and apparatus, but it should try in every possible way to induce the young to take advantage of them. Professor Giddings has suggested that it would not be unreasonable to compensate poor parents of gifted and industrious children to let these children continue at school after the compulsory education limits have been reached. He is right. The State can well afford to be liberal in the encouragement of universal education. This is practically recognized by every enlightened people, France and Germany, in particular.

But there are still many blind leaders of the blind who do not see this. The *New York Times* said recently: "The taxes of the many are now expended on the few to give them privileges of which the many are absolutely deprived." To be sure, why expend any money on West Point and Annapolis? Why? The many are going to be only soldiers in the ranks anyway, so why maintain schools for officers? Is it really so hard to see the point?

The penmanship problem is practically solved in its more essential phases by insisting upon care in the preparation of written work followed by rigid examination. Home work—if such there be—should receive special attention.

VERTICAL SECTION OF A HEAD OF FRUIT.

L. G. WILSON.

One day; early in the summer, a New Jersey teacher presented to TEACHERS MAGAZINE the leaf, blossom and seed from a sycamore tree that grew near her school, saying that her pupils were very much interested in the manner of growth. The editor had this drawing made, for the benefit of pupils and teachers elsewhere.

Summary of the Russo-Japanese War.

1903.

July.—Negotiations between Russia and Japan regarding Korea and Manchuria.

1904.

February.—(6) Diplomatic relations broken off. (8) Japanese torpedo boats attack Russian fleet outside Port Arthur, disabling two battleships and a cruiser. (10) Japan declares war; (11) United States declares neutrality; (12) China declares neutrality. (21) Kuropatkin appointed commander-in-chief of the Russian forces in Manchuria. (25) Japanese naval attack on Port Arthur repulsed. (26) First land action of the war, at Pingyang, Korea.

March.—(4) More than 20,000 Japanese troops landed at Chemulpo, Korea. (6) Japanese warships shell Vladivostok at long range; Russian forts make no reply. (8) Vladivostok bombarded without effect. (12) Kuropatkin leaves St. Petersburg for the front. (22) Japanese fleet again bombards Port Arthur. (27) Kuropatkin arrives at Mukden. (31) State of siege declared in the Port Arthur district.

April.—(7) Japanese supply ships enter the Yalu. (12) Japanese ships strew mines outside Port Arthur. (13) Russian battleship sunk by Japanese mine off Port Arthur, Admiral Makaroff with officers and crew to number of 674 being drowned, and another battleship injured. (27) Third attempt to block channel at Port Arthur fails. Fighting begins on the Yalu. (29-30) Battle of the Yalu. Japanese army under Kuroki forces the crossing of the Yalu near Wiju, and defeats Russians, capturing 28 guns. Loss on both sides about 4,000.

May.—(4) In a fourth attempt Japanese sink five merchant ships at entrance to inner harbor at Port Arthur, but do not seal port. (7) Japanese army cuts the railroad and telegraphic communications with Port Arthur at Polandien. (15) Japanese battleship Hatsuse sunk by striking submerged Russian mine outside Port Arthur; 480 officers and men killed. Battleship Yashima also sunk by mine. Japanese cruiser Yoshino rammed and sunk by sister ship Kasuga; 232 officers and men drowned. (24) Japanese bombard Port Arthur. (30) Japanese occupy Dalny, securing valuable property; docks blocked by sunken ships.

June.—(7) Russians driven from Samaltsa and Sin-yen after hotly contested battles. (14) Russian destroyers make a sortie at Port Arthur, but are driven back by Togo. (14-16) Battle of Vafangow results in decisive victory for Japanese. Russian losses, 3,426; Japanese, 1,193. Russians lose 16 guns. (15) Vladivostok squadron sinks Japanese transports Hitachi and Izumi, and disables the Sado in sea of Japan. (23) Russian fleet makes sortie from Port Arthur, declines battle with Togo's fleet, and is attacked in outer harbor by Japanese torpedo boats. Kuropatkin takes charge of Russian army in person. (26) Japanese capture Russian positions near Port Arthur.

July.—(4) Russian attack on Japanese in Motien Pass repulsed with loss of 200 men; Japanese loss, 60. (14) Announcement that the Baltic fleet will sail for the East. (24) Japanese push Russians from positions south of Liao-yang. (28) M. von Plehve, Russian minister of the interior, assassinated by a bomb at St. Petersburg.

August.—(5) Sea and land attack on Port Arthur. (10) Admiral Togo attacks ships, seriously damaging five battleships. Russian vessels take refuge in neutral ports. (16) General Nogi demands surrender of Port Arthur, offering safe conduct for non-combatants. (17) General Stoessel refuses to surrender Port Arthur. (19) First general attack on Port Arthur. (22) Left flank of Kuroki's army closes in on Liao-yang. (24) Assault by Japanese on Keekwan forts repulsed by Russians. Japanese losses in six days of first general assault on Port Arthur exceed 14,000 men; attempt as a whole a failure. (26) Japanese drive Russians out of positions on Pigeon bay, west of Port Arthur.

September.—(3) Kuropatkin orders general retreat. Japanese torpedo boat destroyer Hayatori sunk by mine off Port Arthur. (4) Russian rearguard evacuates Liao-yang; Japanese enter. Russian losses, 14,000; Japanese, 17,500. (7) Kuropatkin reaches Mukden. (18) Japanese gunboat Hei-yen strikes mine and sinks. (26) Railway around Lake Baikal opened.

October.—(10-14) Heavy fighting. Russians driven back losing 33,000 men; Japanese loss, 16,000. (15) Baltic fleet sails from Libau. (17) Baltic fleet anchors off Danish coast. (20) Baltic fleet moves toward North sea. (21-22) Baltic fleet fires, at midnight, on Hull fishing fleet. One vessel sunk, two fishermen killed. (25) The czar sends message to King Edward expressing regret. (26) Baltic fleet reaches Vigo. (28) Announcement that an International Commission of Inquiry is to be constituted to inquire into North sea matter.

November.—(2) Sir Charles Hardinge submits the British proposals for constitution of North sea Commission of Inquiry. (5) Russia accepts the proposals of Great Britain, but later, difficulties are raised. Baltic fleet leaves Tangier. (10) Admiral Alexieff arrives in St. Petersburg. (12) Admiral Rojesvsky at Dakar. (25) Anglo-Russian convention agrees to submit North sea matter to International Commission of inquiry. (30) Capture of 200-Metre hill. Russian loss, 3,000, Japanese (perhaps) 12,000.

December.—(3) Guns of Japanese naval brigade open fire on Russian ships in Port Arthur. (22) North sea Commission of Inquiry meets in Paris, and adjourns to Jan. 9. (22-25) Japanese dislodge outposts at Port Arthur.

1905.

January.—(1) General Stoessel proposes surrender of Port Arthur to General Nogi. (2) Capitulation agreement signed. (5) Surrendered garrison reported as 32,207 prisoners and 15,000 sick and wounded. (6) Prisoners march out of Port Arthur. (9) International Commission of Inquiry resumes sittings. (19) First public sitting of commission. (22) Strike riots in St. Petersburg. Troops fire on rioters. (25-29) Battle of Heikontai. Russians forced to retire. Russian losses, 10,000. Japanese, 9,000.

February.—(26) North sea commission holds Russia responsible for damage to British fishing fleet. (28) Oku's army of the west advances.

March. (6) Oku's progress checked by Russians. (7) Kuropatkin orders a retreat. (10) Japanese enter Mukden. (16) Japanese enter Tie pass. (21) Japanese occupy Chang-Tu.

April.—(8) Baltic fleet sighted off Singapore. (12-14) Rojesvsky reaches Kamranh bay. (20) Japanese minister at Paris calls attention to the reported stay of Russian vessels in Kamranh bay. (22) Rojesvsky leaves Kamranh bay.

May.—(1) U. S. government urges upon China wisdom of enforcing neutrality of Chinese Harbors. (14) Baltic fleet leaves Honkohe bay for the north. (18-25) Fighting in Manchuria. Japanese successful. (27-28) Battle of sea of Japan. Togo destroys Baltic fleet, captures Rojesvsky and Nebogatoff. Prisoners, 8,000; many killed and drowned.

June.—(8) President Roosevelt sends dispatch to Japanese and Russian governments urging negotiations for peace. (9) Escaped Russian cruisers interned at Manila. (10) Japan agrees to President Roosevelt's proposition to appoint peace envoys to meet similar envoys from Russia. (12) Russia accepts the proposal. (15) Washington selected as place for peace conference.

July.—(2) Announcement that Muravieff and Rosen will be Russian peace envoys, Komura and Takahira, Japanese. (7) Baron Rosen, new Russian ambassador, reaches Washington. (10) Portsmouth, N. H., navy yard chosen as scene of treaty negotiations. (13) Witte appointed in place of Muravieff.

August.—(5) Russian and Japanese envoys formally received by President Roosevelt at Oyster bay. (8) Envoys received by United States and New Hampshire authorities, and installed in Hotel Wentworth. (10) Credentials of peace envoys exchanged and found satisfactory. Japanese present twelve conditions essential to peace treaty.

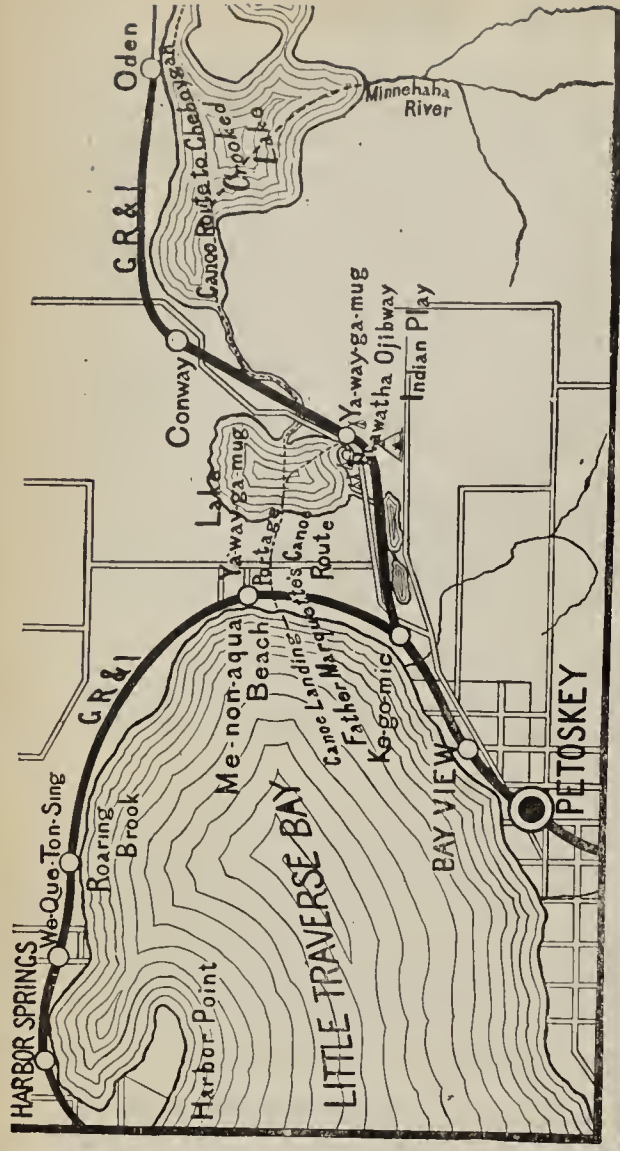

September.—(5) Treaty signed, ending war between Russia and Japan. (For terms of treaty, see *Our Times* for Sept. 2 and Sept. 9, 1905.)

For pimples, blotches, bad complexion, Hood's Sarsaparilla is the medicine to take—it has established this fact.

Scene from the Indian Play of Hiawatha. [See Centre Pages of TEACHERS MAGAZINE for September.]

"Pleasant was the journey homeward:
All the birds sang loud and sweetly,
Songs of happiness and heart's ease."

Seat Work Cards===For Silent Occupation

Write the names of five of your schoolmates.

Write the names of ten married women you know. (As, Mrs. Brown. Mrs. has a period after it.)

Write the names of ten things you can see.

Write five times each: An apple; an egg; an ox.

Write two numbers that, when added together, will make 14, 12, 10, 8, 16.

Put + 8 after each of the nine figures, and add. (As, $1 + 8 = 9$.)

Put - 4 after each of the nine figures, and subtract. (As, $6 - 4 = 2$.)

Write, five times: I saw one goose. I saw two geese.

Write five statements like this: I saw one lady. I saw two ladies, etc.

Write the names of ten men you know. (As, Mr. Brown. Mr. has a period after it.)

Write five questions about the hen.

Write ten describing words before the word girl. (As, A good girl.)

Put your hand on the desk and write five statements about it.

Write, in a column, ten words of three letters each, from your Reader.

Put 5 after each of the nine figures, and subtract. (As, $9 - 5 = 4$.)

Write the names of the days of the week in a column.

Copy the names of the months, each one five times.

Write your name, the name of the place you live in, the day of the week, of the month, of the year. (As, Frank Smith, Watertown, Tuesday, June 25 1905.)

Write a statement about each of the four seasons.

Put a book on the desk and measure it with a ruler. Write a statement about it.

Draw ten lines each one inch long. They must be neat and straight.

Draw eight squares each one inch on each side, and draw across them straight lines.

Draw five oblongs, the bottom line of each two inches, the side lines one inch, and draw over them straight up-and-down lines.

Draw ten level lines one inch long. Across them draw ten up-and-down lines.

Draw twenty slanting lines one inch long.

Draw an oblong two inches long and one inch high, and divide it into eight squares.

Questions on Current Events

(These questions will be found valuable for school-room use, as well as the teacher's own review of the world's progress. If more complete answers are required they will be found in late issues of OUR TIMES. The figures refer to the pages.)

On what points did the peace envoys agree? A. That the Russian and Japanese armies should be withdrawn from Manchuria; that Port Arthur and the Liao-tung base be transferred to Japan; that Chinese civil administration be re-established in Manchuria; that Japan should have part of the railroad leading northward from Port Arthur; that Japanese fishing rights on the coast of Siberia be recognized. 3.

On what points did they disagree? A. Russia objected to the payment of an indemnity, to delivering the interned ships to Japan, to limiting Russia's naval force in the Pacific, and to ceding Sakhalin to Japan. 3.

How did they come to a final agreement? A. Baron Komura abandoned his demands for the interned ships and the limitation of Russia's naval power in the Pacific. The mikado and his advisers waived the indemnity, and Russia agreed to cede the southern half of Sakhalin to Japan. 3.

Why are some Japanese dissatisfied? A. They believe that matters have been left in such a state that Russia may renew the war at some future time. 4.

Where were expeditions sent to view the eclipse of the sun? A. To Spain, Tripoli, Algiers, Tunis and Egypt. 4.

What are some of the results expected? A. Astronomers wish to get more definite knowledge in regard to the

Map Showing Changes of Territory Brought About by the War.

At The Parsonage.

COFFEE RUNS RIOT NO LONGER.

"Wife and I had a serious time of it while we were coffee drinkers.

"She had gastritis, headaches, belching and would have periods of sickness while I secured a daily headache that became chronic.

We naturally sought relief by drugs and without avail, for it is now plain enough that no drug will cure the diseases another drug, coffee sets up particularly, so long as the drug which causes the trouble is continued.

"Finally we thought we would try leaving off coffee and using Postum. I noticed that my headaches disappeared like magic and my old "trembly" nervousness left. One day wife said, "Do you know my gastritis has gone?"

"One can hardly realize what Postum has done for us.

"Then we began to talk to others. Wife's father and mother were both coffee drinkers and sufferers. Their headaches left entirely a short time after they changed the old coffee for Postum. I began to inquire among my parishioners and found to my astonishment that numbers of them use Postum in place of coffee. Many of the ministers who have visited our parsonage have become enthusiastic champions of Postum." Name given by Postum Co., Battle Creek, Mich.

There's a Reason.

Read the little book, "The Road to Wellville" in each package.

the sun's corona, and to find out if there are other planets between Mercury and the sun.

What plan was presented at the Interparliamentary congress in Brussels? A. A plan was submitted by an American for an international parliament. 4.

Why did Lord Curzon resign as viceroy of India? A. On account of a disagreement with Lord Kitchener in regard to the control of the army. 5.

Who succeeded him? A. Lord Minto. 5.

How did the Norwegians vote on the question of separation from Sweden? A. They were almost unanimously in favor of it. 6.

What celebrated churchman died of yellow fever? A. Archbishop Chapelle. 8.

What two authors died recently? A. Mary Mapes Dodge (8) and Hezekiah Butterworth (25).

Who lately petitioned for a cotton bureau? A. The Southern Cotton Association asks for one on account of the great importance of the cotton industry. 23.

What were the main events of the war just ended? A. Togo's first attack on Port Arthur, battle of the Yalu, taking of Nanshan hill, battle of Vafangow, battle of Liao-yang, battle of the Sha river, fall of Port Arthur, battle of Mukden, and battle of the sea of Japan. 20.

What important object is attained by the new Anglo-Japanese alliance? A. It serves as a check to Russia, Germany, and the other powers that have sought a division of China. 20.

What power is the Russian national assembly to have? A. Very little except advisory power. 22.

Replies to Questions

By AMOS M. KELLOGG.

Shall I continue in teaching? This question began to come in letters in February, more in March, still more in April, May, and June, showing that the writers were thinking seriously of ending their work in the school-room with the school year. It is probable that this was the first year for many, and it had not proved profitable pecuniarily, or unexpected difficulties had made their appearance.

There are few teachers but have asked themselves this question at some time in their lives. Let me recall my own experience. I graduated from the Albany normal school in the spring of 1851 and was employed in the junior department of the Palmyra Union at a salary of \$25 per month. Before the year closed I was offered \$40 per month and expenses to travel for a patent window fixture company. It was a temptation. I wrote to my Albany teacher, Prof. D. G. Eaton, for his advice. In his reply he said: "You must ask yourself whether you would be as happy in the other field of work as in teaching. And then bear in mind that you have just begun; as you acquire skill you will command better wages."

The first point decided me; my heart was in school-room work. I consented to go on. The senior department unexpectedly became vacant, and I was put in charge of it at \$40 per month. The answer to the question in nearly all cases will be found to turn on the point of personal preference. It is exceedingly dangerous for a man who has spent time and labor in fitting himself for teaching, and who likes the work, who sees that he is doing good and feels a desire to do good to his fellowmen, to turn aside into another and different field of labor.

I know a teacher in a normal school who left his work to get double the salary by introducing a patent steam engine. In a few months he hated his new work; threw it up and sought a place at his old salary for the reason as he said, "My whole thought is about teaching." He became noted afterward as a principal of a great state normal school; in this field he continued all his life.

I knew a most genial principal of a city high school who was tempted to undertake life insurance and thus double his earnings. A year's trial made it plain that all his preparation, experience, thought, associations, reading, and pleasures were connected with the progress of young persons in knowledge and character, and he gave up the new business, tho he had met with a good measure of success in it. But he never got back into a really good position again; he visited pupils to fit them for college.

Of course in these cases the teachers cited had had considerable experience, but the basal principle will govern in cases where experience is lacking.

Power to teach is an instinct. Adam at once undertook to impart to Cain his knowledge and experience, tho not successfully. All have some teaching power, some possess a great deal. Such find their happiness in the school-room; the remuneration is a secondary matter. The desire to do good enters into the question, in many cases, largely. So does the acquired knowledge and preparation.

Let us take the case of a young man who had graduated from a high school, in ordinary courses this requires twelve years of study. He is eighteen or nineteen years of age. He desires to be of use to the world, to benefit his fellowmen, and begins to teach. After a year thus spent he is offered work as a conductor on a trolley car at a larger compensation, and he hesitates.

He ought to proceed with caution. 1. He will have different companions. 2. He will not be employing the knowledge he has acquired; it is a pleasure to impart knowledge—for the genuine teacher. 3. He ought, in two years from now, if a man of energy and purpose, to occupy a place paying twice, possibly thrice, what he now gets. 4. He has the respect of a community of people and is often a leading member of it. 5. He has a long vacation period each year. 6. He is where he can guard his health—teachers are long-lived. 7. He is able to feel that he is doing a positive good to the world.

There are those who have drifted into the profession solely for the dollars; such are advised to leave as soon as the chance to better themselves occurs; better if they went before. They do not ask any one for advice. But there are very many who are tempted by larger pay, who hesitate. Such should look deeply into themselves. They should weigh their abilities, tastes, and qualifications. If they feel willing to increase in qualifications they can increase the remuneration accordingly. The time and effort may be required.

This shows that the question must be looked at largely; it is a life question.

SCROFULA

is called "the soil for tubercles," and where it is allowed to remain tuberculosis or consumption is pretty sure to take root.

Hood's Sarsaparilla and Pills

remove every trace of scrofula and build up the whole system. Begin treatment with these great medicines to-day.

"I had scrofula which appeared on my face. It troubled me for two years. The medicine I had did not seem to do me any good, and a friend told me about Hood's Sarsaparilla. I began taking Hood's and it has cured me."—ALMA SHERMAN, 1608 N. 9th st., St. Louis, Mo.

PHYSICAL NATURE STUDY LIBRARY

By JOHN F. WOODHULL, Ph. D., Professor of Physical Science, Teachers College, Columbia University, New York City. The subjects treated are such as the following: *Air*.—What it is and what it does; its importance to our health and comfort, especially with reference to the conditions in great cities. *Water*.—The system of supply in cities; suitable drinking water in rural districts; water power; the uses of rain, etc. *Heat*.—Methods of heating buildings, applications to cooking and manufacturing processes; generation of power. *Electricity* in the household; electric bells, equipment, electric lighting, electric heating and cooking, telephone; electric motor; dynamo; electric cars. *Light* and optical instruments. *Sound* and musical instruments. *Combustion* and chemistry of the household and of daily life. **Price 65c. each; postage 8c.**

I. HOME-MADE APPARATUS. *Nearly ready*

With reference to Chemistry, Physics, and Physiology. This book gives directions for making 97 pieces of apparatus. All employ very simple materials easily obtained. The exact cost of making each piece of apparatus is given, varying from 3 cents to \$1.50. Most of them cost less than 30 cents.

II. SIMPLE EXPERIMENTS IN CHEMISTRY. *Ready*
It contains: I. Experiments with Paper. II. Experiments with Wood. III. Experiments with a Candle. IV. Experiments with Kerosene. V. Kindling Temperature. VI. Air as Agent in Combustion. VII. Products of Complete Combustion. VIII. Currents of Air, etc.—Ventilation. IX. Oxygen of the Air. X. Chemical Changes. Also covers Bleaching and Chemistry of the household and of daily life.

III. SIMPLE EXPERIMENTS IN PHYSICS. *Ready in Sept*
Properties of Matter; Mechanics; Fluids; Heat.

V. SIMPLE EXPERIMENTS IN PHYSICS. *Ready in Oct.,*
Magnetism; Electricity; Light; Sound.

Applicant must have good reference and \$1,000 cash, capital secured. Experience unnecessary. Address "Manager", P. O. Box 613 Detroit, Michigan.

Tommie Bate's Thanksgiving Idea.

Altho Tommy Bates had listened attentively to all that his teacher had said about sharing his Thanksgiving goodies with children less favored, he still felt mystified, and as he trudged homeward alone he fell into a certain habit which he had of talking to himself when in trouble.

"There's Johnny Pratt, now. He doesn't have any Thanksgiving to speak of. At least, he didn't last year. Of course I might give him a big piece of pumpkin pie. Ma cuts them in quarters, Thanksgiving Day. Wouldn't he smack his lips, tho? I don't know but she would give him a whole one, but that wouldn't be real giving, it wouldn't cost me anything. Teacher said that pumpkin pies and turkeys, and ma's and grandpa's, and all good things, were blessings, and everybody had them in some way. But if Johnny Pratt has any, I'd like to know what they are. He hasn't any ma, nor grandma, nor grandpa, and no pa to speak of, and of course he hasn't any good things to eat, 'cause there's nobody to get them for him.

"I know what I'll do about things to eat. When pa says, 'Will you have another piece of white meat, my boy?' I'll say, 'No, thank you,' not because there will be any need of it, for there's always more'n enough to go round, and when ma offers me the second piece of pie I'll say, No, ma, guess I'll take a piece of bread.' That will be 'getting into the spirit of it,' as teacher said. But there's the folks. Pa and ma, and little Bettie, and dear old grandpa and grandma, I can't share them with Johnny. Oh, dear! what shall I do? I wish Miss Brown hadn't talked so nicely to us this afternoon. It sounded good, but there's no way. How mean it would be to pass out pies and turkeys, when, of course he's enough sight hungrier for some one to love him than he is for something to eat."

It was of no use, Tommy could not think it out, and he did his chores in such a listless way, and hurried off to bed so quickly after supper, that his mother and grandmother wondered if he was not coming down with the measles or something. He could not sleep, but tossed from one side of the bed to the other, wondering if it was not almost morning. But just as the town clock struck half-past nine a solution of the problem came into his mind like a flash, and in a moment he was in dreamland.

He was awake early the next morning, and came down to breakfast with a face as rosy as the dawn. As soon as he could screw his courage up to the speaking point, he voiced his resolve in the question, "Would you people be willing to trade boys with Mr. Pratt?"

Teachers, don't narrow your lives by reading only professional literature, nor squander your time on desultory reading. Take up some of the splendid reading courses and get your associate teachers to join you for a reading club. If your leisure is limited, you will find the courses of the BAY VIEW READING CLUB just right. Nothing could be more delightful than its travel courses, with systematic studies on the history, art, literature, and institutions of the lands taken up. J. M. HALL, Boston Boulevard, Detroit, Mich., can tell you all about them.

To say that the family were surprised would not be doing them full justice. Grandfather found his voice first.

"And what should we trade boys for, pray? Our own boy suits us very well."

"For how long a time?" inquired father, wondering what Tommie had on his mind.

"Oh! just for Thanksgiving Day. You see, I have things good enough for Thanksgiving every day in the year, and there's Johnny, who never has anything really good, and I thought"—Here Tommie grew very red in the face, ashamed to let his left hand know what his right hand was trying to do.

"Tommie," said his mother, seeing his confusion, "I will see that your friend has a thanksgiving dinner that will astonish him."

"But, mother,—don't you see?—that isn't all of it." Why couldn't they understand without being told? If a boy only might be permitted to do things without explaining. "Dinner isn't all. Johnny needs folks more'n anything, and I thought"—

Again the young philanthropist found it difficult to speak what was in his heart.

"I see what the young man is up to," interposed the father kindly. "He wants to change places with Johnny Pratt that he may have the privileges of home for one blessed day. It is a grand thought, my boy!"

Tommie's face was scarlet. It was so hard to be praised right before them all. There was a suspicious moisture in his mother's eyes as she helped grandpa to his second cup of coffee, and the old man's hand shook even more than usual as he reached out his hand to take it.

"The dear boy," said grandma, under her breath.

"I wants my own Tommie," whined Bettie, understanding just enough to make her afraid that some untoward event was to take place.

Antikamnia tablets have become a favorite for pain, such as headache and neuralgia. They are used only internally. To stop pain, one tablet is administered at once; twenty minutes later the same dose is repeated, and if necessary, a third dose given twenty minutes after the second.—Hugo Engel, M. D., in the Boston Medical and Surgical Reporter.

Thanksgiving Day was spent according to Tommie's plan. Johnny came and took his place in every possible way. His chair at the table, his part in the work, and particularly his share in the games, were Johnny's remarkable good fortune. Mr. Bates always said "my boy," and grandfather placed his hand upon Johnny's head several times during the day, and called him "a noble lad," evidently forgetting that he was not speaking to the boy whom he so much loved.

Mother Bates, like the brave woman that she was, seemed to put her own boy quite out of mind, treating Johnny exactly as she would have her own, never, by any little act, reminding him that he was only a guest.

Poor little Bettie could not take in the situation so readily, and ran away to grandma's room several times during the day, and, throwing her arms about the old lady's neck, shed a few tears upon the soft cheeks. Upon the whole, however, the day passed pleasantly at the Bates homestead, and all rejoiced in the sacrifice which their dear boy was making.

It was really more of a sacrifice than they knew, for Tommie had spent the long day with a querulous old man who could not get out of his chair, and who never did anything but eat and smoke and find fault. He was, if possible, a little more cross than usual, and asked to have his pipe lighted just twenty-five times, for Tommie counted them. He had never been used to tobacco, and the vile scent which filled the room was a poor exchange for the savory odors which he knew were a pleasant part of the day's festivities in his mother's tidy kitchen.

Tommie had given strict orders that Johnny was not to come home until the evening's merry-making was over. There were several cousins about Tommie's age who always spent the day with them, and stayed until late into the evening. This was the best of all, and Tommie had certainly got "into the spirit of it" when he willingly gave up this part of the day's pleasure.

The sacrifice brought its reward, however, as heart sacrifices usually do. This was the beginning of a great friendship between the boys, and the foundation for many a good time. In the pleasant sunshine of kindness Johnny's character blossomed out into that which was quite worthy the friendship of even so noble a boy as Tommie Bates.—Susie E. Kennedy in *The Sunday School Times*.

Rest and Health for Mother and Child.

MRS. WINSLOW'S SOOTHING SYRUP has been used for OVER FIFTY YEARS by MILLIONS OF MOTHERS for THEIR CHILDREN WHILE TEETHING, WITH PERFECT SUCCESS. It SOOTHES the CHILD, SOFTENS the GUMS, ALLAYS ALL PAIN CURS WIND COLIC, and is the best remedy for DIARRHŒA. Sold by druggists in every part of the world. TO MUSICAL CHILDREN.

THERE is nothing that will give greater delight than this beautiful collection. It comprises one hundred and forty-one songs that have been sung by the children of all nations for generations; a fragrant wreath from an old-time garden. The love of music which is natural in all children will respond readily to the inspiration of these fine old melodies.

The book contains two hundred and twenty-six pages, is printed on paper of the best quality, and is bound in attractive and serviceable covers. If not obtainable from the local music dealer, we will send a copy, post-paid, for examination on receipt of the price (\$2.00). If not satisfactory, it may be returned and the amount will be refunded.

Any Superintendent Will
Tell You That

ADVANCEMENT FOLLOWS PREPARATION

CITY SUPERINTENDENT COOLEY, OF CHICAGO, SAYS: "The great need of our schools is efficient teachers. The problem of getting efficient teachers is the greatest and most serious problem school boards have to face. Attention should be given to the work of keeping teachers alive and growing. The average teacher does not grow more than three or four years. If one does not improve, he goes backward." This condition is one of the most promising indications of the times; the teacher who is thoroughly equipped for work receives prompt recognition. The one who does not make the best possible preparation remains low in the scale of efficiency.

Prepare While Earning A Salary

Our school is especially equipped to promote the interests of teachers; it is known the country over as the teachers' correspondence school *par excellence*. We prepare young people for teaching; help others to raise their grades of certificate and train them to teach better schools. Our Normal Elective Courses and the course in Primary Methods are efficient helps in the hands of student and instructor which accomplish results.

Write to-day for information regarding any courses, and state the object towards which you are working.

Thanksgiving Cut-Up Problems

1. Grandma made two mince pies for Thanksgiving dinner. Each pie was cut into 5 pieces. There were 8 people. How many pieces were left?

2. In the bottle of mixed pickles there were 10 cucumbers, 3 onions, 6 peppers, and 4 string beans. How many in all?

3. The turkey had 1 head, 2 eyes, 2 wings, 2 feet, 1 tail, 1 bill. How many in all?

4. Mother had a plate of fruit. There were 5 apples, 3 oranges, 2 bunches of grapes, and a peach. How many in all?

5. Grandpa, grandma, father, mother, Aunt Helen, Uncle John, Bess, Harry, baby and I sat at the table. How many of us were there?

6. My pudding had 7 plums in it. I ate five. How many were left?

7. There were ten plates, with a knife and a fork beside each one. How many knives and forks altogether?

8. Each of the 10 people ate 1-2 a slice of bread. How many whole slices were eaten?

9. The children counted the seeds in their apples. There were 6+7+4. How many seeds?

10. Mother let each of the three children have 2 nuts and 1 piece of candy. How many of each did they have altogether?

11. In the evening the ten people played Pilgrim. The six grown-up people were Pilgrims, the children were Indians. How many Indians?

12. The day after Thanksgiving the 4 children were sick. If there were ten people in all, how many stayed well?

ON EVERY TEACHER'S DESK

should be an

Ingersoll Watch

Teachers need to keep track of the time closely because every minute lost is multiplied by the number of students they have, and promptness is such a valuable habit to instil in the young. And think what a splendid influence it would be if every student carried an accurate watch—what a reduction it would make in the late-comers!

There is no excuse for anyone, teacher or student, to be without a good watch when one can be had for the price of an Ingersoll.

THE PERRY PICTURES

ONE CENT EACH for 25 or more. Assorted as desired. 120 for \$1.00
Size, 5 1-2x8. 2000 Subjects.

If you wish to make your work in history, geography, language, and literature more interesting and helpful, use these pictures. They cost only a trifle and the pupils can pay for them. Why not illustrate their note-books and language papers with these pictures? Why not study a few beautiful pictures this year, calling it Picture Study? Suppose you should introduce your pupils to only one good picture each month, nine during the rest of the school year, do you know how much it would mean to them? The smaller size cost only one-half cent each in lots of 25 cents worth, and the Extra Size only five cents each, each in lots of 12 or more. Why not study about birds, having each pupil buy one of the Pictures in Colors that cost only two cents each? Send two-cent stamp for Catalogue of 1000 miniature illustrations during October, if you mention THE SCHOOL JOURNAL. If you wish to learn about the world's great paintings—and what better "culture-study" can you take for yourself this year—subscribe for THE PERRY MAGAZINE and follow the course in Italian Art arranged by Prof. Poland.

The PERRY PICTURES COMPANY, Box 17, Malden, Mass.

November and "Thanks" Quotations.

We'll light our hearts these gloomy days
With sweet contentment's cheerful rays,
For mercies prove our thankfulness
By useful lives, that help and bliss.

Little songs, all full of joy, little lips
can sing;
Little voices, soft and sweet, may their
tribute bring;
Little verses can express what we wish
to tell
Of a loving care that keeps little folks so
well.

Autumn day, fruitful day!
See what God hath given away!
Orchard trees with fruits are bending,
Harvest wains are homeward wending;
And the Lord o'er all the land
Opens wide His bounteous hand.
Children, gathering fruits that fall,
Think of God, who gives them all.

God gives us with our rugged soil
The power to make it Eden-fair,
And richer fruits to crown our toil,
Than summer-wedded islands bear.
—J. G. WHITTIER.

But let the good corn adorn
The hills our fathers trod;
And let us, for his golden corn,
Send up our thanks to God.

Lord, 'tis Thy plenty-dropping hand
That soils my land,
And gav'st me for my bushel some
Twice ten for one,
All this and better, Thou dost send
Me, to this end,
That I should render for my part,
A thankful heart.

—ROBERT HERRICK.

For summer's bloom and autumn's blight,
For blended wheat and blasted maize,
For health and sickness, Lord of light,
And Lord of darkness, hear our praise.
—J. G. HOLLAND.

For the Little Ones

To Keep Their Digestion Perfect Nothing is so Safe and Pleasant as Stuart's Dyspepsia Tablets

Thousands of men and women have found Stuart's Dyspepsia Tablets the safest and most reliable preparation for any form of indigestion or stomach trouble.

Thousands of people who are not sick, but are well and wish to keep well, take Stuart's Tablets after every meal to insure perfect digestion and avoid trouble.

But it is not generally known that the Tablets are just as good and wholesome for little folks as for their elders.

Little children who are pale, thin and have no appetite, or do not grow or thrive, should use the Tablets after eating and will derive great benefit from them.

Mrs. G. A. Crotley, 533 Washington St., Hoboken, New Jersey, writes: "Stuart's Dyspepsia Tablets just fill the bill for children as well as for older folks. I've had the best of luck with them. My three-year-old girl takes them as readily as candy. I have only to say 'Tablets' and she drops everything else and runs for them."

A Buffalo mother, a short time ago, who despaired of the life of her babe, was so delighted with the results from giving the child these Tablets that she went before the notary public of Erie Co., N. Y., and made the following affidavit:

Gentlemen: Stuart's Dyspepsia Tablets

were recommended to me for my two-months-old baby, which was sick and puny and the doctor said was suffering from indigestion. I took the child to the hospital, but there found no relief. A friend mentioned the Stuart Tablets and I procured a box from my druggist and used only the large sweet lozenges in the box and was delighted to find they were just the thing for my baby. I feel justified in saying that Stuart's Dyspepsia Tablets saved my child's life.

MRS. W. T. DETHLOPE.

Subscribed and sworn to before me this 12th day of April, 1897.

HENRY KARIS,

Notary Public in and for Erie Co., N. Y.

For babies, no matter how young or delicate, the tablets will accomplish wonders in increasing flesh, appetite and growth. Use only the large sweet tablets in every box. Full-sized boxes are sold by all druggists for 50 cents, and no parent should neglect the use of this safe remedy for all stomach and bowel troubles if the child is ailing in any way regarding its food or assimilation.

Stuart's Dyspepsia Tablets have been known for years as the best preparation for all stomach troubles whether in adults or infants.

READERS will confer a favor by mentioning TEACHERS MAGAZINE when communicating with advertisers.

THE IDEAL SIGHT RESTORER

Is Your Sight Failing?

All refractive errors, muscular trouble and chronic diseases of the Eye successfully treated by scientific MASSAGE.

"I am in my seventy-ninth year, and have the Sight Restorer and yourselves to thank for renewed eye-sight." (Testimonial 177)

How the Baby Grows.

Nobody sees the baby grow,
Baby dear with the laughing eyes,
Who came to our house a year ago,
Looking ever so wrinkled and wise;
But every day of the happy year
He has taken upon him some beauty new,

And as for growing, why this is clear,
He's never had anything else to do.
Grandmamma says: "When he's asleep,
Then it is that the baby grows."
Close to the crib we often creep
To watch, but we don't think grandma knows.

Never a fringe of the golden hair
Clustering soft around his brow
Lengthens the least while we are there,
And yet it is growing—the wonder, how?

Nobody sees the baby grow,
But over his rosy little face
The prettiest dimples of laughter flow,
The dancing dimples merrily chase,
And tiny feet are learning to walk,
The rounded limbs are growing strong;
The lisping tongue is learning to talk,
As cheerily pass the days along.

Nobody can explain it all,
But one thing to our thought is clear,
God, who sees if a sparrow fall,
Sent our beautiful baby here.
And mother cares for him day and night,—
'Tis easy enough when she loves him so,
And God, whenever she puts out the light,
Just looks in and makes him grow.

—Selected.

The Babes in the Wood.

My dear, do you know
How a long time ago,

Two poor little children,
Whose names I don't know,
Were stolen away

On a fine summer's day,
And left in a wood,
As I've heard people say.

And when it was night,
So sad was their plight,

The sun it went down
And the moon gave no light!
They sobb'd and they sigh'd,
And they bitterly cried,

And the poor little things,
They laid down and died.

And when they were dead,
The robins so red

Brought strawberry leaves,
And over them spread;
And all the day long,
They sang them this song—

Poor babes in the wood!
Poor babes in the wood!

And don't you remember
The babes in the wood?

A Skin of Beauty is a Joy Forever.

DR. T. FELIX GOURAUD'S Oriental Cream OR MAGICAL BEAUTIFIER

Purifies as well as beautifies the skin. No other cosmetic like it.

Removes Tan, Pimples, Freckles, Moth-Patches, Rash, and Skin diseases, and every blemish on beauty, and defies detection. On its virtues it has stood the test of 56 years; no other has, and is so harmless we taste it to be sure it is properly made. Accept no counterfeit of similar name. The distinguished Dr. L. A. Sayre said to a lady of the haut-ton (a patient), "As you ladies will use them, I recommend 'Gouraud's Cream' as the least harmful of all the Skin preparations." One bottle will last six months, using it every day. GOURAUD'S POUDRE SUBTILE removes superfluous hair without injury to the skin.

Cut-up Reading.

Number paragraphs. Paste each on a separate card. Distribute cards and let pupils read in the order indicated by numbers of these cards.

The Senses.

1. Eyes and ears and lips have I,
Eyes to see the earth and sky,
Ears to hear my friends rejoice.
2. I have lips to tell each thought
In my busy bosom wrought,
Hands for work and hands for play,
Feet to aid me on my way.
3. "I see," says the eye. "I can look on all the pretty things which God and man have made."
4. "Without me," says the eye, "the day might as well be dark like the night, the flowers might be all of one color, and no pictures could be drawn or painted."
5. "I hear," says the ear. "I catch all the sounds that are borne to me on the air. I listen to the voices of those around me, and I enjoy sweet music."
6. "Without me," says the ear, "the human voice might as well be silent, the birds need not sing, and all music would be useless."
7. "I smell," says the nose. "I know which of the garden flowers have the sweetest scent. I also know when the air around is not pure and not fit to breathe."
8. "Without me," says the nose, "the perfume of the rose, the lily, and the violet would be wasted, and bad air might cause much sickness and death."

Sour Stomach

"I used Cascarets and feel like a new man. I have been a sufferer from dyspepsia and sour stomach for the last two years. I have been taking medicine and other drugs, but could find no relief only for a short time. I will recommend Cascarets to my friends as the only thing for indigestion and sour stomach and to keep the bowels in good condition. They are very nice to eat."

9. "I taste," says the mouth. "I know what food is nice and pleasant. I can tell the sweet apple from the sour one, even when the eye does not know."

10. "Without me," says the mouth, "no one would know what was bitter and what was sweet. No one could tell whether there was sugar or salt in the tea."

11. "I feel," says the hand. "I can tell many things about an object by the touch. I can do my work in the dark as well as in the light."

12. "Without me," says the hand, "no one would know what things were hot and what were cold. Nor would any one know the difference between what was hard and what was soft, and what was rough and what was smooth."

Dictation Exercises on the Senses.

The eye sees and tells when it is day and when it is night.

The ear hears and enjoys all the sweet sounds that are made.

The nose smells and warns against bad air.

The mouth tastes, and the hand feels.

A Miser Dog.

Dandie, a Newfoundland dog, was often given money because he would go to the baker's shop and buy bread with it. But Dandie received more money than his needs called for, and so took to hoarding it. This was discovered because the dog one day appeared with a breakfast roll, when it was known that no one had given him any money.

Search was made in the room where the dog slept. Dandie appeared quite unconcerned until his bed was approached, when he seized the servant by the gown and tried to drag her away, and became so violent that his master had to hold him. Several pennies were found hidden in the bed. Dandie did not forego his saving propensities after this, but he showed a great dislike afterwards to the servant who had discovered the hoard. In the future he was careful to find a different place for hiding his money.

The Boyless Town.

A cross old woman of long ago
Declared that she hated noise ;
"The town would be so pleasant, you
know,
If only there were no boys."
She scolded and fretted about it till
Her eyes grew heavy as lead,
And then of a sudden, the town grew still ;
For all the boys had fled.

And all thru the long and dusty street
There wasn't a boy in view ;
The baseball lot where they used to meet,
Was a sight to make one blue.
The grass was growing on every base,
And the paths that the runners made,
For there wasn't a soul in all the place
Who knew how the game was played.

The dogs were sleeping the live-long
day—
Why should they bark or leap ?
There wasn't a whistle or call to play,
And so they could only sleep.
The pony neighed from his lonely stall,
And longed for saddle and rein ;
And even the birds of the garden wall
Chirped only a dull refrain.

The cherries rotted and went to waste—
There was no one to climb the trees ;
And nobody had a single taste,
Save only the birds and bees.
There wasn't a messenger boy—not one—
To speed as such messengers can ;
If people wanted their errands done
They sent for a messenger man.

There was little, I ween, of frolic and
noise ;
There was less of cheer and mirth.
The sad old town, since it lacked its boys,
Was the dreariest place on earth.
The poor old woman began to weep,
Then woke with a sudden scream,
"Dear me!" she cried, "I have been
asleep,
And, oh, what a horrid dream!"
—St. Nicholas.

A Revelation.

If there are doubting Thomases or Maidens fair, or those unfair, who fain would be fair, let them use Dr. T. Felix Gouraud's Oriental Cream and prove the efficiency of what the proprietor has so long tried to impress on the minds of all in nearly every part of the world. As a Skin Purifier and Beautifier it has no equal or rival. If the reader would prove the virtues of Oriental Cream, use it where a scratch or slight cut, or where a blackhead or pimple is troubling you; then you see its healing and purifying qualities. If it does its work well, then read the advertisement again for further testimony of its virtues, and by using Oriental Cream renew both youth and beauty.

Teachers' Agencies.

Women Teachers, New York Needs You!

Scores of desirable teachers could secure permanent positions here if they knew how to go about it. The McEvoy School gives such information. It has 331 students teaching here. Salaries, \$600 to \$1,440. Next examinations January 4th and 5th, 1906. New, copyrighted courses beginning in October. You are eligible if you have one of these qualifications:—

- 1—Graduation from High School and approved training school plus one year in teaching; or
- 2—Graduation from a four years' normal school course plus two years in teaching; or
- 3—Graduation from a High School and a two years' normal school course plus three years in teaching; or
- 4—The holding of a State Certificate granted since 1892 plus five years in teaching.

TAKE A COURSE IN PEDAGOGY

EDUCATIONAL FOUNDATIONS

PROFESSIONAL ADVANCEMENT COURSE

EDUCATIONAL FOUNDATIONS occupies a unique place among professional periodicals. Aiming to be neither a newspaper, nor a journal of methods and devices, nor a mere review of education, it has for fifteen years steadfastly adhered to its original plan of supplying broad, thoro, progressive, carefully planned courses of reading for teachers who are striving for solid and permanent success in their chosen lifework. In addition to the most helpful surveys of the various departments of pedagogy, this magazine supplies intensely interesting and profitable general culture courses. Whatever may tend to broaden the teacher's horizon, and increase his professional usefulness to an appreciable degree, is included in its scope.

By close adherence to its program, and by steady improvement of its wonderful opportunities, EDUCATIONAL FOUNDATIONS has endeared itself to thousands of earnest students of education, and the great leaders in the school field are giving it hearty support. Superintendents and principals in hundreds of cities and towns, from the smallest to the largest, adopt it year after year as basis for the professional reading of their teachers. Many letters of teachers throughout the English-speaking world might be cited to testify to the practical usefulness of the magazine.

One superintendent writes:—"Your magazine has opened my eyes to the larger aspects of education, and my teachers and their pupils has been made the happier by my awakening."

A former country teacher writes:—"I had lost courage and intended to take up the study of law, when your magazine came to me and taught me that great work can be done in education. I studied faithfully the contents of every issue, and passed, with high standing, a principal's examination. My present place pays double the salary I had a year ago."

SOME OF THE GOOD THINGS IN STORE FOR 1905 AND 1906

Educational Biography. First emphasis this year will be placed on the Biographies of the men and women most prominently identified in formulating new ideas, in reducing them to practical methods, and devices for school room use.

History of Education. Vittorius da Feltre and Loyola, and the School of the Jesuits will be among the many special articles relating to the History of Education. The former lends a powerful influence upon Pestalozzi, and through him upon all modern elementary education.

Woman's Work in Education. The great work done by women has never been adequately presented. Interesting articles will appear concerning Miss Stone, Miss Buss, Emma Willard, Lydia Sigourney, and others.

Education Among Different Types of Women. An important series to be continued by Miss Griffin.

Eminent Living Educators. Articles concerning Dr. Sheldon of the "Oswego Movement," Supt. Newton C. Dougherty will write about Newton Bateman, and Dr. E. Oran Lyte, concerning Wickersham. There will be sketches of Dr. W. H. Maxwell, Dr. F. Louis Soldan, and President Eliot.

Methodology. There will be articles concerning general rules of teaching, and also upon instructions in special branches. Teachers' Examinations will be continued.

Common School Extension. There will be a further exposition of this subject by Educational Foundations, which has already won the leadership in this line in the past.

The Social and Economic Life. Several articles will appear on topics of vital interest to the Teachers' Social and Economic Life.

Subscription, \$1.25 a year. Special terms to clubs.

UNITED EDUCATIONAL COMPANY 61 East Ninth St., New York

EDUCATION THROUGH NATURE STUDY

By Prof. J. P. Munson, Ph. D.

This valuable book by the head of the Department of Biology in the State Normal School of Washington and a recognized authority on biological research, and an experienced teacher of teachers in scientific subjects and methods, is incisive, original, and thorough.

The problem before the Educator is to understand mental growth and development. The Author takes the ground with the aim of Nature Study so as to promote nature development; thus the subject is as much a pleasure in the school as geometry or arithmetic.

In the same way some teachers have successfully learned how to make the study of arithmetic or geometry cause mental growth and development, so Prof. Munson shows on the study of nature and will bring about a small growth. 300 pages, \$1.25 net, postage 10 cents.

UNITED EDUCATIONAL CO.

61 EAST NINTH STREET

NEW YORK

Famous Men of Greece	Famous Men of Rome	Famous Men OF THE Middle Ages
-------------------------	-----------------------	-------------------------------------

These Biographies of Famous Men are historical stories and are told in a way to attract and hold the child's interest. They have been prepared to meet the recommendations of the Committee of Ten and the Committee of Fifteen, and the practice of the best schools, and are preparatory for the later formal study of history. Three things are notable concerning the books:—

1. The style of the language is simple, which adapts them to the third and fourth reader grades.
2. These stories are arranged in chronological order and are connected so that, together, they make complete histories of the times.
3. The illustrations present the most complete collection of photographs of historical paintings ever published.

By using these books as supplemental readers and making the stories the basis for conversation and composition work the pupils will be able, by the time they reach United States History, to recognize its proper historic relation to the world's history.

Price, 50 cents each

University Publishing Company
27-29 West 23d Street, New York

 *"To the Teacher Willing to Receive Direction*

THAT
"SPLENDID PURPOSE"
is to help every teacher to become still more proficient by a thorough scientific study of the principles and practices of the very brightest educators to-day.

A study of education in its historical theoretical practical aspects will fit a teacher for a wider field and higher remuneration.

Teachers' meeting under the direction of a superintendent can most properly use Educational Foundations. The magazine has been adopted in many cities and towns. The subject matter opens a new field to those who have not studied pedagogy, while to the deep students of science it presents matter for a wide discussion in which there is room for much original work.

Terms—\$1.25 per year. Special rates to clubs of five or more, for reading circle purposes.

Why leave the preparation for these events till the last moment? Why not ORDER AT ONCE some of these books and study over plans in advance.

UNITED EDUCATIONAL CO. 61 East Ninth Street, New York

A Modern & Dainty Shakespeare

A New Pocket Edition of the COMPLETE WORKS OF WILLIAM SHAKESPEARE

EDITED BY ISRAEL GOLLANCZ

This latest edition of Shakespeare is a complete handy-volume set of the Plays, Sonnets, and Poems, adapted for use in schools and colleges, as well as for the purposes for private reading. It follows the latest Cambridge text of William Aldis Wright. Introductions to the different volumes, and the commentary which follows the text of each play, are by

Dr. Israel Gollancz, the well-known Shakespearian scholar and editor.

The type used is long primer, and the text is never crowded. This is the cheapest large-type edition of Shakespeare now before the public. Its convenient size (4 x 6 inches), clear typography, strong opaque paper, and substantial binding, unite to make it attractive and serviceable.

40 PLAYS AND POEMS

UNIFORM BINDING, 18MO

BOSTON

To Subscribers and Readers

WE WANT YOUR AID

- 1st. We want your subscription to OUR TIMES. If you have already sent it, many thanks; if not, let us urge you to send it at once FOR YOUR OWN, YOUR CHILDREN'S, AND SCHOOL'S BEST INTEREST.
- 2d. We believe intensely in OUR TIMES as a prime factor in school and education. We want your enthusiastic support, and we suggest the following as some of the ways to express it:
- 1st. Recommend OUR TIMES to your fellow teachers and neighbors.
 - 2nd. Give (or loan) them your copy occasionally.
 - 3rd. Send us the names of those you think will be or ought to be interested and we will write them.
 - 4th. Form a CLUB; it's easy work. Let us start you. Just ask for the literature and the suggestions; we will promptly or gladly furnish you an outfit free.
 - 5th. Send us the name of a bright boy in your school or your home.

"WE WILL DO THE REST."

Here are some of the reasons why we urge you to become enthusiastic in spreading the good news that OUR TIMES is *THE* paper to teach CURRENT EVENTS in the school and home:

A Concise Weekly Needed

Every intelligent person readily recognizes the importance of a reliable, unbiased, concise and thorough digest of time, the direction of thought, and the news of the day. In the saving of interpretation of present-day history such a paper performs a service invaluable to its busy patrons. Of no class is this so true as of those who teach and are taught in our schools.

The Usual Newspaper not adapted to schools

Unquestionably the daily newspaper offers the greatest source of information on Current Events, but it is not adapted to school use. All wide-awake, up-to-date educators recognize the necessity of a paper specially suited to this purpose. Many public schools now follow the practice of utilizing Current Events in illustrating Geography, History, etc.

Teaching "Current Events" A means not an end

The first and most important thing in connection with the introduction of the study of "Current Events" is the point of view. They may be TAUGHT, or they may be used as a means of teaching. To use them as a MEANS rather than an END is by far the more fruitful in results, and such use does not increase the daily program or disturb the course of study. Considered as a means rather than an end, the use of Current Events touches school work at many points, and adapts itself to almost any study.

Why "Our Times" is specially adapted

"Our Times" is especially adapted to school use because—

1. It puts the important world-news clearly and tersely.
2. It eliminates all news unfit for youth to read.
3. It provokes discussion among pupils, teachers and parents.
4. It illuminates all related studies—History, Geography, etc.
5. It serves as an excellent text book for "Supplementary Reading."
6. It invigorates the memory by its "Cumulative Index" each month.
7. It is easily within the reach, financially, of every teacher and home.
8. It comes to them at the close of the week's studies, A TREAT.
9. It is simple enough for the child, vigorous enough for the adult.
10. It soon becomes a vitally active bond between the school and the home, which no one study can ever supplant. Talk of "School" and the pupil and parent both weary at the end of the week; talk of "Current Events" and everyone is interested and every study

Methods of Using "Our Times" in the School Room

at school is re-clothed as a new and welcome holiday guest. Such a guest will "Our Times" prove in every home where it is taken.

How to use "Our Times" is set forth in a small booklet, "The Teaching of Current Events in the Public School," free upon application. The following points are elucidated in this booklet:

- "Our Times" as an aid to Reading.
- "Our Times" as an aid to Spelling.
- "Our Times" as an aid to Geography.
- "Our Times" as an aid to History.
- "Our Times" as an aid to Language.
- "Our Times" as an aid to Composition.
- "Our Times" as an aid to Oral Work.
- "Our Times" as an aid to Civics.

OTHER STUDIES.

Many paragraphs in "Our Times" relating to Botany, Zoology, Astronomy, Meteorology, etc., help to add zest to the study of these sciences.

Special Use of "Our Times"

The uses to which "Our Times" may be put in the school room are various. Its subject matter—Current Events—furnishes the foundation for a most helpful "quiz" on the news of the day just before regular school work begins. "Our Times" may also be the medium by which specially-appointed pupils act as news correspondents at various supposed centres, such as New York, St. Petersburg, Washington, etc., each one gleaming the news for his designated country or city. "Our Times" as a "Monthly Review" affords a most profitable exercise for the cultivation of the memory.

"Our Times" in the Home

Most families subscribe for a local paper, but to many, a metropolitan daily is too great a luxury. "Our Times," however, gives all the world's news of an entire week for less than two cents and puts this news in such a terse, simple, forceful way that ALL members of the household are benefited; besides, the little ones at school find in it a ready answer to the many questions constantly asked by their teacher concerning the news of the day. "Our Times" in the home, therefore, serves a DOUBLE purpose—it brings the latest news and it binds the school still more intimately to the home. As a home paper, therefore, it is inexpensive, it is intelligible to the children as well as to adults and it is free from all that is objectionable, and so, well-calculated to become the ideal paper for many thousand homes.

HAVE YOU A BRIGHT BOY in Your School?

Send us his name or ask him to write us. We want to talk to him.

Publishers' Talks

ONE of the pleasing features of the publication of so beautiful and attractive a production as TEACHERS MAGAZINE is the desire which it stimulates among subscribers to have other teachers, with whom they are acquainted, receive the benefit of its help. We venture to assert that among the thousands of enthusiasts who have been charmed by this magazine, there are very few who have not mentally said to themselves as they have read its pages, "I wish so and so could see this periodical." Well, why should they not see it? If you will do your part this can be accomplished to the satisfaction of your friend and to your own benefit. Buy a double postal card and write to a few teacher friends, and ask them if they are taking this magazine. They will reply on the return postal card. If they are not taking it, send us their names and we will send them a sample copy. Upon receipt of information that your friend is not a subscriber write at once stating how much you prize the magazine and urge a subscription thru you. For every new subscription you send us we will extend your own subscription two months. We want to increase our subscription list fifty thousand this year, and from the way new subscriptions are rolling in, this does not seem an unreasonable expectation. If our efforts to produce a magazine that shall be a pride to the profession is worthy of your co-operation we hope you will give us the benefit of your help.

A Double Magazine

We have implicit faith in the general magazine covering all grades of work from the Kindergarten to the High School, and we are positive the more teachers come to know such a publication the more fully they will prize it. There is every reason why a teacher in one grade should be conversant with the character and quality of material which appeals to her fellow co-worker in another grade. All grades are closely inter-related. To successfully prepare a class for a higher grade should involve a knowledge not only of that grade's requirements, but of the foundations already laid for her class by the lower grade teacher. The independent teacher is obsolete; she has no place in the present day educational structure. A successful teacher *must* recognize the method and principles which have been employed in preparing her incoming class, as well as those which are to

be observed in fitting her class for reception to a higher grade. For this reason we are firmly of the belief that one magazine for teachers in all grades is not only a financial desideratum to the teacher herself, but a very essential factor in our educational system. Furthermore, any ambitious teacher looking forward to her own advancement in higher class work, or eventually to principalship, owes it to herself to keep constantly in touch with her co-workers in other and lower grades. In no way can this be done more enjoyably and profitably than by a periodical such as the TEACHERS MAGAZINE. A primary teacher will pay one dollar for a distinctively primary paper of forty pages or thereabouts, whereas this magazine gives equally as much primary material in quantity and many people say much better in quality, and in addition, gives just as great material of a higher character and with which the primary teacher should be familiar. As great care is taken to satisfy the requirements of both the primary and higher grade teacher as tho we were publishing two separate magazines. Neither is neglected in quantity or quality, but we are covering both needs in one magazine which is being appreciated by thousands. The TEACHERS MAGAZINE is the largest and most attractive magazine upon education published anywhere in the world. It is bound to make friends and to hold them.

A Few Don'ts

DON'T fail to give both your old and your new location when requesting that your address be changed. We cannot comply with your request without both, as our lists are not arranged alphabetically but geographically.

DON'T complain if the date on your wrapper is not changed within two weeks after sending us your remittance. At this season of the year it may take three or four weeks to do this because of the heavy character of our mail.

DON'T fail to notify us if you have sent in your subscription from one address, and you were a subscriber at another address to some one of the four journals amalgamated into this magazine. In such case the publication may be going to both addresses at double cost to you.

Is an Educational Paper Club Advantageous?

We notice a growing tendency in some sections of the country for teachers of a given community to club together and subscribe for a large number of educational papers and then exchange among themselves. This may be an admirable arrange-

ment for ascertaining the merits of different publications, but it will be positively derogatory to the best interests of education in general and the teacher's individual advancement in particular, if it is permitted to interfere with the ownership of one or more papers for the teacher's own personal use. We have known teachers to give up taking a paper for themselves because they had joined a club of this character. Such a plan encourages superficiality. The teacher glances at a great deal, reads but little thoroly, and mentally retains still less for her advancement and practical work. There is nothing that the teacher can call her own, which she can keep at hand for ready reference, which she can cut up for her indexed scrap book, or which she can take to school for the delectation of her pupils. If she wants to read a given magazine carefully she is refrained from doing so lest she may keep it from others who have an equal right to its contents. It is a hodge-podge arrangement that can give satisfaction to no one, and principals and superintendants should discourage such a plan as inimical to the best educational work. School libraries should purchase various periodicals, but the individual teacher should have her individual magazine.

Autobiography of a Teacher

Are you reading the "Autobiography of a Teacher," by Dr. C. Hanford Henderson? Do not miss it. Certainly it will appeal to you strongly by the beauty of style and the charm of narrative. You will find it difficult to lay aside after you begin to read, and it can be readily understood why the books of Dr. Henderson are so widely read and why he has so many admirers.

Can You Save One Dollar Per Month?

Be sure and read the advertisement appearing elsewhere as to the Preferred stock of this company. Purchases of five or more shares of Preferred stock can now obtain a bonus in Common stock. The Preferred stock is guaranteed 7 per cent. dividends, and if the common stock also earns dividends as now seems so promising, the return upon the money invested will prove to be unusually gratifying. There are thousands of teachers who can easily set aside five dollars each month for purposes of investment, and it certainly should be done. We do not know where a better opportunity for such investment exists than this very proposition. *Seven per cent* is not a common rate of earning, and yet it takes but comparatively small profits to enable us to pay such dividends upon our Preferred stock. Teachers have been known to invest their savings in mining schemes, in cotton enterprises, and in numerous wild cat propositions that are constantly springing into existence to beguile the unwary. This is no such proposition. Nothing in the world of business is entitled to greater respect than a long, honorable, and prosperous career. Such for twenty-five and thirty years was the record of our predecessors. We have simply brought the two former enterprises into union, with the result that we enjoy a larger patronage, and are enabled to do bigger things in a more attractive way and with greater possibilities of profits. Teachers are fortunate in having a chance to acquire so excellent an invest-

ment. It is a field of activity that they know about, in which they are interested, and in which they can find a peculiar gratification. Even those who can only afford to save *one dollar* a month should take advantage of this chance. There need be no fear of our discouraging such a subscriber merely because the amount of the investment is small, for the larger the number of our stockholders, and the more widely they are scattered the better it is for us from a commercial standpoint. This can be readily understood. We want this stock held by those concerned with education, rather than by mere financiers. It is as safe and attractive for one as for the other, but it is educators who help us make our profits and it is educators that we want to share the profits. The joint business of the amalgamated enterprises was sufficient to produce enough earnings to insure the dividends upon the preferred stock. This business we are not only holding in a remarkable manner, but we are largely increasing our business thru the generous patronage of new friends. We invite and welcome applications for this investment of whatsoever volume from one share upwards, and will satisfy such applications so long as the stock lasts. Applications, however, should be made promptly.

Are You Teaching Current Events?

If you want your pupils to take a keen interest in their studies, you must, as far as possible, bring the important world occurrences into close relationship with the daily class-room work. There is hardly a study in which this is not practicable. Send for our booklet "The Teaching of Current Events in Schools" which can be had for the asking. Hundreds of subscribers voluntarily assert that *Our Times* since it has been converted into a weekly is the best publication in existence for dealing with this situation, especially as it is so splendidly adapted to school use. Desirable rates for school clubs.

Are You Reading the Advertisements?

Do not fail to do this. You will find them very interesting and suggestive. You will not buy anything unless you want it simply because the advertisement is in this magazine, but when you do want a given article buy it from those who have advertised in this journal. The advertisers are helping us to produce a magazine of unusual attractiveness and which we could not do if we were compelled to rely only upon subscription revenue. These advertisers are entitled to your consideration and we hope you will at least look over what they have at considerable expense placed before you.

Versatility of Our Publications

Thru the medium of our various periodicals, we seek to cover the requirements of educators as we understand them to exist. This magazine is for the grade teacher from kindergarten to high school. (\$1.00.) *Our Times* is a weekly, dealing with current events in a most attractive manner. (\$1.25.) *The School Journal* is for superintendents, principals and high school teachers. (\$2.50.) *Educational Foundations* is really a series of monthly pedagogical text-books dealing with the science and art of teaching. (\$1.25.) All four periodicals for \$5.00 and they are worth to any teacher many many times their cost.

CARPENTER'S GEOGRAPHICAL READERS

North America	\$0.60	Australia, Our Colonies, and	
South America60	Other Islands of the	
Europe70	Sea	\$0.60
Asia60	Africa60

The Series Now Complete. This series of geographical readers, covering all the continents of the globe, has now been completed. Each volume tells in an attractive manner about just those things which everyone ought to know, and is profusely illustrated from photographs taken by the author.

The Author's Advantages. These readers are not dry compilations from other books, but comprise vivid descriptions of the author's personal observations. Mr. Carpenter has had exceptional advantages in securing authentic information, illustrations, and other literary material. His travels have been facilitated by letters of introduction from the State and other departments at Washington, and through them he has had the assistance of the governments in many of the countries through which he has traveled.

Their Success as Supplementary Readers.

As Supplementary Readers these books are unequaled. Among their many excellent features are: Their vast fund of valuable information; their accuracy and sensible plan of treatment; their live, human interest; their familiar, colloquial style. For these and many other reasons, Carpenter's Geographical Readers are highly commended by the most prominent educators and are used with great

success in almost every city of the United States.

UNITED EDUCATIONAL COMPANY, 61 EAST NINTH STREET, NEW YORK

PHYSIOLOGY FOR CHILDREN

OF unique attractiveness to the eye and mind of the pupil is **Eadie's Physiology and Hygiene for Children**. Note these features:

1. The text has marked naturalness and simplicity of language for children of the fourth grade.
2. The illustrations have a beauty and value not before found in such a book.
3. Its many artistic colored pictures differentiate clearly the parts of the body.
4. It teaches plainly the functions of organs, not a long list of technical terms.
5. The portion of the text which meets the requirements of the law as to tobacco and alcoholic liquors is such as to make this instruction personal and practical, and at the same time the most interesting part of the book.

Cloth. 204 pages. Price, 45 cents.

A. FLANAGAN CO. - CHICAGO

Smith's Arithmetics

By Professor DAVID EUGENE SMITH
of the Teachers College, Columbia University

A MODERN SERIES

CONTAINING
THE BEST OF THE OLD, THE BEST OF THE NEW

THE PRACTICAL SERIES

Primary Arithmetic	- - - - -	List price, 35 cents
Practical Arithmetic	- - - - -	List price, 65 cents

THE THREE-BOOK SERIES

Primary Arithmetic	- - - - -	List price, 35 cents
Intermediate Arithmetic	- - - - -	List price, 40 cents
Advanced Arithmetic	- - - - -	List price, 45 cents

This series is identical in material with The Practical Series.
The "Intermediate Arithmetic" and the "Advanced Arithmetic" are made up by binding the "Practical Arithmetic" in two volumes.

THE GRAMMAR SCHOOL SERIES

Primary Arithmetic	- - - - -	List price, 35 cents
Grammar School Arithmetic	- - - - -	List price, 60 cents

Presenting less material than either of the preceding series, these two books are well adapted for use in schools which require a moderate but sufficient amount of work.

Correspondence will receive prompt attention

"The Outlook for Arithmetic in America," a suggestive monograph by Professor Smith, will be sent, postpaid, to any address on request.

TYPEWRITER

BATES ADV. CO.

AFTER
NOVEMBER FIFTEENTH

IT WILL BE
IMPOSSIBLE

TO PURCHASE THE PREFERRED STOCK OF THIS COMPANY
UPON THE SAME ADVANTAGEOUS TERMS AS NOW OFFERED

**SUBSCRIPTIONS SHOULD
BE FILED AT ONCE**

Under the terms of the contract with the Underwriters of the Preferred stock of this company, we shall be compelled to withdraw, after the **Fifteenth of November**, part of the favorable terms of the investment which are yet available to subscribers. Those contemplating taking advantage of this opportunity should accordingly file their applications for shares without further delay. Stock now purchased can be paid for in equal instalments extending over a period of ten months and carries a bonus that will not be continued after the date specified.

**WHAT CONSTITUTES
A GOOD INVESTMENT?**

There are three things that should be carefully observed in making an investment. They are: First, invest no amount that you cannot consistently spare from your income; Second, confine your investment to activities about which you know something and which you can understand; and Third, invest in nothing that offers unreasonable and improbable financial returns.

**JUDGED BY THIS
STANDARD**

the Preferred stock of this company should commend itself to your consideration. In the first place, any desired number of shares may be purchased and paid for at the rate of so much per month over a period of ten months. In the second place, this business is one you can understand, in which you have sympathy and pride, and the solidity of which you can readily foresee, since two commercial activities, each having a continuous record of twenty-five to thirty years of prosperous operation, have been merged, thus creating a volume of patronage that can only result in added strength and earning power. In the third place, we do not promise visionary financial returns, but we do know that the profits of the business should easily protect the seven per cent. dividends on the preferred stock.

CAN YOU SAVE
ONE DOLLAR PER MONTH?

Many subscribers are diffident about taking advantage of this opportunity because they fear that one, two, three, four, or five dollars per month, which is all they can spare for such an investment, will be deemed too small for consideration. We wish to dispel this impression. For reasons easily understood, we prefer to have the stock of this company owned by those practically engaged in the work of Education rather than by those looking merely for a good financial investment. The more widely this stock is distributed, and the larger the number of shareholders, the better it is for the welfare of the company. We are only too glad, therefore, to sell the stock even in allotments of one share, involving only the amount of ten dollars, and the payments of which may be distributed over a period of ten months at the rate of one dollar per month.

TEACHERS ARE FRUGAL
EVEN IF NOT WEALTHY

and small amounts can be set aside for investment out of monthly earnings. This makes the opportunity to acquire some of this Preferred stock available to everyone. A reliable, conservative, and attractive **Seven Per Cent.** investment is not often obtainable. It should not be neglected when the opportunity is offered.

SEND SUBSCRIP-
TION NOW

We do not guarantee to continue to offer this stock upon any terms whatsoever for any specified time, and the proposition is liable to be withdrawn without further notice. We hope no one will be disappointed by placing their order too late to obtain a portion of the stock for sale. At best there is only a limited amount, and applicants are liable to exhaust this at any time. We strongly recommend, therefore, that application for as many shares as desired be forwarded promptly.

A Satisfactory Answer

to many of the questions on Current Events in the Teachers Magazine cannot be obtained without reference to OUR TIMES. To facilitate reference, the pages in Our Times on which such information appears, are given. Many a teacher may find it exceedingly embarrassing to be asked more about a Current Event subject that she can get from a categorical, brief answer such as is of necessity given in the limited space in the Teachers Magazine. For this reason we strongly advise every teacher to familiarize herself with the news of the day by taking OUR TIMES. Only \$1.00 a year. Have you not at least ten bright pupils whose parents will gladly afford them 60 cents to subscribe? Just try; perhaps you will be surprised (as we have been) with the readiness with which subscriptions can be secured by the proper presentation of OUR TIMES. If you haven't *ten* such pupils, haven't you *five*? We will accept in such case 75c. each. By all means take OUR TIMES *yourself* and keep posted.

Book Talk

By Mrs. Frances Hardin Hess

Never before in my experience as a purveyor of information of "What to Read" and "How to Read It" have I been so embarrassed by such a wealth of really good books as at the present time. Fortunately the book reviews eliminate the new publications and I can fall back on Emerson's dictum of recommending such as have stood the test of a year's use, or even longer.

Among the purely professional I want to call attention to the *Month by Month Books* once more.

Here is a new up-to-date series of books of Nature Study correlated with Reading, Literature, Language and Drawing Lessons, one for each month of the year from September to June inclusive, based on the best and most approved methods of teaching, and conforming with any course of study. The authors are well-known as experienced and skilful primary teachers. They have embodied the plans and suggestions of Dr. Edw. R. Shaw, Supt. C. B. Gilbert, Miss Ada Van Stone Harris, Prin. D. B. Corson, and other well-known authorities, and have produced a series of most helpful volumes.

Altho especially designed for the use of teachers in primary grades, the series will be welcomed in ungraded country

What Books Are Most Read.

Ossian' Lang's *Outlines of Herbart's Pedagogics* is a compact statement of the educational theory of Herbart. I read all around the subject until I found this "Key to Deeper Studies." I am sure there are many teachers who feel this help as much as I did. With the "Outlines" as a key the door will be open, and the whole structure will be of easier access.

Next we come to the field of English for High and Preparatory schools. This is a field so tempting that one hardly knows how to choose from the wealth of available material. It is wise to select books that are well illustrated. I have used with much success the following:

Ward (H. S. and Catherine Weed);

(a) Real Dickens Land;

(b) Shakespeare's Town and Times;

(c) Canterbury Pilgrimages.

Mrs. Ward is the grand-daughter of Thurlow Weed, and probably the most notable woman photographer living. She is a graduate of Vassar college and identified with educational affairs in England, where she now lives. Mr. Ward is well known in English literary circles, and his text in the *Canterbury Pilgrimages* is not only a real contribution to the

The Young McKinley: "I order you, Colonel, in the name of General Crook, to follow the ravine."

Courtesy of D. Appleton & Co., New York City.

schools where systematic nature study is most needed. The country teacher who wishes to awaken her pupils to an interest in the processes of nature will find in these volumes a wealth of suggestive material.

There is probably not a teacher who has not at some time consulted Sir John Lubbock's (or Lord Avebury as he now is) "List of the 100 Best Books," but not every teacher has come in touch with the little volume which we publish containing letters and quotations on the subject by the following notables:

SIR JOHN LUBBOCK'S FIRST LIST.

Letter from Professor Bryce, Lord Coleridge, Hon. E. J. Phelps, John Ruskin, Mr. Swinburne, William Morris, Lady Dilke, Miss Braddon, Mr. Burnand, Wilkie Collins, Henry Irving, Mrs. Lynn Lynton, James Payn, Canon Farrar, Rev. Edward White, Rev. Samuel C. Green, Dr. E. Warre (of Eaton), Dr. J. E. C. Weldon (of Harrow), Prof. Max Muller, Prof. J. S. Blaikie, Edward A. Bond, R. Harrison, A. W. Black, Bernard Quartich, Henry M. Stanley, Gen. Wolseley, A. Presmer.

SIR JOHN LUBBOCK'S FINAL LIST.

Notes from Duke of Argyll, Prof. Jewett, Mr. Froude, Sir Frederick Leighton, Mrs. Craik, Matthew Arnold, Herbert Spencer.

subject, but an addition to the English literature of the 19th century.

In the October *TEACHERS MAGAZINE* I mentioned N. Chester's "Stories from Dante," and in this number I want to call attention to Gassiot's "Stories from Waverley for Children." They serve the good purpose of getting children interested in Scott.

Binding Literature, Nature Study and Art together comes Anna E. McGovern's charming volume entitled "Type Lessons for Primary Teachers." In her preface she says:

"The aim of Nature Study is two-fold: First, to cultivate the higher nature of the child and lead him to his Creator; and, secondly, to develop his intellectual powers and lead him to acquire a knowledge of his physical environment.

"The guiding principle in language is, first, impression; then expression, that is, to translate forms of beauty into thought and thought into words."

Thus is prefaced a most charming complication that all thru is invested with the personality of a true teacher.

I wish I might go on and call attention to many volumes that lie at hand, but time and space forbid.

All of the above books can be had thru the United Educational Co.

NOVEMBER, 1905

No. 3

Some Thanksgiving Thoughts

ACH year in November the President of the United States issues a proclamation appointing a day of thanksgiving. It is the nation's public profession of its belief in God as the giver of all good. As such it is also an annual reminder of the dependence of the country's welfare upon the All-Father who cares for us. Pious hearts overflowing with gratitude originated the day in Plymouth colony, and loyalty to the principles of the founders of our democracy established it as a national festival.

The American celebration of Thanksgiving is marked by religious services, family reunions and social festivities. These help the mind to realize how much it is blessed. The going to grandfather's house and all that is implied in that homely phrase is one of the most precious memories clustered around the day. Even if it is impossible for one or the other to spend the day with those most dear to him there still remains the privilege of spiritual communion with them. "Thank God for friends!"

To be sure the Thanksgiving may be quite perfunctory and very like a London 'bus conductor's "thank you" on collecting your fare. It devolves upon the homes, the schools, and the churches to cultivate the spirit of gratitude. The school's special prerogative is to lead the young to the fountains of life, to point out to them the way to self-knowledge, to help them find their place in the world, to inculcate in them right views of happiness. Right views of happiness—that is the key to a grateful heart. Contentedness with one's present lot is not necessarily a commendable state of mind. Indolence, conceit, and self-satisfaction often cloak

themselves in it. There is a divine discontent. The contentedness that makes for gratitude accepts conditions as they are, interprets them in the most favorable light, and strives for the greatest achievements possible upon that basis. To be gratified, not satisfied, that is the point. Gratification is a form of gratitude.

The principal studies by whose aid the school may best cultivate the spirit of thanksgiving, without nurturing self-conceit, are history and geography. The former when rightly viewed inspires faith in humanity, in the victory of truth over falsehood and error, and in the power of noble purposes in alliance with intelligence and a determined will. Geography properly handled promotes love of the physical and social environment in which one is placed. Whatever turns the searcher for sources of joy back upon himself and to his soul is helpful to the growth of a spirit of thanksgiving. Let the solicitude become what to make of one's self, rather than what to get for one's self.

Children are very impressionable. The atmosphere around them is a momentous educational influence. The personality of the

teacher ought to be, and frequently is, a strong factor. It is meet for the teacher, therefore, to look well to his own heart. The cultivation of a cheerful disposition is essential to real success. Keep alive the spirit of thanksgiving in yourself!

It would seem to be easier for the teacher than for almost any one else to be thankful every day of his life, thankful not like the Pharisee of the parable, but like King Hezekiah of old. If love is the most wonderful thing in the world, then doing good is the best work that a man can be engaged in. The greater the opportunities for helping others, the more cause there is for

O God, my God, give me a heart to thank Thee; lift up my heart above myself, to Thee and Thine eternal throne; let it not linger here among the toils and turmoils of this lower world; let it not be oppressed by any earth-born clouds of care or anxiety or fear or suspicion; but bind it wholly to Thee and to Thy love; give me eyes to see Thy love in all things, and Thy grace in all around me; make me to thank Thee for Thy love and Thy grace to all and in all; give me wings of love, that I may soar up to Thee, and cling to Thee, and adore Thee, and praise Thee more and more, until I be fitted to enter into the joys of Thine everlasting love, everlastingly to love Thee and Thy grace, whereby Thou didst make me such as Thou couldst love, such as could love Thee, O God, my God—Amen.

C. B. Pusey.

again the teacher is unusually favored in being placed in a field where search for truth and the building and refining of character are ever present aims. It is a thousand times harder for a bank clerk to keep his soul alive in a work that exhausts the mind without nourishing the soul. Has the teacher cause for thanksgiving?

Two special rewards are held out to those who teach children: one is that they may keep young longer than people in other occupations; the other is that they may live in the memory of grateful thousands and exert an influence in the world long after the body is bedded in the grave. What greater boon can a man ask for the conscientious and wise fulfillment of his duty on earth! "He who studies and teaches others possesses treasures and riches," says the Midrash. Truly, blessed is the teacher. Then let your heart be joyous, giving thanks always for all the wealth that is yours.

The world has not been in the past very heedful of the heroes who fought and suffered for the ennobling of humanity. It makes much of statesmen and warriors, but seems to care little for the achievements of its teachers. Yet to its educators the world owes its civilization, its greatness, and nobility. A more enlightened generation will be more just. The history of the future will be the history of the real progress of mankind and that is the history of education. Instead of memorizing the names and recounting the doings of presidents, kings, generals, and statesmen the children in the schools will listen to the self-sacrificing labors of the men and women who labored for the advancement of the higher interests of humanity. That is our hope.

The schools are the true temples of the humanity of to-morrow. Great opportunities entail great responsibilities. Teachers and school officers, therefore, should be the representatives of noblest manhood and womanhood. Better that knowledge be lacking,—for the world has a surfeit of cyclopedias,—than that conduct reveal the slightest taint. Integrity is *sine qua non*. The example of a dishonest superintendent is of fearful consequence for the system. School boards that fail to inquire minutely into the past conduct, character, and moral reputation of a candidate for an educational position,—superintendent, principal, or teacher—is guilty of criminal neglect. Yea, the choice of a caretaker, too, should be well considered.

Thanks to the ingenuity of District Superintendent Elgas there are now displayed all over New York city large posters announcing the work of the evening schools. It was a happy hit to place in the center of the poster this quatrain from Longfellow:

The heights by great men reached and kept
Were not attained by sudden flight:
But they, while their companions slept,
Were toiling upwards in the night."

thanksgiving. Who will deny that teaching the young offers almost limitless occasion for serving mankind! Thank God for your opportunities by making the most of them!

It is of little consequence whether the teacher has faith in the power of his personality or not. The influence itself is undeniable, and the responsibility for its quality cannot be shaken off. I attended last month the funeral of a simple-minded old man whose character and daily walk have left behind them a deep impress upon many lives. I know, tho he could not have known in the flesh, that something of Joe Tomlinson lives on in me. He was poor, very poor, but he did not fret; perhaps he did not even admit it to himself. His pride and his joy was to be useful in the humblest stations. If "Uncle Joe," as the townspeople affectionately called him, could carry a banner or sweep out a public hall or look after the comfort of visitors he felt that he enjoyed a precious privilege. The simplicity of his appreciative heart has been a daily benediction to many who mourn his death. Who can calculate the work wrought by one's personality! And if unconscious influences issuing from a life and spreading abroad as the fragrance of the tuberose can accomplish great things, how much more can be done by an intelligently directed educational force!

Next to doing good I know of nothing better to labor for than growth in the knowledge of eternal truth. This latter is really part of the former. The more I possess of truth the more efficiently can I serve mankind. Inversely, the less seriously I attend to my own progress in understanding and in sweetness of life, the less will my influence be worth to the world. Here

Ralph Waldo Emerson.

By MATTIE GRIFFITH SATTERIE.

RALPH WALDO EMERSON rises, grand and strong, as the great central figure of that brilliant group of literary men and women for which New England is famous. I read the other day this statement, "Emerson was the embodiment of absolute thought and in consequence of this fact, his influence was vague, as he never formulated his theories in a practical manner." Be it so that Mr. Emerson typified "absolute thought in vague theories" then those vague theories assuredly had a most practical hold over the intellectual life of the world.

When a child, I spent one never-to-be-forgotten summer in that quaint old historic village of Massachusetts, Concord. I had the great pleasure and privilege of seeing, almost daily, the "Sage of Concord," as the admirers who came to the dear old village to see Mr. Emerson always called him. His personality was delightful. He was as simple as a child, tender and kind to all, and yet there was a gentle dignity, a sweet aloofness, if I may use that expression. This peculiarity gave him a greater charm, which, added to his kind geniality, made him a most delightful companion. In his beautiful old home, about a mile from the village, he was particularly charming.

The Emersons were very hospitable in a pleasant, unostentatious manner. *Everybody* was welcome to their pretty home. They possessed the rare gift of making all visitors feel perfectly at their ease. To appreciate Mr. Emerson thoroly one should have seen him in his home. He was an ideal husband and father, and a delightful host. Every Sunday evening, Mr. and Mrs. Emerson held their simple informal "At Home." Hither went all the townfolk and the "strangers within their gates." The pretty shaded library will ever live in my memory, when I recall those pleasant Sunday evenings.

I was not permitted to attend more than three of those delightful receptions, and then only by special request of sweet, motherly Mrs. Emerson, as my mother wisely thought the best place for a girl of twelve years, after eight o'clock in the evening, was her bed. Just about a week before we left Concord, Mrs. Emerson came one evening to visit my family at the little cottage we made our temporary home. As we were to leave the village in so short a time, I was allowed to realize that proudest treat in a child's life, namely, that of "sitting up late."

I can see that little cottage room, on that well remembered evening. It was a glorious September night, the moon was streaming with silvery beauty over all. The bare little room was taxed to its utmost to hold its distinguished visitors,—the well beloved sage Mr. Emerson and Mrs. Emerson, Miss Elizabeth P. Peabody, her sister, Mrs. Horace Mann, May Alcott (Louisa Alcott's sister), and Judge Hoar, afterwards United States senator from Massachusetts, and who has but recently died, full of years and honors. Our family at that time num-

CHARLES LORING BRACE, philanthropist and organizer of the charity system in New York City. He was also the inspirer of the Children's Aid Society which supports a number of excellent schools in the same city. Miss Satterie is a teacher in one of the best of these schools.

bered seven, and all these made a goodly group.

I as the only child present, seated myself on one of the broad shelf-seats in an open window. Mr. Emerson in a few moments turned to me, he was always tenderly mindful of children, and holding out his hand to me, he said, "Well what has this little woman been doing with herself all these sweet summer days, spent here in old Concord?"

I said quickly with much pride, "Reading your Essays, Mr. Emerson."

"Really," with a smile and surprised look. My mother said, laughingly, "Yes, she was brought up on your books." My aunt added, rather proud of my precocity, "When other children learned 'Mother Goose' she memorized your poems. At seven years of age she repeated 'Good-bye proud world, I am going home,' and it was her own choice, too."

Mr. Emerson turned to me, and said, with a smile, "What a poor substitute, my child, for the dear old nursery rhymes. Now you must go right to work and commit 'Mother Goose' to memory."

Before the evening was over Mr. Emerson again gave me his kind attention by asking, "What is this little girl going to be after she has grown to be a fine young woman?"

I said, "Oh, I shall be a teacher."

That kind smile we all knew so well played round his finely cut lips, and he replied, as he placed his hands on my black braids, "A noble choice. There was never greater work than that of the teacher. It is great, because it demands that self should be effaced. Yes, teaching, is a grand vocation." Years have passed since that evening, but ever in my memory rests that little room, bathed in moonlight, and I always hear Mr. Emerson's tender benediction upon our profession.

The Autobiography of a Teacher. II

By C. Hanford Henderson

Study and Vacation.

IN any retrospect, however honest the intention, it is not the whole that comes to mind, but only the parts, and the parts themselves are determined, not so much by the events and their relative importance, as by the temperament of the reviewer. Being myself an optimist both by birth and subsequent experience, I realize that in this attempt to recall college days I naturally forget the shadows,—the monotony and pettiness and fatigue, and remember only the high lights. Making all proper allowances, however, it still remains true that these four years were years of genuine delight. My love for the intellectual life came only second to my love for my mother. and in these golden days I was gaining the one and had the other. There were fewer distractions then than now, and in my own case fewest of all, for the family was still feeling the pressure of the financial difficulties which had befallen my father and I hesitated to make demands upon my mother's modest income. Had I been a more capable and enterprising lad, I should doubtless have earned something for myself, but I do not think that it ever occurred to me. For one thing, there were fewer opportunities for making money by tutoring and other gentlemanly occupations, and such occupations as may have been open were probably against our social traditions.

I often regretted the lightness of my purse. Undoubtedly it did keep me out of some things that would have been of large advantage, for I went in for the intellectual life with a single-hearted devotion that might not otherwise have been possible. I doubt whether any modern collegiate dissipation,—athletics, automobiling, cycling, photography, theatricals, yachting, even the best of such society as is commonly open to undergraduates can yield the absolute thrill that comes to a lad athirst for knowledge when he realizes in all honesty that he is actually getting it. It is so devouring a passion that it seems to me not wholly impious to compare it to the emotion of a lover. It is a high pleasure even to recall the experience, the heightened pulse, the burning cheek, the kindling eye, all the physical heat that went with this ecstasy of enlightenment. I loved the fruits of study, even the operation itself, and for the simple reason, I think, that it had never been made flat, stale and unprofitable by being prematurely forced upon me.

In looking back, it amuses me to recall the exciting causes of all this fervor, for in so many cases they now seem a trifle inadequate. Some of the occupations were certainly prosaic enough,—drawing metallurgical machinery, assaying silver ores, making tedious analyses in the chemical laboratory, developing elaborate crystal forms in mineralogy, studying the dry facts of economics and logic, and doing a lot of other things that could hardly be called in themselves amusing. What saved these occupations from

being drudgery was, I think, the fact that with all of them I mixed the leaven of imagination. There are few tasks which will not yield to such alchemy and get transmuted into pleasures. One would not wish to live in an unreal and impossible world however delightful the sensations it aroused. The enemies of imagination doubtless have this danger in mind when they count the imagination as little better than intellectual hashish and will have none of it. But there is a much broader and more helpful way of looking at the faculty than this, a way which properly makes of the imagination a most precious, even a divine gift. Benjamin Franklin in reviewing his own life in that incomparable autobiography which I might almost say is now the despair of every student of English, calmly and dispassionately recalls his various performances,—he was eminent in nearly a dozen lines,—only to add that of all his accomplishments, the ability to write good, clear English had been quite the most useful. Doubtless I should say the same thing, if like my distinguished fellow-townsmen, I possessed this same ability. As it is, I can truthfully say that of the several natural gifts bestowed so sparingly upon me at birth by the traditional fairy godmothers, I have valued most persistently their gift of imagination, and because of it have almost forgiven their many and serious omissions. It is a great boon to feel the splendor of life and to picture even a small measure of its superb possibilities.

The unimaginative are prone to pair off fact against imagination, and to count the two as antithetical. But in reality the seeker after facts needs no food quite so imperatively as just this same imagination. This is particularly true in science. It is common to say that we have only so much science as we have arithmetic; and so far as this means that in its complete statement, science must be quantitative, it is undeniably true. But it is equally true to say that we have only so much science as we have imagination, for the man who enlarges the boundaries of knowledge must be able to see things that have never been seen before, to hear things that have never been heard before, to touch things that have never been handled before,—in a word he must be able to marshal possible facts from the abyss of the hitherto unknown. Valuable work has been done by mere plodders, and apparently will be done until the end of time, for there seems not to be enough imagination to go all around, but their multitudinous facts are only humanly precious as they become the raw material out of which the more imaginative construct a coherent, scientific universe.

I have even read that lack of imagination is the potent cause of human immorality, and I am prepared to believe it. An inability to put himself in another's place makes a man cruel and selfish and unjust. My own failures in morality seem to me to have been mostly failures in imagination, failures to see below the surface,

to see things in their proper relations and values. Nor can I dismiss the comprehensive reflection that given our three dimensional world as we have it to-day,—earth and air, fire and water, apparently the same world to each participator,—and the worth and beauty of the drama we construct depend upon the ideas which we bring to the adventure, much more than upon the seemingly stubborn elements themselves. I am conscious that in my own case the magic which changed the dull college work-rooms into invisible gardens of delight was the rich imaginative life that paralleled their own more prosaic realities.

I should not claim, for a moment, that this imaginative life was always profitable. On the contrary I am quite sure that it was not. I invented fountains that would not work; a steel process so little practical that my good professor of metallurgy begged me to get it out of my head at once lest it bring me into later trouble; an ice-cream freezer that required neither ice nor cream, but gave a product too costly for ordinary consumption; and many other absurdities that it might be humiliating to recall. But this only means that like everything else, the imagination needs discipline and training.

In the more human studies of the course I found this lively imagination a very practical help. Coupled as it was with a distinctly visual type of memory, I turned everything into a gorgeous panorama, and sat like an interested spectator at the play. We had little time, in so crowded a scientific course, for history and other narrative studies, but such work as we had afforded me very brilliant pageants. I did not so much hear or read as I actually saw. I much preferred no illustrations, unless they were actual photographs of buildings and persons. If they had to be imaginative, I preferred to do the imagining myself. I even took delight in the less juicy subjects of the course, such as economics and logic (less juicy as then given) for they all offered a certain free play for the imagination, which gave as keen pleasure as a more muscular gymnastic does to persons somewhat differently constituted. I was quite dull at language, but the French always gave me more pleasure than the German, for the French presented a series of brilliant pictures, while the German only offered an amorphous collection of ideas. This preference still remains, and I have come to believe that for persons of my own type of mind, a knowledge of French and some familiarity with the literature are a distinct help towards clear expressions in English, while the German may even have a contrary effect. As French is so much easier than German, I should be sorry to have this argument used as an excuse for laziness. My little generalization would doubtless not hold for persons of a different mental make-up.

It is hardly necessary to add that this visual habit of mind was of great help in mathematics. It naturally made geometry much easier than algebra and other less graphic forms, and solid geometry the easiest of all, for the geometric solids hung before me in mid-air; generalizing themselves from moving lines or surfaces,

intersecting at any required angle, or transforming themselves quite at my pleasure.

I have since learned that this panoramic habit of mind, and the visual type of memory which goes along with it, are extremely common, and I have also learned that they have marked disadvantages as well as marked conveniences. One of the disadvantages is that certain authors are closed books to me. I cannot read them. For some reason,—probably a distinctly different habit of thought,—their sentences do not call up distinct images, and so fail to be intelligible. I can dig out the meaning, but the process is so slow, and the resulting impression so evanescent that I have had to conclude regretfully that it does not pay. As Louis Lambert would say, they

do not belong to my heaven. Sir Leslie Stephens is such a treasure-house with closed doors. I have read his "Science of Ethics" twice, but it would puzzle me to give the barest account of it. I have also met persons who stand spiritually and intellectually on the opposite side of just such impassable gulfs. I realize, of course, that this failure to communicate may come from other causes,—from a different outlook on life, from alien motives, from defective literary style, but there still remains a goodly array of cases where I am forced to believe that an altogether unlike habit of mind leads to a form of expression which fails to touch or enlighten a pronounced visualist. It would be humiliating to admit that I do not know what under the sun these people are talking about, were I not partially spared by the reflection that I am probably equally unintelligible to them.

Some apology would surely be demanded for this wide digression if it did not lead very directly and certainly to the matter in hand—to education. I am not sure that I use the word imagination quite as more exact psychologists employ it, but using the term to cover this play of thought about all experienced realities; this re-arranging of them into new and untried combinations; this intellectual curiosity which is forever peering into the unknown without removing its feet from the solidly known, and it seems to me that a scheme of education which kills the imagination is distinctly criminal; that one which disregards it, is curiously unwise,

and that one which strengthens and makes use of it is alone defensible and rational. My own reverence for the imagination is so great, for this restless intellectual curiosity which is at once the most idle and the most industrious of all human faculties, that to its outspoken cultivation in children I would willingly sacrifice any number of premature and, as yet, useless facts. Facts lie all about us. They can be picked up any day. The important thing is the tool to apprehend and utilize them.

It would be highly unfortunate to have children live in an essentially unreal and impossible world, just as it would be to have men and women substitute imaginary exploits for genuine performance. We all grant that. But my point is that the performance of real value must needs be perceived and rehearsed in that more intangible world of the spirit before it can flower into action and become the chronicled event. And this necessity is not done away with by the fact that there is such a thing as an unwholesome imagination—an imagination which re-arranges the wholesome elements of life into new and morbid combinations, or out of unreal material builds a fantastic and sickly world. It is easy here as elsewhere to draw the line between the wholesome and the unwholesome.

One reason why my own imagination was so vivid—and, I am bound to believe, so helpful—was doubtless because I was born so; but then most children are so born. It was only that in my own case the imagination was happily never killed. On the contrary, it was distinctly cultivated by my somewhat unusual mode of life, by the fact that I went to school so little, that I read and traveled so much, and above all, perhaps, by the rich emotional life which centered in my beautiful mother. I do not know whether love begets imagination, or imagination begets love, but at any rate there seems to me an essential parallelism between them. Given both, and life is wholly worth while. Given neither, and life is an arid desert. Believing this, it seems to me of far greater importance that our children should have this full life of the spirit, this divine happiness of love and exuberant fancy than any amount of utilitarian facts and business-like accomplishments. We are here very near to the source of power in every human life. It is in the round tower of the heart that battles are won and lost. If the heart be strong, if the power be there, it is an easy matter to create the necessary machinery for transforming power into useful work. But in the absence of power no mechanical equipment, however elaborate, is at all worth while.

So it seems to me overwhelmingly true that the tasks of childhood ought to appeal to the heart of childhood, ought to appear to it both desirable and possible, and that no standard is rational which leaves in its wake despair and weariness in place of hope and inspiration. In reality there are no such things as isolated, impersonal tasks. The world is much too personal and subjective for that. Tasks are not good or bad in themselves. They are good or bad solely with reference to persons. I wish that we could feel this all along the line. It would bring into

question, and then into social condemnation, many of the so-called exploits of our too-impersonal civilization. The truly significant facts in life are largely those which we create, not those which we find ready-made. In the sensitive child-life, these human subjective facts are more vital and vastly more fertile than the whole world of outer, objective information. I have come to believe that the proper object of the teacher's care is the child's spirit, the child's attitude toward the outer world; and that the proper work of child education is to vitalize and energize the spirit, to make it passionately hungry for knowledge and the larger life, and only quite incidentally to supply the knowledge itself. Education is essentially an inner process, a change of heart, a revelation.

Working in this belief, it now seems to me that the instruction commonly given to children is largely a mistake, a premature feast forced upon them before appetite, and the digestion which waits on appetite, have at all been aroused. The first fifteen years of life can be better spent if they are frankly given over to three things—to the cultivation of the affections, to the cultivation of the imagination, and finally to the cultivation of the body as a serviceable tool for the carrying out of the purposes of the spirit. None of these are abstract tasks. In proportion as they are successful, they are concrete.

The first thing that children need is to be loved, and with a warm, human love that they can see and feel. The essence of such a love is comradeship. It has nothing in common with that sentimentality which pets and spoils the child by shielding him from the natural results, the wholesome unhappiness, following upon wrong-doing. Every teacher sees so much of this poor counterfeit on the part of both fathers and mothers, that he is tempted to go, at least outwardly, to the other extreme and be unduly severe. What is needed is that larger emotion which sees straight, but sees also with sympathy and kindly toleration. In such an atmosphere there are few children who will not respond. In the intimacy and sacredness of this life of the affections are to be found the best possibilities of the human spirit.

And the second thing children need is just that cultivation of the imagination, which touches with rose and gold the grayest days and envelopes all life with genuine poetry and romance. The most hopeless children that the teacher is called upon to deal with are the apathetic and unimaginative ones. But the more I see of children, the more I have come to believe that such cases are abnormal. Your healthy, normal child has a warm heart and an imagination which outruns Andersen or Grimm. It is quite possible, however, to kill this splendid play of fancy, and this we too often do. We kill

it by an avalanche of impertinent facts, by malnutrition, by too great literalness, above all, ridicule. In reality, we ought to nurture it, exercise it, train it, chasten it, expand it. One can do much by the right sort of reading. Fairy stories have a large value, and especially if they are true. For we have true fairy stories and false ones. I call them true if they are true to our best human nature, however imaginative the outer event. And there are stories of adventure—old ones from Greece and Rome, capital ones from the Middle Ages, wholesome ones from such boy benefactors as Jules Verne. But even reading can be so badly handled as to kill the spirit. It seems to me an evil thing, educationally speaking, to make a child under fifteen read anything that he does not understand or cannot be genuinely interested in. Allowed to browse at will in a good library, he will doubtless read much that he does not understand, but he will get his own meaning out of it, different, certainly, from what the author intended, yet of value. In play, in all the imaginary exploits connected with woods and waters, fields and barns, huts and tents, there is a world of fancy much too illuminating to be rudely brushed away or even neglected.

Looking back upon my boyhood, I am grateful that, in spite of its illnesses and little worries, these two essential conditions of education were amply fulfilled. It is the vivid recognition of how much I owe to them myself that has led me to place such emphasis upon the emotions and the imagination in any present educational creed. For quite an opposite reason, I have been led to place an equal emphasis upon the third requisite. In the seventies, the cultivation of the body as a tool was neglected with a thoroughness which would appall modern educators, and neglected both at school and at college. During the few months that I attended the Quaker school in Philadelphia, we were marked for our play, but no one taught us how to play better, or to get more out of it. At the university there was no teacher of physical culture, and nothing that deserved to be called a gymnasium. In the way of sense culture we had almost nothing. A very little was done in drawing, and, of course, we got much incidentally out of the laboratory work, but that more comprehensive cultivation of the faculties embraced under the general term of organic education was a thing quite unheard of. It was this complete absence of adequate bodily training together, of course, with an intellectual appreciation of its value, that led me afterward to devote so much time and energy to furthering the cause of manual training.

My mother felt very keenly the need of greater bodily development on my part, and did all she possible could, but a delicate lady living in the city could do very little, and especially for an extremely delicate boy. I learned to ride horseback, to row a boat, to walk considerable distances without fatigue, and to climb our lower and less exacting mountains. I drew a little without instruction, chiefly plans for houses; I had a few lessons on the piano, and I spent many busy hours over printing presses and scroll

saws. It was a very deficient physical education, mostly a mere fumbling about. The facilities for physical culture were almost lacking, and for manual training, wholly lacking. Even the scroll work, which looks feeble and inartistic enough at this distance, was then considered the mark of considerable mechanical initiative. I recall two promising experiments in bodily development that were made several years before I went to college, but both failed, owing, I am sorry to say, to my own lack of spirit. I was sent first to a boys' boarding school in Doylestown, in the hope that the simple country life and out-door games would make me stronger. After several weeks' trial, however, our good family physician advised that I be brought home, for he feared that the inevitable home-sickness would really injure me. Afterward I was sent to a beautiful farm in Pennsylvania and did manage to remain six weeks. It was planned that I should learn farming, as the outdoor life was thought to represent my one chance for good health. I was to go home every six weeks for a visit. At the end of the first six weeks, however, I was too ill to leave my bed, and it was only after my mother had nursed me for several days that I was able to stand the home journey. So that ended my farming. I regret both these occasions and even wish that I had been forced to persevere. They made it easier for me to relinquish other plans later in life, plans that were eminently wholesome, but not altogether agreeable. It now seems to me a grave fault to be what my boys call a "quitter," and I encourage them—and myself, too—to carry out a wise plan when it is once entered upon, even if it entails some unhappiness, or even not too serious illness. I used to believe that the spirit was willing, but the flesh weak; now I know that the flesh is only weak as the spirit is, and that those of us who have no great show of bodily strength must make up for it by the greater strength of the spirit.

More successful far were the long summers in the country with my mother and sister. These stand out as the brightest spots in my boyhood, and they not only kept my health from utter collapse, but also gave me the best part of my education. Philadelphia, as is well known, is one of the hottest of cities. It is built upon what metallurgists call the regenerative principle. The bricks of the pavements and houses absorb the sun's heat during the day and give it out during the night! I was consequently taken to the country in June, and I never returned until September, or even October. This plan came to

The Beloved Queen of the Netherlands.

[See Article on Page 250.]

seem to me so altogether natural and normal that for many years after I regarded persons who remained in town during the summer as rather queer sort of people. My mother was very fond of travel, and usually took me with her. We spent nearly all our summers in New England, sometimes in Connecticut, but more frequently in the White mountains. In those days such a trip represented quite an outing, and I passed among my playmates at home as a much traveled person. My mother found the mineral waters at Saratoga very beneficial, and went there and to the sulphur springs at Sharon many years in succession. I cared much less for such places than for the country proper, but in looking back upon these visits I see that they brought me many novel and valuable experiences. At Sharon, particularly, I was thrown in with some of the Cuban refugees, and thru them got a vivid glimpse of the atrocities of civil war. Afterward, when I came to go to college, I spent all my summers in the mountains, sometimes in western Maryland where I had delightful southern cousins, and sometimes in Pennsylvania. My father could not be with us for much of the summer, but he was an unusually good correspondent. Sometimes he wrote me in rhyme, usually describing my own adventures. I treasured one such epic for many years—four closely written pages of very fluent and amusing doggerel.

My last long vacation—the one between junior and senior year—was given over to geologi-

cal and engineering work, and was my first serious essay in the practical world. In the latter part of June our professor of geology took seven of us into the coal regions, and there we camped out for two weeks, while we made a survey of a large anthracite mine. The practical side of the enterprise was not without difficulties, for we were all city boys, little used to roughing it. We had two sleeping tents, but they were so small that the four cots in each occupied all the ground space and we had to climb into our blankets from the outside. We ate in the open air and cooked under a temporary shed. The professor did all the cooking and was really a very good cook, but he had such a heavy hand in onions that I can almost smell them now. He used to say jokingly that he would have made more money as a *chef* than as a professor of geology; but, if so, it would hardly have been in an American hotel. The first time I went into the mines I remember being very weak-kneed about it. I recovered my nerve as the visits were repeated, but I never got to like the underground part of my work. I enjoyed better the long tramps above ground. The laurel was in full bloom and turned the otherwise desolate coal country into a June garden. On one of these tramps we visited the famous Mammoth Vein, and saw men quarrying coal in the open from the doubled over seam—a clear hundred feet of shining anthracite. Many of the miners were unable to speak English. We saw one such party running in hot haste from what we supposed to be an impending blast. As we could get no answers out of them, we likewise took to our heels and ran as fast as they did, or even a little faster. Presently each miner dashed into the bushes and produced a tin pail—it was merely dinner-time.

At night we sat around a roaring log fire and either sang college songs or told stories, or received visits from the neighboring miners. One evening we were all startled by a bright light streaming over the hills. We thought at first that the Catholic church back of us must be on fire, but later found that it was in reality a brilliant comet, the fiery visitor of 1881, which the superstitious associated with the assassination of Garfield.

The camp lasted for two weeks. I was much too fastidious to enjoy the experience, but I look back upon it as about the most profitable fortnight of study that I ever had. I must add, however, that, in general, camping is too exacting a fine art to mix well with busy days spent in dirty coal mines.

A little later I had the good fortune to get a summer post on a railroad survey in western Pennsylvania. Our headquarters were at Ridgeway. I had hoped for field work exclusively, as I wanted both open air life and the experience, but I arrived in the midst of injunctions and lawsuits, and had to spend half of my six weeks copying deeds and other dull papers. I wrote at that time a round, copperplate hand, good to look upon, I hope, but very slow and laborious. The pay was a dollar a day and board at the country hotel. This was, I think, the first money that I ever really earned, and it made something of an impression

on me. My last three weeks were spent in genuine surveying work, and quite made up for the dull clerical tasks. It was a short period, only three weeks, but like the fortnight in the coal

wanting, for their little rules will not fit all cases.

My own education has been very irregular: those who disapprove of it might pardonably say, very faulty. But such as it is, it has been the

source of an unflinching pleasure and delight. So much of it has been unofficial, has come from persons, from books, from travel, from experience, from the leisure and vacation time of life, that I am, perhaps, prone to underestimate the value of more orthodox methods. The long summer vacations especially, stand out as "growing times." The memory of them has borne fruit in the summer camp work which has filled the last ten summers of my life with the best of its later comradeships. If I seem too much the advocate of the irregular in education, it must be remembered that one can only sincerely praise what has been tasted for one's self and found to be good.

Boys of Marken, Holland.

regions it was fraught with valuable results. I learned more in those three weeks than in the whole year at college, but I realize, of course, that it was the theoretical ground-work that made the field practice so helpful. I am mentioning these two occasions in so much detail because the principle involved, the turning to life and experience, came to be a part of all my own policy in education. On the railway survey I was particularly struck with two things, the superior pluck of the men on top, the thoroughbreds, and the comparative helplessness of the rule-o'-thumb men, the so-called practical people. The strong men of the party, the choppers, chain-men, and the like, were always falling ill and knocking off on some pretext or other, while the men of comparatively slender physique, who were doing the real work and bearing the responsibility, kept in condition constantly, and apparently possessed no white feather to display, however strong the provocation. Among the top men were some who had risen from the ranks and had had little or no theoretical training. I found them much less resourceful than the college men of far less experience. They did so many things without knowing why, that any deviation from the typical condition set down in the Engineer's Handbook, produced at once uncertainty and panic. And this in general has been the burden of all my experience with the so-called practical people of the world—in any emergency they are pretty sure to be found

"The pedagogical dictum, 'from the concrete to the abstract,' finds universal acceptance in this age of laboratory education. The idea of teaching thru hand and eye in manual training is being put into practice more and more, owing to the great success that has been achieved by the pioneer institutions in this line. Why should not the same principles of co-ordinate activity govern in the teaching of algebra? Can we not clear up some of the most troublesome points by making visual, concrete representations of negative numbers and of equations?"—*Scientific American*.

President Angell, of Michigan university, is reported to have said that the old-fashioned liberal college education is being monopolized by women.

Robbie and the Others: Tales of a Real School-Room

By M. A. Grant, Denver, Col.

Chapter III.—A Bad Bargain.

ROBBBIE had respected Anne before, to a high degree, and now all debatable ground was passed. He loved his teacher, and a feeling of responsibility grew as his affection increased, and he made up his mind to be what he called "best of all." Accordingly, in school, Robbie, in an unexpected, and, to Miss Howard, a most welcome manner, abruptly began to change his ways for the better. The teacher had explained to them that the best kind of a little boy would be even more careful to make everything just right in the halls, if the teacher were away, or when she happened to be called out of the room, than when she was there looking right at him. All nice children would go right on doing their work just the same if company or the principal came in, and would know better than to talk and visit with each other in school at any time.

Up to this time Robbie had evinced a sad predilection for indulging in all such forbidden pleasures. But there had come a change. It was felt most grievously by Nathan. Before this Robbie had been such an "easy fellow," and now, annoyed and perplexed, Nathan tried to account for this improved conduct in some rational, and, to him, satisfactory manner. At recess he accosted Robbie and took him sharply to task.

"Gots you headache?" demanded Nathan.

"No sure not," replied Robbie.

"What else den? Gots you toothache?"

"No, I gots me no ache at all in any place."

"For what den gots you such a mad on me?"

"Dats not so eder, I don't gots no mad on you at all. Come on, I go by Apple Pete."

"All right," said Nathan for the time pacified by the enticing prospect of a visit to the candy store, kept by a young man who was known far and near by the different names that the school children had given him,— "Apple Pete" and "Schwiegervater" being the most popular. So they went by "Apple Pete," and as usual Robbie made Nathan happy by sharing with him his tempting purchases.

Robbie's newly adopted ethics continued to thrive. Nathan Jariwonski sat directly behind Robbie. His broad, square, stocky little figure was no taller than Robbie's. Notwithstanding the breezy beginning of their acquaintance, they had become quite chummy. They were almost daily companions at recesses and other play times. Nathan's natural characteristics led him to scent a bargain at a distance, and to pursue unerringly commercial advantages that were on his side, while Robbie, being unused to defeat in any line of business that he had undertaken up to this time of his life, usually failed to recognize the wiles that his newly made little friend universally practiced on all who came his way. And many were the marbles, larger halves of apples, oranges sucked far

more than a fair half of their intrinsic value in juice, that passed from Robbie's to Nathan's possession, before Robbie's sense of proportion became sufficiently outraged vigorously to defend his rights. Self-protection, from a physical standpoint, was a law he was fast learning to observe, being smaller than most of the boys with whom he played. After numerous painful experiences he had cultivated quite a degree of caution in his daily walk and conversation. But when it came to dealing with Nathan, he had to learn lessons of wisdom by experience.

Nathan had a pet rabbit. Twice Robbie had seen it, and his heart was filled with great admiration and a longing to own it himself. Many good offers had Nathan refused from his eager playmate. Three glass agates, a cart with only one lost wheel, two cents, a knife with one good blade left, and some gum that had only been chewed once, had he offered in exchange for it, but everything had been steadfastly refused until one day Robbie had a bright new half dime in his hand, which a man in a carriage had given him for handing him a whip which had fallen on the ground. Nathan, seeing it, looked with covetous eyes at the money in Robbie's hand, and when again Robbie offered to buy the rabbit and pay for it with his nickel. Nathan promptly agreed and took the money and at once spent it for a bag of peanuts, two pencils, lead and slate, candy, a ball of pink popcorn, one yard of black licorice. All of these treasures were wrapped in paper, and the paper bags were temptingly displayed with proud indifference to those near.

After school when Robbie hurried home with Nathan to get his rabbit, he found his coveted treasure cold in death. There was trouble then, as with feelings too deep for utterance, he looked at his longed-for possession and said, "Dats a deader! You didn't tell how it's a deader!"

"Well," said Nathan "dat's all right."

"You did tell how it could drink water, and when I saw it, it could jump whole far, and eat cabbage, and whole much odder stuff!"

"Dat was last week," calmly remarked Nathan. "It yet could eat whole much stuff then. It yet could eat this morning, but did noon not. It got dead den."

"A deader is no good," said Robbie in grief.

"Dat's why I sell it," said Nathan hurrying away as fast as he could go.

Robbie picked up his dead rabbit and started for home, but it took all the sporting blood in his system to enable him to keep to such a bargain as this without crying, altho as he could find no means of escape from it, he had to submit with what grace he could. Fortunately for Robbie he had an imagination. A funeral procession was just passing down the street on its way to the cemetery. As Robbie gazed, a light broke thru the gloom that was so heavily depressing his spirits, and he perceived a silver

lining to his cloud. There could not have been found a more fitting expression for his feelings. Funerals appealed to him, anyway. He had been taken to one once and been greatly impressed with the occasion. He had envied the boy ever since, whose grandfather's death had brought such an honor to the house, and had deeply regretted the fact that his own grandfathers had both died before he could remember, as there was no chance of having any more funerals for them.

But now the future brightened. He would go home and find consolation for his injured feelings in plans for a funeral, and the unwelcome "deader" should furnish a subject for the rites.

Rachel Schwartzberg, a little girl who sat across the aisle from him in school, was one of his neighbors. She was standing on the sidewalk as Robbie reached home, and she called to him, "Oh Robbie, where ever gots you such a rabbit? Why it's a dead rabbit! Is that for your mamma?"

"No" said Robbie, "Dat's mine, I bought it for five cents."

"Oh, what for did you buy a dead rabbit? I don't like dead ones, do you?"

"Yes," said Robbie with a surprising degree of cheerfulness, considering the emotions that had so recently been tearing his heart asunder. "Now we can have a really truly funeral and you can see it, too. Come on! I'll get my shovel, and such a box with black on it, and all things for a funeral. Will you come in our yard?"

"Oh yes, you bet! I like to go on a funeral, too. My ma always carries flowers when she goes on a funeral. I can go by my aunt and get some flowers. I dast pick all kinds without asking, but roses. Dose, I don't dast, but all odders I may. I'll go and bring dem whole swift."

"Dat's good. Make quick while I dig such a grave."

So off started Rachel, and she soon returned bringing with her a huge bunch of flowers. As Robbie in the meantime had not been idle, everything was soon in readiness for the rabbit's funeral, Rachel entering into the ceremonies with abandon and taking part with great zest as one of the chief mourners. Altogether the occasion was in every respect a success.

But for the future, bargains with Nathan were not to be considered. A coolness sprang up between the two boys. All the caution Robbie had learned to use in the street and on the playground was henceforth incorporated into his estimations where Nathan might come in, for trust and confidence in him was a thing of the past.

Josie Jirenek, a pretty, fair-haired little girl, sat in front of Rachel. She, then Sarah Schmitz, Rosina Emanuel,

Frank Hallachek, and the others sitting near, listened with interest to Rachel's thrilling description of the funeral, which was given with such dramatic effect that Robbie became quite a hero. As it rained too hard to play outside Miss Howard said they would have only a visiting recess both morning and afternoon that day. Robbie's desk became for the time a social center from which, however, Nathan was frigidly excluded.

A School Garden Report.

The Bureau of Plant Industry connected with the United States Department of Agriculture has naturally been much interested in the school garden movement. Efforts have been made to arouse interest in school gardens by means of publications, but the best work of the Agricultural Department has been thru the distribution of seed. Many million packages of seed have been distributed in this way in the larger cities.

The report of what has been accomplished in school gardening has been prepared by Mr. B. T. Galloway, chief of the Bureau of Plant Industry, and shows what may be done if superintendents and teachers are determined that the children shall have gardens. The barest of vacant city lots have been made to blossom like the rose, and under the inspiration, thousands of little hearts have warmed to the possibilities of ground, air, and sunshine, and the possibilities in themselves. Mr. Galloway tell in his report of the splendid work already done in Washington, Hartford, Boston, Brookline, Hyannis, Worcester, St. Louis, Ithaca, New York, Cleveland, Philadelphia, and at the government school in Hampton, Va. The report is good reading for teachers; especially so, if after reading it they begin to plan at once for gardens in connection with their own schools, to be started next spring.

By the kindness of the Department of Agriculture, TEACHERS MAGAZINE has received a number of fine photographic reproductions of interesting school garden scenes. These will be found in our pages in the near future.

Perpetual Motion

is not yet discovered!

Thoughts for Teachers

He prayeth best who loveth best
All things both great and small;
For the dear God who loveth us,
He made and loveth all.

—SAMUEL S. COLERIDGE.

I am content with what I have,
Little be it or much.

—JOHN BUNYAN.

My God! I thank Thee who hath made
The earth so bright—
So full of splendor and of joy,
Beauty and light;
So many glorious things are here
Noble and right.

—ADELAIDE A. PROCTER.

Thank God for rest, where none molest,
And none can make afraid,
For peace that sits in plenty's guest
Beneath the homestead's shade.
O favors, every year made new!
O gifts, with rain and sunshine sent!
The bounty overruns our due,
The fulness shames our discontent.

—J. G. WHITTIER.

"Get all the good I can,
From all the sources I can,
In all the ways I can,
By all the means I can,
And as long as I can."

How to Rise.

Heaven is not gained at a single bound;
But we build the ladder by which we
rise
From the lowly earth to the vaulted
skies,
And we mount to its summit round by
round.

I count this thing to be grandly true,
That a noble deed is a step toward God,
Lifting the soul from the common sod,
To a purer air and a better view.

We rise by things that are 'neath our feet;
By what we have mastered of good and
gain;
By the pride deposed and the passion
slain,
And the vanquished ills that we hourly
meet.

—J. G. HOLLAND.

God and the Soul.

The awful shadow of His too great light
Is everywhere, and therefore everywhere
We feel his presence, tho Himself unseen.
At farthest reach of thought He says,
"Believe!"

Where farthest beauty is He cries, "Yet
higher!"

When all is won He says, "Thy all is
naught!"

Eternal, He makes longest time seem
short;

Pure light, He darkens what is not Him-
self,

Infinite He, all else seems not to be;
Essential life, where He is not is death;
Truth absolute, all else but shadowy
dream;

The only good, all other is impure;
The perfect, best, all holy, only God!
In black despair, He is the only gleam of
hope,

When all is lost, He only still remains;
He is the light that lies on silent graves;
That gleams thru heaven when stars
begem the sky,

That clothes the earth with flowers in
the glad spring.

He is the harmony of the wide world,
The music in all tender, loving souls,
Which the whole earth attunes to sweet
accord,

With their own happiness and deep de-
light.

He is the joy that swells in childhood's
heart;

He is the love that lives in mother's
breast;

He is the sadness of all happy things.
The rising sun is but his shadowed light,
The moon that leads the stars still dreams
of him,

And the abysmal heavens speak His
name!

Up toward his throne the mountains lift
their head,

And oceans ever moaning yearn for Him,
All-beautiful, All-mighty, only God.

—BISHOP SPALDING.

Joy.

Take joy home
And make a place in thy great heart for
her,
And give her time to grow, and cherish
her;
Then will she come, and oft will sing to
thee

When thou art working in the furrows,—
aye,

Or weeding in the sacred hour of dawn.

It is a comely fashion to be glad;

Joy is the grace we say to God.

—JEAN INGELOW.

Labor.

Labor is life! 'Tis the still water faileth;
Idleness ever despaireth, bewaileth;
Keep the watch wound, for the dark rust
assaileth;

Flowers droop and die in the stillness
of noon.

Labor is glory! the flying cloud lightens;
Only the waving wing changes and
brightens;

Idle hearts only the dark future frightens;
Play the sweet keys, wouldst thou
keep them in tune.

Labor is rest from the sorrows that greet
us,

Rest from all petty vexations that meet
us,

Rest from sin-promptings that ever
entreat us,

Rest from world-sirens that lure us
to ill.

Work,—and pure slumbers shall wait on
thy pillow;

Work,—thou shalt ride over care's
coming billow;

Lie not down wearied 'neath Woe's
weeping willow;

Work with a stout heart and resolute
will!

—FRANCES S. OSGOOD.

Work.

Blessed is he who has found his work;
let him ask no other blessedness. He has
a work, a life purpose; he has found it and
will follow it! How, as a free-flowing
channel, dug and torn by nobler force
than the sour mud-swamp of one's exis-
tence, like an ever deepening river there,
it runs and flows; draining off the sour,
festering water gradually from the root
of the remotest grass-blade; making,
instead of pestilential swamp, a green,
fruitful meadow, with its clear, flowing
stream. How blessed for the meadow
itself, let the stream and its value be
great or small! Labor is life; from the
inmost heart of the worker rises his God-
given force,—the sacred, celestial life-
essence breathed into him by Almighty
God; from his inmost heart awakens him
to all nobleness, to all knowledge, 'self-
knowledge,' and much else, so soon as
work fitly begins.

—THOMAS CARLYLE.

Mary Kingwood's School.—Story of a Teacher's Success

By Corinne Johnson, Pennsylvania

(Continued from last month.)

Second Month

THE chill and dreary rains of autumn had no depressing effect on Miss Kingwood's enthusiasm. During the month just closed she had explored new fields and found new treasures. What a month! Yes, she had met some disappointments, but her love for children as a collective representation of human growth and human possibility had differentiated into love for individual children, and thus her love for *the child* was intensified, and so was her love for her work. In the future, as she peered into it, she saw herself a successful teacher. And in her visions she saw the children a potent factor in her professional growth. She felt at the threshold of this month that the love and sympathy of the pupil is the strength and hope of the teacher.

It happened that this Monday morning was the first day of the month, and it seemed to Miss Kingwood that a review of September's work was an appropriate beginning for October. Indeed, the entire day was spent recalling the growing experience, of the past month. The best story was told again. The favorite games were played once more. The most helpful songs were sung for the good they had done, and everything that could in any way be made the basis for enlarging the lives of children was carefully talked over by teacher and pupil. Miss Kingwood led in the work of suggestion and question, but she was only one of the enthusiastic company. As the day went by she told several new stories for further use. These she had selected to the end that they might stand in relation to the work that had been done and thus stimulate inquiry and intensify interest. Her chief work for the day, however, was to take careful notice of the suggestions of children, not as a school, but she made special note of the trend of thought of each child. She said, "To know the impressions received by each child is my greatest desire."

Her greeting to the pupils was, "Last week we said 'good-bye' to September, and now we are beginning a new month. Who can tell me its name?" Of course a number knew, and she permitted all who knew to answer in concert at her signal. "October" rang out clear and positive from almost every one in the room. The fact that so many at this early age know the names of the months suggests that children in general know a great deal more concerning the things within their environment than teachers recognize. In questioning children about common things Miss Kingwood gave them a chance to "utter themselves," and in these exercises she revealed the beauty of the child's unconscious answer to questions within his experience. He comes to this service, not with fear and trembling for fear he may give the wrong answer,—the answer is nothing,—but with joy, the joy arising from growth, from en-

larging life because of the power within himself to grow.

Miss Kingwood regarded the formal work of the day as a matter never to be neglected, and she led the children to express themselves in complete sentences with the right inflections of verbs, pronouns, and adjectives as well as the best words to use. The answers to questions were always put into complete sentences before the exercise was finished, so the "favored" child was indicated by the teacher's quietly saying, "Clara may tell," and Clara promptly responded, "Miss Kingwood, this is October." The language work is the most important work of the school on the form side, and carefully, by significant look and artless inquiry, she led them to use right language.

Her influence over the little ones reminded me of the story of another teacher and a little boy naturally disposed to be rough and to play the rowdy. After the boy had been in school a short time his mother noticed that he was more thoughtful and quiet and she asked, "Does your teacher teach refinement, politeness? What does she do?" The little fellow replied, "Why she just walks around, talks with us, and we feel polite." Ah, that is the mystic charm after all! It is the way the teacher expresses herself that leads the children to the same.

"October!" What a myriad of lessons grew out of this one word! Observing the interest the child has in his home life Miss Kingwood kept the home before them in such a manner as to please them greatly. One morning she asked, "What was mamma doing when you came to school?" How anxious they were to tell! Of course, mamma was canning fruit, as many of the children remembered, so that they might have "something nice to eat during the long winter months." Another mamma was making clothes for the children, and another was helping papa pick apples to put in the cellar.

"What did you see on your way to school?"

"What birds did you notice as you came to school?" "Were there many?" This question about the birds aroused little Paul Thomas, and with eyes sparkling and voice eager, he said, in a tone which meant he was surprised to hear her ask the question, "Why, Miss Kingwood, the birds have all gone to the south, so they would not get frozen this winter." Then he told how he had watched the birds gathering and getting ready for their long flight. From Paul's conversation there arose a long discussion about which birds go south, why they go, and when they would return. One said they went away so they could get food, and another said they went because they could not bear the cold. Frank Jones said that bobolinks and swallows go first, and after talking the matter over the children concluded that birds that live on seeds and winter berries stay with us all winter.

One day, not long after, little Paul came with a list of the names of birds, poorly written it was, but to him a great text-book on ornithology, and Miss Kingwood used it to the edification of the others, and under the inspiration of the honor Paul grew. He had named only those which stay with us, and thus he unconsciously took a long step into the mysteries of natural science. Where there is a leader there are followers, and many of the school wanted to make a list. They did make one. They started the science way. Not book scientists. No, for they all agreed that they would watch to see which birds would be the last to go south.

The children as they came into the room in the morning always gathered around Miss Kingwood's desk for a morning talk before school. She said that these confidences between her and her pupils before the opening of school and at recess often suggested to her the line of work for the day, and during these periods she was able to outline the formal work of the recitation periods. But more than this, in these happy moments she was finding the royal road into the affections of her pupils. She was thus becoming one of them.

In studying her work and the children, Miss Kingwood was delighted when she found how nature appeals to the impressive and responsive nature of the child. Her nature work developed more fully in the study of seeds, grains, fruits, leaves, and birds, but the autumn rains, the chill winds,—a prophecy of winter,—and the occasional flurry of snow made rich contribution to the abundant supply. She recognized that nothing can better serve to unify the work of the primary school than the observation of the natural phenomena which fall within the field of the child's experience. This phenomena observation is commonly called "nature study," without a comprehension of the meaning of the term. Miss Kingwood had no large writ "Nature Study" labels on her blackboard, but the force and value of the process made philosophers of her pupils, philosophers that caught a glimpse of the meaning of God and immortality, while learning the sublime art of making bread.

In the collection of seeds many were brought in fresh from the fruit, and ways of drying them were devised so that they could be arranged to be kept. The principal caught the meaning and the value of the work going on, and promptly supplied small bottles in which to keep the seeds.

The topics of interest concerning seeds were their form, size, color, use, seed-pods, or cradles, means of transportation and purpose. They talked of the wings, hooks, and sails. They told how they were scattered by wind, water, beast and man. The seed of the chestnut in its burr was a great delight, and burr, shell and flesh of the nut were eagerly observed and fully

discussed. This study was marked with great enthusiasm.

The beautiful autumn leaves were brought in and the task was to find as many varieties as possible. To cheer them in their work Miss Kingwood read to them "October" by Helen Hunt Jackson. This day she began her lesson by saying, "Do you know there are artists who paint word pictures just as beautiful and wonderful as those painted with brush and colors? "While I read, you may close your eyes and see the pictures." How I wish every teacher could have heard her read that poem.

They saw the dying golden rod, they smelled the fragrant grapes, they could see the chestnuts falling and hear them. Then they took their pencils and brushes and paints and made the picture of what they saw, and without any hesitancy regarding the color of the leaves, apples and grapes. Judging from these pictures Miss Kingwood concluded that the October color is red, and she said, "Mother Nature dipped many times into the red paint pot to paint pictures for you."

The red leaves and the yellow ones were pressed and then mounted, and the pupils were filled with October and its beauties, and through these experiences had looked through Nature up to Nature's God. They had in a sense felt the poet's meaning when he sang:

"All are parts of one stupendous whole,
Whose body Nature is and God the Soul."

In connection with these lessons Miss Kingwood taught the children an autumn song, "Sweet Summer's Gone Away. (Words by Allingham, From Fountain Song Book, A. Flanagan, Publisher). This increased the interest, and next she gave them the story "Seedlings on the Wing" (Cat Tails and Other Tales).

She had made it a rule of her life to try to see something beautiful every day, and it was easily kept in this glorious month of October, when "earth's crammed with heaven, and she had great opportunity to do something for somebody every day. She also noticed how the little children were putting into practice the verse they had learned, "Little children, love one another," for they seemed to derive great pleasure from doing little acts of kindness every day; little acts we say, but as great in purpose as the martyrdom of Stephen or the liberation of the slaves, only less in their field of influence.

Miss Kingwood's visits to the different rooms proved a helpful experience to her. One day when she went to Room Number Two, she was very much impressed by the attitude of the teacher. She was one among her children. Her enthusiasm in the work was unconsciously communicated to all who came in touch with her, and Miss Kingwood left her presence with a fixed determination to still greater effort.

(To be continued.)

History and Civics.

French Colonists in America.

By G. P. COFFMAN, Illinois.

THE French were slow in making up their minds that they desired a part of the New World. It was almost one hundred years after Columbus made his discoveries that France took up the idea of colonizing. But when she took hold she went at it in earnest. From the snow-fields at the mouth of the St. Lawrence to the canebrakes of Louisiana can be found traces of French settlements. Rivers, cities, and even counties have French names. The cavalier of France crept thru the natural waterway from the St. Lawrence, thru the Great Lakes, to the Father of Waters, on to the Gulf of Mexico. From this frozen country of the north, the French went forth to claim the garden spot of the world, the Mississippi valley.

No people had a better opportunity to build a great nation than had France in North America. The frozen regions of the St. Lawrence and the Great Lakes abounded in game, while the soil of the Mississippi valley was rich and productive. They had the best natural water routes in the world.

The men who came over were daring, resolute and brave. They came with a determination to make a name for themselves and their country. To those who wished to hunt and trade with the Indians, great fortunes lay before them. Game was plenty and the Indians were anxious to sell their furs. With but a trifle they could get furs from the Indians, when sold on the market at home, that would bring them fortunes. The St. Lawrence and the Great Lakes offered abundant opportunities for all kinds of adventures. Trading posts were set up at many places.

To the priests, whose hearts went out for the betterment of mankind, abundant opportunities were offered. The field was open to them and the Indian was all ready. Glory and renown were waiting for the men who could christianize

and civilize the wild men of the forest.

He who wished to establish a new kingdom for France had ample opportunities. The country invited settlement. The forests and

prairies were waiting to be subdued. Nature was itself teeming over with the invitation and longing for a master. From 1600 to 1750 no nation had a better opportunity to explore and settle and develop a country so vast, so productive, as did France. If France had been prepared to make use of this opportunity, she would to-day be one of the greatest nations on the globe. But like a great many men and women of to-day, she was not prepared when the golden opportunity came, and it passed her forever. It is my purpose to show wherein she was not prepared and why she failed.

France had three objects in view: (1) To trade in furs. (2) To convert the Indians. (3) To build up a government like that at home. However, the one great object of every man that came across the ocean was to get riches, or if not riches, then renown. They all wanted authority and power. The country was used directly for this end. They cared not for the development of the country and the making of homes for the subjects.

The fur trade, as I said, was very profitable. Many men entered that field. They were on good terms with the Indians, because they did not destroy the forests. It was to their interest for the Indians to have unlimited sway over the forests and hunting grounds. They furnished them arms and weapons so that they could better defend themselves and kill more game. The Indians looked to the French, even up to the Revolutionary war, as their friends. It was this that caused the Indian to take the side of France in the French and Indian war. It was this that caused some of our Indian wars after the Revolution.

France found many men who were willing to come to the New World as missionaries. They were willing to sacrifice home, and life if need be, for glory and honor at home. I might stop here and say that the main incentive that caused this sacrifice was the honor it gave the individual in the eyes of his countrymen. The actions of the priests themselves showed that they were not moved by a desire to better the Indian. It was to establish missions so that they would be honored by their fellow countrymen. In order to do this they explored the country, established posts and opened up the country for settlement. The object of the priest was to establish a name, the object of France was to open up the country and she was willing to give the name and the honor to the priests for this service.

I wish to stop here and say that the teacher will miss an opportunity if she does not cause the pupil to see the real object of both mission-

ary and government. It should be clearly shown that both were selfish and that both accordingly met their deserved end. But to get this the pupil must be led into the real every-day life of the missionary and his works. He should see that the pretended object was to save the souls of the Indians, on the principle that he is human; and second, after the Indian has accepted, he is treated as an inferior being. He is made to become the servant of the very one who declared his object to be to raise him up and place him on a higher plane. Instead of elevating him, he crushed him. He took him from a free and happy life and placed him in a closed and degraded one.

Most historians give but the missionaries' side of the story. They give only the "Glory" side of it. This is not fair, because the student can come to no correct conclusion. He misses the real object of history. If the pupil can be led into the real camp-life of the missionary and see the converted Indian there, and then be led out on the plains and see him there, it will not take him (the student) long to see why the missionary did not succeed, and why the Indian was not civilized. This is only one out of many cases in history where men were not equal to the occasion. It is one out of many cases in life where selfish motives bring unsatisfactory results.

The same spirit prevailed in the department of state. The king appointed the governor and the council. They were supreme. The officers ruled the people for the benefit of the officers. It was the duty of the people to obey and not to ask any questions. The people were servants

of the officers and not the officers servants of the people. Laws were made for the benefit of the officers and not the people.

This one central idea was closely held to by the priest, the fur trader, and all who attempted to make settlement in the New World. Let us take Quebec as a typical French colony. If we could have paddled up the St. Lawrence in a birch bark canoe, about 1725, we would have seen the old-fashioned civilization on the banks of the St. Lawrence. It was a civilization of the Middle Ages. It was planned on feudalism. The land was first let by the king to noblemen or seigniors who then let it to under men called habitants. The seigniors paid the king and the habitants paid the seigniors. This payment was usually made on St. Martin's day, at which time they brought in grain, chickens, apples, eggs and many other things raised on the farm. The working class had no home, nothing they could look to and call their own.

What a contrast when we look down along the Atlantic coast, and behold, there in Massachusetts, homes and farms owned by the laboring man. And what a contrast when we look still further in the affairs of state and find the same man sitting in council, helping to make the laws. Not only doing this but learning to think for himself, learning to do his own business; his children going to a free public school and his home happy.

On the banks of the St. Lawrence the laboring man had no hand in making the laws, had no free schools to educate his children. His religious beliefs were fixed for him. He was not expected to think. To obey was the only thing required. No free schools were ever established in the French colonies before the

French and Indian war. France brought the government of the Middle Ages to America and expected to establish it here, but she found it would not grow in this new soil.

The teacher should take the pupil on an imaginary visit to the governor's mansion. There the governor and the council met each Monday morning. There the laws were made. He should hear the deliberation. He wants to hear them planning for new roads or a church. In a few days he wants to go where the new roads or church is being built. There he will see the poorer class doing the work. If he makes inquiry, or if he remembers what he heard in the council, he will know that all such work is done by the poorer class of people. Their services must be ready at any time. They do this work without pay.

If the pupil can be made to live thru the whole scene of the making of the laws and the putting

of them in execution, he will then know the spirit of the law and the effect on the common people; he will then see why Quebec fell and why the English were triumphantly victorious in the French and Indian war. It was not the English against the French; so much as it was the Middle Ages fighting modern civilization.

France like Spain had fallen in the New World because she did not know how to build therein institutions for the people, by the people, and of the people. Her institutions were built for the king and by the king. America was not the soil in which to plant the idea that men and institutions exist for rulers, but that rulers and institutions exist for men. France and Spain refused to bring the new agents of thought and freedom to America, which had developed in Europe, so it was well for her to fall back to the Old World and give way to a nation of more modern ideas.

The Origin of Thanksgiving.

By JEANNETTE H. EYRE, Michigan.

The Thanksgiving Day which we celebrate is a composite one, being made up of parts of celebrations of that day by other peoples. We have taken the time from one, the feast from another, and the gathering together of the people from a third. Let us, then, trace its origin from the remotest era to the present century.

Picture to yourself old Jerusalem twenty centuries or more ago, lying on and among the hills, the Mount of Olives standing as a faithful sentinel over the city. On the fifteenth day of the seventh month great multitudes of people journeyed toward the Holy City, for it had been decreed that after the ingathering of the corn and wine there should be seven days of burnt offering and an eighth day of solemn communion and holy convocation in remembrance of the exodus from Egypt. Booths were built of pine, olive, and myrtle branches. Altars were constructed, upon which the sacrifices were offered by the Jewish devotee to the great Creator. Altho the glory of this great Hebrew festival long since passed away, the fundamental principle that every one should rejoice before the Lord in the fruits of the current harvest has entered into the harvest observances elsewhere.

The Greeks and Romans held like celebrations in honor of their goddesses, Demeter and Ceres. They gave thanks for the abundance of their crops and for the preservation of their lives.

Coming a little nearer to our own Thanksgiving is the English Harvest Home. The sturdy lads and lasses danced on the green sward or engaged in athletic sports, the fun and frolic continuing for a week, while religious services were held every evening in the chapels.

When the Pilgrim Fathers emigrated to this country they brought with them many of the customs of their own native land. During the autumn of 1623 Governor Bradford made preparation for a rejoicing, not instituted to celebrate a single event, but to show thankfulness to God for all the mercies of the year, for all the bounties of the harvest and all the manifold gifts of Providence, and to show a fitting recognition of the whole in gratitude which should overflow with mirth and festivity.

Massasoit, the great Indian chief, was bidden to the feast, and he and ninety of his Wampanoag braves came to the celebration. Nature had yielded a bountiful supply for this first Thanksgiving, and the pioneers sat down to a table heavily laden with waterfowl, wild turkey, venison, and the products of corn and barley. They gave thanks to God that thru his numberless blessings they were far from want.

We, standing on the borderland of the twentieth century, with all the advantages of developed industries and higher education, can scarcely realize the hardships our Pilgrim Fathers had to endure. Not a family in the little colony had escaped the ravages of death and disease or the onslaughts of the treacherous and blood-thirsty Indians. Yet notwithstanding all this, they were glad to offer praise and thanks to God for the blessings they had received.

And there in that somber woodland, bathed in the soft, mellow sunlight, and caressed by the balmy winds of the south, bringing with them the odors of the forest, was the first Thanksgiving in America celebrated.

Our Thanksgiving of to-day has taken some part from each of these different festivals. It has taken the time from them all, in the autumn, after the harvest days are over. Its charity comes from the Jewish Feast of Tabernacles. It has copied the feasts of Demeter and Ceres in giving thanks for the crops. Its mirth and festivity have a flavor of the English harvest home, and its spirit of thankfulness and religious adoration was given to it by our Pilgrim forefathers.

First Thanksgiving Proclamation.

The first proclamation of Thanksgiving day that will be found in printed form is the one issued by Francis Bernard, captain-general and governor-in-chief in and over his majesty's province of the Massachusetts bay in New England, and vice-admiral of the same, in 1767. This is the text:

"As the business of the year is now drawing toward a conclusion, we are reminded, according to the laudable usage of the Province, to join together in a grateful acknowledgment of the manifold mercies of Divine Providence conferred upon Us in the passing Year: Wherefore, I have thought to appoint, and I do, with the advice of his Majesty's Council, appoint Thursday, the Third day of December next, to be a day of public Thanksgiving, that we may thereupon with one Heart and Voice return our most Humble Thanks to Almighty God for the gracious Dispensations of His Providence since the last religious anniversary of this kind, and especially for— that He has been pleased to preserve and maintain our most gracious Sovereign, King George, in Health and Wealth, in Peace and Honor, and to extend the Blessings of his Government to the remotest part of his Dominions; that He hath been pleased to bless and preserve our gracious Queen Charlotte, their Royal Highnesses, the Prince of Wales, the Princess Dowager of Wales, and all the Royal family, and by the frequent encrease of the Royal Issue to assure us the Continuation of the Blessings which we derive from that illustrious House; that he has been pleased to prosper the whole British Empire by the Preservation of Peace, the Encrease of Trade, and the opening of new Sources of National Wealth; and now particularly that he hath been pleased to favor the people of this Province with healthy and kindly Seasons, and to bless the Labour of their Hands with a Sufficiency of the Produce of the Earth and of the Sea.

"And I do exhort all Ministers of the Gospel with their several Congregations, within this Province, that they assemble on the said Day in a Solemn manner to return their most humble thanks to Almighty God for these and all other of His Mercies vouchsafed unto us, and to beseech Him, notwithstanding our Unworthiness, to continue his gracious Providence over us. And I command and enjoin all Magistrates and Civil Officers to see that the said Day be observed as a Day set apart for religious worship, and that no servile Labour be performed thereon.

"Given at the Council Chamber in Boston the Fourth Day of November, 1767, in the Eighth Year of the Reign of our Sovereign Lord, George the Third, by the Grace of God, of Great Britain, France, and Ireland, King, Defender of the Faith. &c.

Fra. Bernard.

"By His Excellency's Command. A. Oliver, Sec'y.

"God Save the King."

The Teaching of Civics. III.

By Flora Helm, Head Assistant, Robert Morris School, Chicago

Civics in Second Grade.

THE teacher of each grade should have in teaching every subject, a general purpose in view, and a special purpose.

The general purpose should be the same thruout in each subject for all the grades of any oneschool organization, this, in order that when the child has passed thru all the successive grades, a subject will have been presented to him as a unified whole. Each grade teacher has prepared the child on one phase of that subject. Collectively, the grade teachers have developed him along the whole subject. The special purpose in each grade underlies the one phase of the subject; the general purpose is the principle which underlies the subject in all its phases and ultimately unifies it to the student. The general purpose in teaching the subject of Civics should be, as quoted below from the Introduction of this series on Civics. (See TEACHERS MAGAZINE for September):—The development of the individual is reciprocal to the development of his race. Religions and philosophies of all times recognize this. So Civics, which is that branch of education which develops a child with relation to his sociological environment should be *the science of ethics*

Summary (of educational purpose of Civics): Civics is that branch of education which relates a child to the universe. It should be broad in its ultimate scope. It should be ethical in its character.

Special Purpose.

We found that in the First Grade the special purpose in Civics should be the relationship of the child to his home-life and to his immediate social life.

This diagram outlined the steps in presenting the subject of home-life.

I. Home-life mode of	(a) family life	father	1
		mother	
		brother &c.	
	(b) contributors to his subsistence	baker	2
		farmer	3
		grocer	4
		dairyman	5
		spinner	6
	(c) contributors to his general mode of life	weaver	7
		m'nuf't'r'r	8
		carpenter	9
		mason	10
		plumber	11
		dr'ssm'k'r	12
		bl'ksm'th	13

If we take this diagram as a basis to work from, in evolving the second-grade special purpose of Civics, we find that most of these subjects represent a primitive mode of life and industry.

Children of the second grade cannot of course reason backward from effect to cause, neither

can they reason forward from cause to effect.

But they can be led to infer a relationship between two things, aided by their simple experimental knowledge, their knowledge of life thru the story, and their imagination.

By calling into service these faculties, the teacher can lead the pupil to see that back of the baker and grocer must have existed the farmer. Back of the dairyman, the herder and nomad. Back of the spinner and weaver, the shepherd. Back of the manufacturer, the potter and the smith. Back of the carpenter, the lumberman or woodman. Back of the mason, the stone-hewer.

This line of inference seems to lead to the establishment of a certain relationship between the child-ego and man in his primitive stage, because of the intermediate relationship of the child-ego to those in his home-life who contribute to his subsistence.

The following diagram illustrates this point:

First Grade—		Second Grade—	
Immediate Environment.		Remote Environment or Primitive Life.	
Child-ego	baker }	farmer	1
	grocer }	nomad	2
	dairy-man.....	shepherd	3
	spinner }	miner	4
	weaver }	potter	5
	manufacturer }	smith	6
	carpenter...	woodman	7
	mason.....	stone-hewer	8

We have now evolved the special purpose of the second grade work in the subject of Civics—*the child's relationship to primitive man with his industries.*

Let us add to this list of subjects for second grade civics—primitive fire-making (stick, flint, etc.) and primitive modes of transportation (animal: horse, mule, and camel—water. boat, canoe and ship.)

This gives us ten subjects for the year.

Time

The following outline may assist in regulating the length and occurrence of periods to cover these subjects,—one lesson a week, four lessons a month, forty lessons a year. Twenty minutes to each lesson. Eight hundred minutes a year. Ten subjects in all. One subject to cover four lessons.

Subjects.

The three faculties of the child to be most aroused by the teacher in presenting this outline of topics in second grade would be

I. Experimental Knowledge or Observation.

II. Physical Activity { construction
drawing
game

III. Imagination { story-telling
child's mental
fabrication.

The best lesson would be the one involving experimental knowledge passing into the expression of physical activity and that again evolving into imagination. That is, following strictly the order of the unfolding of primitive man's industries.

The Primitive Farmer observed that the seed that fell into the soil and was moistened — grew. Observation. He planted a seed and watered it — Physical Activity.

His imagination filled the fields with the fragrance and fruition of forests—Imagination.

Let us say then that the first lesson on subject (farmer) is for each child to contribute to the class his knowledge of seeds, planting, soil preparation, fertilization, etc.

In the second lesson, he expresses his knowledge in an active way,—in other words, he plays farmer.

In the third lesson he fraternizes with other miniature farmers; the sociological play of comparative farming dominates; they compare their planting experiences and planting results.

In the fourth lesson they study the picture of The Sowers or The Gleaners and they hear the story of The Mowers,—

The sun-burnt mowers are in the swath

Swing, swing, swing!

The towering lilies loath

Tremble and totter and fall;

The meadow rue

Dashes its tassels of golden dew

And the keen blade sweeps o'er all—

Swing, swing, swing!"

And in each lesson glimmers the play of social sunshine.

1st lesson: The seed falls and matures for others as well as ourselves.

2nd lesson: We plant for others as others have planted for us.

3rd lesson: We give to others the harvests or experiences that we have garnered; we sow that others may reap.

4th lesson: The toil and suffering seen in the bent forms of "The Sowers," the joyous swing, swing and rhythm of The Mowers' song vibrate the chords of sympathy in our hearts.

"No man liveth unto himself."

COMMON SCHOOL HYMNS

TEACHERS MAGAZINE gives each month at least one hymn suitable for the common schools where children of all religious beliefs are gathered together. These hymns have been selected with great care, and the editor feels confident that they will prove a welcome collection to teachers everywhere. If you know of any favorite hymn which might be included please tell us about it. We want all the best things to be had in this magazine.

God is Wisdom, God is Love.

Adapted from an Old English Melody.

1. God is love; His mer - cy bright-ens All the path in which we rove;
2. E'en the hour that dark-est seem-eth, Will His changeless goodness prove;

Bliss He wakes, and woe He light-ens; God is wis - dom, God is love.
From the gloom His brightness streameth; God is wis - dom, God is love.

Chance and change are bus - y ev - er; Man de - cays, and a - ges move;
He with earth - ly cares en - twin - eth Hope and com - fort from a - bove:

But His mer - cy wan - eth nev - er; God is wis - dom, God is love.
Ev - 'ry - where His glo - ry shin - eth; God is wis - dom, God is love.

Thanksgiving Day

Harvest Home.

A Thanksgiving Day Exercise for Children.

Characters represented.

Thanksgiving Day.—A tall girl dressed in a flowing white robe trimmed with autumn leaves. She wears a gilt crown with the word Thanksgiving printed upon it. A raised throne is placed for her in middle of platform.

The Harvesters.—Boys dressed as farmers. They wear broad-brimmed straw hats, and each carries a wooden rake.

Children of the Harvest.—Boys and girls carrying bundles and baskets of corn, wheat, oats, and various kinds of fruit.

(Enter the Harvesters, singing.)

Song of the Harvesters.

Air :—"The Minstrel Boy," Page 202, Harper's Favorite Songs for School and Home.)

The falling leaves all brown and red
Proclaim to earth that summer's fled ;
O'erflowing barns full harvest show,
And thanks to heaven set hearts aglow.

CHORUS.

Ho, then for Thanksgiving Day,
When grateful hearts are raising
Unto the Giver of all Good
Their meed of love and praising.

Our Pilgrim Sires first kept this day,
And we like them will praise and pray,
When fields and orchards yield their store ;—
Thanksgiving keep, as 'twas of yore.—Chorus.

Dear brothers all, in summer's heat
We still toiled on, this day to greet ;
Our work is done, we now may rest—
Thanksgiving Day, our welcome guest.—Chor.

A march is played and Children enter keeping time with the music. They march and countermarch in and out among the Harvesters, who make signs of gratification at the tokens of an abundant harvest that the children carry. During the last strains of the march, the children deposit their bundles and baskets of fruit, etc., around the foot of the throne, and arrange themselves on one side, the Harvesters grouping together on opposite side of platform. A clear space must be left in front, so that the throne and the children's offerings may be plainly seen by the audience.

Chorus of Children.

Air :—"The Watch on the Rhine."—Page 290 Harper's Songs.

In honor of Thanksgiving Day,
These fruits and flowers here we lay ;
Long live, long live fair Autumn's Queen,
Long live, long live fair Autumn's Queen !
Thanksgiving Day, thy name we greet,
As year by year we gladly meet ;
Long be the harvest-fields with plenty crowned,
Long may Thanksgiving Day with us be found !

Then spread the feast, let all be gay,
For hither comes Thanksgiving Day,—
Fair Queen, fair Queen of Autumn Days,
Fair Queen of Autumn Days !
Thanksgiving Day, thy name we greet,
As year by year we gladly meet ;—
Long be the harvest-fields with plenty crowned,
Long may Thanksgiving Day with us be found !

It is effective to have the Harvesters join with the children in singing the refrain of four lines at the close of each stanza.

Thanksgiving Day comes in during the singing of the last four lines, and seats herself on the throne. As the song concludes the music changes to a lively air. Harvesters and Children keeping step, form a ring and dance around, as in the grand chain, giving right and left hands alternately to each other. They then return to former places each side of throne, and Thanksgiving Day rises to address them.

Thanksgiving Day's Address.

I thank you, sturdy harvesters,
And you my children dear,
For all the pleasant songs you've sung,
Because I happened near.
Remember, tho a holiday
Not for itself is sent ;—
The gracious Giver of all Good
It doth but represent.

The Giver of all Good ! 'Twas He
Who sent the sun and rain,
Without whose gracious influence
The sowers' work were vain.
In vain the work that man can do,
In vain his toil and strife,
Unless the Giver of all Good—
Shall clothe his work with life.

Forget not, then, Thanksgiving Day
Has only come to lift
Your thoughts in gladsome unison
To the Giver of the Gift.
Praise Him from whom all blessings flow,
To whom alone we owe
The many, many precious boons
He freely doth bestow.

And would you please Him, children dear?—
Then take these fruits away,
Give them to earth's more needy ones
Than you, Thanksgiving day.

And you, ye harvesters, be keen,
Best crops of all to reap ;—
The blessing of the hearts you've blest,
The smiles of those that weep.

Song of Harvesters and Children.

Air :—"Vacation Days"—Page 98 Franklin Square Collection I.

Hurrah for dear Thanksgiving Day,
Hurrah ! Hurrah ! Hurrah !

A tribute to her wisdom
pay,—
Hurrah! Hurrah! Hurrah!
With kindly deeds Thanks-
giving's crowned,
And truly thankful hearts
are found
Where love and friendship
most abound.
Hurrah! Hurrah! Hurrah!
Hurrah for dear Thanks-
giving Day,
Hurrah! Hurrah! Hurra!
She bids us love as well as
pray,—
Hurrah! Hurrah! Hurrah!
Not only for ourselves to
care,
Thanksgiving Day would
have us share
With others and their bur-
dens bear.
Hurrah! Hurrah! Hurrah!
Oh, comethen, let us haste
away,
Hurrah! Hurrah! Hurrah!
Let's rightly-keep Thanks-
giving Day,
Hurrah! Hurrah! Hurrah!
Full many grateful hearts
we'll, make—
To those that have not we
will take
These good things for
Thanksgiving's sake.
Hurrah! Hurrah! Hurrah!

During the singing of the last stanza, the Harvesters and the Children go out, two and two. The children carry the fruits, etc., assisted by the Harvesters. Thanksgiving Day follows, walking by herself.

A Song of Christmas.

Sing a song of Christmas,
With frost and ice and snow;
With evergreens and holly,
And stockings in a row.
Sing a song of Santa Claus,
The children's jolly friend,
With laads of books and play
things,
And goodies without end.
Sing a song of Christmas,
And the stately Christmas
tree,
With its lights and shining tinsel,
So beautiful to see
Sing a song of secrets
Securely hid away,
Which must ntt be found out
Till mesry Christmas day,
Sing a song of feasting,
of gayety and mirth,
While bells are gladly chiming,
"Peace, and good will on earth."
Sing a song of Christmas,
Oh, sing it oud and clear,
For the merry Christmas time
Is the best of all the year.
—From The Days we Cele.

COMMON SCHOOL HYMNS

TEACHERS MAGAZINE gives each month at least one hymn suitable for the common schools where children of all religious beliefs are gathered together. These hymns have been selected with great care, and the editor feels confident that they will prove a welcome collection to teachers everywhere. If you know of any favorite hymn which might be included please tell us about it. We want all the best things to be had in this magazine.

Plymouth Rock.

Words by Mrs. HEMANS.

Music by Mrs. BROWN.

2. Not as the conqueror comes,
They, the true-hearted, came;
Not with the roll of the stirring drums,
And the trumpet that sings of fame;

Not as the flying come,
In silence and in fear;—
They shook the depths of the desert gloom
With their hymns of lofty cheer.

3. Amidst the storm they sang,
And the stars heard, and the sea;
And the sounding aisles of the dim woods
rang
To the anthem of the free!

The ocean eagle soared
From his nest by the white wave's foam,
And the rocking pines of the forest
roared—
This was their welcome home!

4. There were men with hoary hair
Amidst that pilgrim band;
Why had they come to wither there,
Away from their childhood's land?

There was woman's fearless eye,
Lit by her deep love's truth;
There was manhood's brow serenely high,
And the fiery heart of youth.

5. What sought they thus afar?
Bright jewels of the mine?
The wealth of seas, the spoils of war?—
They sought a faith's pure shrine!

Ay, call it holy ground,
The soil where first they trod.
They have left unstained what there they
found—
Freedom to worship God.
— FELICIA DOROTHEA HEMANS.

Dance of the Autumn Leaves

For sixteen, or twenty-four, boys and girls

By Frances L. Allison

This charming fancy march and drill is eminently suited to the Thanksgiving season. This drill and either the Harvest Exercise given elsewhere in this number, or the "Harvest Carnival" given in *TEACHERS MAGAZINE* for October, will form the basis for a delightful autumn entertainment.

COSTUMES.

For girls: Number them one's, two's, three's and four's. Let the number one's have dresses of green, the two's yellow, the three's red, and the four's brown. The skirts should be short, very full, low-necked, with short-waisted bodies. The hair should be worn high, with a dainty circlet of variegated autumn leaves.

For boys: Each boy should wear knee trousers and short sack coat, of the same color as his partner in the march. Let each boy wear regalia of autumn leaves.

Both boys and girls should powder the face and hair.

The materials for the costumes may be of cambric, or of more expensive goods if desired. The leaves, if natural ones can not be obtained, may be easily made of paper.

Partners should be of equal height or as nearly so as possible. Let the tallest couple lead, followed by the next in size and so on down to the smallest.

See that the couples have a light springy step, and carry themselves erect and with grace before allowing them to take the figures of the march.

Have a pianist who will keep correct time and who can play *good* music, and who can readily change from a march two-step to waltz time etc.

March.

Order of March:—Enter partner from opposite sides. March to center-back of stage. As each boy meets "his lady" let him kneel to her. She extends her right hand to him, he takes it, rises and draws her arm thru his. They march to center-front of stage, across right-front, then down the rear right hand corner, where they remain standing till the other couples are placed. When the first couple begin to march down center-front, the second couple should enter, follow suit in everything, till they have marched to center-front of stage, when they turn and march to the left instead of the right.

Make four rows of six couples in a row or four rows of *four* couples in a row. When the last couple is in place, the piano leader gives as signal a short prelude and all sing the following chorus:—

Once we were young and tender buds,
Asleep on the bare rough trees.
At spring's command, burst we our bonds,
And grew into beautiful leaves;

Chorus:

Swaying, playing, kissed by the summer breeze,
Dancing, glancing, high in the azure sky.

He did as we pleased,
High up in the trees,
And waved at the passers-by.
The years grew old, we happy leaves
Heard the winds so frostily cold.

Then shivered we on our perches high,
Nor smiled at the north winds bold.

Chorus:

Swaying, playing, kissed by the autumn breeze,
Dancing, glancing, in Indian summer's sky,

Our colors changed we,
High up in the tree,
When autumn winds came by.

DIRECTIONS FOR MOTIONS IN THE SONG GIVEN ABOVE:

When singing chorus, join hands clear across each line—keep time with feet and backward and forward motions of body while singing the first three lines. At the fourth line raise clasped hands above heads, still keeping time with the feet, and at last line unclasp hands, with both make a swaying motion from right to left, bringing them at last word of chorus down to sides.

Pianist plays the chorus softly after it has been sung the second time, while the boys and girls hum the chorus lightly and brightly, with closed lips. With clasped hand those in the first line advance still nearer the front of the stage, followed by the others. While humming the chorus, give the same motions as above directed.

At a chord by the pianist, all lines face the rear of the stage, the first couple at the center line, all couples falling into their respective places. Separate at the rear of the stage, boys to the right, girls to the left. March around back to center-front, fall into line with partners, and meet at the rear of the stage. The second time at the rear of the stage meet, come up four abreast, the next time eight abreast, then twelve abreast, then twenty-four, forming a large semicircle. If the stage is not large enough, divide into *two* semicircles. While in this position sing: "Hark! Hark, ye Winds of Autumn."

Hark! Hark! Ye Winds of Autumn.

(Solo for soprano or tenor.)

Hark! Hark! ye winds of autumn,
That tell us summer is o'er,
Ye tell of the days,
That soon will come,
Of wintry days in store.

Chorus, (all sing.)

Hark! Hark! ye chilling winds of autumn
That round our pathway roar,
Have ye no pity nor mercy
That with such fury ye blow?
List to the prayer of us autumn leaves,
Swaying upon our trees,
Change ye no more our colors,
Festive and gay now are we.
Blow ye, blow less coldly
Is the boon we would ask of thee.
(Repeat words of chorus).

The pianist strikes up a lively two-step. The leader of the girls leads off, the other girls

falling in line, and form a circle at the center of the stage. The leader of boys faces toward the rear of the stage, the boys fall in line and form a circle outside the girls' circle. March around once to the right, once to the left. Girls clasp their hands all around, kneel, while the boys, who have clasped hands all around, kneel, every other boy just back of two girls. All rise, march around once to the left, still with clasped hands. At the end of the second round each boy should find himself immediately behind his partner. All fall into line by two's and march to center-back of stage.

The leaders when advanced three good steps from the back of the stage halt and face each other. The boy tosses one end of his regalia to his partner. She catches it and together they hold it high, thus forming an archway under which the second couple passes, then following suit, so do all the others.

When the last couple is in place, the first couple, taking down regalia, march under the archway towards the front of the stage, each couple following in turn.

When the archway is complete a second time, each boy, with a profound bow, presents his regalia to his partner, which she gracefully accepts and quickly loops across her own shoulders.

The girls join hands and form a line diagonally across the stage from the left front corner to the right back corner. The boys join hands and form a line from the right front corner to the left back corner. These two lines, cutting each other in the center should form a good X. Wheel once around to the right, once to the left, girls and boys keeping the line of the X perfectly straight, halting at each corner long enough to count two entire measures, until the wheel is complete.

Next the two back diagonals close in behind their respective front diagonals until a straight line has been made across the stage, thus.—

Leader of the girls leads off and forms a circle on the left hand side of the stage, the boys forming one at the same time on the right. Wind, then unwind each circle, watching the other enough to finish about the same time.

Partners fall into line, marching to the rear of the stage, and form in couples down the center of stage, ready for the Virginia Reel or "Scotch Ramble," or "Twistification," by all of which names this old-fashioned dance is known.

(Let the music change to a slow dance time.) After doing the Virginia Reel once, let the couples group themselves in *four's* upon the stage, or in two's, some in sixes, while they join in the chorus of—

Good-by Summer.

Good-by ! good-by ! happy, happy summer,
We bid you now good-by.
Our days are o'er
Forever, evermore,
We must away to-day.
So off we go,
We've had a merry show
But now 'tis time to go.

Chorus.—Good-by, good-by, ha-ha ! ho-ho !

We must away to-day.
We've danced, we've sung
We've played and swung
On our boughs so strong and high,
But now we're off tra-la
Follow, follow not ha-ha !
For we dance, we dance away.

After singing this the music should be in very quick time. Forming circles of four's and sixes, a whirling, fast, gay movement is kept up for a few minutes, until the couple have gradually made their exit.

A simple method of drawing the poppy bud, blossom, and fruit capsule. Other outlines drawings may be simplified similarly for copying on the blackboard, by dividing the drawing into squares, and placing on the blackboard the squares enlarged, the sketching in each large square the lines that appear in the smaller squares. The guide lines may be erased after the copy has been made.

Hints and Helps

Plans,
Methods,
Devices, and
Suggestions

from the
Workshops
of many
Teachers

This feature, originally planned for *Institute and Primary School*, has proved so popular with teachers that it has been copied by nearly every educational periodical in the country. *TEACHERS MAGAZINE* will continue to publish the best to be had for this department. The Editor would like nothing better than that he might be able to visit the school-rooms of every one of the the hundred thousand teachers who will read this magazine. What an abundance of good things he would find! But that cannot be. The next best plan is to have the teachers aid each other by writing out the devices and plans and thoughts that have proved most helpful to them. Will you not contribute from the store of your experience? A good book will be sent for every contribution accepted for this department.

Autumn Leaves.

WHEN the frost had begun his magic work on the trees I found my desk laden with leaves of every description, red, yellow, brown, and various other colors. During a nature study lesson I held up several to see if the children could tell from which tree they came. I found that even the common maples and oaks were not known to the majority of the pupils.

That they might know the foliage of our trees better I obtained from them a list of the trees found in our section of Virginia, and gave each child a part in the work by assigning to each a tree from which he was to bring the prettiest autumn leaf he could find.

The next morning one would have thought that October had given a party in truth, for all the trees were represented, and the frost had done its work in making the colors beautiful.

I had obtained some white cardboard 7x7 inches, and we made the leaves lasting by rubbing white beeswax over a hot flat-iron, and then passing the iron over the leaves. We pasted the leaves on the squares of cardboard and wrote under each leaf its name. These were put up as a frieze at the top of the blackboard, and quite frequently we would have a drill on the names until the children could readily recognize the name from the shape of the leaf. In this way we accomplished the main object,

which was to teach the native trees so that the children could recognize the tree by the leaf, and we also obtained a pretty decoration for our room which was fresh and pretty after the trees had shed their leaves and were covered with snow.

Virginia.

RUTH O. DYER.

Heart Cultivation.

It seems to me that too much which is written for the aid of teachers in their work is adapted for mind cultivation, leaving out of perspective the heart cultivation. Too much stress is being placed upon "marks," "grades," "ranks" and incentives in general. These are useful, but they should not receive all the attention of the teacher, causing her to forget that she is doing a work for eternity.

The pupil, then, must see not the school incentives only. He must get a better view of his duty than the winning of a certain grade in a certain class. Let him see the beauty around him and feel that God lends it, and requires him to do his best in life. Something which will awaken the noblest attributes of the soul must be given him.

Every day some of the old folk songs should be sung in school, their sweetness mentioned and their beauty pointed out. These will awaken the sentiment. "Flow Gently Sweet Afton," "Home Sweet Home," "Annie Laurie," and many others are appropriate.

The school-room should be adorned with copies of masterpieces, and not with the meaningless, worthless pictures seen in so many rooms. The Angelus, St. Cecelia, The Sistine Madonna, The Soul's Awakening, Pharaoh's Horses, The Horse Fair,—are all highly desirable and should be carefully studied by teacher and pupil. Every other day a memory gem may be committed by the pupils and Friday afternoon should be marked by the reading of a good story. We *must* do more for the cultivation of an appreciation of the beautiful in these young lives.

Ohio.

NITA HESSIN.

Christmas Presents.

We tried a new line of work for Christmas and found the results very satisfactory.

There were mamma and papa to be thought of, then the bit of work for other little ones less fortunate than themselves.

For mamma's gift we bought some pretty Dresden ribbon at a bargain sale; some narrow lace, sachet powder, and wadding. These purchases represented five cents apiece for each pupil, which amount they all brought.

The ribbon was cut in squares, folded to a triangle, lined with wadding on which had been sprinkled the sachet powder, then sewed up and edged with lace. This made as dainty a gift as one would wish.

For papa's present we bought sheets of dark-green ingrain paper. This we cut into bells, decorating the outside with sprays of holly cut from crepe paper. The last leaf was of the same material without decoration. Between these we inserted several leaves of white papers. On the first of these were the words, "Merry Christmas," and the date, "1905," painted in holly berry colors.

The next few leaves contained a Christmas poem. The last page had upon it a copy of the Madonna del Sedia, one of the Boston edition of the Perry pictures. This bell-shaped book had a handle at the top, which we tied with a bit of red satin ribbon.

For our "Lend-a-Hand" work we made fancy paper chains to decorate the tree for the children at one of our hospitals. We also collected pictures from all sources, particularly Christmas cards, and from these we made scrap-books for the same purpose. Neither of these last ideas was new, but were well suited for the purpose intended.

It is the intention each year to keep our children in touch with others less fortunate than themselves, hoping to teach them the true spirit of Christmas.

The Wide-Awake Game.

The following little device in arithmetic for the second year I use occasionally to vary the monotony of the large amount of drill work necessary in this grade.

The first child in the first row and the first in the sixth row come quickly to the front of the class-room. On the blackboard I write in large numbers some combination which has been particularly difficult, such as $6+9$, $7+8$, etc. The child who first gets the correct sum calls it in a distinct voice and her row is credited one count. Then the second children of the above-mentioned rows step forward and are given another little example. This continues until each pupil has had an opportunity to answer, when the row or rows which received the most counts are declared winners and are permitted to march out first at the close of the afternoon. We call this the "Wide-Awake Game" and play it about twice a week.

H. M. HANDRICH.

New York.

The Perfect Lesson.

A thoroly good lesson is a work of art. To witness it affords one as much pleasure as to hear a genius perform upon a musical instrument. In order that a lesson may be perfect, a number of things must be observed. Some of these things are, generally speaking (they are not always necessary), the following:

First, the aim of the lesson must be clear and kept clearly in mind thruout the lesson, so that each question may lead the child nearer to the desired end.

Second, there must be a proper development, the points must be well brought out, the essential must be distinguished from the non-essential.

Third, the development must be followed by a drill, so that the points which have been developed may become firmly fixed in the mind of the pupils.

Furthermore, the pupil must be led to compare and to classify facts intelligently, and to apply principles after these have been learned. In other words, the inductive and deductive processes must be applied in their proper places. The teacher plays upon the most delicate instrument in existence,—the human mind. To touch the proper chord with every question is a matter of great delicacy and difficulty. Simply to hear children recite lessons they have learned by heart from books is the music of the organ grinder.

Ontario.

Board Work a Privilege.

Very likely some of you have trouble in keeping the first and second grade reading pupils from bringing up "sorry lessons." I have good success with the following: When the class has good lessons I let them go to the board and write or draw. If any member of the class has a bad lesson he forfeits his place at the board. All children love board work so they strive the harder for the privilege of working on the board.

A. M. CLARKE.

Mississippi.

Stories in Geography.

One can always appeal to the love of stories in children.

In my work with fourth grade pupils, they and I took great pleasure in correlating our study of geography and English. It was my idea that both subjects would prove more interesting by such treatment. My purpose was to make the work as natural as possible and as pleasing.

At the beginning of our study of North America, work ascribed to this grade, we had a lesson about the atmosphere. One question in particular was: "Where does the rain come from?" After explanations, talks, and tests, I asked that for their lesson in composition they write a story of the raindrops. Here is one of the stories given me:

What the Rain Drops Said.

One day as I was walking along the seashore I met a

little drop of water. I spoke to him and he spoke to me. He said, "Would you like to hear my story?" I said, "Yes, dear little Rain Drop, indeed I would, if you have time to tell it to me." So he went on to tell me his story.

"One day," said he, "as I and my brothers were in that merry ocean the sun came up. He drew some

of us gently up into the air. This made us so fine that that we were called vapor.

"At last we reached the sky. Here we gathered and formed a little cloud. And one day not long ago we fell to the earth as rain again. When we went up the air was nice and warm. You know if one of those cold winds had arisen while we were on our way up we would have fallen to the earth before this time."

Children of this grade are very imaginative and love to be given free play in expressing themselves. The fanciful attitude of former years when they told fairy stories still lingers, and 'tis so easy to throw it's glow about their beautiful ideas of our beautiful earth!

New York.

ELIZABETH BODLE.

Breathing Exercises.

Dr. John L. Davis, of California, in an article published in Hall's *Journal of Health* suggests the following exercises as of great value in developing the lungs:

Standing as erect as possible, with shoulders thrown back and chest forward, the arms hanging close to the body, the head up, with lips firmly closed, inhalation is to be taken as slowly as may be; at the same time the extended arms are to be gradually raised, the back of the hands upward, until they closely approach each other above the head. The movement should be so regulated that the arms will be extended directly over the head at the moment the lungs are completely filled. This position should be maintained from five to thirty seconds before the reverse process is begun. As the arms are gradually lowered, the breath is exhaled slowly, so that the lungs shall be as nearly freed from breath as possible at the time the arms reach the first position at the side.

By these movements the greatest expansion possible is reached, for upon inspiration the weight of the shoulders and pectoral muscles are lifted, allowing the thorax to expand fully, while upon exhalation, in lowering the arms, we utilize the additional force of the pressure upon the upper thorax to render expiration as complete as possible.

These deep respirations should be repeated

five or six times, and the exercise gone thru with several times a day.

It is hardly necessary to remark that the clothing must in no way interfere with the exercise.

In some cases this exercise is more advantageous when taken lying flat on the back, instead of standing. In this position the inspiratory muscles become rapidly strengthened by opposing the additional pressure exerted by the abdominal organs against the expanded lungs. And, on the other hand, expiration is more perfect and full on account of the pressure of these organs.

This is an exercise now advocated by several leading vocal teachers of Europe.

A Telegraph Reading Lesson.

I found that my class of advanced first grade pupils were tiring of the usual blackboard reading lessons, so I asked one morning how many in the room had ever received a telegram. No child had been so favored, so I told them I was going to send one to each child in the room. On the board was written a command or a request for each child in the room, as, "Mary, bring me a book." "John, open the door."

In a telegraph office, I explained, there was no noise. The man received a message and did what the message told him to do. If he failed to do as the message said, his place would be taken by some one else. So in our class if the one whose name was before the sentence did not act, the next one would act in his place.

When all were in position Mary quietly brought me a book and returned to her seat. John opened the door, etc. This not only served as a silent reading lesson but as a rest exercise also. The children, always showed unmistakable signs of pleasure when I announced that we would have a telegraph reading lesson.

Virginia.

RUTH O. DYER.

The Teaching of English. III

By Emma L. Johnston, Principal of the Brooklyn Training School for Teachers

Composition.

OUR critics maintain that in the elementary schools we do not teach reading, writing, and spelling. But they are mistaken. Our pupils do learn to read, to write, and to spell well enough for most practical purposes. What they do not learn so well is to speak our splendid language, without, as one writer puts it, "boorishness and vulgarity, without clumsiness and awkwardness, without throatiness and nosiness." Neither do they learn to select and to combine words and sentences so as to express adequately in oral or in written language such thoughts as they have. One reason why it is so interesting to teach composition is that we are continually experimenting; no one has shown us how to do it, or rather no one has done it. We hear very frequently that there should be much oral composition in the schools, but in how many schools is a course in oral composition being given systematically and deliberately? I am asking for information. I believe that the New York city syllabus in composition takes us as far as the best workers in the field have gone as yet. When it is incomplete or indefinite it corresponds to the lack of completeness or definiteness in the common experiences or good teachers of composition. It is full of suggestions for the teachers of the first five years, who need not postpone their lessons in composition until some one has planned a more definite course.

In the 1B grade the teacher makes the correct forms of a few of the incorrect expressions common to the class the bases of oral drills. A list of the forms so used should be passed on to the 2A teacher with the children who are promoted. This does not mean that the 2A teacher is to consider these forms taught. She knows better than that; but the list will help her to make this phase of language training systematic. She in turn will pass on the list with her additions to the teacher of the 2B grade, the 2B teacher to the 3A, and so on. No two schools will have precisely the same lists since no two schools have precisely the same errors common to their pupils. From the 3A thru the 6A certain forms commonly misused are specified in the syllabus. This does not mean that other forms are not to be taught. Nor does it mean that in teaching the use of the correct forms the technical terms of grammar are to be employed below the grade where the study of grammar is begun.

The conversation is the chief form of language lesson prescribed for the lower grades. This is the place where little real progress is made by the children. The teacher frequently lacks a definite aim. Her conversational lessons are not planned so as to form a series. Worse still, she does not deliberately make her own contribution to the conversation a model in structure and choice of words. As was said at the beginning of this paper, the teacher in the lower grades must in her conversational lessons bear in mind everything that the 8B teacher will have to make explicit

with regard to the structure of narratives, descriptions, and expositions.

Especially must she bear this in mind when giving her pupils exercises in oral reproduction. More and more is story-telling becoming an important educational factor during the child's first year in school. At present a candidate for license No. 1 is required by the examiners to read aloud, to sing, to conduct an exercise in physical training, to sew, and to draw. I shall not be surprised if presently the candidates be required to tell a story.

Altho the syllabus nowhere expressly states it there should be some story-telling on the teacher's part without reproduction on the part of the children. It is enough if the children become completely absorbed in these stories—the ruinous thing is the divided attention, the lukewarm interest—it is enough if they become for the moment the valiant hero, the self-sacrificing heroine.

A second class of story is the story of some length told for reproduction in part or as a whole. Children in class frequently tire of the reproduction of a long narrative, but they enjoy the telling of certain parts. To indulge them here will be to give them a variety of exercises in composition. For instance, instead of reproducing the whole of "The Three Bears," a child may begin with the bears' return, thus getting a chance to imitate the three voices; in "The Sleeping Beauty" he may get some exercise in description by relating how the Prince found everything and everybody in the castle before he woke the Princess.

Lastly there is the very brief story told with the expectation that pupils will, without effort, reproduce it almost verbatim and thus lodge in the memory standards of literary forms. Such narratives, even if they should not exceed fifty or sixty words in length, should strictly conform to the laws which are observed by acknowledged masters of this form of literary art. During one lesson period a teacher tells a story of this kind, four or five children reproduce it, the teacher tells another, a few reproduce that, and so on. Soon the children have in mind a stock of these short stories, and during a recitation period of twenty minutes nearly twenty children may tell each a different story. As preparation for the telling of a new short story to her class the teacher should compose it with care, write it in her day-book, and then learn it by heart. Before any one concludes that this kind of story-telling kills independence, spontaneity, let him remember that two kinds of exercises in story-telling which encourage great freedom in reproduction have already been provided for.

Written composition begins in the third year. If teachers would follow the syllabus here they would have extremely simple exercises. In many schools I believe that too much writing is done in the third and fourth years, while exercises in oral composition are not given with sufficient frequency and system. In the 3A the children write statements in response to the

teacher's questions or directions; but the construction of the group of sentences having unity and coherence, which we may call the paragraph, should be not individual, but class work, the teacher or some one else writing it on the board as the contributions to it are made. If the third year teachers would have much of this kind of work, making it really co-operative, the fourth and fifth year classes would be ready for the two steps in advance, which they are called upon to make. These are the free written reproduction and the construction of outlines. The free written reproduction begins in the fourth year; it should be continued thru the eighth. The syllabus specifies as subject matter for this kind of composition the information gained by the pupils from their silent reading, but of course other material may be used. The important thing is to allow the pupils to write freely without let or hindrance either from outline or the teacher's suggestions. Such compositions will be very faulty, but the good teacher will be blind to all errors but those of one kind,—the special error which she is making war on at the time, and which she has warned the children against.

The use of the outline begins in the 4B grade. The construction of the outline should be the most important work in written composition done in this grade. It is a great mistake to ask the pupils to write from ready made outlines. The making of the outline furnishes a training in thought organization. The first outlines—perhaps all of those used in the fourth and fifth years—should be the result of co-operative effort on the part of teachers and pupils. It is not necessary to write a composition from every outline constructed. Sometimes it is well to let the pupils, with the outline before them, compose orally, omitting the written exercise entirely.

We have come to take it as a matter of course that when a pupil writes a school composition he should not be hampered by lack of thoughts call-

ing for expression, nor by inability to spell, to write, and to punctuate. We often, however, lose sight of the fact that just as he needs preparatory training in thought getting, in spelling, in penmanship, in punctuation, so he needs preparatory training in sentence making and sentence analysis—in using consciously all the common forms of thought.

Not all teachers of the fourth and fifth years understand the significance of the fact that in the course for their grades sentence study comes under the heading composition. Their aim and their method in teaching it are the aim and the method of grammar. Then, too, they see no special reason for studying one form of thought rather than another in the beginning. They do not see why the 4A teacher should begin with the sentence whose subject is the actor, the doer, the hero. This is the sentence that narrates, the story-telling sentence, the sentence that should be repeatedly resolved into its elements—subject and predicate,—before other kinds of sentences are analyzed, so that pupils may come to believe that every subject represents a doer and every predicate what he does.

The other sentence studied in the 4A grade should record action also, for while children of this age can have narration, they will not choose description or classification. There is still action in this second sentence, there is still a hero, but it is a suffering hero. The subject represents the hero; the predicate, no longer what he does, but what is done to him. Now the 4B pupil is ready for the more difficult forms of thought—the sentence that unfolds the qualities of a thing and the sentence that places a thing in its proper class. Nothing better illustrates the misconception that teachers may have concerning the connection between sentence study and composition than the remark of the teacher who said, "I prefer to begin with the sentences of the third and fourth types because it is easy for the pupils to remember that the verb in these sentences is always some part of *to be*."

Outline Study of "The Man Without a Country"

By Maud Elma Kingsley, Maine

Preparatory Work.

HISTORY OF THE STORY.—"The Man Without a Country" was published in the third year of the Civil War, at the time when Vollandigham had turned rebel and had been sent across the border. It was intended that the story should appear in the *Atlantic Monthly* in time to influence the autumn elections, but for some reason it could not be brought out soon enough. It is perhaps the best sermon on patriotism ever written, and should form a conspicuous part of the reading done each year in preparation for Memorial Day, or some other patriotic occasion.

(In 1863, Clement L. Vollandigham, of Ohio, was tried, convicted, and imprisoned, for uttering opinions disloyal to the Union.)

OBJECT OF THE STORY.—To impress upon the young men of the time the heinousness of such a crime as that of Vollandigham's.

PLAN.—So cleverly is the story written that it seems to be the *bona fide* production of the navy officer—one Captain Frederic Ingham—who assumes to be the narrator.

First Reading.

1. ABSTRACT OF THE STORY.

Introduction.—The newspaper paragraph; the officer's reason for noticing the paragraph; manner in which the story is introduced; facts concerning Nolan derived from paragraph 1; amount of public knowledge concerning Nolan; reason for telling the story.

The Story of Philip Nolan.—His position; date of story; event which determined his career; steps leading up to his loss of loyalty; court martial at Fort Adams; great event leading up to it; climax of Nolan's trial; excuses made for Nolan by narrator; Nolan's sentence (quote narrator's summary of it; quote the sentence verbatim); effect of the sentence on Nolan; on the Court; plan adopted for the carrying out of the sentence; Nolan on shipboard—his position, mode of daily life, means taken to prevent his hearing of the United States; episodes in his life; the Lay of the Last Minstrel; the ball on board the Warren; the great frigate duel; Nolan's chance of pardon; the Portuguese slaves; on the George Washington Corvette; Capt. Ingham's acquaintance with Nolan.

Conclusion.—Danforth's letter.

2. THE CHARACTERS.

State part played by each.

3. TIME OF THE ACTION.—1807–1863.

4. PLACE OF THE ACTION.—Mackinaw, Fort Massac, Fort Adams, Cape of Good Hope, Windward Islands, Bay of Naples, South Atlantic, St. Thomas Harbor.

Require pupils to give geographical location, and to state the event connected with each.

5. TOPICS FOR SPECIAL STUDY.

Career of Aaron Burr; the Grand Catastrophe; Spanish plot and Orleans plot; Nukahiva Islands; Slave Trade Treaty; Middle Passage; Bragg and Beauregard; Maury and Barron, Tannall, "The House of Virginia."

Note.—The Orleans plot was the plot organized by Genet, minister from France to the United States, and headed by George Rogers Clark, to capture New Orleans by an army of backwoodsmen, for the French republic.

The Spanish plot, organized by Carondelet, Spanish governor of Louisiana, and participated in by prominent Kentuckians, was to separate Kentucky from the American Union and unite it with Louisiana under the nominal sovereignty of Spain, thus giving the Kentuckians the coveted privilege of a free port at the mouth of the Mississippi.

Second Reading.

1. POINTS TO BE ESPECIALLY NOTED.

Nolan's attitude toward his sentence during the first years of its execution; the point at which he begins to experience a change of sentiment; the narrator's plan for Nolan's future; age of Nolan at time of death; Nolan's profession—difference between him and other naturalists; circumstances under which the author drives home the moral of the story; (*Learn, "And if you are tempted . . . mother"*); circumstances under which the author moralizes openly for the only time in the story; Nolan's text; his epitaph; circumstances under which an allusion is made to Shakespeare's "Tempest;" fulfillment or non-fulfillment of Capt. Shaw's prophecy regarding the Bermudas.

2. DESCRIPTIONS.

Suggestion.—Require pupils to recite from memory all the details of the following: The reading of the Lay of the Last Minstrel; Nolan's question and Mrs. Graff's answer; presentation to Nolan of the sword of ceremony, Nolan's scrap books; Nolan interpreting for the slaves; Nolan's room; his map.

3. HISTORICAL EVENTS FROM 1807–1863.

Those referred to in the story.

4. LITERARY CHARACTERISTICS OF THE STORY.

Its most conspicuous excellence is its excellently sustained air of truth. It is impossible, for the moment, to believe that the story has not the slightest foundation in fact. (Point out some of the features of this story which give it its air of verisimilitude.) It is characterized by felicity of expression, shrewd and comprehensive knowledge of nature and its emotions and passions. The growth of love of country in the mind of Nolan is an excellent study in character development.

Supplementary Work.

EFFECT PRODUCED BY THE STORY.

The story gave the author a national reputation. "It was intended to create, and did create, a national sentiment. It has done much to foster the idea of national unity, of a united country as opposed to state autonomy or separate sectional interests."

THE AMERICAN FLAG.

Suggestion.—A lesson on the flag is eminently appropriate in this connection.

June 14, 1777, the Continental Congress passed its memorable resolution "that the flag of the United States be thirteen stripes, alternate red and white; that the Union be thirteen stars, white, in a blue field." This flag was first displayed at the battle of Brandywine.

Mrs. John Ross of Philadelphia made the first flag, making the stars with five points after the French fashion, instead of with six as is the British fashion. The stars on our coins have six points.

Revolutionary Ensigns.—The Pine Tree Flag, the Rattlesnake Flag, the Bunker Hill Flag. (Describe each.)

Significance of stars, stripes, colors.

The idea of adding a star for every new state was not formally adopted until 1818. Present number of stars? Arrangement?

Similarity between the Stars and Stripes and the arms of the Washington family.

Themes.

1. Life and Works of Edward Everett Hale.
2. Pen Picture of Edward Everett Hale.
3. Our Country's Flag.
4. Patriotism.
5. Patriots Famous in History.
6. The African Slave Trade.
7. Aaron Burr.
8. "The Old Thirteen."
9. Most Impressive Scenes of the Story.
10. Lessons Learned from the Story.

Number One.

"I tell you," said Robbie, eating his peach,
And giving his sister none,
"I believe in the good old saying that each
Should look out for Number One."

"Why, yes," answered Katie, wise little elf,
"But the counting should be begun
With the other one instead of yourself—
And he should be Number One."

—Selected.

Little Talks on School Management. IV

By Randall N. Saunders, Hudson, N. Y.

Classes and Divisions.

IN ungraded country schools, the problem of keeping down the number of classes and of arranging divisions is one that gives the teacher no little trouble and anxiety.

The country school, offering unrestrained an opportunity for the individuality of the teacher and the individualities of the pupils as well, is likely, in the matter of classes and divisions, to assume a kaleidoscopic character,—ever changing in relation to the punctuality, ability, and application or energy of the various pupils.

In a graded school, where the teacher is a part of a mechanism that turns off so many pages in so many days, regardless of the fact that some pupils are overworking at the same task that others find mere play, regardless of the fact that the slow ones are constantly discouraged and the bright ones are forming habits of listlessness, there is no room left for the exercise of the discretion with which the rural educator attempts to harmonize these inequalities and to reconcile many an inconsistency. The smaller the school and the closer the contact of teacher and pupil, the more complex becomes the problem, until, in some instances, classes cease to exist altogether in many of the more difficult studies.

While we can not find it in our hearts to retard the progress of some exceptionally bright pupils we should not forget to stir the exceptionally dull ones to greater effort to keep pace, and even then we can scarcely avoid a division of the class which must inevitably come. At this point, when it is reached, to avoid multiplying classes, I have dropped the slower pupils into the brighter division of the class in the next lower grade,—in fact, to preserve harmony in the homes and in school, have made this measure an apparent elevation of the brilliants into a higher grade.

Complicating the problem in rural schools is the diversity of text-books, rendering special lessons necessary. After determining the grading and finding many different books in some one class, I have found that to teach without a book was a course that, while it necessitated some extra preparation, obviated the necessity for separate recitations.

To develop a recitation and not have it a mere fact-mill for a two, three, or five minutes revolution turning out dust and ashes, one must have time, and to get time a reduction of the number of classes and an increase of general exercises,—lessons in which the greater part of the pupils can join,—should be made.

With forty classes, with varying text-books, inequalities in age, attainment, and ability, and with special subjects asked and needed by special pupils,—with forty classes, or thirty classes to manage, what justice can be done to any one of them, or to any individual in any one of them? With a doubling up of some of the

classes, with a combination of correlated subjects, with a discarding of some extras that could not be continued, with a revolution that deposed some old, cherished methods from the throne beneath the popular dome of thought, I was not spared the consequences of my ignorance and mismanagement, and closed my first year of teaching with twenty classes and a case of fever that made me a better student of economy,—school and physical economy combined.

I think we should not deny ourselves the privilege, which is a duty, with the liberty we have in this country, of advancing as far as possible the brighter pupils, nor do I think we should deny ourselves the pleasure of stimulating and gratifying some natural talent of some thoughtful lad or lass with a special subject outside of the ordinary curriculum, provided we can find the time for it. The country teacher has an added responsibility not so strongly felt by the city teacher. The main burden on the mind of the average urban teacher is the passing of a certain percentage of her grade for promotion, knowing that the greater need of her pupils will be supplied in the order of their ascent toward graduation; but the rural teacher is handling all grades, and, if true to her trust, is ever yearning to awaken the spirit that is like the electric flash to the mingled but unseen gases, unrealized, uncentered, and uncontrolled powers, that it unites into a crystal drop reflecting the universe and dazzling with a brilliance more to be desired and beyond that of the diamond. The country teacher has the responsibility of awakening and centering the powers and ambitions of "the great minds, brave hearts, strong and willing hands an age like this demands," and this responsibility must not be shirked or neglected.

There is a class of pupils, the irregular ones, who multiply classes and perplexities. They are a class to which I have shown few favors, unless the pupils were unfortunately kept out of school by necessity. That being the case, they received every attention I could possibly bestow when they were able to attend. Irregularity is usually the fault of the parents, and if they do not have more interest in the future of their children than to allow them to ignore advantages, I do not believe it is the teacher's duty to retard the progress of others for their benefit.

If you become wise unto your own salvation and institute a new order, make use of every available time-saving method. You may fear the loss of popular favor; but duty to yourself and to your school may demand such a sacrifice, which will be lighter than you imagine. In fact, a gain in favor will be made if methods intelligently applied bring, as they will, results to be desired. Find comfort in Schiller's thought, as favor is accorded: "If by your art you cannot please all, content the few. To please the multitude is bad." Among "the few" count yourself the first to be contented.

TWINS.

By A. L. HARRIS.

Illustrated by ELSIE BLOMFIELD.

WHEN Maud and I walk out with Nurse—it doesn't matter where—

Someone is sure to point at us, or else turn round and stare.
And sometimes you can hear them say, "They're just as like as pins,"

Which isn't to be wondered at, 'cause Maud and I are twins.

We always dress alike—our clothes are nearly stitch for stitch—

Which makes it all the harder to distinguish which is which ;

And no one knows *exactly* how to tell us one from t'other,
But Grandmamma and Uncle George and Nurse and Dad and Mother.

As babies we were so alike, I've often heard Nurse say,
In keeping us from getting mixed, her hair went nearly grey.

I can't help thinking, now
and then, how funny it
would be

If, all the while, I should be
Maud instead of being Me.

Twice one is two—I think
that's how arithmetic
begins—

So it must be correct to say
that twice one baby's twins.

At any rate, we're sure as sure
there'd not be half the fun,

If we, instead of being two,
were only one time's one.

The Invisible Robe

Many years ago there lived a king who was over-fond of fine clothes. One day two swindlers came to him. They said they knew how to weave the most beautiful robe that human eyes had ever seen. Besides, they said, that this robe had the wonderful quality that it could not be seen by any one who was very stupid.

“That must be a very uncommon robe,” thought the king. “If I wore such a one I should be able to find out what men in my service are not fit to hold the places they have. I could then tell the wise men from the fools. I certainly must have that wonderful robe. Let the men weave the cloth for me.” He paid the two sharpers much money to have them begin at once.

So the swindlers put up a loom and made believe they were weaving. They asked for many yards of the finest silk and a hundred spools of the purest gold thread. All these treasures they tucked away in their bags, while they worked away at the empty loom till late into the night.

“I should like to know how those weavers are getting on with my robe,” thought the king. But he felt a little queer when he thought of what the weavers had said. Was he afraid that he might be found stupid and unfit for his office? No, he was sure he would be able to see the beautiful cloth. Still he decided to send some one else to see how the work was getting on. All the people in the city had heard of the strange power of the cloth which was being woven for the king. Everybody was anxious to find out how stupid his neighbors were.

“I will send my honest old minister to the weavers,” thought the king. “He can judge best how the cloth looks, for he is wise and no one is better fit for his place than he.”

So the good old minister went into the room where the two swindlers sat working at the empty loom.

“Why!” thought the old minister, opening his eyes very wide. “I cannot see a thing!” But he was careful not to say this aloud.

The two swindlers begged him to step nearer. They asked him if he did not think the colors pretty and the pattern the best he ever saw. Then they pointed to the empty loom. The poor old minister stared as hard as he could; but he could see nothing, for there was nothing to see.

“My, O my!” thought he, “is it possible that I am a fool after all?” I certainly never thought so, and not a soul must know it. Or is it that I am unfit for my office? It will never do for me to tell that I cannot see the robe.”

“Well, sir, you don’t say anything about our work,” said the one who pretended to go on with the weaving.

“Oh, it is beautiful—quite charming,” said the old minister, peering through his spectacles. “What a fine pattern, and what colors! I shall certainly tell the king that I am very much pleased with it.”

“We are delighted to hear you say so,” said the weavers; and then they named all the colors and described the strange pattern. The old minister listened closely, that he might be able to repeat it to the king when he got home. And so he did.

Now the sharpers grew bolder. They asked for more money, more silk, and more gold, to be able to go on with the weaving. They hid everything away with the rest of their plunder. Not a single thread was ever put upon the loom; but they kept on as before weaving at the empty loom.

Everybody in the town was talking about the wonderful robe.

Now, the king wished to see it himself while it was still on the loom. With a large party of picked men he went to the workshop of the two bold swindlers who were working away with might and main at the empty loom. The faithful old minister who had been there before stepped forward and said:

“Is not that charming? Just see, O king, what a pattern! And what colors!” And then he pointed to the empty loom, for he thought that no doubt the others could see the cloth.

“What is this?” thought the king. “I see nothing at all! That is

THE WH

on Thanksgiving, Farm Life, the Cow or Butter-Making. Cut the
 page of his composition. There were thirty of these pictures in the
 mounted on cardboard it will be found worth framing.

awful. Am I a fool? Am I not fit to be king? That is the most dreadful thing that could happen to me."

"It is very pretty, to be sure!" he said aloud, "I am well pleased with it." Then he nodded in a satisfied sort of way, as he gazed at the empty loom. He would not tell for anything in the world that he saw nothing.

The people who were with him looked and looked, but they, too, saw nothing. Nevertheless they all said, "Yes, it is very beautiful!" They begged the king to wear the wonderful robe in the great procession that was just about to take place.

"It is grand, magnificent! Never was there such a robe before!" So the word passed from mouth to mouth. Everybody praised the weavers.

The whole night before the morning on which the procession was to take place, the swindlers sat up burning sixteen candles. That was to make the people believe that they were hard at work upon the king's new robe. They pretended to take the cloth off the looms; they made cuts in the air with big scissors; they sewed away with needles without thread in them. At last they said, "Now the king's new robe is ready!"

The king came himself with the highest officers of his court. The two swindlers raised up their arms as if they were holding something, and said, "Here is the robe! It is as light as a spider's web. One would think one had nothing on, but that is just the beauty of it."

"Yes," said all the court officers; but they could not see anything, for there was nothing to see.

The sharpers pretended to tie and to pin and to button the garment, and the king turned round and round before the mirror.

"How well his Majesty looks! How well the clothes fit!" said all. "What a pattern! what colors! That is a magnificent dress!"

"I am ready," said the king. "How well the clothes fit me!" And then he turned again to the mirror, for he wanted it to seem as if he saw all his grand things.

The pages who were to carry the train of the king's robe stooped down

and pretended to lift it from the ground, then they walked away with their hands in the air. They did not dare let it be known that they could see nothing.

The king walked along in the procession under the gorgeous canopy. All the people in the streets and at the windows said, "How fine the king's new clothes are! what a splendid train his robe has! how perfectly the clothes fit!"

Nobody would tell that he could see nothing, for that would have shown that he was very stupid and was not fit for his office.

"But he has got nothing on!" said a little child.

"Listen to that innocent child!" said his father; and one whispered to another what the child had said.

"He has got nothing on; a little child here says he has got nothing on."

And at last all the people said: "That is right. He has nothing on."

That made the king very angry, for now he knew that they were right. But he thought, "the procession must go on." And on it went. He held himself a little stiffer than ever, and the pages followed holding up the train which was not there at all.

And the swindlers? They left the city very quietly with their ill gotten gains. They are now making invisible clothes for other people.

[Adapted for The Child World from a well known fairy tale.]

'Saw the rainbow in the heavens
In the eastern sky, the rainbow.
Whispered, "What is that, Nokomis?"

Seed Collections for the Schools.

By F. L. STEVENS, North Carolina College of Agriculture, and Mechanic Arts.

(Continued from last month.)

Now as to the storing and keeping of such a collection. Secure small vials about one-half an inch thick and two inches long with corks. They will be admirable, and are inexpensive. Possibly you can get them at no cost.

Put the seeds in the vial, place a label outside in such a position as not to obscure the view of the seeds, and arrange them all in a box where they can be inspected.

A very neat way of mounting seeds is also shown in the accompanying illustrations. The seed holder may be described as a piece of pasteboard mounted between two pieces of glass, and fastened together by passepartout paper. Secure a piece of pasteboard say four or five inches square, and quite thick, if possible 1-5 of an inch or more, if need be use two thicknesses. Upon both sides of this pasteboard paste a good quality of white paper to cover the crudities of the pasteboard. When dry and smooth mark off the central points of holes to be cut with a gun wad punch. You may buy the punch at a cost of a quarter or better still some of your boys inclined to hunting will probably have one they will be

little pit of which the glass will constitute the bottom. Place the seeds in these pits, lay the other plate of glass on top, and bind the whole thing together with passepartout paper, resulting in a mount similar to that shown in figure 2.

Such a mount may be either hung upon the wall or in the window as a transparency. It is exceedingly handy to pass about the class-room

Fig. 2. Seed mount.

Fig. 1. Glass and passepartout paper.

able to loan to the school. With this punch make the holes in the pasteboard as indicated in the illustration.

Now get your seeds together, write under each hole the name of the seed to be placed therein. Prepare one sheet of glass with passepartout paper as in figure 1. Lay the pasteboard on the glass. Each hole will then form a

for class inspection of the seeds. The seeds are in excellent position for observation with a small hand lens.

Glass for such mounts can frequently be procured from some of your pupils who are interested in photography and who have discarded negatives which can be cleaned up. Ordinarily the cost of the whole mount is very small. A four by five glass will accommodate comfortably about six samples of seeds. Larger glass may of course be used, placing more specimens in the same mount. In connection with all seed study it will be very useful and very desirable to have one or more small magnifying glasses such as can be purchased for about 30 or 40 cents. The one which I personally like best is known as the QR. lens and may be procured from Arthur H. Thomas & Co., 12th and Walnut streets, Philadelphia, Pa., or Bausch and Lomb, Rochester, N. Y., for 35 cents.

The rapidity with which a large seed collection can be gotten together is astounding to any one who has not tried it. The making of a seed collection is to be highly commended in all schools where agriculture is to be taught or where nature study plays a part.

Drawing and Constructive Work

By Anna Linehan, Supervisor of Manual Training, Asheville, N. C.

Plan of Work for November.

Grade 1.

1st week.—Lesson on cube. Likeness, faces, corners, edges; modeling same in clay.

2nd week.—Folding square basket, or bench, if preferred.

3rd week.—Modeling pumpkin. Call atten-

Diagram for Square Basket.—Fold a 4-inch square into 16 squares. Cut on dark lines between A + B. Fold in A and paste B over it. Handle can be fastened to middle of two opposite sides.

tion to difference in shape of apple and pumpkin, size of stem, etc.

4th week.—Cutting and coloring same to take home.

“Over the river and thru the woods,
To grandmother’s house we go,”
can be used for illustrated story for the month.

When giving the clay lesson care should be taken that no clay gets on desk or floor, and the children will soon learn to keep it on the board or paper provided for that purpose. The cube should be made in the hands, not patted on the desk.

In the paper folding the children are interested to call the first fold a book, the fold on the second diameter a window, the fold on the diagonal a shawl, etc.

The children should lay papers on the desks and fold from them, and then press folds with one finger.

The teacher’s paper should be larger than the square of paper used by the children, and she should move around the room that she may be seen by all the class; but the less assistance given, the better, for the child should work independently.

When the basket is folded, a strip of paper of the same color, about $\frac{1}{4}$ inch wide, may be used for the handle.

A sheet of bristol board with a few corn stalks drawn on it and some of the pumpkins pasted here and there, suggests a cornfield and pleases the children, as well as preserves the cuttings.

Grade 2.

1st week.—Studying shapes of nuts and modeling the same in clay.

2nd week.—Folding 8-inch square to make a hollow square prism with cover.

3rd week.—Cutting ducks of different sizes. If there is time enough, let the children draw them.

4th week.—Cutting ducks from white paper and coloring the same to take home. Illustrated story for the month should relate to farm life.

When the children are modeling nuts, their attention should be called to the models they resemble—ellipsoid, ovoid, etc.

If in making the box manila paper is used, some simple design should be marked on cover of box, but colored paper can be used with good results.

A few of the ducks mounted on an oblong of stiff paper, a few lines to represent water, and the children will have a picture of ducks which they will enjoy, especially as they made it.

Or the children will enjoy cutting three or four each, and mounting them on a small sheet, each child making his own poster. But this is rather hard to accomplish with large classes and limited time. Some teachers prefer to have the mucilage on a bit of paper on each child’s desk, using a bit of twisted paper for a brush; others find it

Diagram for Oblong Box.—Fold 8-inch square into 16 squares. Cut out the two C’s. Cut on darkened lines between A + B and fold in, putting B over A. Decoration on box optional.

quicker to pass from child to child, putting a drop of mucilage on the part to be pasted. Good mucilage is a prime necessity, for much of the

soiled work is due to the fact that the paper does not stay pasted, and the child becomes impatient and careless.

Grade 3.

1st week.—Modeling carrots and other winter vegetables in clay.

2nd week.—Make large drawings of the same and color them.

3rd week.—Cutting turkeys of different sizes.

4th week.—Cutting turkeys in white paper and coloring the same to take home. If only in ink the children will enjoy it better if a touch of red is added to the head. Brown crayon or water color will give greater variety.

In modeling carrots, have them of good size—about as large as the vegetables used for the lesson. The drawings should be strong and should match the carrot in color.

If a drawing of a barnyard is made and some of the turkeys pasted on it here and there, an effective poster will be the result.

Above the first grade frequent drills should be given in proper pencil-holding, and correct position in drawing quick, light lines. The drill

should be on vertical, horizontal, and oblique lines, also circles and ellipses.

Grade 4.

Study of winter vegetables with leaves. Work done in color is desirable.

Simple grouping of objects. Design of *menu* for Thanksgiving dinner, with an appropriate motto for the same.

Grade 5.

Simple perspective—square prisms, oblong boxes, houses. Composition on Thanksgiving, landing of the Pilgrims, etc. Cover design of something appropriate. In this connection, we found "Pictures in Outline, No. 10" (Prang Educational Co.), very helpful for developing ideas on the subject.

Grade 6.

Study of simple groups, design in color for decoration, borders, etc. Appropriate design for calendar for November, or cover design for Thanksgiving composition. Covers from last year's magazines are always helpful in this work and suggest ideas on the subject.

If the teachers in the three lower grades will make hektograph copies of the drawings given this month, and have them placed so all the

The Christmas-Tree and School-Made Gifts

By Martha Hellman, Illinois

IF every primary teacher knew how little money and time are necessary to buy and trim a Christmas-tree and if she realized what a priceless treasure it seems to the children, I feel confident that no room in December would be without one. This is the month in which our finances are apt to be at lowest ebb. Nevertheless, when writing your Christmas shopping-list, don't neglect to include the tree.

My tree costs from twenty-five to thirty-five cents, which is the only expense with the exception of a few cents for tissue-paper and wired tinsel. We "plant" the tree in a bucket of sand brought by one of the children, and by occasionally dampening the sand the falling of the needles is almost entirely prevented. I cover the bucket with a layer of cotton batting and

then, even before anything is hung upon its branches, our tree begins to look Christmasy.

As to ornaments, the children are more than willing to bring old ones from home, or even to buy new ones. The pupils of our school being too poor to bring a penny for a book-cover or colored crayon, it is surprising how many can spare a penny or pennies to buy some sparkling trifle for the tree (all without any suggestion on my part.) Of course, some can not contribute anything in this way, and so, in order that all may feel they have helped, I plan to have every child make something. If your experience resembles mine, you will find that with all the material brought in, your tree would look overloaded if each child made all the articles suggested. I think it is well to divide the class into

2.

1.

4.

3.

5.

6.

sections, each section to make a different kind of tree ornament.

Among the decorations easily manufactured are the well-known kindergarden chains, made of narrow strips of colored engine, or better still, tissue paper, and the equally well-known paper lanterns which require no description.

9.

10.

7.

8.

11.

12.

Give each pupil of the lowest section a cardboard pattern of a star, trumpet, wheel, or bretzel, and let him cut one of these forms from colored paper. If two sheets of contrasting colors are pasted together before cutting, the ornaments will be prettier and stiffer. When the babies have finished the ornaments give them each a piece of wired tinsel (Fig. 1) for a hanger and see the proud, happy look on the little faces as the tiny fingers fasten their handiwork upon the tree.

A chain requiring no paste is made as follows: Fold a piece of paper 2x4 inches over, to make the short edges meet. Use a circular cardboard pattern two inches in diameter and draw a chord about one inch long. Cut away the segment thus formed. When using the pattern, this straight edge must lie on the folded edge of the paper (Fig. 2). Mark around the pattern, leave the paper folded, and cut out two adjacent circles. From the centers of these circles cut two circles one and one half inches in diameter, and concentric with the larger circles.

Your paper will then somewhat resemble the figure eight (Fig. 3). Make ten or more of these links. To put them together, leave the first link folded, open the second link and pull one-half of it (one circle) thru both parts of the first, then slip half of the third thru both parts of the second, etc. Finish at the end with the tinsel wire (Fig. 4).

Pretty "jewels" require three squares, or circles 3 inches in diameter. They may be of one or more colors. Three shades of the same color are beautiful for this purpose. Cut slits according to Figs. 5, 6, and 7 respectively, cut-

Produce from the School Garden.

TEACHERS MAGAZINE is indebted to the kindness of Supt. A. J. Mackay, of Halifax, for this interesting picture.

ting away narrow strips of paper when making the slits. In putting together, take 5, bend back corners a and b gently and insert one-half of 5 into the long slit of 6, then straighten the bent corners. Next take 7, and slip around 5 and 6, bending the corners e and f of 5, and corners c and d of 6 in order to accomplish this. Straighten the corners and adjust the squares into position. Hang by means of the wire. (Fig. 8).

To make a pretty plaited star, proceed as follows: Fold and cut two squares into eight-pointed stars. Cut to the center of each star on one of its short diagonals, a.—a. on Fig. 9. Fold up on all long diagonals b.—b. and down on all short diagonals. Join the two stars to make a fourteen-pointed one, by pasting the two end points of the one respectively under and over the corresponding points of the other. (Fig. 10.)

For gifts, we made one year, a sachet for mother and a letter-pocket for father. For the sachet, we sewed a cylindrical cheese-cloth bag about 3 inches long and 1 inch in diameter and stuffed it with cotton on which I had sprinkled sachet-powder. Around this bag we wrapped a piece of crepe paper wide enough to overlap a little, so the ends

could be pasted together, and long enough to project about an inch at each end. We used three pieces of ribbon, one tied in a bow around each end of the sachet and one to serve as a hanger. (Fig. 11.)

For the letter-case we used common cardboard covered with green ingrain paper. We took a piece of cardboard about 6x8 inches, drew a line 3 inches from, and running parallel with one of the short edges, scored and bent it up to make the front of the case. We covered the two sections separately with the paper, and tied bows of ribbon at either side to hold it together, and also tied some ribbon into the top to hang the pocket up by. For decoration we cut the word "Letters" from gilt paper and pasted upon the front of the case.

Give the children patterns of print capitals to trace around. It may be a little troublesome to get good spacing but by pasting first the middle letter, then the first and last letters, the remaining letters can easily be placed at even distances. (Fig. 12.)

"Do all the good I can,
To all the persons I can,
In all the ways I can,
By all the means I can,
And as long as I can."

A class in the largest vacation school in the world, Public School No. 188, New York City, of which Mr. William E. Waters is principal.

Pieces to Speak for *Young and Old.*

Thanksgiving Joys.

Cart-loads of pumpkins as yellow as gold,
Onions in silvery strings,
Shining red apples and clusters of grapes,
Nuts and a host of good things,
Chickens and turkeys and fat little pigs,—
These are what Thanksgiving brings.

Work is forgotten and play-time begins ;
From office and school-room and hall,
Fathers and mothers and uncles and aunts
Nieces and nephews, and all
Speed away home, as they hear from afar
The voice of old Thanksgiving call.

Now is the time to forget all your cares,
Cast every trouble away ;
Think of your blessings, remember your
joys.

Don't be afraid to be gay !
None are too old and none are too young
To frolic on Thanksgiving day.

—*Youth's Companion*

The Squirrel's Arithmetic.

High on the branch of a walnut tree
A bright-eyed squirrel sat.
What was he thinking so earnestly ?
And what was he looking at ?
The forest was green around him,
The sky all over his head ;
His nest was in a hollow limb,
And his children snug in bed.

He was doing a problem o'er and o'er,
Busily thinking was he ;
How many nuts for his winter's store
Could he hide in the hollow tree ?
He sat so still on the swaying bough
You might have thought him asleep.
Oh, no ; he was trying to reckon now
The nuts the babies could eat.

Then suddenly he frisked about,
And down the tree he ran.
"The best way to do without a doubt,
Is to gather all I can."

—*Annie Douglas Bell*

The Christmas Bells.

I.

The time draws near the birth of Christ;
The moon is hid; the night is still:
The Christmas bells from hill to hill
Answer each other in the mist.

II.

Four voices of four hamlets round,
From far and near, on mead and moor,

Swell out and fail, as if a door
Were shut between me and the sound.

III.

Each voice four changes on the wind
That now dilate, and now decrease;
Peace and good will, good will and peace;
Peace and good will, to all mankind.

V.

Rise, happy morn, rise, holy morn,
Draw forth the cheerful day from night;
O Father, touch the East, and light
The light that shone when Hope was born.

—From TENNYSON'S *In Memoriam*.

What the Winter Brings.

What does the winter bring?
Berries red on the holly spray,
Gems of ice in the clear, cold day,
That gleam on the tall fir trees;
Over the world with its leaden skies,
Dainty snow like a blessing lies,
But it bringeth more than these.
Time for busy hands to rest,
For cozy seats in the dear home nest,
With blazing logs piled high,
Happy hearts for the Christmas cheer,
And no regret for the parting year
As you bid its hours good-by.

—MARY R. CORLEY

An Address to Santa Claus.

I

Oh, Santa Claus, dear Santa Claus!
I wonder if you know,
How many poor folks' stockings hang
All in a gaping row;
How anxiously you're waited for,
By many a girl and boy,
As you dash by with jingling bells
And never leave a toy!

II.

Oh, Santa Claus, dear Santa Claus!
You have such pretty things—
Great heaps of dolls and picture books,
Gold chains and finger rings,
And loads of lovely china sets!
Dear Santa, please believe,
We would be very glad to have
Just what the rich folks leave.

III.

When from its merry midnight round
Your sleigh comes dashing back,
And all the toys are given out
From every Christmas pack;
Could you not bring some last year's
drums,
Or skates, or balls or sleds,
Or dollies who have lost their hair
Or cracked their arms or heads?

IV.

Oh, Santa Claus, dear Santa Claus!
You may be very sure
Rich children do not love you more
Than children of the poor.
Ah, what delight at Christmas time
Your tinkling bells to hear,
To see the prancing, dancing feet
Of your fleet reindeer!

—MRS. M. F. BUTTS

To-Morrow is Christmas Morning

I.

Old Santa Claus woke from his long winter
nap,
Put on his overcoat, muffler, and cap,
Then ordered his reindeer and harnessed
the sleigh:
"For I must be up and off and away—
To-morrow is Christmas morning."

II.

He blew on his horn for his Troopers so
bold,
A myriad of them in numbers untold,
All mounted and booted in trappings so
gay,
The Rocking Horse Troopers, all leading
the way,
For to-morrow is Christmas morning.

III.

At a wave of his hand the Dollies all come,
Both little and big ones, they walk and
run,
Dressed up in fine muslins, silks, velvet
and lace,
With merriment dancing on each pretty
face,
For to-morrow is Christmas morning.

IV.

He went to the fields where sugar plums
grow,
Millions of trees of them, row after row,
And bushels and bushels came tumbling
down,
Red ones and pink ones and chocolate
brown,
For to-morrow is Christmas morning.

V.

He pushes a button and trinkets galore,
Come hustling and bustling right up to
his door,
Horns, whistles, and bells, drums, engines,
and toys,
Such beautiful gifts for our good girls and
boys,
For to-morrow is Christmas morning.

VI.

And now he is off for his long Christmas
ride,
To visit the children who live far and
wide,
Wherever they live and his sharp eyes
can see
A stocking hung up or a bright Christmas
tree,
For to-morrow is Christmas morning.

—GABRIELLE STEWART

Autumn and November Poems.

A series of inexpensive, yet very useful books of poems suitable for memorizing and study has been arranged by Miss Katherine D. Blake, principal of the girls' department of public school No. 6, New York city, and Miss Georgia Alexander, supervising principal, of Indianapolis, Ind. The books are called Graded Poetry Readers, and the poems are selected with regard to their suitability for the several grades of the elementary school course. The November and Autumn poems given here are taken from the Graded Poetry Readers, published by Maynard, Merrill & Company.

Down to Sleep.

November woods are bare and still ;
November days are clear and bright ;
Each noon burns up the morning's chill ;
The morning's snow is gone by night ;
Each day my steps grow slow, grow light,
As thru the woods I reverent creep,
Watching all things lie "down to sleep."

I never knew before what beds,
Fragrant to smell, and soft to touch,
The forest sifts and shapes and spreads ;
I never knew before how much
Of human sound there is in such
Low tones as thru the forest sweep,
When all wild things lie "down to sleep."

Each day I find new coverlids
Tucked in, and more sweet eyes shut
tight ;
Sometimes the viewless mother bids
Her ferns kneel down, full in my sight ;
I hear their chorus of "good-night" ;
And half I smile and half I weep,
Listening while they lie "down to sleep."
November woods are bare and still.

November days are bright and good ;
Life's noon burns up life's morning chill ;
Life's night rests feet which long have
stood ;
Some warm, soft bed, in field or wood,
The mother will not fail to keep,
Where we can lay us "down to sleep."
—HELEN HUNT JACKSON.

The Wind and the Moon.

Said the Wind to the Moon, "I will blow
you out.
You stare
In the air
Like a ghost in a chair,
Always looking what I am about ;
I hate to be watched ; I will blow you
out."

The Wind blew hard, and out went the
moon.
So, deep,
On a heap
Of clouds to sleep,
Down lay the Wind, and slumbered
soon—
Muttering low, "I've done for that Moon."

He turned in his bed; she was there
again !
Oh, high
In the sky,
With her one ghost eye,
The Moon shone white and alive and
plain.
Said the Wind—"I will blow you out
again."

The Wind blew hard, and the Moon grew
dim.

With my sledge
And my wedge
I have knocked off her edge !
If only I blow right fierce and grim,
The creature will soon be dimmer than
dim.

He blew and blew, and she thinned to a
thread.
One puff
More's enough
To blow her to snuff !
One good puff more where the last was
war bread,
And glimmer, glimmer, glum will go the
thread !"

He blew a great blast and the thread was
gone ;
In the air
Nowhere
Was a moonbeam bare ;
Far off and harmless the shy stars shone ;
Sure and certain the Moon was gone !

The wind he took to his revels once
more ;
On down
In town
Like a merry mad clown,
He leaped and hallooed with whistle and
and roar,
"What's that ?" The glimmering thread
once more !

He flew in a rage—he danced and blew ;
But in vain
Was the pain
Of his bursting brain ;
For still the broader the Moon-scrap grew,
The broader he swelled his big cheeks and
blew.

Slowly she grew—till she filled the night,
And shone
On her throne
In the Sky alone,
A matchless, wonderful, silvery light,
Radiant and lovely, the Queen of the
Night.

Said the Wind—"What a marvel of
power am I !
With my breath,
Good faith !
I blew her to death—
First blew her away right out of the sky—
Then blew her in ; what a strength am I!"

But the Moon she knew nothing about the
affair,
For high,
In the sky,
With her one white eye,
Motionless, miles above the air,
She had never heard the great Wind blare
—GEORGE MACDONALD.

The Huskers.

It was late in mild October, and the long
autumnal rain
Had left the summer harvest fields all
green with grass again ;
The first sharp frosts had fallen, leaving
all the woodlands gay
With the hues of summer's rainbow, or
the meadow flowers of May.

Thru a thin dry mist, that morning, the
sun rose broad and red,
At first a rayless disk of fire, he brightened
as he sped ;
Yet, even his noontide glory fell chastened
and subdued
On the cornfields and the orchards, and
softly pictured wood.

And all that quiet afternoon, slow sloping
to the night,
He wove with golden shuttle the haze
with yellow light ;
Slanting thru the painted beeches, he
glorified the hill ;
And, beneath it, pond and meadow lay
brighter, greener still.

And shouting boys in woodland haunts
caught glimpses of that sky,
Flecked by the many-tinted leaves, and
laughed, they knew not why ;
And schoolgirls, gay with aster flowers,
beside the meadow brooks,
Mingled the glow of autumn with the
sunshine of sweet looks.

From spire and barn looked westerly the
patient weathercocks ;
But even the birches on the hill stood
motionless as rocks.
No sound was in the woodlands, save the
squirrel's dropping shell,
And the yellow leaves among the boughs,
low rustling as they fell.

The summer grains were harvested ; the
stubble fields lay dry,
Where June winds rolled, in light and
shade, the pale green waves of rye ;
But still on gentle hill slopes, in valleys
fringed with wood,
Ungathered, bleaching in the sun, the
heavy corn crop stood.

But low, by autumn's wind and rain, thru
husks that, dry and seer,
Unfold from their ripened charge, shone
out the yellow ear ;
Beneath the turnip lay concealed, in many
a verdant fold,
And glistened in the slanting light the
pumpkin's sphere of gold.

There wrought the busy harvesters ; and
many a creaking wain
Bore slowly to the long barn floor its load
of husk and grain ;
Till broad and red, as when he rose, the
sun sank down, at last,
And like a merry guest's farewell, the day
in brightness passed.

And lo ! As thru the western pines, on
meadow, stream and pond,
Flamed the red radiance of a sky set all
afire beyond,
Slowly o'er the Eastern sea bluffs a milder
glory shone,
And the sunset and the moonrise were
mingled into one ;
And thus in the quiet night the twilight
lapsed away.

And deeper in the brightening moon the
tranquil shadows lay ;
From many a brown old farmhouse, and
hamlet without name,
Their milking and their home tasks done,
the merry huskers came.

Swung o'er the heaped-up harvest, from
pitchforks in the row,
Shone dimly down the lanterns on the
pleasant scenes below ;
The growing pile of husks behind, the
golden ears before,
And laughing eyes and busy hands and
brown cheeks glimmering o'er.

Half hidden in a quiet nook, serene of look
and heart,
Talking their old times over, the old men
sat apart ;

While up and down the unhusked pile, or
nestling in its shade,
As hide-and-seek, with laugh and shout,
the happy children played.

Urged by the good host's daughter, a
maiden young and fair,
Lifting to light her sweet blue eyes and
pride of soft brown hair
The master of the village school, sleek of
hair and smooth of tongue,
To the quaint tune of some old psalm, a
husking ballad sung.

—JOHN GREENLEAF WHITTIER

Farmer John.

Home from his journey, Farmer John
Arrived this morning safe and sound ;
His black coat off, and his old clothes on,
"New I'm myself," said Farmer John ;
And he thinks, "I'll look around."
Up leaps the dog : "Get down, you pup !
Are you so glad you would eat me up ?"
The old cow lows at the gate to greet him ;
The horses prick up their ears to meet him.

"Well, well, old Bay !

Ha, ha, old Gray !

Do you get good feed when I'm away ?"

"You haven't a rib," says Farmer John ;
"The cattle are looking round and sleek ;
The colt is going to be a roan,
And a beauty, too ; how he has grown
We'll wean the calf in a week."
Says Farmer John, "When I've been off,
To call you again about the trough,
And water you and pet you while you
drink,

Is a greater comfort than you can think !"

And he pats old Bay,

And he slaps old Gray ;

"Ah ! this is the comfort of going away."

"For after all," says Farmer John,
"The best of a journey is getting home :
I've seen great sights, but I would not give
This spot and the peaceful life I live,
For all their Paris and Rome ;
These hills for the city's stifled air,
And big hotels and bustle and glare ;—
Land all houses and roads all stones,
That deafen your ears and batter your
bones !

Would you, old Bay ?

Would you, old Gray ?

That's what one gets by going away."

"I've found out this," says Farmer
John,

"That happiness is not bought and sold,
And clutched in a life of waste and hurry,
In nights of pleasure and days of worry,

And wealth isn't all in gold,

Mortgage and stocks, and ten per cent,
But in simple ways and sweet content,
Few wants, pure hopes, and noble ends,
Some land to till, and a few good friends

Like you, old Bay,

And you, old Gray,—

That's what I've learned by going away."

And a happy man is Farmer John,—
Oh, a rich and happy man is he !
He sees the peas and pum kins growing,
The corn in tassel, the buckwheat blowing,
And fruit on vine and tree ;

The large kind oxen look their thanks,
As he rubs their foreheads and strokes
their flanks ;

The doves light round him, and strut and
coo ;

Says Farmer John, "I'll take you, too,—
And you, old Bay,

And you, old Gray,

Next time I travel so far away."

—JOHN TOWNSEND TROWBRIDGE.

The Frost Spirit.

He comes—he comes,—the Frost Spirit
comes ! You may trace his foot-
steps now

On the naked woods and the blasted fields
and the brown hills' withered
brow.

He has smitten the leaves of the gray old
trees where their pleasant green
came forth,

And the winds, which follow wherever he
goes, have shaken them down to
earth.

He comes—he comes,—the Frost Spirit
comes ! From the frozen Labra-
dor,—

From the icy bridge of the Northern seas,
which the white bear wanders
o'er,—

Where the fisherman's sail is stiff with ice,
and the luckless forms below

In the sunless cold of the lingering night
into marble statues grow.

He comes—he comes,—the Frost Spirit
comes !—on the rushing Northern
blast,

And the dark Norwegian pines have
bowed as his fearful breath went
past.

With an unscorched wing he has hurried
on, where the fires of Hecla glow

On the darkly beautiful sky above and
the ancient ice below.

He comes—he comes,—the Frost Spirit
comes ! And the quiet lake shall
feel

The torpid touch of his glazing breath,
and ring to the skater's heel ;

And the streams which danced on the
broken rocks, or sang to the lean-
ing grass,

Shall bow again to their winter chain, and
in mournful silence pass.

He comes—he comes,—the Frost Spirit
comes ! Let us meet him as we
may,

And turn with the light of the parlor fire
his evil power away ;

And gather closer the circle round, when
that firelight dances high,

And laugh at the shriek of the baffled
fiend as his sounding wings go by !

—JOHN GREENLEAF WHITTIER.

Song of Life.

A traveler on a dusty road

Strewed acorns on the lea ;

And one took root and sprouted up,

And grew into a tree.

Love sought its shade at evening time,

To breathe its early vows ;

And Age was pleased, in heights of noon
To bask beneath its boughs.
The dormouse loved its dangling twigs,
The bird sweet music bore—
It stood a glory in its place,
A blessing evermore.

A little spring had lost its way
Amid the grass and fern ;
A passing stranger scooped a well
Where weary man might turn.
He walled it in, and hung with care
A ladle on the brink ;
He thought not of the deed he did,
But judged that Toil might drink,
He passed again and lo, the well,
By summer never dried,
Had cooled ten thousand parched tongues
And saved a life beside.

A nameless man, amid a crowd
That thronged the daily mart,
Let fall a word of hope and love,
Unstudied from the heart,
A whisper on the tumult thrown,
A transitory breath,
It raised a brother from the dust.
It saved a soul from death.
O germ ! O fount ! O word of love !
O thought at random cast !
Ye were but little at the first,
But mighty at the last.

—CHARLES MACKEY.

Ruth.

She stood breast-high amid the corn,
Clasped by the golden light of morn,
Like the sweetheart of the sun,
Who many a glowing kiss had won.

On her cheek an autumn flush,
Deeply ripened ; such a blush
In the midst of brown was born,
Like red poppies grown with corn.

Round her eyes her tresses fell ;
Which were blackest none could tell,
But long lashes veiled a light
That had else been all too bright.

And her hat, with shady brim,
Made her tressy forehead dim.
Thus she stood amid the stocks,
Praising God with sweetest looks.

Sure, I said, Heaven did not mean
Where I reap thou shouldst but glean ;
Lay thy sheaf adown and come,
Share my harvest and my home.

—THOMAS HOOD.

To-Day.

Lo, here hath been dawning
Another blue day ;
Think, wilt thou let it
Slip useless away ?

Out of Eternity
This new day is born ;
Into Eternity,
At night, will return.

Behold it aforeside
No eye ever did ;
So soon it forever
From all eyes is hid.

Here hath been dawning
Another blue day ;
Think, wilt thou let it
Slip useless away ?

—THOMAS CARLYLE.

CHILDREN OF OTHER LANDS

Boys and Girls of The Netherlands

By DOROTHY WELLS.

SO long as Thanksgiving shall be celebrated in America, little Holland, across the water from us, will be remembered. It was from Holland—or better the Netherlands—that the Pilgrims sailed to New England. From Holland came the first settlers of New York and New Jersey. Their descendants count among the most useful and prominent of our citizens, President Roosevelt being one of the number. And ever since the beginning of this country Dutch men and women, boys and girls, have been coming from Holland to be industrious, loyal Americans. The children of the Netherlands are very near cousins of ours, are they not? Let us make their acquaintance this Thanksgiving month.

The name of Holland applies only to two parts of the Netherlandish provinces, North and South Holland, tho many people still call Holland what is really the Netherlands or the low countries, making the latter name include all the provinces of Belgium and Holland. The capital of the Netherlands, and the residence of Queen Wilhelmina, is in South Holland. It is generally known as The Hague. The Dutch people call it Gravenhage.

Most of the land of Holland was reclaimed from the sea. Much of it is to-day below the sea-level. The ocean is kept from overflowing the land by means of great stone walls called dykes. The whole country is cut up by ditches and canals, which are used for highways, as we use our streets. The people ride in boats or on rafts, instead of in carriages or carts.

The canals mean all manner of fun for the Dutch children. In the winter time skating serves not only as exercise, but is the common way of getting about. The children have so much practice that they can skate very well indeed. Many of the Dutch people can skate faster than a railway train can travel.

When the ice is strong enough to skate on the first time in a winter, there is always a holi-

day. The boys run around the streets shouting for joy. The skaters dress in the gayest of costumes, girls as well as boys wearing loose, baggy trousers.

The little folks learn to skate when they are hardly more than babies. They still skate, even after they are gray-haired men and women. When the ice is thick enough, sledges or sleighs begin to appear on the frozen canals. These glide over the ice in a long procession, one behind the other. Some of the sleighs are shaped like shells, others are like boats or swans. All are drawn by horses with ornamental feathers or tassels on their heads. At night every sleigh has one or more torches and thousands of the lights can be seen twinkling in all directions.

In summer there are boats of all sizes, large and small, on the canals. The children have many delightful times playing with their toy boats, or sailing and rowing in the larger ones. Shall I tell you what the Dutch ships are like? They have but one mast, and they are broad and stout. They are usually painted bright green, with a stripe of some other color, or perhaps of several colors. The deck and mast are var-

nished, and everything about them is as neat as wax. The cabin windows are almost always draped with white muslin curtains tied with yellow or crimson ribbons.

Many children are born and brought up on the boats that ply up and down the Holland canals. Often they never live anywhere in all their lives except on a boat. They have their playthings and pets. Often dogs, cats and canary birds can be seen on the decks as the boats move along the canals.

The Dutch people are very fond of animals. They make great pets of their cattle. The children often help to wash and comb the cows, which they love dearly. The stork is the favorite bird, since it eats up the frogs and toads which are so numerous in that damp country. The storks are so tame that they can often be seen walking in the streets. They frequently build their nests on round pieces of wood fastened to the tops of long poles.

VOLENDAM.

HOLLAND.

driven into the ground for their use.

Everybody in Holland, whether young or old, is fond of flowers. Potted plants are always found where there is no room for gardens. The canal boats and even the tiniest cottages have their window boxes.

Dutch houses are quite different in appearance from any houses in America. They are made of red or pinkish bricks, marked off with white stripes, while other stripes indicate the different stories. They all lean in some direction, either forward or back or to one side. Some of them look as if they might fall into the street, others seem to be starting back in fright, and still others appear to be leaning against their neighbors for support. From the top of some of the houses hang a cord and pulley for drawing up baskets and pails. Two small mirrors, joined like the covers of a book, are fastened to the sill of one of the parlor windows, with a third mirror hanging above them in such a way that by arranging the three in just the right positions the children can stand in the house, and yet see all that is going on in the street, without being seen themselves at all.

The little Dutch girls look as if they were dressed up in their mother's clothes. They wear the same kind of a long skirt reaching down to the ground, with over it the same kind of large apron; the same tight-fitting bodice, laced in front and showing the white guimpe underneath; bare arms, both in summer and winter; white cap showing in front two bands of parted hair, kept in place by curious cork-screw pins; and heavy wooden shoes. The shoes or *klompen* are not worn in the house, where it is quite proper to go about stocking-foot. By looking at the collection of *klompen* on the doorstep, you can readily guess what members of the family are at home. The boys, too, look pretty much like their fathers. When they are dressed up in their best, with two gold buttons at the collar, and a belt with large silver buttons, they are sure they look very well indeed.

A favorite playground of the children is the beach and along the sand-dunes. A writer in the *Girls' Realm* tells about a sand tournament that he witnessed when visiting Holland. On the eventful day, says the writer, every boy and girl, and man and woman of the village was on the beach. The band was playing, flags were flying and excitement was in the air. A rope had been stretched along the beach, to show just where the sand forts were to be built. The rope was so placed that about an hour after the children were allowed to begin building the tide would reach the sand forts and gradually surround them.

The children were arranged in companies, each with its leader. When the gun sounded they all began to build the finest and strongest forts they could. They piled the sand high, and packed it down hard, and smoothed it, leaving a hollow in the middle as a shelter to stand in when the

waters should roll in. Some of the forts were round and some were square. Some had double walls, and some had protecting angles to break the force of the waves. It was a contest between the forts on the one side, and the strength of the tide on the other. There was a prize for the fort that held out the longest, and a prize for the one that looked the best.

The fort-building went on busily, and all the while there was shouting and laughing, and the mothers and fathers were watching their little ones, and the judges went about watching the progress of the forts. As the water came nearer and nearer an occasional wave swept clear over the heaps of sand. Then shoes and stockings were pulled off and back went the builders to stop up the holes made by the water and to strengthen the weak places.

The firing of a second gun was the signal to stop work. The workers crowded into the fortress, determined to hold the fort until the water should force them out. One company, then another was forced to abandon the fort. At last even the one that had gained the prize by holding out the longest succumbed, and nothing was left but a shapeless heap of sand. In the afternoon the prizes were distributed. There were toys of all sorts,—drums, balls, picture-books, and dolls dressed like the little people, and all things that Dutch children liked as much as you would. The children shouted and showed their prizes, and everybody went home happy.

On the second day of September all the people of Holland have a holiday, because that is Queen Wilhelmina's birthday. This is the way the queen's birthday was celebrated a year or two ago in Edam, the city whence the Edam cheese comes. In the morning there was kite-flying for the boys, with a prize for the kite that flew highest and another for the one that made the best appearance. The boys had made their own kites, and had decorated them with pictures and mottoes. The main sports of the day were, however, held in the afternoon. The boys ran races with their legs in sacks. They raced for potatoes, each one trying to pick up all the potatoes along his track and put them into a bag faster

than any other boy. There were three-legged races, the right leg of one boy tied to the left leg of another. The play that seemed to be the hardest was this: Each boy had a wheelbarrow on which was piled three empty kegs; and along the track were fastened strips of wood. The boys were to wheel the barrows over the strips without shaking off the kegs. Again and again the kegs tumbled off until at last one boy succeeded in reaching the goal, and so won the contest.

The girls, meanwhile, were having games of their own. In one, they walked blindfolded along narrow boards, the trick being to walk the whole length of the board without stepping off. Two girls started together, the one reaching the end first being the winner; she must then walk against the winner of another match, and so on, until one girl became champion of them all. Another amusing contest was carried on similarly. Here the object was to walk backwards across the square, wearing a pair of loosely fitting slippers over the ordinary boots, and not lose the slippers. If the girls tried to walk quickly, the slippers dropped off; if one walked too cautiously the other girls got ahead.

In the evening there was a grand procession, with torches and lanterns. The boys marched in line with their kites, and the prize-winners carried their trophies. The celebration ended with fireworks on the green and a speech from the burgomaster.

The Dutch make a great deal of birthdays. On the birthday of father or mother one of the children recites a poem, which is copied on fancy paper and given to the parents for a keepsake.

Santa Claus is called St. Nicholas in the Netherlands, and he is especially revered as the patron saint of Amsterdam, the largest city. At the feast of St. Nicholas a certain kind of gingerbread is very popular. It is called "tough-tough," (Dutch *taai-taai*). The shops are at their gayest at Christmas time.

The jewelers' shops, with their glistening rings, necklaces, and bracelets, attract much attention, as do the bright, red apples and hot-house grapes in the fruit shops. The flower shops show the roses, that are all the prettier for their rarity at this time of the year, while the toy shops, with their endless variety of dolls, rocking-horses, and boats are a never failing delight to the children.

But all play without any work is no better for the children in Holland than for those of the rest of the world, and the Dutch boys and girls have much to learn. In school they sit in their stocking feet, leaving their wooden shoes in a heap outside the door. Think what a scramble there must be for each to find his own shoes when school is dismissed!

The school benches, walls and floors are, like everything else in the Netherlands, as clean and bright as soap and water can make them. On the walls are small pictures of landscapes and groups of animals to help in making the lessons interesting, and there are also rules and helpful mottoes printed in large letters.

The children are taught to be very polite. When they meet any one on the street, they always say, "Good-evening," or "Good-morning." If they meet two people, they say, "Good-morning to both of you;" if more than two, "Good-morning" to all together.

When the children are at home, they almost always stay in the kitchen, which is the principal room in the house, and is really very attractive, with its pretty tiled walls, and tables, chairs, and dishes as clean as can be. The floor is strewn every day with fresh sand, which is marked out in elaborate patterns, the artist using the handle of a broom. The children are never allowed in the parlor except on grand occasions. This is opened once a week, the floor swept, and everything put in perfect order, and then the shutters are closed again, and the room darkened for another week.

Dutch children are taught to be industrious, the little girls often learning to knit before they are five years old.

Even Wilhelmina, the queen, knit a pair of stockings when she was quite a little girl. She had to study and work just like any other girl. Her teachers always treated her as they would an ordinary pupil, and she was taught to play the piano and to ride horseback by her mother.

Several years ago, when Wilhelmina was a little girl as she was driving with her mother one day, she saw some children throwing snowballs. She wanted to play with them, so her mother stopped the sleigh and let her get out. For some time, she threw snowballs, and the rest had the fun of throwing snowballs at their queen.

When Queen Wilhelmina goes to ride, she is obliged to bow, first on one side, and then on the other, to the crowds that greet her. When she was younger, this used to tire her very much; so when her dolls were naughty, she always made them bow to imaginary crowds as a punishment.

The first salute that was ever given to the American flag by foreigners was fired by the Dutch, and the father and mother of the first little boy ever born in New York, tho of French descent, came to this country from Holland.

If it is desired to interest the children in child life in other lands with the aid of dolls dressed in appropriate costume, the doll for the Dutch costume should have light hair that can be braided in two long braids. The skirt should be of red, of flannel or similar material, reaching about half way between the knee and the ankle. The bodice should be of black, velvet would be prettiest. A cap could be easily made, and by all means let the doll wear an apron. As the Queen of Holland is young the doll might be named for her, Wilhelmina.

Nature Study and Geography.

Nature-Study Notes.

At the convention of the National Educational Association held in Boston in 1893 a committee was appointed to investigate the feasibility of industrial education in schools for rural communities. In its report, recently issued, this committee has given some helpful suggestions with regard to the teaching of nature study, suited both to city and to country schools. The "remarks" given below come from the report, as well as the illustrative lessons on earth and sky, and the study of a brook.

IT should be the object of all nature-study work to put the pupil into touch and sympathy with the natural world in which he lives, and to use the objects and phenomena in this environment as a means of education. Every effort should be made, therefore, to give to the pupil a correct mental and spiritual picture of his surroundings in their entirety rather than to train him merely in certain unrelated objects or parts taken out of his surroundings. Of course, the pupil must be set at specific objects, but this is only because these objects should be studied in their relationships. It is not enough merely to study a leaf or a bird—these are only parts of the life of the neighborhood, and the study of them should lead out to plants and birds and fields. Nature study constantly takes the pupil out from the school-house into the larger school of Nature, and it keeps him in touch with the out-of-doors the whole year round.

The best nature-study lesson is that which has relation to something normal or native to the environment. The kind of tree that grows in the school yard or along the road, the birds that frequent the school yard and adjacent fields, the brook, the hills, the character of the soil, any unusual or striking feature in the neighborhood—all these are proper subjects for nature-study work. Some of these objects can be brought into all the grades. There is such a great variety of subjects in the environment that it is difficult to choose any list that is better than another or that will apply to all parts of the country. The following list comprises subjects that will be found to be useful and teachable. It is not expected that all these subjects be taught in any one year or one grade. Perhaps nine subjects in each grade will be sufficient, one subject continuing for a month. This will allow some degree of thoroughness with the work, but will not keep the subject before the pupils so long as to make them tired of it. It is assumed that not more than one or two periods a week would be devoted to these subjects.

The work in nature study should be simple, definite, accurate, and, above all, have relation to the lives of the children. Nature study should be clearly distinguished from object-les-

son teaching, for object-lesson teaching nearly always takes the object out of the environment, and, therefore, trains only the observation powers. Object-lesson teaching with natural history subjects is not nature study.

The teacher should avoid the giving of mere information and the holding of the old-time kind of recitation. The teacher must remember that the recitation is a re-telling, that is, a reciting; the child tells the teacher what the teacher or book has previously told the child. In fact, the teacher asks what the child remembers. Nature-study teaching should proceed on the principle of questioning the children for the purpose of asking the child what he has found out, or what his own point of view is, or how his work may be improved. Some information must be given for the purpose of starting the pupil off and awakening his interest; but information-teaching with nature subjects is not nature study.

Observation work should always be accurate. It is not to be understood, however, that accuracy means completeness. We are always in danger of giving the children the complete experience of grown-ups rather than the incomplete experience of themselves. It is not necessary, for example, to study the leaf in all its functions and all its structures at one time for the purpose of being able to say that the pupils have completed leaf study. The leaf should be studied because it is a part of the tree and has work to do. So far as possible, all nature study should begin with the functions, at least with the natural relations of the objects to their environment.

It is always desirable to have the pupils feel that the nature study work lies out of doors rather than in doors. The work is brought inside only when it can be better done in the school-house. The excursion, therefore, becomes a very important part of nature-study work. However, the general promiscuous excursion-going may be too indefinite and discursive to be anything more than a recreation; therefore, the excursion should be planned for some definite object. Tell the pupils the general line of inquiry they are to make—to see a maple tree, to watch the fish in the brook, to examine the lichens on the rocks, to discuss the weeds in a fence corner, to watch the cows feeding, to discover the habits of a particular bird. Make the excursion short, definite, and for a purpose.

In nature study in the earlier grades the children should not be conscious that they are studying "science," altho all the work should be scientific in the sense that it is accurate and definite so far as it is possible within the limitations of the child.

There are three main elements in the out-of-doors—earth, and sky, and scenery; the plant population; the animal population. Any good nature study will reveal all of these to the pupil.

In order to study these to the best advantage the pupil should have a laboratory in which the objects and phenomena may be under some control, be near at hand, and in which all the work may be concentered. This laboratory is the school

garden. A considerable part of manual training, as well as nature study, may be associated with the school garden. All the handicraft of the garden is manual training—the making and repairing and cleaning of the tools; the building of tool-boxes or sheds; the making of bird-houses; the construction of fences and paths; making of labels; painting of tools and buildings.

Illustrative Lessons

Earth and Sky.

(For the lower grades.)

Purpose of the Lesson.—To help little folks to be “weather-wise,” and to put them into sympathy with the weather.

The Lesson.—It will be of more value to children in the first and second grades to note the conditions associated with storm and sunshine than to take part in keeping a record of them. The most important result is that they shall get into the habit of noticing the weather and the out-of-door changes resulting from it.

There will be the sunny day. Little children can be led to take an interest in the sunlight and to notice what it means in the out-of-doors. There are many ways of bringing about an interest in the sunshine that will suggest themselves to teachers. One way is to note the things that the sunlight reveals. There are the shadows, and every little child is interested in them. There is his own, sometimes large and sometimes small; sometimes he can find it, and again it is not there; the shadows of the trees and where they fall at different times; the shadows cast by the currant bushes; the shadows

cast by the asters and golden rod; the shadows at different times of the day.

Then the sunny day will bring the reflections in the brook; his own round face; the trees and the water plants; the shadows made by the little water-striders skipping over the surface—the range of this world mirrored there. These he can see, and these things he will care for. Thru them he touches his environment.

Another line of suggestion for lessons on weather may be found in the clouds. There are times during the school days when the sky is blue and the great white clouds are crossing it. Let the children go out into the yard with you for a few minutes and watch them. Let them talk about the clouds; let them notice the small ones and the large ones; let them tell you whether all are of the same color. What happens when one of these great clouds covers the sun? What are the differences in the shadows then? Will the rain come soon?

In these grades the sun-dial and the shadow-stick can be introduced; and if there is manual training in the school, these devices may be made by the pupils.

It will be a good thing to teach the children to enjoy a gray day. A few minutes in the school yard under a gray sky will lay the foundation for this. What does the long gray day foretell? And the autumn skies with their wonderful cloud effects? Can you not spare a little time from the routine of school work to stand beneath them and to encourage the little folks to see them?

Children often hear the expression, “It is going to rain,” or “It is going to snow.” On such days have a little outdoor experience with the weather. How does the air feel? Is the wind blowing? Which way do you turn to feel the wind in your face?

The children will soon come to name the kinds of days—hot days, cool days, bright sunny days, dull sunny days, bright gray days, dark days, gusty days, rainy days.

A School Garden at Attleboro, Mass.

Study of a Brook.

(For the upper grades.)

Purpose of the Lesson.—To lead the pupil to make definite, accurate observations on some natural feature in his region; that he may lay the foundation for acquiring an intelligent interest in his environment. A brook is here suggested for this series of lessons, but other topics may be as valuable, as a hill, a mountain, some fine country road, a swamp, or other strong natural feature.

The Lesson.—There are many ways in which the lesson on a brook may be handled successfully for pupils in the fifth grade. As one means of keeping up an active and continued interest, the following may be suggested: Start a brook book for the work of the year. Have the pupils feel that in this book there will be kept a record of the brook as they come to know it in 1905-1906. The book will be a part of the school property. Each succeeding class will be asked to keep a similar record, so that changes may be observed, and in time an interesting history of this outdoor playfellow may be compiled. The pupils should feel the importance of accuracy in all their observations, for history is valueless if inaccurate.

As to the kind of book used, each teacher will have some original plan. It may be well for the children to make it of manila paper in scrap-book form, in which their compositions and observations from time to time may be pasted. Toward the end of the year, perhaps on Arbor Day, some of the best facts may be compiled and read before the school during one of the public exercises. Have a list kept of the number of good observations made by each pupil, and, at the end of the year, find out who has been the most active and patient in his outdoor study.

The study of the brook will furnish a motive for the making of a school museum. This museum should become a regular part of the property of the school as much as books and pictures are. A cupboard can be used for the museum, and the smaller items of the collections may be kept in boxes. If no cupboard is available, shelves may be placed in the corners of the rooms.

Following are suggestions for the preparation of the history of the brook:

1. If the brook is large, let the territory be marked that the pupils think it will be possible to study. Then have the pupils describe the area that is chosen, in order to get a mental picture of it in its entirety.

2. Exact measurements should be made and recorded. Large numbers in the field cannot do successful work. It may be well to divide the class into sections for mak-

ing the measurements. If ten boys were sent out on Monday and ten girls on Tuesday, a comparison of the measurements may lead to interesting discussions as to accuracy, etc.

3. Let a list be made of every tree, bush, and plant along the margin, and of every water plant in the brook. If the children do not know the names of the plants, they can describe them briefly. They will soon want to know the names, and there will be some way to find out. The important thing is that the children know the plants themselves.

4. There should be also a list of the animal life found in the brook—the fishes, the water insects, etc.; also the animal life living along its banks—salamanders, perhaps, or muskrats, or the evidences of these animals.

5. The pupils in this grade should make a map of the brook, locating anything of importance along the bank; the place where the plane-tree stands; the place where the stranger may seek the pussy-willow, and the place where little patches of watercresses grow.

6. What farms or homes lie along the brook? A few words of interest regarding the homes will be of value in the history of the brook-side.

7. Whenever a new point of interest is observed by one of the pupils, let him write it on a slip of paper with his name and drop it into a box on the teacher's desk. At the end of the month the best observations can be selected for the brook book. A new plant, a fallen tree, a stone moved by the ice, a bird that stopped for a drink, will be subjects for notes.

8. An effort should be made to discover what this brook means to its adjacent country. How large a country does it drain? Does it dry up in summer? What is its source? Its mouth? Has it tributaries? Does it drain merely the surface water or is it fed by springs? Is it quickly affected by rains? Does it furnish any water-power, and what for? Used for irrigation? For watering stock?

9. Suggestions should be left for future observations by the class in 1906-7. Compare the plant life with that of the previous year. What new plants have entered? What old plants have disappeared? What difference in the animal life, what changes in the homes along the banks? etc. Correct and complete the map from year to year.

Studies of North America. IV.

A Series of Lesson Outlines by Adelaide R. Pender, Connecticut

(To be used with any geography.)

Waters of North America.

THE pupils' preparation for the study of the lakes of North America consists in writing a short description of a lake or reservoir in their own town, using such topics as: How formed, source, outlet, location, size, altitude, air, soil, history, vegetation, animals, uses to people in the town.

Have a sketch of this lake made, if the children think they are familiar with its general features. As the questions are asked, the children may read from their notes, and a few of the descriptions should be heard entire. At the close of the talk more of the descriptions may be presented.

To the pupils.—How were the lakes in your town formed? Mention two or three, and let us consider their formation. Why did they form just where they did? Turn to your relief map of the United States, find several lakes and give your reason for their location. Let us turn to the supplement in the geography, and find a list of the lakes in North America, with their size. Let us compare the lakes in our town with those in North America, in the United States, as to size, uses, and so forth. How large is an acre? How many acres do you think the largest lake in your town covers? Try to find out the size of one or two lakes in your town if possible.

How many different kinds of lakes are there? Let us find on our maps all the salt lakes of which we have ever heard, and decide why they happen to be salt. Our knowledge of surface will help us here. What large salt lake in our own country? What does your text tell you about Great Salt lake?

How was the reservoir in your town made? When? What is its capacity? Why does a reservoir have to be higher than the town?

To the teacher.—Here is your opportunity to develop the science side of reservoirs. This is considered one of the most interesting topics in science lessons, because of its practical application to every day needs.

Lake Pictures.

There are several lake pictures in Frye whose details should be studied and compared with well-known lakes near home. Champlain, page 88; lake in the Rocky Mountains, page 17; lake in White Mountains, page 89; Lake Superior, with cliffs, page 106; Lake Winnepesaukee, page 16, in the supplement.

One of the happier methods of appreciating the lake pictures in the geography is to read a lake poem in connection with the study. Or repeat that famous and fascinating passage from Scott's "Lady of the Lake," First Canto:

And now to issue from the glen,
No pathway meets the wanderer's ken,
Unless he climb with footing nice,
A far-projecting precipice,

The broom's tough roots his ladder made,
The hazel sapplings lent their aid;
And thus an airy point he won,
Where, gleaming with the setting sun,
One burnished sheet of living gold,
Loch Katrine lay beneath him rolled,
In all her length far-winding lay,
With promontory, creek, and bay,
And islands, that empurpled bright,
Floated amid the livelier light,
And mountains that like giants stand
To sentinel enchanted land
High on the south, huge Benvenue
Down to the lake in masses threw
Crag, knolls and mounds, confusedly hurled,
The fragments of an earlier world;
A wildering forest feathered o'er
His ruined sides and summit hoar,
While on the north, thru middle air,
Ben-an heaved high his forehead bare.

The child who has learned that canto will never fail to see beauty, and enter into the spirit of Scott's huntsman, either when looking at a lake picture or the real thing.

Word Pictures From Notes.

Carpenter gives us a journey to the Great Lakes in his "Geographical Reader." The following notes help suggest the series of graphic pictures.

Duluth, built how?—granite, terraces, elevators at Superior City, vessels on lake, whale-back, steamboats, ships, sailboats, steamers, barges, frozen five months of the year, minerals, ore docks, freight by canals, to Gulf of Mexico, by Erie to Hudson and Atlantic, drops of canal, Soo canal, two around falls, locks in Welland canal, Niagara falls and river.

As the children read this description have them make rough drafts of the outlet of the Great Lakes, to the St. Lawrence; this will help them see the picture better.

Topics.—Lakes: Formed—source—outlet—size, altitude—soil—history—vegetation—animals—uses—compare—pictures memorized—literature connected with lakes—drawings made—current events.

Special Study of Springs.

Develop this topic by questions like the following: What two things happen when rain falls? (Runs off the ground or sinks into the soil). Describe a rainstorm, and what happened to the rain in our own school yard. What is a watershed? Are there any in this town? Do you know of any springs in the country? How were they formed? (Develop the scientific principle of springs). How many kinds of springs are there with respect to temperature of the water? Point, on the map of the United States, to some celebrated hot springs. Point to any others. How are artesian wells made?

Literature on rain includes "Summer Rain," by Beecher; "Rainbow," by Wordsworth; "Rainy Day," Longfellow; "Before the Rain," by Aldrich. There are splendid descriptions of rain storms in "Mill on The Floss," by Eliot, "Undine," by Fouque, and many, many others, including Barnaby Rudge, by Dickens.

Celebrated springs might be cited both in history, and romance. We have a vivid picture of the little spring fountain in "Paul and Virginia;" the fountain cell, in Scott's "Marmion,"

A little fountain cell
Where water clear as diamond
In a stone basin fell.

The springs found on the present site of New York by the old Dutch settlers are others. There are hosts of references to springs, and each teacher can make her own list from her own reading. Read portions of Hawthorne's "Rill from a Town Pump," the "Vision of the Fountain," by the same author, and one stanza in Browning's "Up in a Villa," where he describes the fountain on the square.

A little spring had lost its way along the grass and fern,
A passing stranger scooped a well, where weary man
might turn;

He walled it in and hung with care a ladle at the brink;
He thought not of the deed he did, but judged that toil
might drink.

He passed again, and Lo! the well by summers never
dried,

Had cooled ten thousand parching tongues, and saved a
life beside.

Topics. Formation—kinds—historical springs; stories about—poems about springs, and rain—science of springs (gravitation, evaporation, pressure in springs, siphons, vegetation and animal life about springs—springs in your own town.

Waves and Tides.

To the Pupils.—How many of you ever saw the sea? How far is it from your home to the sea? Waters of North America? How did the waves look the day you saw them? Was there much breeze? Did you ever see the sea in a gale? Describe the way it looked.

To the Teacher.—Have the pupils think of words they have heard or read that describe the sea. Let them turn to poems on the sea in their readers, and select phrases or words which may be used in picturesque descriptions of the sea. Such words might include:

A wrinkled sea, dimpled waves, broad billows, sad and restless sea, wintry sea wails and shrieks, the ripples break with a soft sound on the beach, the billows are lashed with foam, the waves curl up and break, feathery spray; blue, fresh, free sea; gentle murmur of the waves; furrowed sea; deep, glassy brine; low, beating surge, waves lick and lap the shore, crested waves.

Many others will be found. This exercise will broaden the vocabulary of the pupils. Let them turn to any pictures of the sea in their geographies and describe the waves, using the phrases they have found.

Have the pupils describe their visit to the shore, using the phrases to vivify their descriptions.

Talk about the height of waves, the influence of wind on waves, describe swell, breakers, crest, trough, shore. Develop the reason for tides, and their uses to man.

Have the pupils think of the various forms of sea life which they saw while at the shore, and ask that a complete list be kept during the next vacation.

Have sea poems read, a number of which may be found in Lovejoy's "Poetry of the Seasons," published by Silver, Burdett and Company. Talk about shipwreck and famous stories of shipwrecked people. Touch on famous sea myths of the Grecians, such as Neptune, the Tritons, the Harpies, and so on.

Develop all the uses of the sea.

Topics.—Names of oceans, locate largest, smallest, color of ocean, vegetation, minerals, animals, uses, forms of indentations, and projections, shore life that you have seen, words to describe, poems, stories, pictures, myths, uses.

Lake Chargoggagoggmanchauggagoggagungamaugg.

No more the Indian's bark canoe skims lightly on its placid breast;

No more his camp-fire's ruddy hue lights up each wavelet's tiny crest;

No more is heard his whoop and call; no more the yelping of his dog

Sounds shrilly o'er Chargoggagoggmanchauggagoggagungamaugg.

The dudelet and the summer flirt, the small boy splashing near the shore,

The ice man in his flannel shirt are here—the Indian nevermore;

Tho' thoughts of him still haunt the spot and memory receives a jog

Each time we say Chargoggagoggmanchauggagoggagungamaugg.

Poor Lo has gone. 'Twas vain the strife, for never could a race endure

And struggle in its daily life with any such nomenclature As Umsaksis, Chinquassabamtook, Apmonjemgamook and Umbagog,

Capsuptac and Chargoggagoggmanchauggagoggagungamaugg.

Had he but used a curter speech and spent his wits inventing things,

He might be running factories and sitting down to dine with kings.

Far easier it seems to make a tumbler lock or patent cog Than name a lake Chargoggagoggmanchauggagoggagungamaugg.

—JUST JOHN in *The Corbin*, New Britain, Conn.

Arithmetic Department.

Right and Wrong Teaching.

By JOHN E. WILLIAMS, Pennsylvania.

ARITHMETIC has been considered one of most important subject taught in the schools. It is evidently still considered by many to be a subject of first importance. At any rate, it has always held and now holds, a very important place in the common school curriculum. The child begins the study of formal arithmetic the first day he enters school and continues to study it till the high school is reached, as many days in each year as he attends school. And as oral arithmetic and written arithmetic are usually studied in different text-books, it is not at all unusual for the child to have two recitations a day, one in mental and the other in written arithmetic, during the greater part of the time he attends school.

Parents as a rule, are anxious that their children shall make progress in arithmetic, if in nothing else, and measure their children's educational advancement largely by this standard. The teachers, knowing of how much importance arithmetic is thought to be, and how desirous parents and the public are to have the children acquire arithmetical knowledge, put forth their best efforts to teach as much of the subject as possible in order to win public approval and to satisfy their own consciences that they have taught thoroughly that which is of the greatest value to the pupils. It is safe to say that one-third of all the time devoted to study by the children of this country during their first eight years in school is spent on arithmetic, and one-third of all the millions of dollars expended for education is used to teach this subject.

In view of the facts mentioned, if good results are attained at all in our schools, they certainly should be seen as results of the study of arith-

metic. It is fair to say that the pupils who complete our common school course of study should acquire rapidity and accuracy in the fundamental operations as applied to business, and the ability to solve the single practical problems of every-day life. But can they do this? I assert that they cannot, and I believe that all who have had opportunity to test the matter will bear me out in making this statement. The problems that are solved every day, on the farm, in the shop, mill, store and factory, oftentimes by men who have had no educational advantages, are those that the boys and girls that are about to enter our high schools cannot solve readily and satisfactorily.

There is a fearful waste of time, energy, and money in attempting to teach this subject. There is something radically wrong somewhere in our methods, and it behooves us to find out what it is.

The first fault, I believe, is that children begin the study of arithmetic too young, and at a period of their school life when they have much else to learn of more value and interest to them. There is no reason at all why children should

A picture by the famous Pilgrim painter, George H. Boughton, who died recently.

begin formal number work at five or six years of age, and there are at least three good reasons why they should not: "They are not ready for it. They have no use for it. They are harmed by it." It had been demonstrated by every observing parent and teacher that children at the age of five or six do not readily take to

number work. Colonel Parker says: "The great majority of children at five years of age do not know three." The object method of teaching numbers as outlined by Grube, and which is essentially that followed in the American schools, is evidence in itself that children at that age learn numbers with great difficulty.

The first years of a child's life are spent at home in receiving object lessons. He gets ideas of objects thru his own activities, by observa-

tion and investigation, and learns oral symbols for them (spoken words) from members of the household and playmates. He relates this ideas by the natural operations of his mind and gets thought for which he learns oral expressions from others.

How is it with number? During this time, while he has been getting ideas of objects naturally and rapidly and learning words to express them, he has acquired ideas of number of objects. In his development the number instinct or power has not manifested itself with force. It would, however, in due time begin to develop naturally, and then with surprising rapidity he would acquire ideas of number and objects and the spoken words to express them, in much the same manner as he got ideas of objects and spoken words to express them, at an earlier period of his development. Then and not till then, should any attempt be made to teach him number as now generally taught to children. There should be a natural development of number power and number ideas upon which to base formal number work in school. To begin without this basis is unpsychological, unpedagogical, and unreasonable, but precisely what is done by beginning number work at the time and in the manner prescribed in our courses of study for common schools.

If formal number work were deferred altogether until the third or fourth year of school, our pupils at the end of the fifth year would know as many facts of arithmetic and would have greater mathematical power than they now acquire by taking the regular allotment of work from the beginning, and the time thus saved would be just what is sorely needed to enable the primary teachers properly to teach reading, spelling, language, and nature study, subjects for which the children are ready, for which they have use, and by the study of which they cannot be harmed. There is need everywhere for more frequent recitations in reading in the primary grades, and if number work were out of the way the children would get more of what they need and less of what they do not need.

No fact of pedagogy has been more satisfactorily established and more widely accepted

than that the fundamental operations of arithmetic should be taught together. It is impossible for the mind to know the number twelve as the sum of two numbers without also knowing that twelve less one of the numbers equals the other; or to know that twelve is the sum of the four threes without also knowing that four times three is twelve and twelve divided by three is four. Practically, all text-books and manuals on primary arithmetic provide that numbers from one to twenty be taught this way. But the fundamental operations should be taught together, not only from one to twenty, but thruout the whole subject of arithmetic.

The teaching of the fundamental operations together should continue thru all the grades without a break. Fractions, decimals, denominate numbers, proportion, percentage, measurements, involution,—can be begun in the primary grades without any difficulty and will furnish material and exercise for the natural development of the child's mental powers.

Work in arithmetic cannot be graded by arranging the different subjects in any successive order, but by exercises of gradually increasing difficulty in the different subjects. The teaching fraternity is hearing and reading and talking about "Modern Education" and "Correlation." Why not have books on arithmetic in accordance with the principles of modern education in which there is at least some attempt at correlation of subjects?

Oral and written arithmetic should not be taught from two different books. The oral and written work should be together in the same book, prepared and arranged by the same author, so that each day's lesson shall contain both oral and written exercises in the proper relation and proportion.

The greater share of time should be given to the oral work, in which the explanations, definitions, rules, and principles are taught. The written work should follow, consisting of exercises of the same character, in which the operations are too numerous or the numbers too large to admit of solution without the use of a pencil.

Some very practical portions of arithmetic are very impractically presented in the books. The rules given for papering, plastering, carpeting, measuring wood and lumber, etc., are frequently such as men engaged in these occupations would scorn to use, and directions and instructions for doing the work are omitted altogether. Answers to problems should not be given in the books, for children, as a rule

when they have access to answers, begin with the answers to solve the problems, and by manipulating figures succeed admirably in getting the given answers, whether they be right or wrong.

There are defects in teaching which are quite general, the worst of which, I believe, to be a neglect to observe the educational maxim, "Never do for a child what he can be led to do for himself." If a child cannot be led to solve the problems of a lesson, that lesson should not be given to him. It is, however, a very common error of teachers to assign work in arithmetic which is far beyond the power of the pupils to perform. As a result, the pupils are compelled to rely upon others to do their tasks for them. They lose interest in their work, come to believe they never can do anything for themselves, and give up trying.

Until pupils have reached an advanced grade they should not be required or permitted to take their arithmetics home for study, where they may and do frequently get injudicious assistance. The training of a child's thinking faculty is too delicate a matter to be left to bunglers and novices. It should be attempted only by competent teachers. Pupils while trying to solve problems in arithmetic should receive no assistance except from those skilled in the art of teaching, that nothing may be done for them that they can and ought to do for themselves. The school-room, under the direct supervision and guidance of the teacher, is the only proper place for pupils to study arithmetic.

The teachers frequently use objects to excess in teaching the idea of number to beginners, yet they more frequently neglect to use objects for making arithmetic concrete. Arithmetic cannot be taught in the school-room, cut off from all practical applications. It must be brought into touch with the outside business and material world.

Katydid.

Words and Music by THOS. B. WEAVER, Prospect, O.

1. In Oc - to - ber's love - ly ma - ples, Dress'd in gowns of green,

Hide the queer - est lit - tle crea - tures An - y one has seen;

All the day they on - ly whis - per, Les - sons none have they,

But a se - cret they are keep - ing, And at night, they say:—

Girls—Sop.

Ka - ty did, Ka - ty didn't, Ka - ty did, Ka - ty didn't, Ka - ty

Boys—Alto.

did - n't, Ka - ty did - n't, Ka - ty did - n't, Ka - ty did - n't, Ka - ty
did, Ka - ty did, Ka - ty did, Ka - ty did, Ka - ty

Accentuate to fine with crescendo.

did, did - n't, did, did - n't, did, did - n't, did, did - n't,

did - n't, did - n't, did - n't, did - n't, did - n't, did - n't, did - n't, did - n't,
did, did, did, did, did, did, did, did,

Oh! we know that Ka - ty did - n't; What you say is not true.
Oh! we know that Ka - ty did; What I say is true.

Katydid.

Stanzas 2 and 3 of Mr. Weaver's Song, on opposite page

No one knows their precious secret,
We can only guess;
Katie may have been a fairy
Everyone to bless;
Or some rugged little urchin
In an alley drear;
But if you should ask them kindly,
This is all you hear:
"Katydid."

Katy may have been a pupil
In some far off school,
May have disobeyed her teacher,
Broken some good rule;
Or she may have won first honor,
Perfect ev'ry way,
If you ask them, "Who was Katy?"
This is all they say:
"Katydid."

On Being Ten.

I'm very nearly grown, you see,
Next birthday I'll be ten,
And I suppose that life will be
Oh, very different then!
Tho being nine is very nice,
And you do pleasant things,
I think at ten there will be twice
As many happenings!

I know a girl who's ten, and I
Have often heard her say
She does not have to ask, but goes
Just where she likes to play.
And when you're ten I think that you
May sometimes sit up late.
At nine, no matter what you do,
You go to bed by eight!

I think you give your toys away,
You feel so nearly grown;
You're very quiet at your play,
You go downtown alone.

There's lots of things you do, I s'pose,
That I don't even know.
Oh dear, when anybody grows
It is so very slow!

But wouldn't it be very strange
When I was truly ten,
If I should think I'd like to change
To nine years old again!
Of course it always seems to me
To be ten would be fine!
But do you think I'll ever be
Just homesick to be nine?

—Youth's Companion.

George's Clothes.

"Come here to mamma, and I'll tell you,
dear boy,
For I think you never have guessed
How many poor animals we must employ
Before little George can be dressed.
"The pretty sheep gives the wool from his
sides
To make you a jacket to use;
The calf or the goat must be stripped of
its hide
To give you these nice little shoes.
"And then the shy beaver contributes his
share,
With the rabbit to give you a hat,
For this must be made of their delicate
hair;
And so you must thank them for that.

"All these I have mentioned, and many
more, too,
Each willingly gives us a share;
One sends us a hat, another a shoe,
That we may have plenty to wear.

"Then as the poor creatures thus suffer
to give
So much for the comfort of man,
I think 'tis but right as long as they live,
We should treat them as well as we
can."

—FROM *Normal Third Reader*The Rhymes of the Birthday
Stones.

JANUARY.

By those who in this month are born
No gems save garnets should be worn:
They will ensure you constancy,
True friendship and fidelity.

FEBRUARY.

The February born will find
Sincerity and peace of mind—
Freedom from passion and from care,
If they the Amethyst will wear.

MARCH.

Who on this world of ours their eyes
In March first open shall be wise,
In days of peril firm and brave,
And wear a Bloodstone to their grave.

APRIL.

Those who in April date their years,
Diamonds should wear, lest bitter tears
For vain repentance flow. This stone
Emblem of innocence is known.

MAY.

Who first beholds the light of day
In spring's sweet flowery month of May
And wears an Emerald all her life
Shall be a loved and happy wife.

JUNE.

Who comes with summer to this earth
And owes to June her day of birth,
With ring of Agate on her hand.
Can health, wealth, and peace command.

JULY.

The glowing Ruby should adorn
Those who in warm July are born;
Thus will they be exempt and free
From love's doubts and anxiety.

AUGUST.

Wear a Sardonyx, or for thee
No conjugal felicity;
The August born without this stone,
'Tis said, must live unloved alone.

SEPTEMBER.

A maiden born when autumn's leaves
Are rustling in September's breeze,
A Sapphire on her brow should bind;
'Twill cure diseases of the mind.

OCTOBER.

October's child is born for woe,
And life's vicissitudes must know;
But lay an Opal on her breast
And hope will lull the woes to rest.

NOVEMBER.

Who first comes to this world below
With dull November's fog and snow,
Should prize the Topaz' amber hue;
Emblem of friends and lovers true.

DECEMBER.

If cold December gave you birth,
The month of snow and ice and mirth,
Place on your hand a Turquoise blue—
Success will bless you if you do.

A Ticklish Situation.

Games for School and Playground.

The games described in the series of which the first instalment is given in the present number were arranged for use in the schools of New York city. They are, accordingly, suited to the school-room, or to small playgrounds as well as large. Many of the games are old and many are new. All have been tried and are enjoyed by pupils.

Tip-up.

The center player of a circle of players tosses a ball high up in the air, the other players striving to catch it as it comes down. The player who succeeds in catching the ball, tosses it up in turn.

The ball can be tossed with either hand or both, or can be struck from below after a rebound. Players are at liberty to leave their places to catch the ball, but must re-form the circle after each catch.

Toss-up, Toss-Over.

The center player of a circle of players tosses a ball up in the air saying, "toss-up." The outside players, marching around the circle, must cry out "toss-over," before the center player recatches the ball, whereupon the center player must toss the ball to the outer player. Should the outer player fail to cry "toss-over" in time before the ball is regrasped by the center player, he exchanges places with the next player in order. Should the center player fail to catch the ball, any player alert enough to secure the same may serve as center player.

Ball Tossing Games.

1. Form a circle in front (pupils facing the center player) double arm's length distance between pupils. Odd pupils (and even pupils alternately) toss a ball to each other sideward, left or right, and over the heads of the even pupils, the center player endeavoring to get the ball in case of a miss, and exchanging places with the pupil who missed the ball.

2. Form a circle in flank (pupils behind each other, left or right flank toward the center) arm's length between pupils. Toss the ball overhead, bending backward, toward the next pupil or to odd or even pupils, the center player exchanging places upon securing the ball.

3. Form a circle in front in close order, with four openings large enough to permit escape of the center player. The center player tosses the ball to whomsoever he likes, such pupils in turn tossing ball back to the center player, who must catch it and escape with it thru one of the openings, the player who threw the ball endeavoring to catch him before he can succeed. Places are exchanged when the center player has been caught.

4. The center player of a circle tosses a ball to his playmates a number of times agreed upon, four, six or eight times. Upon the last return toss, the players scatter, the center player endeavoring to hit some one of them before they can get too far away from him. The player who was hit exchanges places with the center player.

5. The players of a circle toss the ball upward and toward the center of the circle, the center player endeavoring to catch it in his cap. Upon missing, places are exchanged with the player who tossed the ball.

French Blind Man's Buff.

A pupil furnished with a wand and blindfolded stands in the center of a circle of players. The players dance and hop around him, until he signals them to stop by tapping the floor with his wand. He points his wand at the players and asks a question to be answered by the pupil pointed out, in a disguised voice. Should the blindfolded player recognize the voice he is relieved by the owner thereof.

Buzz.

The players are resting from some lively game and seated in a circle or around the room. One person begins by saying one, the next two, the counting continuing around the circle; but whenever the number 7 is reached or any multiple of 7, as 14, 21, or any number having a 7 in it, as 17 or 27, the number must not be given, but in its place the person says buzz, and the following number is given by the next player. On the failure of any one to say "buzz" at the proper time he is dropped from the circle. Thus the game proceeds, usually commencing with one again, each time a person misses until but

one player is left to score the victory. Some action or movement of the hands may be substituted for the word "buzz."

The Blind Cow. (For Girls.)

A circle is formed within which the blind cow is blindfolded. The players circle to the right, till the blind cow claps her hands when they remain standing where they are. The blind cow now walks forward and touches some one. (Those in the circle must not try to avoid her in any way.) The one touched says, "peep" and the blind cow must say who it is. If she guesses wrong the players circle to the right again. If she guesses right the one touched becomes the blind cow and the previous one returns to the circle.

Bag in the Ring.

A number of circles about fifteen inches in diameter are drawn on the floor in a row, at a distance of about 2 or 3 feet apart. At a distance varying with the skill of the players a line is drawn, the players stand along this line and opposite each circle. Each is supplied with a given number of bean bags which are thrown into the circle.

Wall Ball.

1. The game is played at the side of a high unbroken wall. The players stand in line. The first one throws the ball three times, catching it as it rebounds. The next one does the same, and so on until all have played. Then the first begins by throwing it six times. Each time the number is doubled until some number agreed upon is reached, which constitutes the game.

2. The first player throws the ball, while the second, standing behind her, catches it and throws it against the wall for the first one to catch. Otherwise this is like number one.

Preliminary Ball.

The players stand in two lines facing each other. The players of one line hold the balls. At a signal each throws his ball to the player opposite him in the other line. The following order is a good one:

Throwing three times with right hand and catching with both.

Throwing three times with left hand and catching with both.

Throwing three times with right hand and catching with right.

Throwing three times with left hand and catching with left.

Throwing three times with right hand and catching with left.

Throwing three times with t hand and catching with right.

If a suitable wall space is to be had the players may next throw the balls against the wall and catch them, using the order of the table above. If the balls are elastic, they may also bounce them on the floor and catch them in the same order.

String Ball.

The ball is hung from a piece of gymnastic apparatus, or, if out of doors, from the limb of a tree. The players stand about in a circle. One player starts the game by striking the ball with the hand; the others try to catch it before he can hit it again. If they do not catch the ball he scores one, and continues until the ball is caught, scoring one each time he strikes it.

Bean Bags Over the Head.

One player is chosen to throw the bean bag. He stands in front of the other players with his back to them, takes the bean bag and tosses it over his head with both hands. Each player tries to catch it. The one who is successful next throws the bag.

Bean Bags in a Circle.

The players form a circle, standing several feet apart. The bean bags are distributed at equal distances. Each player who holds a bag turns and tosses it to his next neighbor to the right, and instantly faces his neighbor to the left, ready to receive the next bag. All the bags should be in motion at once. If desired, a forfeit may be required of the one who fails to catch a bag, or he may drop out of the circle. Balls may be used in place of bean bags, and the game made more difficult by having them of various sizes.

Ball Hunt.

If there are six players, those of each side form a triangle, the player at the apex of the triangle on one side standing with his back to the one at the apex of the opponents' triangle. At a signal given by the referee one of those at the base of each triangle throws the ball to the one at the apex, and he to the remaining player. It is then returned in reverse order to the one from whom it is started. As soon as it is received by the leader the players of that side clap hands. The side which has returned the ball first scores a point. If the ball is dropped it is picked up and the throwing begins in turn from the one who dropped it. Any number of points may be agreed upon for a game. When the players exceed six in number they are arranged in two lines, the players of one side alternating with those of the other, so that No. 1 on B's side throws to No. 2 on the opposite line, and he returns the ball to No. 3 of B's line. No. 1 A throws to No. 2 in B's line. The balls thus constantly cross. A signal being given No. 1 A and No. 1 B commence throwing the balls. When the balls have reached the end of the line they are returned in reverse order, and the leader who first receives the ball scores one for his side.

Design for paper cutting or brush work. For description see Mrs. Linehan's article on drawing and constructive work, page 222.

Among Ourselves

The Editor's Round Table

A teacher who reads this magazine faithfully from cover to cover is not likely to become a routinist and to grow narrow. The most serious danger that can befall a teacher is close specialization. It is like trying to keep warm at a single little candle. The pupils of such a teacher are to be pitied, too. But they have a broadening life before them, and so the danger to them is not so great. The primary teacher who cares for nothing but primary material, the grammar school teacher who wants everything cut and dried for her special work are in a like deplorable state of mind. Aside from starving their souls, they sin against the school. For the school is an organism, one division fitting closely to and into all that precedes and follows it. The kindergartner who does not inform herself concerning the school in which her charges are to continue their life is as neglectful of her full duty as is a pastor who cares only to have attentive listeners for his Sunday sermon. The grammar school teacher is as much in need of an understanding of the primary school's work as is the primary teacher. Keep the eye on the school as a whole.

Knowledge of pedagogy does not necessarily make good teachers, any more than the study of theology makes good preachers. But that is no argument against the serious, systematic, and persistent study of education.

It is more important to cultivate virtuous habits than to break up vicious ones. Take pride in building rather than breaking.

Don't look at the ceiling for a lost marble.

There is a vast difference between making things pleasant and making them interesting for the pupil.

This republic of ours is built upon faith in individuals to govern themselves. Have you such faith? Are your pupils receiving training in self-government?

The best fortification of the soul against corrupting influences is abiding and sufficient noble interests.

On page 255 of this magazine there is reprinted from the *Outlook* a charming story translated from the Danish by Jacob Riis, "The most useful citizen of New York," as President Roosevelt has called him. Often we are prone to wonder how a certain strand happens to be where it is, why certain elements and experiences in our lives should need to be as they are. The strands we find in our web are all of some

practical use if we only get at the way of making the best of them. At any rate let us be careful not to injure even that which appears of small value. The story is especially rich in meaning for the teacher, but the children in the last years of the elementary school will get much from it.

Play while you may. There is freedom, there is health, there is joy in play. Educators have begun to understand something of the value of games. In several school systems, notably New York city, children are systematically taught how to play games. There is more practical philosophy in playing games than most people can see. When one begins to find no more pleasure in games then let him look well to his heart. It may be withering. Play with your pupils and keep young. Look to page 242 for suggestions.

There is a song in this number, on page 240, with other stanzas on page 241, which children of all ages will hugely enjoy. It is one of Supt. Weaver's best, and he has written many excellent ones, as the older subscribers well know. If you have both girls and boys in your room you will get the fullest measure of fun out of the "Katydid" song. The girls will insist and reiterate that Katy did, and the boys will declare and protest, an octave lower, that she didn't. Try it! The young ladies and gentlemen of the high school, who have kept alive a merry heart, will like it, too.

The stories of "Robbie" are as full of humor as anything I have read for a long time. Miss Grant—by the way, it is Alma and not M. A. Grant, as the printer insists on making it—knows how to get a good time out of teaching. She is wise. It is a rare art to derive genuine pleasure from one's daily round of work.

The "Thoughts for Teachers" are for you personally and for no one else. It is my wish, as I lay aside for you some of the good things I pick up here and there in my reading, that you may find among them some restful or inspiring thought worth valuing and loving for its own sake. Will you not send me some thoughts that helped you? Pass on whatever good things come your way.

The talks by Randall N. Saunders on school management continue to be solidly helpful. Every paragraph is weighted with practical school-room experience. The readers of *TEACHERS MAGAZINE* will be glad to hear that Mr. Saunders has been nominated for school

commissioner in his county. In the Christmas number I hope to be able to tell you that he has been elected by a rousing majority. He is ever loyal to the best interests of the children and teachers in the schools.

Mrs. Kraus-Boelte is a wonderful woman, whose labors in the cause of education have been and continue to be a power for good. It is largely due to her sane interpretation of Froebel's ideas that the kindergarten in this country has thus far escaped perversion by the symbolization mania. Her influence is a wholesome one. Many young women who have been permitted to call her their teacher and guide in the education of little children have been strengthened and made better by it, and in their work she will live when once she is called home to the eternal kindergarten. Mrs. Kraus-Boelte is well along in years, tho one who does not know would never believe it, so youthful she is in heart, in enthusiasm, and in educational interest. She is a very active worker, too. In fact there are few women so busy as she. Aside from conducting her training classes and lectures she keeps a watchful eye out for everything that gives promise of better things in education. No subscriber reads *The School Journal* more

carefully, no one is more eager to learn of significant phases of progress. Nor does she narrow her inquiries to matters that concern the kindergarten only. She is interested in all education. The continuousness and earnestness of this interest is refreshing. With it all she is modest and unassuming. To me her whole personality is an inspiration, and I hold her friendship very dear. It is with no small degree of pleasure, therefore, that I present to the readers of *TEACHERS MAGAZINE* the portrait of Mrs. Kraus-Boelte, which was taken only very recently. It does not bring out all the sweetness and strength of character revealed in her face, but it does show something of it.

At the bottom of the undeniably persistent attacks upon the elementary school program is a deep-seated feeling of dissatisfaction with the results produced. Where a narrow spirit has kept the light out and left only the dry bones of a mechanical "three R's" course it is natural that parents should find fault with the schools. But opposition is just as likely to arise in places where the course of study includes everything that the heart might desire. One thing ought to be fully understood by this time, and that is that neither the scope nor the value of the curriculum can be judged by the number of subjects it includes. Some excellent teachers make "reading" cover almost everything that in elaborate programs appears under the separate heads of geography, nature study, literature, history, and civil government. On the other hand, some very poor teachers have reduced to a dead mechanism the various subjects which were intended to give children a living contact with nature. A school must not be judged by its program. A very poor dinner may look very well on the bill of fare. The results tell the true story.

Lincoln's Gettysburg speech is one of the real treasures of our patriotic literature. In nobility of sentiment, beauty of diction, and power of stirring the hearts of men it ranks with the world's great orations. No words that have come from human lips have done so much to spread abroad thru the land a feeling of the oneness of our nation in spirit and hopes and to arouse American hearts to loyalty in the preservation of the Union. Particularism and sectionalism dwindle to a sorry appearance when compared with the ideal set up by Lincoln.

All honor to the men who agreed to reproduce the speech in bronze and place the tablet in a school building, as was recently done at Arlington, N. J., in the town of Kearny. This makes a practical step in a well-organized movement to place bronze reproductions of the Gettysburg speech in common schools thruout the country. Just how the movement began I do not know, but I rather think that Mr. Alfred King, an enthusiastic veteran, got it under way. At any rate, it originated among the survivors of the earlier organizations of the Union army. Many of them are interesting themselves in spreading it abroad, so that the young at school and those who will come after them may be reminded of the principles which hold the states together in one indissoluble Union.

Mrs. Maria Kraus-Boelte.

Miscellaneous Problems in Arithmetic

It is almost as widely known a tradition in the United States that Warren Colburn wrote a series of arithmetics as that Columbus discovered America. Yet comparatively few pupils, and not so very many teachers, have ever seen copies of these fine old books. Mr. Colburn's problems are as pertinent to-day as they were when his books were first printed. Pupils will enjoy trying their skill at solving the ones given below, taken from the Intellectual Arithmetic upon the Inductive Method of Instruction. The book is still published by Houghton, Mifflin & Co.

1. Mr. Smith bought a piano for \$336, and agreed to pay \$12 a month until the whole should be paid, how many payments had he to make?

2. Divide 9936 by 27; 22464 by 468; 2304 by 128.

3. There are 640 acres in a square mile; how many square miles are there in a township containing 8320 acres?

4. Mr. Hood, the plumber, bought of a dealer 895 feet of gas pipe at 8 cents a foot, 4 valves at \$1.50 each, 24 plugs at 11 cents apiece, and \$3 worth of solder; what was the whole amount of Mr. Hood's bill?

5. Farmer Jackson sold at market one day 12 pounds of butter at 32 cents a pound, 14 bushels of potatoes at 65 cents a bushel, 9 dozen eggs at 26 cents a dozen, and 2 bushels of onions at \$1 a bushel; how much did he receive in all?

6. I bought a lot of wild land containing 114 acres at \$7 per acre, paid \$86 in taxes, and sold it for \$9 per acre; how much did I make by the transaction?

7. I bought 173 barrels of sugar for \$3633, and sold it for \$22.75 per barrel; how much did I make on each barrel?

8. I bought 18 quires of paper at 12 cent a quire, and 10 packages of envelopes at 9 cents a package. I gave the stationer a ten-dollar bill; how much ought I have received in change?

9. The circumference of each fore wheel of a carriage is 8 feet, and of each hind wheel 12 feet; how many more turns will the fore wheels make than the hind wheels in going 5280 feet or 1 mile? How many more turns in going from Boston to Worcester, a distance of 44 miles?

10. The year 1884, being a leap-year, contained 266 days; how many hours did it contain? If I slept 8 hours each day, how many hours did I sleep in the whole year? If I had read 2 hours each day, at the rate of 23 pages an hour, how many pages should I have read in the whole year? How many books of 276 pages each?

11. Find the cost of each of the following items and add the results together:

25 Bushels of potatoes at \$0.60 per bushel.

128 Pounds of sugar at \$0.11 per pound.

138 Pounds of coffee at \$0.32 per pound.

84 Winchester rifles at \$28 apiece.

14 Pairs of oars at \$2.85 per pair.

148 Gallons of kerosene oil at \$0.16 per gallon.

648 Pounds of tea at \$0.82 per pound.

12. Find the cost of the articles which Mr. Slade bought for his store when he was last in Boston. He bought:

25 yards of silk at \$1.37 per yard.

25 yards of silk at \$2.10 per yard.

48 yards of ribbon at \$0.28 per yard.

214 yards of cotton cloth at \$0.08 per yard.

96 yards of cashmere at \$0.82 per yard.

And a number of small articles which came to \$118.25.

13. The number of square miles in Texas is 265,780, in Massachusetts is 8,315. Into how many states of the size of Massachusetts could Texas be divided, and how many square miles would be left over?

Multiply:

14. 69834 by 9761.

15. 76497 by 2864.

16. 9426 by 984.

17. 16214 by 4962.

18. 7698 by 1111.

19. 8432 by 5555.

20. 9012 by 7006.

21. 2984 by 1080.

22. 6798 by 9807.

23. 8432 by 2348.

24. 9821 by 2484.

25. 16462 by 10832.

26. 1268 by 132.

27. 18006 by 3082.

Divide:

28. 19798336 by 8432.

29. 11604186 by 6798.

30. 3222720 by 1080.

31. 55494492 by 18006.

32. 167376 by 132.

33. 178316384 by 10832.

34. 681649674 by 69834.

35. 219087408 by 76497.

36. 9276184 by 984.

37. 80453868 by 16214.

38. 8552478 by 1111.

39. 46839760 by 5555.

40. 63201126 by 7006.

41. 24395364 by 9821.

Answers.

In cases of catarrh Hood's Sarsaparilla heals the tissues, builds up the system, expels impurities from the blood and cures.

A Cut-Up Story

The Story of Mr. Crab.

Number paragraphs. Paste each one on a separate card. Distribute cards and let pupils read in the order indicated by the numbers of their cards.

1. When Mr. Crab frees himself from his egg-shell he makes his first start in the world.

2. He is not a bit like his father or mother. He has a long tail made of rings, and he looks very much like his cousins, the shrimps.

3. By the time Mr. Crab is a week old he has changed. His little back has grown broad and hard. His tail is tucked between his legs, and he is ready to walk about.

4. Like all children, Mr. Crab gets very hungry. He eats any kind of crab food that comes his way.

5. Small fish taste very good to him, and so do cockles, and mussels. And alas! he even eats other crabs if they are smaller than he.

6. As time goes on Mr. Crab gets larger and larger. Like a growing boy, his shell, or coat, becomes much too small. At last he cannot wear it any longer.

7. Before he can have a new suit he must get rid of the old one. He goes to some out-of-the-way corner, perhaps under a rock. There he takes off his old clothes,---his old shell.

8. The new coat is soft at first, so the crab waits in his hole till it is hard. Then he starts out once more, and is ready to kill or be killed.

9. At first Mr. Crab changes his shell about four times a year. When he is older, the change is not needed so often.

10. Because of his hard shell, Mr. Crab is said to belong to the "Crusty Family." The shrimp and the lobster are members of the same family.

11. Mr. Crab's head is on the under side of the shell between the large claws. The mouth is protected by two horny flaps.

12. He has two pairs of feelers, which are long, slender, and jointed. His eyes are small and they are on the ends of stalks which can be drawn back at will.

13. Crabs have ten legs, five on each side. Eight of the legs are thin and bristly. Two are large and strong. The smaller legs are jointed, and are armed with a single claw.

14. Each of the large front legs has two claws, which open and shut like jaws. These are used by the crab in catching his prey.

15. If a crab loses a leg in fighting, or by some accident, a new one grows in its place. The loss is not made good all at once, but every time he throws off his shell, the new leg is larger. At last it is as good as the other legs.

16. Crabs can both walk and swim. They can breathe either in water or on the land.

17. Crabs are good to eat. They are first boiled, then fried.

18. They taste best when they have just taken off the old shells. We call them, then, soft-shell crabs.

Questions on Current Events

The answers to these questions are found in late numbers of *Our Times*. For the convenience of those who desire more complete answers, the pages and dates of issue are given.

When was an armistice arranged between the two armies in Manchuria? A. September 16. 51. September 23.

What did this accomplish? A. It stopped all hostile acts between the armies and established a neutral zone four kilometers wide between them. 51. September 23.

What were the triple conditions of disorder in the Baku district? A. A raw industrial population, a half savage Moslem Tartar race, and a certain proportion of hated Armenians. 51. September 23.

Where was Alice Roosevelt the guest of Empress Tsi An? A. At the imperial summer palace, twelve miles northwest of Peking. 52. September 23.

What measures has the pope taken against socialism? A. He has directed the teaching of law and order from the pulpits. 52. September 23.

What important commission lately started out from China to visit other countries? A. A commission to study the workings of other forms of government, as China is to have a parliament twelve years hence. 52. September 23.

Why is the opening of the Zambesi river bridge important? A. It completes another link in the the Cape-to-Cairo railway. 53. September 23.

What was the principal bar to the agreement of the Swedish-Norwegian commission? A. The question of what should be done with the forts on the frontier. 53. September 23.

What noted French explorer lately died? What did he do? A. Count de Brazza. He spent a quarter of a

century studying the French Congo. 53. September 23.

What great danger was averted by the peace of Portsmouth? A. It is said the signing of this treaty prevented a war in which practically all of Europe would have been engaged. 53. September 23.

How was Chinese progress recently shown? An edict was issued abolishing the examinations by which public offices in the empire have been filled for centuries. 54. September 23.

For what purpose was Judge Calhoun sent to Venezuela? A. To get at the facts in relation to the asphalt matter. 54. September 23.

What 300th anniversary will soon be celebrated in New York? A. The tricentenary of the discovery of the Hudson river. 54. September 23.

How will cable routes to China and Japan be completed? A. By extending the present lines, which extend from San Francisco thru the stations of Honolulu, Midway, and Guam to Manila. 55. September 23.

What important investigation has a legislative committee been making in New York city? A. An investigation of the methods of insurance companies. 55. September 23.

What have they discovered? A. That the companies have been giving money for political campaign purposes, loaning large sums irregularly, expending money in various states to prevent legislation, etc. 55. Sept. 23. 56. October 7.

Who has called another conference at The Hague? A. The czar of Russia. 67. September 30.

In what respect did the peace congress at Lucerne criticize The Hague court of arbitration? A. For granting preferential rights to England and Germany in the Venezuela case. 68. September 30.

For what was Dr. Thomas John Barnardo noted? A. For his rescue work in England; he saved thousands of waifs. 68. September 30.

What plan for greater freedom for the Russian people is under way? A. A plan for free speech and press. 69. September 30.

For what were beef packers punished? A. For violating the law against the acceptance of rebates. 70. September 30.

What different plans for the Panama canal have been proposed? A. Plans for a lock, a lock and lake, and a sea level canal. 71. September 30.

What time did Dingly make in the automobile race? A. An average of fifty-eight miles an hour for the 113 miles. 71. September 30.

Where was an Irish exposition held? A. At the Madison Square Garden, New York. 71. September 30.

What is to be done with the Andre monument? A. It has passed into the hands of a patriotic society. A public park will be maintained there. 72. September 30.

What important end is accomplished by the Anglo-Japanese treaty? A. It practically makes Great Britain Japan and Japan Great Britain for the purposes of defense 'in the regions of Eastern Asia and India.' 82. October 7.

In what ways does it affect China? A. It preserves the

Work a Pleasure

It is one of the Real Joys Given Us.

"Postum Food Coffee has done more for me in two years," writes a Wisconsin young lady student, "than all that medicines and treatments I had employed to overcome the effects of the coffee poisoning that was killing me by degrees.

"I had all the familiar symptoms and suffered all the well known tortures. My stomach was wrecked and I could not eat, my head ached almost continually, I became the nervous victim of insomnia, and the capacity for study deserted me. Of course this came on gradually, and without suspicion, for a long time, as to the cause.

"Two years ago a friend enthusiastically urged me to quit using the old kind of coffee and to drink Postum Food Coffee. I have never regretted acting upon the advice. As soon as the coffee poison was eliminated, the strengthening and nourishing properties of Postum began to build me up.

"Each day I gained a little, the color crept back to my cheeks, my limbs rounded out with new flesh, my complexion grew fair and clear again, my digestion improved, and now I can eat anything at any time, the nervous insomnia has left me and I sleep soundly at night and wake up refreshed. I have no more headaches, and mental work has become a pleasure to me. "Name given by Postum Co., Battle Creek, Mich.

There's a reason.

Read the little book, "The Road to Wellville," in each package.

American Legation in Tokio, Lately Guarded by Police.

"open door" for trade and also the integrity of the empire. 83. October 7.

Why is the United States government pleased with the treaty? A. Because the above mentioned objects were what Secretary Hay aimed to accomplish. 83. October 7.

How does Russia look upon the treaty? A. Russia seems to be alarmed. It checks Russian expansion both in Eastern Russia and on the Persian Gulf. 83. October 7.

What nations seem to have made most progress in arranging arbitration treaties? A. The smaller nations, like Belgium, Switzerland, Peru, Ecuador, etc. Next to them come Great Britain, France, Italy, and Austria-Hungary. 84. October 7.

What are the terms of the Morocco agreement? A. Germany and France have jointly agreed on the reform of the police and finances, and the creation of new sources of revenue. 84. October 7.

New York's Milk Supply.

How was the smallest republic ended? A. This tiny state was turned over to Belgium by Prussia. 85. Oct. 7.

To whom has the throne of Norway been offered? A. Prince Charles of Sweden. 85. October 7.

Why are the Bengalis boycotting British goods? A. They are displeased because of the partition of the province of Bengal. They call it an attempt to split the population and impair the Bengalis' nationality. 85. October 7.

Why are Austria and Hungary trying hard to reach an agreement? A. On account of the failure to vote appropriations, government employees are unpaid. It is feared that if the deadlock is not broken there will be a revolution. 86. October 7.

Why did President Roosevelt appoint an international board of consulting engineers? A. He wished to have the very highest expert opinion relative to the different plans. 87. October 9.

What reason is given for the union of Panama and Costa Rica? A. Many advantages may be obtained by a large republic that are not open to a small one. 99. October 14.

The Secret of Youth.

De Soto looked for the secret of youth in a spring of gushing, life-giving waters, which he was sure he would find in the New World. Alchemists and sages (thousands of them) have spent their lives in quest for it, but it is only found by those happy people who can digest and assimilate the right food which keeps the physical body perfect that peace and comfort are the sure results.

A remarkable man of 94 says: "For many long years I suffered more or less with chronic costiveness and painful indigestion. This condition made life a great burden to me, as you may well imagine.

"Two years ago I began to use Grape-Nuts as food, and am thankful that I did. It has been a blessing to me in every way. I first noticed that it had restored my digestion. This was a great gain but was nothing to compare in importance with the fact that in a short time my bowels were restored to free and normal action.

"The cure seemed to be complete; for two years I have had none of the old trouble. I use the Grape-Nuts food every morning for breakfast and frequently eat nothing else. The use has made me comfortable and happy, and although I will be 94 years old next fall, I have become strong and supple again, erect in figure and can walk with anybody and enjoy it." Name given by Postum Co., Battle Creek, Mich. "There's a reason."

Read the little book, "The Road to Wellville," in every package.

Replies to Questions

By Amos M. Kellogg

One of the distinctive features of the *Teachers' Institute* (which was absorbed and succeeded by this magazine) was, that it aroused a spirit of inquiry. Many of the editorials and articles in it were answers to questions voiced in letters from subscribers; this gave the paper peculiar value and endeared it to thousands of earnest teachers. TEACHERS MAGAZINE desires to preserve this feature. The editor would like to hear whatever serious questions are in the minds of readers. Many of these questions will receive attention in this special department to be conducted by Amos M. Kellogg, the founder, and, for many years the editor of the *Teachers' Institute*. Whenever desirable and possible all letters will be promptly answered by mail, provided a self-addressed and stamped envelope accompanies the question. Direct all letters to "Editor TEACHERS MAGAZINE." If information concerning subscription or business matters is desired be sure to put this on a separate sheet. Put at head of this "To Business Manager," at the head of the other sheet, "To the Editor."

ONE who has settled upon teaching as his life work will find certain problems present themselves and demanding a solution. He will be, let us suppose (for I am not writing these papers for the well-paid superintendent), receiving \$25, \$40, or \$50 per month. The practical question will press itself upon him, "*How can I obtain a larger salary?*"

This is a perfectly legitimate question; it is probable that one-half of the teachers are paid but a small part of what they really deserve. The obstacles in the way of a just payment are (1) the ignorance of the public concerning the real value of the school and (2) allowing almost anybody to practice the art of teaching. As the public has come to understand the influence which knowledge and training have upon the destinies of the children it has seen that persons of ability as teachers are needed. It has seen that such persons must be specially trained, and as this number is really small a willingness to pay greater salaries has manifested itself.

Still there is much ignorance concerning what we may term professional preparation. Once the young man who worked on a farm during the summer would be employed to teach school during the winter, but that era has nearly passed away. When certain large minded men sixty years ago in the state of New York asked to have a normal school established at an annual expenditure of \$10,000, it was violently opposed. Now the state expends over \$300,000 annually for this purpose, and the larger schools are dissatisfied if any of lower qualification than a graduate from a normal school is employed.

A young man in New York state who contemplates making teaching his life work sees the necessity of attending one of the normal schools; he might obtain a place by possessing one of the county commissioner's certificates, but he knows that he would be paid a much smaller salary. The answer to the proposed question given by young men and women in all parts of New York state is "obtain an education at one of the normal schools." And this is practically true of all the other states. These graduates possess an education of the high school grade and are able to become principals when the opportunity presents itself; they have a knowledge also of the principles of education, and this the public demands.

While this may answer the question for those who are planning to become teachers, it may not seem to meet the case of those who are already

teaching and who cannot give up that work and attend a normal school. I shall attempt to show that a better compensation is reached by a more thoro and generous preparation. In the many years' experience as editor of *The Teachers' Institute* I became acquainted with men who had begun teaching at \$15 or \$18 per month and who afterwards were paid \$150 per month. They all told one story; they gave themselves up to earnest study and continued it year after year.

There are those who think a better paying

Grandma and I, with the pie,
on the back Seat

From Mrs. Olive Thorne Miller's charming book, "*Kristy's Surprise Party*," which was published recently by Houghton, Mifflin & Co., Boston, Mass., who also hold the copyright for this illustration.

THE NEW THOUGHT IN MUSIC

ANNOUNCEMENT

"Hearing Courses" with Pianola are rapidly becoming a part of the work of Colleges, High and Normal Schools and Academies.

**Every Superintendent should investigate
the New Musical Education in the Appreciation and Understanding of Music**

GREAT MASTERPIECES OF MUSIC EXPLAINED AND SIMPLIFIED FOR THE COMPREHENSION OF ALL

Endorsed and adopted by:

Harvard, Columbia, Vassar
University of Michigan
N. Y. Training School for Teachers

Morris High School, New York City
Wadleigh High School, New York
City

Framingham Normal School
Crane Normal School
and fifty leading institutions

The Hon. William T. Harris, U. S. Commissioner of Education, predicts that the plan means a revolution in the highest study of art:

"I think that a selection of one of the great works of Beethoven and the listening to its performance once a week, forty performances in the school year, would by the close of the year make the entire school familiar enough with the great work to name it among its favorites. A great work comes to stand out more and more from the dead level of the cost of daily experience, and by and by, sooner or later, the work is sure to make a great impression on the soul.

It would be one of the greatest educational effects at any high school to make all pupils know and admire Beethoven's Fifth Symphony or his Sonata Appassionata.

I predict that the new invention for reproducing the best interpretations of the great musical authors will ultimately find a place in what are called the general exercises of all our high schools, and that from the date of the adoption of this course a new era will dawn in American secondary education."

COLUMBIA UNIVERSITY

Extract from a syllabus of a collegiate course of lectures on the development of instrumental music.

"This course on the development of instrumental music as given in Extension Teaching in Teachers College provides illustrations of the larger instrumental forms by means of the *Pianola* played by the Lecturer, and the instrument will be accessible in the lecture room as a working laboratory to students taking this course. Study of music in this manner by means of the piano-player is recommended as the best means ordinarily obtainable of becoming familiar with the larger works of music."

NOW READY:

Comprehensive Courses on the Understanding of the Music of Beethoven, Wagner, etc., also a

SPECIAL COURSE FOR HIGH AND NORMAL SCHOOLS

An Introductory Course in Great Composers: Examples for Illustrations on Pianola from Bach, Handel, Haydn, Mozart, Beethoven, Schubert, Mendelssohn, Chopin, Wagner.

Any intelligent person will be competent to deliver these courses to classes or individuals, creating a new field of work for ambitious and progressive workers.

Besides its function as an ever ready demonstrator of great music, the Pianola will be useful for playing marches for physical culture (Gymnasium) exercises, and for school entertainments.

SLIGHTLY USED PIANOLAS AT \$200.00, SUITABLE FOR SCHOOLS. Easy terms of payment if desired

Courses from \$35.00 up, the whole constituting a *permanent musical Laboratory and Reference Library of Good Music* for use on all occasions.

Hand-book of Information and Price List of Courses sent to any address upon application to

THE AEOLIAN COMPANY, 362 Fifth Ave., New York City.

place is to be obtained by political influence, but the one who leans on that should see that he is worthy of the effort of influential friends. The politician does not mean to help any one who will not reflect honor on himself. Then there are those who think a "teachers' agency" can get them a better paying school; but the agent is a wise man; he will never put a third rate man in a first rate place; it would ruin his business. He aims to deal with men of ample qualifications; those he can do much for.

To sum the matter up, it may be said, *possess high qualifications*, then (1) keep in correspondence with influential educators and thru them be acquainted with vacancies likely to occur; (2) advise with your county or city official; (3) obtain the aid of strong teachers' agencies; these latter can always find places for high grade teachers; they never obtain all they need of such.

The suggestions made above are specially applicable to teachers of district schools, assistants in union schools, and assistants in high schools, private schools, and academies, who receive from \$25 to \$50 per month.

There are many such who from mere timidity fail to employ the means needed to better their fortunes. There are normal graduates who are worth \$60 per month who are receiving only \$40.

THE BROWNIE BROTHERS:
ON BULRUSH STILTS.

It is the duty of the teacher to be paid all he is worth. Let him not conclude that his merit alone is sure to win him the place he deserves. There are many communities earnestly and constantly searching for the best sort of teachers. The competent teacher paid \$35 per month can assure himself there are hundreds of places willing to pay him \$50, \$60, or even \$75. Well devised plans must be formed and such places will be found. As just said, by means of the advice and assistance of influential educational friends and officials and teachers' bureaus, the competent

November

teacher will obtain his merited compensation.

R. E. L. The question you ask, "Is it best for me to continue teaching?" is one being asked by at least 100,000 teachers this fall. It cannot well be answered by a "yes" or a "no," by one not fully acquainted with the surrounding circumstances. The general case is this: a good many years and after some money has been spent in becoming able to teach a school and get (let us say) \$25 per month; to get (let us say) \$50, \$60, or \$75 per month will require more study, and more experience. A position paying the desired increase of money is by no means certain.

Catarrh

Is a constitutional disease originating in impure blood and therefore requiring constitutional treatment acting through and purifying the blood for its radical and permanent cure. Be sure to take

Hood's Sarsaparilla the Great Constitutional Remedy

Nasal and other local forms of catarrh are quickly relieved by the pleasant antiseptic tablets known as Catarrlets, which allay inflammation and deodorize discharge.

Hood's Sarsaparilla, all druggists, \$1.

Catarrlets, druggists or mail, 50 cts.

The One-Cent Pictures are 6 to 10 times this size

THE PERRY PICTURE COMPANY, :: Box 17, MALDEN, MASS.

Under such circumstances it is a serious question with a vast number of bright young men and women whether they had better continue in this line of work. And really the matter should be made the subject of much careful thought. For it is altogether probable that a large per cent., fully one-half of the 100,000, are teachers by accident. That is, they found that the handiest employment whereby to earn money; they engaged in it because they knew of no other business by which they could earn \$25 per month, having no experience or skill to offer the public.

Now a great many are well paid at \$25 per month, wholly lacking experience and skill as teachers; but having acquired both of these necessary qualifications they naturally expect more money; the ordinary district, however, pays but \$25 and hence the painful questioning by the 100,000 as the spring advances. "What shall I do?" they ask, for the sensible ones see that it will not do to drift; they see teachers forty or more years of age working for the same monthly sum received when they first began. So that the question is one of the first importance; and to answer it foundation principles will be stated.

1. There is plenty of room for good teachers; there is really a pressing demand for them (pos-

sibly not in one's immediate vicinity); and it is plainly for trained teachers—that is, normal graduates.

2. No one can expect to succeed in teaching who has not a liking for the society of children and the work of teaching. (Those who go into it first of all to make money had better get out and stay out.)

3. Those who expect to succeed must be willing to spend money, time, and study to fit themselves for better positions than the ones they now hold. (Read (1) again. If not a normal graduate become one; if this already look towards the college.)

[These three points answer R. E. L., and thousands of other cases. Let them ask themselves (1) Do I like this work? Am I "cut out" for a teacher? (2) Have I made a proper investment (that is, been trained, etc.), or am I still to be reckoned as a "green hand"? (3) Am I still a STUDENT OF EDUCATION? But few who have begun to teach can leave to take a course in a normal school. Such should study the harder where they are; the best paid teachers in the country have risen in this way. The teacher should own a professional library and have the best papers relating to pedagogical work. "How to Become a Successful Teacher," 25 cents, will be found very valuable.

United States History Brought Up to Date.

Congress.

The text-books on the history of the United States cannot keep up with current events without publishing new editions as often as once a year. As most of the histories used in the schools cover the important events only about to the year 1900, in answers to numerous requests from teachers, a brief resume of the most important occurrences since that date will be given in this and succeeding numbers of TEACHERS MAGAZINE.

The Year 1900.—The Census.

A census of the United States is taken every ten years. As the year marking the beginning of a new century is the census year, this was taken in 1900. The work was done under the direction of W. R. Merriam. It was performed in 300 census districts by 52,000 enumerators. These were paid \$5,000,000, and the whole cost of taking the census was about \$12,000,000. The most interesting results shown by the census were the increase in size and population of cities. There were in 1900 cities to the number of 159, having a population of over 25,000 each. Nineteen cities had 200,000 or more inhabitants. Of these New York had more than 3,000,000; Chicago and Philadelphia had each more than a million; St. Louis, Boston and Baltimore half a million each; Cleveland, Buffalo, San Francisco, Cincinnati, and Pittsburg between 300,000 and 400,000; and New Orleans, Detroit, Milwaukee, Washington, Newark, Jersey City, Louisville, and Minneapolis between 200,000 and 300,000 each.

The number of cities of over 25,000 inhabitants by states: Maine 1, New Hampshire 1, Massachusetts 20, Rhode Island 3, Connecticut 5, New York 12, New Jersey 10, Pennsylvania 18, Delaware 1, Maryland 1, District of Columbia 11, Virginia 2, West Virginia 1, South Carolina 1, Georgia 3, Florida 1, Ohio 9, Indiana 5, Illinois 7, Michigan 5, Wisconsin 5, Minnesota 3, Iowa 6, Missouri 3, Nebraska 3, Kansas 2, Kentucky 4, Tennessee 4, Alabama 3, Louisiana 1, Texas 5, Arkansas 1, Montana 1, Colorado 2, Utah 1, Washington 3, Oregon 1, California 4.

The following states and territories did not contain any city with a population of 25,000 or more: Arizona, Idaho, Indian Territory, Mississippi, Nevada, New Mexico, North Carolina, Vermont and Wyoming.

Presidential Election.

The year 1900 was time for election of a President. The Republican National convention was held at Philadelphia on June 19; the Democratic convention at Kansas City on July 4. The campaign was pushed vigorously by both parties, but the Republicans won, William McKinley becoming President and Theodore Roosevelt Vice-President.

Congress did some important work in 1900. Roberts the polygamist, was refused a seat in the House of Representatives. United States finances were placed upon a new basis, with gold as the standard of value and the interest bearing bonds of the government refunded at a two per cent. rate. Porto Rico was given a civil government under American control, revenues for the island being provided from imports and by levying a small tax on Porto Rican goods entering the United States, all of which was to go to the support of the insular government. Hawaii was formed into a territory of the United States.

The Great Coal Strike.

Early in the autumn about 120,000 miners in the hard coal regions of Pennsylvania went on strike. They claimed that their wages were so low that they could not live comfortably; that they were obliged to buy their groceries at the company's stores and pay more for them than they would at other places. The strike lasted for several months, causing inconvenience, and in some localities considerable suffering, because of the lack of coal.

Lesser Happenings.

As a result of conferences between American and British ambassadors, the way was cleared for the control of the Nicaraguan canal by the United States. The agreement known as the Hay-Pauncefote treaty was signed on February 5. It was agreed that the canal should not be fortified, but should be free to the passage of the ships of all nations, in war as well as in peace.

Numerous experiments were made during this year in wireless telegraphy. The government had kites in service at a large number of stations. Tests were made covering only comparatively short distances, eighty miles being the longest distance over which a message was sent.

Preparations were made, and work was started, on the great underground railway for New York city. Arrangements were made by which the city should own the road. The financial plan under which it was to be built, and the relations of the contractor to the city are such that the people would not be compelled to pay larger taxes, nor would any money be taken from the treasury.

C. A. Bryce, M. D., editor of the Southern Clinic, in writing of la grippe complaints, says: I have found much benefit from the use of antikamnia tablets in the fever and muscular painfulness accompanying grip. A dozen tablets should always be kept about the house. Druggists speak well of them and so far as our experience goes, we can indorse the above.—Southwestern Medical Journal.

The Strand Above.

From the Danish of Johannes Jorgensen,
by Jacob A. Riis.

(Reprinted from *The Outlook*.)

The sun rose on a bright September morning. A thousand gems of dew sparkled in the meadows, and upon the breeze floated, in the wake of summer, the shining silken strands of which no man knoweth the whence or the whither.

One of them caught in the top of a tree, and the skipper, a little speckled yellow spider, quit his air-ship to survey the leafy demesne there. It was not to his liking, and, with prompt decision, he spun a new strand and let himself down straight into the hedge below.

There were twigs and shoots in plenty there to spin a web in, and he went to work at once, letting the strand from above, by which he had come, bear the upper corner of it.

A fine large web it was when finished, and with this about it that set it off from all the other webs thereabouts, that it seemed to stand straight up in the air, without anything to show what held it. It takes pretty sharp eyes to make out a single strand of spider-web, even a very little way off.

The days went by. Flies grew scarcer, as the sun rose later, and the spider had to make his net larger that it might reach farther and catch more. And here the strand from above turned out a great help. With it to brace the structure, the web was spun higher and wider, until it covered the hedge all the way across. In the wet October mornings, when it hung full of shimmering raindrops, it was like a veil stitched with precious pearls.

The spider was proud of his work. No longer the little thing that had come drifting out of the vast with nothing but its unspun web in its pocket, so to speak, he was now a big, portly, opulent spider, with the largest web in the hedge.

One morning he woke very much out of sorts. There had been a frost in the night and daylight brought no sun. The sky was overcast; not a fly was out. All the long gray autumn day the spider sat hungry and cross in his corner. Toward evening, to kill time, he started on a tour of inspection, to see if anything needed bracing or mending. He pulled at all the strands; they were firm enough. But, tho he found nothing wrong, his temper did not improve; he waxed crosser than ever.

At the farthest end of the web he came at last to a strand that all at once seemed strange to him. All the rest went this way or that—the spider knew every stick and knob they were made fast to, every one. But this preposterous strand went nowhere—that is to say, went straight up in the air and was lost. He stood up on

his hind legs and stared with all his eyes, but he could not make it out. To look at, the strand went right up into the clouds, which was nonsense.

The longer he sat and glared to no purpose, the angrier the spider grew. He had quite forgotten how, on a bright September morning, he himself had come down this same strand. And he had forgotten how, in the building of the web and afterward when it had to be enlarged, it was just this strand he had depended upon. He saw only that here was a useless strand, a fool strand, that went nowhere in sense or reason, only up in the air where solid spiders had no concern...

"Away with it!" and with one vicious snap of his angry jaws he bit the strand in two.

That instant the web collapsed, the whole proud and prosperous structure fell in a heap, and when the spider came to he lay sprawling in the hedge with the web all about his head like a wet rag. In one brief moment he had wrecked it all—because he did not understand the use of the strand from above.

Thoughts for the Thoughtful.

She doeth little kindnesses
Which most leave undone, or despise;
For naught that sets one's heart at ease,
Or giveth happiness or peace,
Is low esteemed in her eyes.

—JAMES RUSSELL LOWELL.

True Living.

God has written upon the flower that sweetens the air, upon the breeze that rocks the flower on its stem, upon the rain-drops which swell the mighty river, upon the dew-drop that refreshes the smallest sprig of moss that rears its head in the desert, upon the ocean that rocks every swimmer in its chambers, upon every pencilled shell that sleeps in the caverns of the deep, as well as upon the mighty sun which warms and cheers the millions of creatures that live in its light—upon ALL hath he written, "NONE OF US LIVETH TO HIMSELF."

—JOHN TODD.

Success.

Every man must patiently bide his time. He must wait, not in listless, not in useless pastime, not in querulous dejection, but in constant, steady, fulfilling and accomplishing his task; that when the occasion comes, he may be equal to the occasion. The talent of success is nothing more than doing what you can do well, without a thought of fame. If it come at all it will not come because it is sought after. It is a very indiscreet and troublesome ambition which cares so much about fame; about what the world says of us; to be always looking in the face of others for approval; to be always anxious about the effects of what we do or say; to be always shouting to hear the echoes of our own voices.

—H. W. LONGFELLOW.

Refreshing
RUBIFOAM
The Best of Pleasures

The teeth need the same refreshing that the body gets from golf, the life and sweetness and soundness that keep them well and beautiful. Like the game, too,

RUBIFOAM

the Delicious Liquid Dentifrice, fortifies the teeth against disease and decay. If you have thought of it only as a beautifier, remember it is far more, being an ally of health, preventing the encroachment of disease.

IT'S WISE TO USE RUBIFOAM.

If I Were Queen.

If I were Queen of Anywhere
I'd have a golden crown
And sit upon a velvet chair
And wear a satin gown.

A knight of noble pedigree
Should wait beside my seat
To serve me upon bended knee
With things I like to eat.

I'd have a birthday cake each day
With candles all alight—

I'd send the doctors all away,
And sit up late at night.

LUCY FITCH PERKINS in *St. Nicholas*.

The Power of Love.

There is a flower which dares the storms
and winds

Of earth. In every clime it triumphs
over Fate

And Time and Seasons. In every glade
Its welcome head it lifts, and its sweet
look

The mother wears. The maid seeks for it
in

The summer shade, pictures its image and
then

By babbling brooks she walks alone that
none

Her dreams invade. In spring the hills
Waft its praises heavenward, till earth,
and sea,

And sky, and every bird and sleeping
thing

Join in the universal hymn of praise.

Oh Love! Thou flower divine, I weep
for those

That know thee not; for thou alone of all
God's good gifts to man art still the
Brighest, truest, tenderest.

RUTH WARD KAHN in *Reform Advocate*.

A Problem.

"I wonder," said Teddy, one sunny day,
As he gazed at the meadow with
thoughtful frown,

"Why the grass is so pretty so green and
so bright,

When it comes from the earth so dirty,
and brown!"

With a look of surprise in her great blue
eyes,

"Why, don't you know?" cried small
Katrine.

"The sun is yellow, the sky is blue,

And that is the reason the grass is
green."

ESTHER W. BUXTON in *St. Nicholas*.

The Pianist.

When I play

All the other people seem to vanish right
away.

Not that I am sorry, for I like to be alone,
And sing aloud my counting in a very
touching tone,

When I play.

When I play

The old clock's minute hand gets stuck,
and there it seems to stay.

For hours I thump my best known piece
until I'm fit to drop.

When some one pokes her head in: "Half
hour's up, it's time to stop."

When I play.

When I play

"How Paderewski'd envy you!" the
other girls all say.

"At any rate," I then reply, "I keep a
graceful pose;

At least my fingers never need assistance
from my nose,

When I play!"

OLIVER ALLEN in *The Girls' Realm*.

Book Notes.

Mr. W. H. Neidlinger stands almost alone among the American song-writers, in combining the three advantages of knowing how to write simple singable songs, in understanding children and what they enjoy, and at the same time comprehending the needs of schools. In his new book, "The Discontented Goldfish and Other Children's Songs," he has given to teachers a treasure. There are lovely little songs that apply to almost every topic taken up in the primary room,—Indian life, Spring, rain, night-time, Chinese life, the worm, the Katydid, fire, birds, animals, the wind, the cold, and lots of other things. I don't see how we ever got along without these songs. I certainly advise every teacher of little children to get a copy. The book, words, and music with simple accompaniments, costs only 75 cents. (The William Maxwell Music Co., New York city.)

Introductory Physiology and Hygiene by H. W. Conn, Ph. D., professor of biology in Wesleyan university.—This introductory textbook on physiology and hygiene is intended to precede the author's more advanced work on the same subject. There has been an urgent demand for a beginner's book because teachers and parents have seen the necessity of teaching very young children the laws of health. In this book the subject is presented in simple language and the comparisons are such as are familiar to the average child. Special emphasis has been laid on the value of good food, of out-of-door exercise, of the formation of regular habits, and of right living from day to day. As in the elementary book, the effect of alcohol and narcotics is treated in direct connection with the various organs and functions of the body concerned. (Silver, Burdett & Co., New York.)

Twelve Songs, for kindergarten and schools, by Kate B. Palmer, formerly principal, of the Fruitvale grammar school, Oakland, California.—These songs have for their aim the higher development of child character, thru the medium of song by the skillful introduction of primary ethical culture. Obedience to law, kindness to dumb animals, graceful carriage and poise of body, love for the beautiful in nature, and patriotism are taught by the stories preceding each song, while the songs themselves, written within the natural register of the young voice, are memorized and retained—a constant reminder of the text. The pictures please the eye and teach the child how each gesture in the motion songs should be made. (Ginn & Co., Boston. Price, 40 cents; by mail, 45 cents.)

Japanese Fairy Tales, retold by Teresa Peirce Williston, illustrated by

BAD BLOOD

"I had trouble with my bowels which made my blood impure. My face was covered with pimples which no external remedy could remove. I tried your Cascarets and great was my joy when the pimples disappeared after a month's steady use. I have recommended them to all my friends and quite a few have found relief."
C. J. Pusch, 967 Park Ave., New York City, N. Y.

of Northwestern University, Evanston

The Chief Safeguard of the Student is the Skill of His Instructor

There are two principal reasons why our courses continually grow in favor: (1) They were prepared by experts to render superior service; (2) the instructors in charge of recitations received college and university training, and are sympathetic and helpful to the highest degree. You are sure of the assistance you need if you enroll with us for one of our teacher's courses.

PRIMARY METHODS.—A very extended new course of study in Primary Methods, covering the work in every branch taught in the first three grades of school; also careful treatment of the subjects of organization, management and discipline.

NORMAL ELECTIVE COURSES.—Thorough review courses in twenty-two common school and high school branches; any five subjects constitute a course of study for one tuition fee. Thousands of teachers have prepared for higher grade certificates through this department of the School; they now teach better schools than formerly and receive higher salaries.

ACADEMIC COURSES.—Each branch is a thorough, complete course in itself.

NO OTHER CORRESPONDENCE SCHOOL CAN OFFER: Advantages of affiliation with a great university; courses of such strength that they receive university entrance credits; instruction especially adapted to individual needs; annual scholarships in Northwestern University for the best work in correspondence courses. Write today for information.

Teachers Magazine—Nov.

Sanchi Ogawa.—So far as artistic and typographical make-up are concerned this is about as handsome a book of its kind as we have seen. The many illustrations, in the Japanese style of art, by Mr. Ogawa, are a decided novelty and very effective for their purpose. Besides there are border designs, comprising leaves, flowers, fish, fruits, and various fancy figures. The stories embody the imagination and poetry, which have been treasured thru hundreds of years by the little ones of Japan. Every effort has been made to bring Japanese life as vividly as possible before the children by means of the illustrations. (The Rand-McNally Company, Chicago and New York.)

The late John Hay did not think much of his own poetry; he considered his daughter Helen's style of writing poems much better than his own. For this reason, if for no other, the little books of *Sonnets and Songs*, by Mrs. Helen Hay Whitney will be welcomed by the reading public. But Mrs. Whitney's little poems can stand on their own merits. They are dainty, and several of them are unusually delightful. We see the picture of the country road on a rainy day, with trees dripping and skies gray, as plainly as if we, the readers, had walked or driven with the author along those woody roads about Lake Sunapee. The following charming bit gives just a suggestion of what the volume contains:

IN HARBOR.

My little boat is in a bay,
It swings with gentle motion,
And there I lie and watch all day
The far-off, noisy ocean.
The ships go up, the ships go down,
And never see me spying.
They are the pride and fear of town—
Sails wide and colors flying.
They are so strong, they are so tall,
They fear no storm, no sorrow;
With brave eyes to the sun, they all
Set sail for some to-morrow.
Sometimes I long to range and roam,
My harbor life bewailing,
But little boats must bide at home,
To gaily speed the sailing.
—(Harper and Bros., New York city, publishers.)

The Rose Primer. By Edna Henry Lee Turpin. This primer is distinguished by the small vocabulary of common words, the frequent reviews, the short sentences, the simple language and phonetic exercises, and the carefully graded and well-selected subject matter. There are never more than two new words on a page, and only one hundred and ninety-eight in the book. These words are carefully repeated, most of them being used ten or more times. Every new word is

THE ONLY BOOK FOR TEACHERS AND SCHOOLS PRACTICAL AND ARTISTIC BASKETRY

By LAURA ROLLINS TINSLEY, Former Principal in the Minneapolis Public Schools. Will be received with enthusiasm by educational leaders who know the value of hand training. Four things specially emphasized. 1. Good forms. 2. Harmonious decoration. 3. Skilful workmanship. 4. Use of native material. Boards of Education, although unable to buy material, would gladly put industrial work in the course of study, if the pupils could gather their own supply from the fields. With its aid the country school children will have an advantage over their city cousins in having the material at hand which they can use.

CONTENTS

1. Introduction.
2. Basketry in the Public School.
3. Material—Imported and Native.
4. Rattan Work. Mats, Baskets, Birds' Nest, Hauls, Covers.
5. Common Willow Twigs. How to Prepare and Manufacture.
6. Articles Made from Raffia. Braiding for different purposes, Hats, Bags, Pillows, and various other Articles, both Artistic and Useful.
7. Combination of Rattan and Raffia. Baskets of Various Shapes and Sizes. A great many Indian Stitches used.
8. How to Make Baskets and Other Articles from Native Material. Cattail Leaves, Flags and Rushes, Straw, Corn Husks, Grasses, Pine Needles, Palmetto, Cedar, and Willow Bark.
9. Work Carefully Graded for Public Schools.
10. Coloring.
11. Cord Work. A very valuable chapter, fully illustrated, not in any other book on basketry.

Profusely illustrated with 112 drawings and photographs of baskets. Beautifully bound in cloth, 12 mo. \$1.00 net; postage, 10 cents.

READERS will confer a favor by mentioning TEACHERS MAGAZINE when communicating with advertisers.

THE VALUE OF CHARCOAL.

Few People Know How Useful it is in Preserving Health and Beauty.

Nearly everybody knows that charcoal is the safest and most efficient disinfectant and purifier in nature, but few realize its value when taken into the human system for the same cleansing purpose.

Charcoal is a remedy that the more you take of it the better; it is not a drug at all, but simply absorbs the gases and impurities always present in the stomach and intestines and carries them out of the system.

Charcoal sweetens the breath after smoking, drinking or after eating onions and other odorous vegetables.

Charcoal effectually clears and improves the complexion, it whitens the teeth and further acts as a natural and eminently safe cathartic.

It absorbs the injurious gases which collect in the stomach and bowels; it disinfects the mouth and throat from the poison of catarrh.

All druggists sell charcoal in one form or another, but probably the best charcoal and the most for the money is in Stuart's Charcoal Lozenges; they are composed of the finest powdered Willow charcoal, and other harmless antiseptics in tablet form or rather in the form of large, pleasant tasting lozenges, the charcoal being mixed with honey.

The daily use of these lozenges will soon tell in a much improved condition of the general health, better complexion, sweeter breath and purer blood, and the beauty of it is, that no possible harm can result from their continued use, but on the contrary, great benefit.

A Buffalo physician in speaking of the benefits of charcoal says: "I advise Stuart's Charcoal Lozenges to all patients suffering from gas in stomach and bowels, and to clear the complexion and purify the breath, mouth and throat; I also believe the liver is greatly benefited by the daily use of them; they cost but twenty-five cents a box at drug stores, and although in some sense a patent preparation, yet I believe I get more and better charcoal in Stuart's Charcoal Lozenges than in any of the ordinary charcoal tablets."

READERS will confer a favor by mentioning THE TEACHERS MAGAZINE when communicating with advertisers.

given both in script and print, and there are frequent script exercises for tracing and copying. The sentences are short and simple, and the construction is varied as much as possible to avoid the formation of singsong and monotonous reading habits. The child confronted by the least possible labor in word getting, can easily master these pages. On completing them he has acquired a small but serviceable vocabulary of common words, and can begin any well-graded first reader with ease and intelligence. The subjects in this primer are those which appeal to the intelligent interest of children. Here are described and discussed familiar objects, plants, and animals, and common amusements of boys and girls, and the every-day round of home and school life. The illustrations are attractive and helpful to the child. Cloth, square 8vo, 128 pages, with illustrations in colors and in black and white. Price, 30 cents. (American Book Company, New York, Cincinnati, and Chicago.)

The Young Folks' Book of Etiquette was written in response to requests from teachers. Inquiry at book stores and publishing houses revealed the astonishing fact that, until the publication of this little book, there was no satisfactory treatise on etiquette arranged for children, published in the United States. The author, Miss Caroline S. Griffin has taught, and written for, young people, for years. A Pennsylvania superintendent who read the book a few weeks ago wrote to the publisher, "The little book is pure gold. It should be in the hands of every child in Pennsylvania, and I hope it will be. We need it in our state."

And the book is needed in every state and in every school. Every child, even if he has the best of training at home, should have for his own, a book on etiquette, for it is etiquette in the best sense of that word that smoothes the rough places in life. Our boys and girls are wandering too far away from the old-fashioned ideas of politeness and kindness toward others of which their grandparents made so much. They can be brought to see the use and meaning of polite manners by means of Miss Griffin's book, which by the by, is most suitable for a Christmas gift. It is daintily bound, is illustrated, and is edged with gilt. The price is only 35 cents. (A. Flanagan Co., publishers, Chicago, Ill.)

Be 1 and Health for Mother and Child
MRS. WINSLOW'S SOOTHING SYRUP has been used for OVER FIFTY YEARS by MILLIONS OF MOTHERS for THEIR CHILDREN WHILE TEETHING WITH PERFECT SUCCESS. It SOOTHES the CHILD, SOFTENS the GUMS, ALLAYS ALL PAIN, CURES WIND COLIC, and is the best remedy for DIARRHOEA. Sold by druggists in every part of the world. Be sure to ask for "Mrs. Winslow's Soothing Syrup." And take no other kind. Twenty-five cents a bottle.

Entertainments

Thanksgiving and Christmas

We publish the best School Entertainment Books. They are intelligible, clear cut, wholesome, pure, practical, and free from insinuations of all kinds. We do not encourage the teacher to try to ape the theatre, but to provide simple, pleasing, child-like entertainment to which no one can take exception and which, rather than provoke criticism, commend themselves to parent and teacher by an absence of all that is far fetched, illogical and absurd. Only a small selection can be given here. We publish a very complete list of entertainment books both of our own and other publishers which we will send free.

KELLOGG'S HOW TO CELEBRATE THANKSGIVING AND CHRISTMAS. Material for all grades consisting of Recitations, Songs, Drills, Exercises. For Christmas there are ten Songs, fifteen Recitations, a Christmas Tree Drill, three Christmas Plays, three Exercises and a program for a Christmas celebration. For Thanksgiving there are six Songs, two complete programs of Recitations, songs, etc.; "What the Months Bring," and "Thanksgiving in the Past and Present," a play with tableaux. "The Gifts of the Year," an Exercise with Songs and Tableaux, also many single Recitations. For Autumn there are fifteen Songs, Recitations and Plays. 25 cents.

KELLOGG'S CHRISTMAS ENTERTAINMENT. Christmas-bell Drill, for 8 girls; The Snow Brigade, a winter drill for a dozen boys; Christmas Stockings, 6 small girls and boys are needed for speaking and any even number for singing. Christmas Children, an acrostic for primary children; Santa Claus acrostic for 10 very small children; Merry Christmas, 7 boys and 7 girls; Dance of the Snowflakes; Christmas Pictures, a series of tableaux; Mr. St. Nicholas, play, 6 boys and 4 girls; Christmas Offerings by Children from Other Lands, 6 little girls; A Christmas Reunion, play, 10 girls and 6 boys; A Christmas Party, 5 to 25 boys and girls can take part; Little Snowflakes, song for six primary children; Many recitations in costume. 25 cents.

DAVIDSON'S VISIT FROM MOTHER GOOSE. A Christmas play for primary pupils. Mother Goose, Simon, Old Woman and Hen, Mother Hubbard, Bopeep, Bopeep's Sheep, Little Boy Blue, Bachelor, His Wife, Old Woman Who Lived in a Shoe. Costumes fully described. 15 cents.

HADLEY'S AT THE COURT OF KING WINTER. A bright Christmas play for schools. Characters: Winter, November, December, Nature, Santa Claus, Elves, Heralds, Winds, Flowers, Christmas Day, Forefathers' Day. Costumes and decorations given. 5 cents.

HADLEY'S A CHRISTMAS MEETING. Very attractive. Characters: Girls—Nature, Mistletoe, Holly, 2 Dryads, 2 Children, Austria, Germany, Italy, Russia. Boys: Father Time, The Year, Jack Frost, 4 English Customs, 4 (or more) Carol Singers, 2 Yule Log Bearers, Winter. Directions for costumes. Also Holly Red and Mistletoe, a Drill with Singing for a Christmas celebration. 15 cents.

STERLING'S CHRISTMAS STARS. A Fancy Drill with Songs and Recitations, Novel exercise for a Christmas entertainment for ten girls who carry lighted candles and are dressed in simple but effective costumes. Full directions given for production of the exercise. 15 cents.

KELLOGG'S HOME COMING OF AUTUMN'S QUEEN. An operatic dialog for thirty pupils, with simple music. It is beautiful for a Harvest Home Exercise. Characters represent the fall fruits, flowers trees, etc. Paper, 15 cents.

KELLOGG'S MONTHS OF THE YEAR. Special for December and January, but good for all the year. The months come in simple costumes, each with verse, followed by the lessons of the months by five pupils. 15 cents.

KELLOGG'S NEW YEAR AND MIDWINTER EXERCISE. The only book published of exercises especially appropriate to the winter season. It contains a Midwinter Exercise, 7 girls and 7 boys, or more; A New Year Exercise, songs, readings, and recitations; The Child and the Snowflakes, 4 to 7 girls; Little Miss Wonder and the Snow, 12 or more children; Poet Peasant of Scotland, a Burns' Program, born Jan. 25; The Days of the Week, for 7 little girls; Dickens Memorial Exercise, birthday Feb. 7; Pictures of winter, 3 tableaux; Program for a Winter Evening Entertainment; Quotations. 25 cents.

GANNETT'S WHO KILLED COCK ROBIN AND MARCHING IN THE SCHOOL-ROOM. Part I is a gymnastic game from the story of Cock Robin. Simple music is given and fourteen illustrations of poses to be taken. Part II gives directions for school-room marching with many illustrations. A beautiful book with many exquisite half-tone illustrations. 30 cents.

KELLOGG'S PRIMARY SPEAKER. We think we have here the best yet published. The selections range in length from four lines for the

little tots to simple rhymes of four or five stanzas for children in the upper primary grades. 25 cents.

KELLOGG'S NEW FANCY DRILLS AND MARCHES. The most popular and really valuable book of its kind for school use ever issued. Motion Songs and Action Pieces, for Arbor Day, Christmas, Memorial Day, Closing Day, and all other school occasions. By Alice M. Kellogg. Covers all grades. Fully illustrated. It contains Fancy Ribbon March with Grouping and Posing, 6 girls; Hatchet Drill for Feb. 22, 17 to 25 children; The Pink Rose Drill, girls; Christmas Tree Drill, boys and girls; Wand Drill, any number; Delsarte Children, boys and girls; Free Drill, any number; Zouave Drill, 25 boys or any odd number; A Scarf Drill, either boys or girls; Wreath Drill and March, boys and girls; Rainbow Drill, with recitations, motion songs, and physical exercises; The Glove Drill, for girls; Tambourine Drill; ruler drill, any even number; Grouping with Flags, by Carl Betz, beautiful; 2 Flag Drills; Muff and Gun Drill, for boys and girls; Cane Drill, for boys; the March of the Red, White, and Blue, little girls; Motion Songs; also 8 very attractive Action Pieces. 25 cents.

STERLING'S GALA DAY DIALOGS. A new and entirely original book prepared expressly for schools by the talented authors M. D. and S. H. Sterling. Five for Christmas—"Kitty's Christmas Dream," "Keeping Christmas," "Santa Claus in the School-Room," "Five Little Gooses and the Doll Maker," "Faith, Hope, and Charity," will cultivate the moral side. 25 cents.

KELLOGG'S TIP TOP DIALOGS. Humorous. You will hardly have an entertainment where this will not be helpful. Here are a few of the 35 dialogs: Innocents Abroad, Artist's Dream, Aunt Dinah and Columbus, Box and Fox, Taking the Census; Christmas with the Old Woman Who Lived in a Shoe.

KELLOGG'S BANNER DAYS OF THE REPUBLIC. By Alice M. Kellogg. In cloth. For Washington's Birthday, Lincoln's Birthday, Grant's Birthday, Discovery Day, Closing Exercises, Thanksgiving, Christmas, or for almost any school occasion. 37 pupils may take part (more or less if desired). Costumes fully described. 15 cents.

A FEW OF MANY SCHOOL-ROOM EXERCISES AND PLAYS

HEMPHILL'S LITTLE RED RIDING HOOD. Musical play in 4 scenes. Easy and pretty. Music. 15 cents.

KELLOGG'S CROWNING OF FLORA. Simple Spring cantata 10 to 30 pupils. Catchy music. 15 cents.

KELLOGG'S NEW YEAR'S RECEPTION. Primary program for Holidays. Recitations, Songs. 15 cents.

KELLOGG'S SIX MUSICAL ENTERTAINMENTS. For 5 to 12 pupils. Each is short and pointed. 15 cents.

LAMBERTON'S TIMOTHY CLOVER-SEED. Amusing scene at a photographer's for 1 boy and 1 girl. Bright dialog and smart climax. 15 cents.

WARE'S MOTHER GOOSE FESTIVAL. Consists of songs, drills, and marches. Supplies a complete evening's entertainment. 15 cents.

WARE'S MOTHER NATURE'S FESTIVAL. For primary grades, 30 to 50 children to represent Birds, Flowers, Months, etc. Any school can present it; 15 cents.

A NOBLE SPY. An historical play for boys in six acts. Chief characters are George Washington, Generals Clinton and Heath, Nathan Hale, etc. 15 cents.

AUTHORS' BIRTHDAYS. 2 vols. Excellent for Friday afternoons. Separate programs for Lodgepole, Bryant, Hawthorne, Holmes, Burns, Dickens, Shakespeare. No. 2 contains separate programs on Whittier, Emerson, Lowell, Irving, Milton, Tennyson, and Scott. 25 cents each.

Send for our "Entertainment Catalog" (32 pp.) and our complete list of Blackboard Stencils, Pictures, etc., pertaining to Thanksgiving, Christmas, and special occasions.

Christmas Wishes for the Stocking Books.

"On comes Christmas, like a king,
Dressed in white and crowned with gold;
In his kingly arms he brings
Gifts of love for young and old."

"This stocking full of wishes true
I make to show my love for you."

"Christmas comes but once a year
May it bring happiness and cheer."

"A happy Christmas to you,
May it bring you all fair things,
With the sweetest, best remembrance
That about its coming clings."

"Sunbeams bless thy Christmas day,
Gladness with thee dwell for aye."

"The best wish this stocking holds for you
dear,
Is that you may have a happy New
Year."

"We hope your Christmas will be merry,
May you fare well by Santa Claus;
All care and trouble try to bury,
Let joy and pleasure be your cause."

"At Christmas play and make good cheer,
For Christmas comes but once a year."

Merry Christmas! Merry Christmas!
Is echoed from hill and plain;
As year by year, with heart of cheer,
We welcome glad Christmas again.

Of all the merry days of old
When merry days did most abound,
The best was Christmas, all the rest
But ushers to this royal guest!

O what's the best season for giving?
Is it when the chill winter is here?
When cold makes the fireside pleasant,
The days of the glad Christmas cheer?

The Shell.

See what a lovely shell,
Small and pure as a pearl,
Lying close to my foot,
Frail, but a work divine,
Made so fairly well
With a delicate spire and whorl,
How exquisitely minute,
A miracle of design.

What is it? A learned man
Could give it a clumsy name.
Let him name it who can,
The beauty would be the same.

The tiny cell is forlorn,
Void of the little living will
That made it stir on the shore.
Did he stand at the diamond door
Of his house in a rainbow frill?
Did he push, when he was uncured,
A golden foot or a fairy horn
Thru his dim water world?

CHOICE NEW CHRISTMAS ENTERTAINMENTS.

A Christmas Joke—Play for young or old. The Richest Humor and Exciting Climaxes. In taking rhyme, 25c.
Christmas at Skeeter Corner—Delightful play, presenting old-time school. Humor of the rarest sort, 15c.

SEND FOR OUR PLATFORM.

Slight, to be crushed with a tap
Of my finger nail on the sand,
Small, but a work divine,
Frail, but of force to withstand,
Year upon year, the shock
Of the cataract seas that snap
The three decker's -oaken spine
Athwart the ledges of rock,
Here on the Breton strand.

ALFRED TENNYSON.

A boy who had been working in a baker-shop for some time was just about to finish his trade. One night when the boss was gone he broke the marble slab he moulded his loaves on. So he went to the marble yard to secure another, but could not find one. On his way back he passed a graveyard, and as it was very dark he jumped over and pulled up a small headstone about the right size and took it back and finished his job. The next day, after the bread had been delivered, nearly all of it was sent back. The baker looked at it and broke several loaves open, but found nothing wrong. Then he happened to turn one of the loaves over, and found on the under side of every loaf the inscription:

"Here lies the body of Mrs. ——. Born A. D. 1682, died A. D. 1740."—C. McA. Wassell, in Oct. *Lippincotts*.

Educational Views, Morse & Simmons New York City.

James E. Morse, recently President of the Morse Company, Educational Publishers, and Parker P. Simmons, recently Superintendent of School Supplies in the City of New York, now Educational Publisher, announce that they have taken the General Agency from the Keystone View Company for the exclusive sale of all their Educational Views, Stereopticon Slides, Stereoscopes, etc., in the states of New York, New Jersey and New England.

The Keystone for many years has sent proficient photographers to all parts of the world for securing views of most vital importance for educational work in all the course of study subjects so that as a result of this enterprise they are prepared to offer views which are the most perfect, varied and attractive in character in the market.

These views have been grouped in a thoroly pedagogical manner to cover the average course of study in both Elementary and High Schools. and with carefully edited text pertaining to each series in active preparation.

The accuracy and minute details of these views make the instruction comprehensive, rapid and delightful and, with the grouping, a physiological method for supplementary teaching is presented which it is hoped will have hearty appreciation and support especially as these views do not add to the subjects to be taught or in any way increase the burdens of teaching, but on the contrary, they simplify and greatly facilitate teaching the subjects already required by the course of study, viz.: Nature Study, Natural Science, Geography, History, Sociology, Commercial and Industrial Pursuits, etc.

Their catalogue will give all detailed information.

AN AGENCY is valuable in proportion to its influence. If it merely hears of vacancies and tells THAT is something, but if it is you about them THAT asked to recommend a teacher and recommends you, that is more. Ours RECOMMENDS.
C. W. BARDEEN, Syracuse, N. Y.

Consoling.

There is an evangelist in Boston who is so devout that, so his friends aver, he scarcely ever permits himself a secular thought or his tongue a worldly word.

It appears that this evangelist has a very bright daughter aged five. Not long since she answered the door bell, and found there the iceman with a bill.

"Father is not at home," she said, "but if you will come in, you poor perishing soul, perhaps mamma will pray for you."—*Harper's Weekly*.

Sentiments for the Schoolmaster.

Education reduces the commercial value of humbug.

How fleet is the foot of a lie.

Nothing bores an ignorant mind like a work of art.

Many a fellow gets a reputation that goes farther than he can go.

Sometimes what we take for envy is pity.

Make a caricature of yourself once in a while and laugh over it.

Give me one sincere friend—you can have all the rest.—*American Illustrated Magazine*.

The Editor's Lament.

Alone, alone, all, all alone,

Alone on a pitchy sea,

'Mid scuttled graft and sinking craft,

But not a raft for me.

No new trust looms for me to hit

That has not been exposed;

No state corruption hides unwrit,

No grafter undisclosed.

Tom Lawson's drum to kingdom come

Has smashed the great oil-can.

Russell lays bare the beef roast rare

And carves the butcher man.

The Baptist John is Tarbell's right

(Herself monopolist!),

And every naughty town in sight

To Steffen's mill is grist.

Now Collier's Hapgood draws his pen;

With style at large and pure

He cries the ill of dopes that kill

And advertise to cure.

And I, a sore competitor,

Am driven to the wall.

I cannot find a sin to score—

Our rivals have them all.

I pray to-morrow's sun may see

A brand-new scandal burst,

That for reform my pen may warm

And stab the monster first,—

That our subscriptions may ascend

A million every day,

I long my country's wrongs to mend

And make my paper pay.

—JOHN A. MACY in the *October Critic*.

Publishers' Talk.

IT is a most happy custom at the beginning of the New Year to take a glance at the past and to make earnest resolves for something better and higher in the year to come. No field of activity calls for greater endeavors for better things than the educational. Every child should be encouraged to believe that the best is yet to be, and can only be brought about by most earnest personal endeavors. Still stronger should be the desire on the part of the teachers to make the very most of every opportunity at her command and to use all the means within her power to improve her teaching ability and her own personal prospects.

What makes the difference between the teacher who struggles on year after year at a small salary and the teacher who takes the lead in school matters and secures the best position at the command of the board of education? What makes the difference between the teacher selected for superintendent of schools and the one who forever remains in the grammar grade? Is it luck? Not a bit of it. It was brains, hard work and thoro preparation. When you go behind the scenes you will find that the plodding teacher stayed in her shell and poked along as earnest as any of her scholars to close up school on the hour and remove from her mind further thought of school work.

Now look at the successful teacher's career. What do you find? First of all, unflagging interest and a willingness to take all suggestions offered, to get all the information possible, to study the best books, and to introduce the best methods possible in her class-room.

We want to talk just now to the ambitious and the successful teacher. We want to call her attention to the fact that one of the surest methods by

which she can advance is to use the helps and read the best periodicals.

We publish a number of most helpful books for teachers and also issue besides the beautiful TEACHERS MAGAZINE, the *School Journal*, *Educational Foundations*, and *Our Times*—all vitally alive with the most helpful suggestions from successful teachers. Any teacher wishing to improve her opportunities for advancement, cannot do better than to read and study these periodicals.

If you have a friend engaged in teaching whom you desire to remember, bear in mind that *The School Journal* is especially helpful to superintendents, principals, or high school teachers. \$2.50 per year.

If your friend is engaged in primary or grammar grade work remember that TEACHERS MAGAZINE will be a gift that will be a source of constant pleasure and helpfulness. \$1.00 per year.

For those whether engaged in educational work or not, whether young or old, *Our Times* will be a Christmas remembrance that each week of the entire year will recall delightful memories of your thoughtfulness and generosity. \$1.25 per year.

Educational Foundations will prove an exceptionally attractive present to anyone seeking to broaden his educational knowledge and to pedagogically prepare himself for positions of greater service. \$1.25 per year.

A little keepsake is momentarily gratifying as an evidence of kindly remembrance but the Christmas gift of a magazine recalls the giver with the arrival of each new number.

For teachers wholly engaged in primary work nothing could be more appropriate or serviceable than a cloth set of our *Month by Month Books*.

Should you desire to present to a friend any special book that you know will add to his particular pleasure, our book department will gladly serve you in the purchase and prompt shipment.

Read Advertisements

Even at the risk of being wearisome we reiterate the wisdom of carefully reading advertisements. This is not only beneficial to us, but helpful to you. For clear, concise, graphic English there is frequently no better examples than are found in advertisements. It must necessarily be so. Considerable must be said in a very little space, the facts must be stated so as to arouse interest and to excite desires. Oftentimes they are masterpieces of brevity, clearness, and cleverness of expression, and for this cause alone worthy of your study. In addition to this any advertiser supporting the cause of education by patronizing educational journals is entitled to your patronage in return, provided the article advertised is something that you require. If we could encourage this spirit of reciprocal relations upon the part of our readers we could materially increase our advertising and thereby steadily improve this magazine. If you want a soap buy the kind that is advertised in this journal, if you need a tooth powder or wash purchase the one you see here presented, and so on thru the catalog of human requirements. We shall advertise nothing that is not meritorious, and we hope that we shall have your co-operation in seeking to advance the quality and beauty of this magazine by increasing our resources from advertising. If you will patronize the advertisers who patronize you this can be easily accomplished.

Current Events

Dr. W. T. Harris, our educational dean, has said that "Education in order to be a preparation for life should be a participation in life." Nothing more forcible could well be said in support of the use of current events in teaching. No matter how sluggish a given child may be about studies, it will always be found that such a child will quickly respond when reference is made to some important event of the present. To arouse this interest every teacher should have in her possession a good paper such as *Our Times* dealing with current events in a form adapted for class-room service. Better still: Place such a paper in the hands of each pupil. It is very easy to encourage a club of subscribers among pupils for this purpose. Try it. Not only does it arouse the interest of pupils, but it forms a link between the parent and the school-room. Parents quickly discover that their children are learning something that becomes of fascinating discussion around the family table, and their interest in other departments of school-room work easily follows. Let us send you our little booklet on the Teaching of Current Events, which will show you how to work up a club among your pupils. It would do much to increase interest in school studies.

Appreciative Praise

Every day brings to us very enthusiastic expressions as to the helpfulness and attractiveness of this magazine. We presume all subscribers feel much the same way, and yet we confess to being so human that we cannot refrain from publishing a few of these testimonials:

Am delighted with your magazine. Have never seen one its peer.—*Miss Mattie G. Cawthorn.*

The TEACHERS MAGAZINE is certainly a gem.—*Mr. J. D. Dell.*

I like the magazine very much better than any other I have taken.—*Miss Gertrude Alexander.*

A close study of the TEACHERS MAGAZINE proves to me that it is king of its kind.—*Mr. H. E. Oliphant.*

I think the TEACHERS MAGAZINE is the best publication of its kind I have ever taken. It is filled with interesting reading from cover to cover. I want to recommend it to all other teachers.—*Miss Etta M. Yule.*

After a careful inspection of TEACHERS MAGAZINE I am in a position to say that it is the most ideal teachers' magazine that I ever inspected.—*Mr. P. F. La Valle.*

It is the best magazine that I have ever taken and its monthly visit is always looked forward to with grateful anticipation.—*Miss Estelle M. Kirkpatrick.*

It is a magnificent periodical.—*Mr. M. E. Greene.*

I think it is the best school paper published at present.—*Miss Lulu B. Rassmussen.*

It is surely a "bonanza" for the teacher.—*Mr. J. M. Ireland.*

I was very much pleased with the first issue, but the September number is very unique as a magazine for the teacher, no matter in what grade he may teach.—*Mr. Geo. A. Gaylord.*

I think TEACHERS MAGAZINE is a most beautiful, most interesting, most helpful, as well as a very large periodical, and I look forward to it as something that I would not like to do without.—*Miss Lena L. Hibbel.*

I shall do my best to bring this excellent magazine to the notice of my many friends who are teaching; for I consider it the best one of its kind that I have ever used or read.—*Miss Annie C. Kendrick.*

In my term of seventeen years as a teacher in this city's schools, I have been without one of your publications but one or two of these years. Am glad to see them combined as I am not always in the same grade, and in the combined way I can get anything. It seems to me I could scarcely be without the magazine teeming with ways and means for every day.—*Miss Kate G. Keely.*

INTERESTING READING

(From Hunting and Fishing)

Carpenter's Africa 60 cents

Takes the children on a personally conducted tour, giving a good knowledge of present day Africa. Over 160 illustrations, largely from photographs by the author.

Dutton's World at Work---Hunting and Fishing . . . 30 cents

Devoted to stories of child life among the Eskimos, the Filipinos, the Western Indians, and the Alaskan Indians, bringing out in an entertaining manner many of their habits and customs.

Dutton's World at Work---In Field and Pasture . . . 35 cents

Stories of peoples more advanced than those in the preceding volume, treating of agriculture and cattle raising among the Tibetans, Cubans, Norwegians, Swiss, Egyptians, and Pueblo and Navajo Indians.

Baldwin's Thirty More Famous Stories . . . 50 cents

Nearly all true stories, and all extremely entertaining. Among the tales are those of James Watt, Hannibal, Galileo, Sir Isaac Newton, Columbus, The First Printer, and the Man in the Iron Mask.

Baldwin's Robinson Crusoe Retold . . . 35 cents

Defoe's famous story is here arranged and written anew in a charming fashion for young children. The main points of the original are presented, the harsher parts and tiresome reflections omitted.

(From Thirty More Famous Stories)

The Supplementary Reading books published by the **American Book Company** number 170 volumes, on all subjects and for all grades. They are interesting in subject-matter and simple and attractive in style. Most of them are profusely illustrated; all are carefully printed and substantially bound.

A classified and graded list, with suggested courses for graded and ungraded schools, will be gladly sent free to any address on request. The suggestions given in this pamphlet can not fail to be helpful to teachers who are on the lookout for new ideas.

Note These
Preparatory Latin Books

As to Towle and Jenks's "It is far and away the most practical text-book for classes that I have seen. . . The Appendix defines the principles of Latin syntax in the simplest and clearest language. The simple typographical arrangement by which the student is led to refer from his notes to the Grammatical Appendix is one of the many attractions of the book." So writes to us an experienced teacher of Greater New York. Others think so, too. Gallic War, complete. List Price, \$1.25.

Have you seen Doty's They furnish the pupil with a certain definite line of work in the study of each chapter in preparation for recitation. There is ruled space for writing out the results of such study. They are practical books—one for each of the first four books of the Gallic War. Price, 25 cents or 20 cents each.

For School Entertainments

The Recitation, Dialogue, Pantomime, Drill, Motion Song, or Play that you are looking for is probably in one of the books named below. We are specialists in this sort of material. Write to us for suggestions.

Tiny Tot's Speaker

By Misses Rook & Goodfellow. Contains more than one hundred and fifty pieces of only a few lines each, expressed in the simplest language. For the wee ones. Paper Binding, 15 cents; Boards, 25 cents.

Child's Own Speaker

By E. C. & L. J. Rook. A collection of Recitations, Motion Songs, Concert Pieces, Dialogues, and Tableaux. Contains over one hundred pieces, many of which were specially written for this book. For children of six years. Paper Binding, 15 cents; Boards, 25 cents.

Little People's Speaker

By Mrs. J. W. Shoemaker. A superior collection of Recitations for little people, mostly in verse, and ranging in length from four to twenty lines. For children of nine years. Paper Binding, 15 cents; Boards, 25 cents.

Young People's Speaker

By E. C. & L. J. Rook. This book is composed of bright, cheery, and wholesome recitations by the most popular authors. For children of twelve years. Paper Binding, 15 cents; Boards, 25 cents.

Young Folks' Recitations

By Mrs. J. W. Shoemaker. An excellent collection of fresh and crisp recitations adapted to the various needs of young people's entertainments. For children of fifteen years. Paper, 15 cents; Boards, 25 cents.

Little People's Dialogues

By Clara J. Denton. All new and original. Everything bright and fresh, and arranged for special days and seasons, as well as for general occasions. For children of ten years. Paper, 25 cents; Boards, 40 cents.

Young Folks' Dialogues

By Charles C. Shoemaker. Everything specially written for this volume. One of the best dialogue books in print. For children of fifteen years. Paper Binding, 25 cents; Boards, 40 cents.

Young Folks' Entertainments

By E. C. & L. J. Rook. Motion Songs, Concert Pieces, Pantomimes, Tambourine and Fan Drills, Tableaux, etc. All specially prepared, directions simple, everything taking. Paper, 25 cents; Boards, 40 cents.

Drills and Marches

By E. C. & L. J. Rook. Everything specially prepared for this volume. Contains Broom Drill, Hoop Drill and March, Mother Goose Reception and Drill, Doll Drill, New Tambourine Drill, etc. Fullest directions, and success of every drill assured. Paper Binding, 25 cents; Boards, 40 cents.

Choice Humor

For Readings and Recitations. By Charles C. Shoemaker. One of the best and most popular humorous recitation books ever published. Contains many of the best humorous selections in print. Every piece is a gem and there is not a coarse one among them. Paper Binding, 30 cents; Cloth, 50 cents.

Choice Dialect

For Readings and Recitations. By Charles C. Shoemaker. Contains selections in all dialects, such as Irish, Scotch, French, German, Negro, etc., representing all phases of sentiment, the humorous, pathetic, and dramatic, and all the very best of their kind. Paper Binding, 30 cents; Cloth, 50 cents.

Ideal Drills

By Marguerite W. Morton. A collection of entirely new and original drills into which many unique features are introduced. There are nearly one hundred diagrams illustrating the movements. Among the more popular and pleasing drills are the Brownie Drill, Taper Drill, Maypole Drill, Rainbow Drill, Tennis Drill, Easter Drill, Ring Drill, and Scarf Drill. Paper Binding, 30 cents; Cloth, 50 cents.

Choice Dialogues

By Mrs. J. W. Shoemaker. This is doubtless the best all-round dialogue book in print, being adapted as it is to the Sunday-school or day-school, to public and private entertainments, and to young people or adults. Each dialogue specially written for this book. Paper Binding, 30 cents; Cloth, 50 cents.

Good Humor

For Readings and Recitations. By Henry Firth Wood. Many of the pieces make their first appearance in this volume, while a number of others are original creations of the compiler. No reader wishing to keep abreast of the times can afford to be without this book. Paper Binding, 30 cents; Cloth, 50 cents.

Humorous Dialogues and Dramas

By Charles C. Shoemaker. All the dialogues are clean, bright, and taking, and sure to prove most successful in their presentation. They can be given on any ordinary stage or platform, and require nothing difficult in the way of costume. Paper, 30 cents; Cloth, 50 cents.

Holiday Selections

For Readings and Recitations. By Sara S. Rice. The selections are specially adapted to Christmas, New Year's, St. Valentine's Day, Washington's Birthday, Easter, Arbor Day, Decoration Day, Fourth of July, and Thanksgiving, and are classified accordingly. Paper Binding, 30 cents; Cloth, 50 cents.

Holiday Entertainments

By Charles C. Shoemaker. Contains many exercises, dialogues, and entertainments suitable not only to the Christmas Holidays, but also to Easter, Decoration Day, Fourth of July, Thanksgiving, etc. Paper Binding, 30 cents; Cloth, 50 cents.

Select Speeches for Declamation

By John H. Bechtel. A volume specially prepared for college use and containing a superior collection of short prose extracts from the leading orators and writers of all ages and nations. Paper Binding, 30 cents; Cloth, 50 cents.

These books are for sale by all booksellers or they will be sent prepaid upon receipt of price to any address

To Subscribers and Readers

WE WANT YOUR AID

- 1st. We want your subscription to OUR TIMES. If you have already sent it, many thanks; if not, let us urge you to send it at once FOR YOUR OWN, YOUR CHILDREN'S, AND SCHOOL'S BEST INTEREST.
- 2d. We believe intensely in OUR TIMES as a prime factor in school and education. We want your enthusiastic support, and we suggest the following as some of the ways to express it:
 - 1st. Recommend OUR TIMES to your fellow teachers and neighbors.
 - 2nd. Give (or loan) them your copy occasionally.
 - 3rd. Send us the names of those you think will be or ought to be interested and we will write them.
 - 4th. Form a CLUB; it's easy work. Let us start you. Just ask for the literature and the suggestions; we will promptly or gladly furnish you an outfit free.
 - 5th. Send us the name of a bright boy in your school or your home.

"WE WILL DO THE REST."

Here are some of the reasons why we urge you to become enthusiastic in spreading the good news that OUR TIMES is *THE* paper to teach CURRENT EVENTS in the school and home:

A Concise Weekly Needed

Every intelligent person readily recognizes the importance of a reliable, unbiased, concise and thorough digest of time, the direction of thought, and the news of the day. In the saving of interpretation of present-day history such a paper performs a service invaluable to its busy patrons. Of no class is this so true as of those who teach and are taught in our schools.

The Usual Newspaper not adapted to schools

Unquestionably the daily newspaper offers the greatest source of information on Current Events, but it is not adapted to school use. All wide-awake, up-to-date educators recognize the necessity of a paper specially suited to this purpose. Many public schools now follow the practice of utilizing Current Events in illustrating Geography, History, etc.

Teaching "Current Events" A means not an end

The first and most important thing in connection with the introduction of the study of "Current Events" is the point of view. They may be TAUGHT, or they may be used as a means of teaching. To use them as a MEANS rather than an END is by far the more fruitful in results, and such use does not increase the daily program or disturb the course of study. Considered as a means rather than an end, the use of Current Events touches school work at many points, and adapts itself to almost any study.

Why "Our Times" is specially adapted

- "Our Times" is especially adapted to school use because—
1. It puts the important world-news clearly and tersely.
 2. It eliminates all news unfit for youth to read.
 3. It provokes discussion among pupils, teachers and parents.
 4. It illuminates all related studies—History, Geography, etc.
 5. It serves as an excellent text book for "Supplementary Reading."
 6. It invigorates the memory by its "Cumulative Index" each month.
 7. It is easily within the reach, financially, of every teacher and home.
 8. It comes to them at the close of the week's studies, A TREAT.
 9. It is simple enough for the child, vigorous enough for the adult.
 10. It soon becomes a vitally active bond between the school and the home, which no one study can ever supplant. Talk of "School" and the pupil and parent both weary at the end of the week: talk of "Current Events" and everyone is interested and every study

Methods of Using "Our Times" in the School Room

at school is re-clothed as a new and welcome holiday guest. Such a guest will "Our Times" prove in every home where it is taken.

How to use "Our Times" is set forth in a small booklet, "The Teaching of Current Events in the Public School," free upon application. The following points are elucidated in this booklet:

- "Our Times" as an aid to Reading.
- "Our Times" as an aid to Spelling.
- "Our Times" as an aid to Geography.
- "Our Times" as an aid to History.
- "Our Times" as an aid to Language.
- "Our Times" as an aid to Composition.
- "Our Times" as an aid to Oral Work.
- "Our Times" as an aid to Civics.

OTHER STUDIES.

Many paragraphs in "Our Times" relating to Botany, Zoology, Astronomy, Meteorology, etc., help to add zest to the study of these sciences.

Special Use of "Our Times"

The uses to which "Our Times" may be put in the school room are various. Its subject matter—Current Events—furnishes the foundation for a most helpful "quiz" on the news of the day just before regular school work begins. "Our Times" may also be the medium by which specially-appointed pupils act as news correspondents at various supposed centres, such as New York, St. Petersburg, Washington, etc., each one glean the news for his designated country or city. "Our Times" as a "Monthly Review" affords a most profitable exercise for the cultivation of the memory.

"Our Times" in the Home

Most families subscribe for a local paper, but to many, a metropolitan daily is too great a luxury. "Our Times," however, gives all the world's news of an entire week for less than two cents and puts this news in such a terse, simple, forceful way that ALL members of the household are benefited; besides, the little ones at school find in it a ready answer to the many questions constantly asked by their teacher concerning the news of the day. "Our Times" in the home, therefore, serves a DOUBLE purpose—it brings the latest news and it binds the school still more intimately to the home. As a home paper, therefore, it is inexpensive, it is intelligible to the children as well as to adults and it is free from all that is objectionable, and so, well-calculated to become the ideal paper for many thousand homes.

HAVE YOU A BRIGHT BOY in Your School?

Send us his name or ask him to write us. We want to talk to him.

CHRISTMAS

New Year's and Authors' Birthdays Entertainments

KELLOGG'S CHRISTMAS ENTERTAINMENT. Christmas-bell Drill, for 8 girls; The Snow Brigade, a winter drill for a dozen boys; Christmas Stockings, 6 small girls and boys are needed for speaking and any even number for singing. Christmas Children, an acrostic for primary children; Santa Claus acrostic for 10 very small children; Merry Christmas, 7 boys and 7 girls; Dance of the Snowflakes; Christmas Pictures, a series of tableaux; Mr. St. Nicholas, play, 6 boys and 4 girls; Christmas Offerings by Children from Other Lands, 6 little girls; A Christmas Reunion, play, 10 girls and 6 boys; A Christmas Party, 5 to 25 boys and girls can take part; Little Snowflakes, song for six primary children; many recitations in costume. 25 cents.

DAVIDSON'S VISIT FROM MOTHER GOOSE. A Christmas play for primary pupils. Mother Goose, Simon, Old Woman and Hen, Mother Hubbard, Bopeep, Bopeep's Sheep, Little Boy Blue, Bachelor, His Wife, Old Woman Who Lived in a Shoe. Costumes fully described 15 cents.

HADLEY'S AT THE COURT OF KING WINTER. A bright, Christmas play for schools. Characters: Winter, November, December, Nature, Santa Claus, Elves, Heralds, Winds, Flowers, Christmas Day, Forefathers' Day. Costumes and Decorations given. 5 cents.

HADLEY'S A CHRISTMAS MEETING. Very attractive. Characters—Girls—Nature, Mistletoe, Holly, 2 Dryads, 2 Children, Austria, Germany, Italy, Russia. Boys—Father Time, The Year, Jack Frost, 4 English Customs, 4 (or more) Carol Singers, 2 Yule Log Bearers, Winter. Directions for costumes. Also Holly Red and Mistletoe, a Drill with Singing for a Christmas celebration. 15 cents.

STERLING'S CHRISTMAS STARS. A Fancy Drill with Songs and Recitations. Novel Exercise for a Christmas entertainment for ten girls who carry lighted candles and are dressed in simple but effective costumes. Full directions given for production of the exercise. 15 cents.

KELLOGG'S HOME COMING OF AUTUMN'S QUEEN. An operatic dialog for thirty pupils, with simple music. It is beautiful for a Harvest Home Exercise. Characters represent the fall fruits, flowers, trees, etc. Paper, 15 cents.

KELLOGG'S MONTHS OF THE YEAR. Special for December and January, but good for all the year. The months come in simple costumes, each with verse, followed by the lessons of the months by five pupils. 15 cents.

GANNETT'S WHO KILLED COCK ROBIN AND MARCHING IN THE SCHOOL-ROOM. Part I is a gymnastic game from the story of Cock Robin. Simple music is given and fourteen illustrations of poses to be taken. Part II gives directions for school-room marching with many illustrations. A beautiful book with many exquisite half-tone illustrations. 30 cents.

KELLOGG'S PRIMARY SPEAKER. We think we have here the best yet published. The selections range in length from four lines for the little tots to simple rhymes of four or five stanzas for children in the upper primary grades. 25 cents.

KELLOGG'S HOW TO CELEBRATE CHRISTMAS. Material for all grades consisting of Recitations, Songs, Drills, Exercises. For Christmas there are ten Songs, fifteen Recitations, a Christmas Tree Drill, three Christmas Plays, three exercises and a program for a Christmas celebration. For Thanksgiving there are six Songs, two complete programs of Recitations, Songs, etc.; "What the Months Bring," and "Thanksgiving in the Past and Present," a play with tableaux. "The Gifts of the Year," an Exercise with Songs and Tableaux, also many single recitations. For Autumn there are fifteen Songs, Recitations, and Plays. 25 cents.

STERLING'S GALA DAY DIALOGS. A new and entirely original book prepared expressly for schools by the talented authors M. D. and S. H. Sterling. Five for Christmas—"Kitty's Christmas Dream," "Keeping Christmas," "Santa Claus in the School-Room," "Five Little Gooses and the Doll Maker," "Faith, Hope, and Charity," will cultivate the moral side. 25 cents.

KELLOGG'S NEW YEAR AND MIDWINTER EXERCISE. The only book published of exercises, especially appropriate to the winter season. Consisting of Recitations, Quotations, Authors' Birthdays, and Programs, by Alice M. Kellogg. It contains a Midwinter Exercise, 7 girls and 7 boys, or more; A New Year Exercise, Songs, Readings, and Recitations; The Child and the Snowflakes, 4 to

7 girls; Little Miss Wonder and the Snow, 12 or more children; Poet Peasant of Scotland, a Burns' Program, born Jan. 25; The Days of the Week, for 7 little girls; Dickens Memorial Exercise, birthday, Feb. 7; Pictures of Winter, 3 tableaux; Program for a Winter Evening Entertainment; Quotations; Many Recitations appropriate for Winter, for all grades.

KELLOGG'S NEW FANCY DRILLS AND MARCHES. The most popular and really valuable book of its kind for school use ever issued. Motion Songs and Action Pieces, for Arbor Day, Christmas, Memorial Day, Closing Day, and all other school occasions. By Alice M. Kellogg. Covers all grades. Fully illustrated. It contains fancy Ribbon March with Grouping and Posing, 6 girls; Hatchet Drill for Feb. 22, 17 to 25 children; The Pink Rose Drill, girls; Christmas Tree Drill, boys and girls; Free Drill, any number; Zouave Drill, 25 boys or any odd number; A Scarf Drill, either boys or girls; Wreath Drill and March, boys and girls; Rainbow Drill, with recitations, motion songs, and physical exercises; The Glove Drill for girls; Tambourine Drill; ruler drill, any even number; Grouping with Flags, by Carl Betz, beautiful; 2 Flag Drills; Muff and Gun Drill, for boys and girls; Cane Drill, for boys; the March of the Red, White, and Blue, little girls; Motion Songs; also 8 very attractive Action Pieces. 25 cents.

KELLOGG'S BANNER DAYS OF THE REPUBLIC. By Alice M. Kellogg. In cloth. For Washington's Birthday, Lincoln's Birthday, Grant's Birthday. Discovery Day, Closing Exercises, Thanksgiving, Christmas, or for almost any school occasion. 37 pupils may take part (more or less if desired). Costumes fully described. 15 cents.

KELLOGG'S TIP TOP DIALOGS. Humorous. You will hardly have an entertainment where this will not be helpful. Here are a few of the 35 dialogs: Innocents Abroad, Artist's Dream, Aunt Dinah and Columbus, Box and Fox, Taking the Census, Christmas with the Old Woman Who Lived in a Shoe.

KELLOGG'S LITTLE PRIMARY PIECES. About 100 recitations for use with children of from 5 to 8 years of age. All are simple, bright and pretty. They range from 4 to 16 lines in length and relate to matters of interest to little folks. The book contains some half dozen simple little exercises, each to be given by several children, but none have more than 8 lines for any child to learn. The collection is designed to meet the needs of teachers and mothers who complain that the poems in most primary recitation books are too difficult for very little folks. 25 cents.

A FEW OF MANY SCHOOL-ROOM EXERCISES AND PLAYS

HEMPHILL'S LITTLE RED RIDING HOOD. Musical play in 4 scenes. Easy and pretty. Music. 15 cents.

KELLOGG'S CROWNING OF FLORA. Simple Spring Cantata. 10 to 30 pupils. Catchy music. 15 cents.

KELLOGG'S NEW YEAR'S RECEPTION. Primary program for Holidays. Recitations, Songs. 15 cents.

KELLOGG'S SIX MUSICAL ENTERTAINMENTS. For 5 to 12 pupils. Each is short and pointed. 15 cents.

LAMBERTON'S TIMOTHY CLOVER-SEED. Amusing scene at a photographer's for 1 boy and 1 girl. Bright dialog and smart climax. 15 cents.

WARE'S MOTHER GOOSE FESTIVAL. Consists of songs, drills, and marches. Supplies a complete evening's entertainment. 15 cents.

WARE'S MOTHER NATURE'S FESTIVAL. For primary grades! 30 to 50 children to represent Birds, Flowers, Months, etc. Any school can present it. 15 cents.

A NOBLE SPY. An historical play for boys, in six acts. Chief characters are George Washington, Generals Clinton and Heath, Nathan Hale, etc. 15 cents.

AUTHORS' BIRTHDAYS. 2 vols. Excellent for Friday afternoons. Separate programs for Longfellow, Bryant, Hawthorne, Holmes, Burns, Dickens, Shakespeare. No. 2 contains separate programs on Whittier, Emerson, Lowell, Irving, Milton, Tennyson, and Scott. 25 cents each.

Send for our "Entertainment Catalog" (32 pp.) and our Complete List of Blackboard Stencils, Pictures, etc., pertaining to Thanksgiving, Christmas, and special occasions

Try Mennen's Violet Talcum.

GERHARD MENNEN CO., Newark, N. J.

Merry Christmas!

YULE TIDE has a joyousness peculiarly and distinctly its own. Just when and why men agreed to be merry at this season and to celebrate it with festivities of various kinds we may never know. Mithraic, Syrian, Roman; Druidic, Norse, and other mythologies have occupied themselves with its philosophy and given it diverse meanings. But everywhere the key-note is good cheer.

Christendom has invested the festival with a noble and inspiring thought. A wonderful mystery is placed in the center. A little child is born into a humble Jewish home. He is bedded in a manger. Yet that child of poverty became the

we are brothers and sisters. Thus, in two words, Jesus embodied a theology which in the course of its development redeemed the whole Western world from the gloom of paganism and gave it a victorious civilization.

However much men may differ in their views regarding the nature and message of Jesus, no one can deny the wonderful changes wrought in the thought and spiritual character of mankind. Is not the fruitage reason enough for men of all creeds to unite in joyful celebration of the birthday of the Jewish infant which became the light of the world?

★

Solar worship in its various manifestations fixed upon Yule Tide as a season for rejoicing because of the conquest by the sun of the powers of darkness. The gradual lengthening of the nights seemed to portend the final annihilation of daylight. The midwinter solstice dispelled these fears, and the ascent of the victorious sun filled all

light which showed to millions of people the way out of darkness and despair to a higher, happier life: the hope of a world weary of war and strife and cruel superstitions, longing for peace and encouragement making life worth while. A new era dawned upon the world with his birthday. He brought a new revelation of Divinity and gave a new interpretation of human life. His life exemplified both.

God is our *Father*; not a monstrous despot thirsting for bloody sacrifices, not an unreasonable taskmaster, not an elusive spirit controllable by incantation and priestly ceremonial. He is a loving, reasonable, real Father, and *our* Father:

God, from whom we have received life and all earthly blessings, vouchsafe to give unto us each day what we need; give unto all of us strength to perform faithfully our appointed tasks, bless the work of our hands and of our minds. Grant that we may ever serve Thee, in sickness and in health, in necessity and in abundance, sanctify our joys and our trials; and give us grace to seek first Thy kingdom and its righteousness, in the sure and certain faith that all else shall be added unto us—Amen.

Eugène Bersier.

hearts with rejoicing. When Christianity became a world power the birthday of the new sun in the physical world readily became the birthday of the new sun in the spiritual world. Pagan customs were transformed into symbols of great spiritual thoughts; and humanity was made richer by a holiday with a message simple enough to find its way into the humblest heart, and profound enough so that no philosopher's plummet may sound its depths.

The evergreens, the lighted candles, the exchange of presents and of expressions of good will; the Yule log, and the merry games and joyful noise all bear significant lessons. And the chil-

Then all the bells on earth shall ring
 On Christmas day, on Christmas day;
 And all the bells on earth shall ring
 On Christmas day in the morning.
 And all the angels in heaven shall sing
 On Christmas day, on Christmas day;
 And all the angels in heaven shall sing
 On Christmas day in the morning.
 And all the souls on earth shall sing
 On Christmas day, on Christmas day;
 And all the souls on earth shall sing
 On Christmas day in the morning.

—“WEST OF ENGLAND CAROL.”

dren have their Santa Claus, the precious incarnation of a thought which in its abstract nakedness would be beyond the grasp of untrained minds. I am sorry for the child who has never known the joy of the belief in the good old Saint: his life is poorer by a precious experience. Symbols are better teachers of truth than bare facts. The senses can get no further than the outer courts of the tabernacle of truth. The door to the holy place is open only to the heart. At Yule Tide the heart begs for its rights.

★

The birthday of the child which universalized the religion of Abraham, Moses, and Isaiah may well be celebrated in the common schools. The religious significance of it does not concern us here. In the cities where immigrants from across the sea are by the nature of circumstances kept more or less in the bondage of racial prejudices, it would be especially unwise for a teacher to dwell upon it. Where the principles of Americanism are firmly established it may not be out of place to refer to the fact that a child was born nineteen centuries ago who gave to the world a new vision of Divinity, who, when he grew up taught that God is Love, and that men serve God best by trying to be like Him in loving mankind. We are all the children of one Father, and therefore brothers and sisters proving our sonship and daughtership by loving one another. That is all that need be said about it in common schools. Care must be exercised not to give offence to a single child.

★

To the teacher the birthday of Jesus has a special thought. The child born in a stable and reared in the lowly household of a poor Jewish

community in the Galilean mountains became the spiritual guide and comfort of millions upon millions of people. What of the children who gather around you day by day? May there not be among them boys and girls who will bless the world? Who can foretell the future of a child? Of one thing I am certain: every child is an individual incarnation of Divinity. It is the teacher's duty and privilege to aid in bringing to light the Divinity in the child. Thereby he helps to increase Divinity in the world. "Thy kingdom come!" He must train the child to win the mastery over the desires of the body. Whatever nourishes the spiritual nature must have first consideration in the program of education. In no other way can the world be given the fullest measure of the potential good supplied in the children now at school. Treat every child as a son or a daughter of God. The Rabbis had a saying, "Look well to the children of poverty, for of them shall come the Law." Look well to every child, for the good you do to each one of them is done for mankind at large.

★

It was a custom in England to save a charred remnant of the Yule log to kindle the next year's Christmas fire. So let the teacher carry the message of this joyous season with him thru the year to be inspired with it again in all its vividness when the great day returns. Let there be no regrets for the things left undone. Let the heart rejoice in the opportunities that are ahead.

★

Merry Christmas!

Mrs. Mary Mapes Dodge: In Loving Memory

By Mattie Griffith Satterie

[Mrs. Mary Mapes Dodge, author of "Hans Brinker" and the first and only editor of *St. Nicholas Magazine*, died in August at her summer home in Onteora Park, New York. She was born in 1831, and early in life married William Dodge. "Hans Brinker" was written in 1865, and has been translated into several languages. Another story of hers, "Donald and Dorothy," is so popular that a new edition is brought out every year. Miss Satterie has been a close friend of Mrs. Dodge for many years.—EDITOR.]

ONE of the most delightful memories of my childhood, is the friendship of Mrs. Mary Mapes Dodge. I was a girl of ten years, when Mrs. Dodge first came into my life. Her personality, her bright vivid beauty, her sparkling wit, her kind, tender manner, all combined, took possession of my childish heart.

From my tenth birthday up to the time I was sixteen I had the pleasure of being constantly in Mrs. Dodge's society. No one ever understood children more truly than she. Her manner was sunshine itself, always, but with children, it was positively the sun. Her well known and delightful story, "Hans Brinker" was then quite new to the public. We children used the

lest she might not bring those lads safely thru their journey. There was an old woman of Holland birth, living near Mrs. Dodge's country home, in New Jersey. To this old woman's house, Mrs. Dodge made daily visits, and in these long conversations learned much of the every-day life of Holland. Much of the "local color," as we call it these days, of *Hans Brinker* was acquired, Mrs. Dodge often told us, from her talks with this old woman.

I never knew any one who entered so completely into the feelings of children. We all thought no one could ever arrange such delightful games, yes, and play them, too, as Mrs. Dodge could. The glorious evenings of charades, impromptu private theatricals and games of all sorts, live in the memory of the children who took part, even tho they are sober, middle-aged people now, bearing the brunt of the heat and burden of the day. I can see Mrs. Dodge's brilliant face, so plainly, as she helped us thru a charade, arranged a tableau, or led in a dance or a game. Her remarkably handsome face appealed so strongly to our childish admiration.

Altho a mother of sons, only, she understood girls perfectly. Her influence over girls was very marked. When she reproved us for any fault, her bright, sunny manner softened the rebuke. A little friend of mine said once to me, "Do you know, no matter how cold or dark the day is, if Mrs. Dodge comes in the room the sun seems to shine?" Such was the influence of her bright personality.

Her order of mind was of that description, intellectually practical. Her brilliant wit was thoroly American, sparkling with humor. I always felt that it was that practical intellectuality that gave her such a fascinating personality. Her sympathy was one of her greatest charms. With her penetrating intellect there was always the warm heart to which the sunny manner was the index. Her faith in the hereafter is evident, and well expressed in her beautiful lines:

Nothing is known, but I believe
That God is overhead,
And as life is to the living
So death is to the dead.

Mrs. Mary Mapes Dodge.

charming story as a text-book, as so many children have done since. We would gather round Mrs. Dodge in the evening and beg her to tell us "Who Gretel married," adding again and again, "You did not tell us in the book, you know."

While she was writing a story she lived completely in the scenes she was depicting. While she was writing *Hans Brinker*, she lived entirely with the boys she was carrying thru Holland and she positively shivered with fear,

Teaching Love of Labor

By A. C. Scammell, Massachusetts

NEAR the June vacation the superintendent of schools supplied the pupils of the four higher grammar grades with flower and vegetable seeds, to be planted in early summer, the fruitage to be enjoyed, in the real or in the memory, long after harvesting. An October Wednesday saw the school halls dressed for a harvest festival. The successes of summer gardening were takingly arranged on exhibition and on admiration, too, for they won unstinted praise from guests within and without the school public. An old farmer from five miles away declared, "This beats anything of the kind that I've ever seen at any cattle show." Was this public exhibition the superintendent's goal when he proposed the vacation work? The reaching-place of his pupils was set away and away beyond the pride of show; he called it "The Dignity of Labor." Every one of his boys and girls was well on his way toward it.

How Two Teachers Went at It.

The material for raffia work was not free to second grade schools of a town; the pupils were voted too young for such work. Two of the teachers, who knew differently said, "We will provide the small amount needed, for this work will delight the children." They did more; they bought the material for making the part furnishings of a doll's house. These included dainty bath towels woven of white cheese-cloth slips, bright-bordered rugs woven of carpet yarn, a doll's hammock of silkoteen, a doll's sweater, and other pretty apparel, with the "so-forths" that gladden every mother of dolls. This labor of love was done outside of school hours, the eager children staying for a little time after school to be taught how to do the work at their homes. The reasons given were, "We want our children to learn from the beginning that work with the hands is honorable, and that they ought to do their share; and, besides, enticing work is children's most interesting play."

Don't Berries Make Something.

A little girl from a purse-poor home asked her teacher, on a day nearing Christmas, how she could spend to best advantage her forty-five cents, earned at berry picking, in buying gifts for each one of her family of eight. "Don't buy any presents, dear, but just make them; forty-five cents will buy such a lot of material to work with!" And so it did, under the wise teacher's guidance. Up to Christmas morning the needle and the tool were busy fashioning, and all the while the love for and the skill in doing were growing.

Don't Let any Work Slip Away.

The recent coming of the paid janitor into the rural schools may have its advantage, but it is a sad breaking-up of the delightful co-operative school housekeeping which has been in these schools since the beginning. The stopping for

a half-hour after school, by turns of twos, to do the housework for the next day was a pleasure eagerly looked forward to; sweeping, dusting, rubbing, scrubbing, decorating—how delightful! What matter tho it soiled and bruised the tender hands unused to housework!

Every teacher, in city or in town, who is a work lover, will, as one work goes out, quickly send another in. She will start something, in or out of school hours, that will keep the muscles supple, and the desire aglow to do something for others' comfort. To this end, the sooner the holiday gift-work begins, the better; the more of it, the better. The teacher's encouragement needs to stay at high tide during this preparative season. The children's courage must be kept up, while doing the work that bothers, or work that receive scanty or no return thanks, for they will have a lot of such work to do out in life.

In the by years of a seminary, to-day a prominent college, its domestic work was shared by the girl students. Attending to the boiler down in the "boiler-room" on washing day was not a work to be desired. For a half year this duty was assigned to the daughter of the school's most influential patron. All but the young girl herself wondered at this selection, but she pleasantly accepted her work with, "And why not I?" Donning a dark, short washdress and thick shoes, she did her work as cheerfully and painstakingly as she had done her first six months' happy privilege, the careful copying of "Journals" to be sent to the school's graduated missionaries, at work over sea. That girl had been well born into right ideas of inter-work, of sharing, of burden-bearing.

The Place to Get Started In.

A standstill in school progress recently visited a school that kept going. Among the wall hangings were several designs for house paper and for oilcloth; designs for cotton prints, mechanical drawings, and other industrial beginnings. "This looks well enough," assented the visitor, "but what good will it do these boys and girls? When I was a boy the children went to school to study their books and found plenty of time to learn to work after school days were over." A boy of twelve overheard and said to his mate, after school, "Isn't he a queer one? He seems to think that all school is for is to learn one thing. He doesn't know that school is the place to get started in everything that's going. What's a fellow going to do for his living while he is learning his trade, for a year or two after he has left school? Catch me living on my father!" "Nor me, neither," stoutly responded the other boy. The tramp sentiment, "The world owes me a living," isn't likely to develop in such boys.

Heap on more wood!—the wind is chill
But let it whistle as it will,
We'll keep our Christmas merry still;
Each age has deem'd the new-born year
The fittest time for festal cheer.

—WALTER SCOTT.

Cold December brings the sleet,
Blazing fire and Christmas treat.

—SARA COLERIDGE.

In a drear-nighted December,
O happy, happy tree,
Thy branches ne'er remember
Their green felicity.
The north cannot undo them,
With a sleety whistle thru them,
Nor frozen thawings glue them,
From budding at the prime.

—JOHN KEATS.

"Whatever the weather may be," says he—
"Whatever the weather may be,
It's the song ye sing an' the smiles ye wear
That's a-making the sunshine everywhere."

—JAMES WHITCOMB RILEY.

Crackle and blaze,
Crackle and blaze!

There's snow on the house-tops,
There's ice on the ways;
But the keener the season
The stronger's the reason
Our ceiling should flicker and glow and blaze.
So fire, piled fire,
Leap, fire, and shout;
Be it warmer within
As 'tis colder without.

And as curtains we draw and around the hearth close,
As we glad us with talk of great forests and deep snows,
As redly thy warmth on the shadowed wall plays,
We'll say Winter's evenings outmatch Summer's days,
And a song, jolly roarer, we'll shout in thy praise;
So crackle and blaze,
Crackle and blaze.

—WILLIAM COX BENNETT.

When icicles hang by the wall,
And Dick the shepherd blows his nail,
And Tom bears logs into the hall,
And milk comes frozen home in pail;
When blood is nipp'd and ways be foul,
Then mighty sings the staring owl,
To whoo;

Tu whit! Tu whoo! A merry note!
Tu whit! To-who! A merry note!

—SHAKESPEARE

Chill airs and wintry winds! My ear
Has grown familiar with your song;

I hear it in the opening year—
I listen, and it cheers me long.

—H. W. LONGFELLOW.

I listen in the evening
To the sighing of the gale;
I watch the heaping snowdrifts
And hear the rattling hail:
And I think, with grateful spirit,
What a glorious God is ours,
Who is mighty in the tempest,
And gentle in the flowers.

—SAMUEL FRANCIS SMITH.

The meadow lark sings in the meadow,
But the snowbird sings in the snow.
Ah me!
Chickadee!

The snowbird sings in the snow!

The pine is like a tall cathedral tower,
With ariels or withered ivy-vines
Entwined in sculptured shapes of wreath and flower,
Thru' which the clear, red stain of morning shines;
And underneath, the snow-draped shrub and briers
Seem kneeling groups of silent, white-robed friars.

—C. L. HILDRETH.

Lo, what wonders the day hath brought,
Born of the soft and slumbrous snow!
Gradual, silent, slowly wrought,
Even as an artist, thought by thought,
Writes expression on lip and brow.

—MRS. ELIZABETH A. ALLEN.

"Help one another," the snowflakes said,
As they cuddled down in their fleecy bed.
"One of us here would not be felt,
One of us here would quickly melt;
But I'll help you, and you help me,
And then what a splendid drift there'll be."

Out of the bosom of the air,
Out of the cloud folds of her garments shaken,
Over the woodlands brown and bare,
Over the harvest fields forsaken,
Silent, and soft, and slow,
Descends the snow.

Snowflake
—ANON.

Ring a merry season
Joyous Christmas bells,
What a tale of wonder
Your sweet pealing tells,
For one little child's sake
All the world is glad.

"And never more the blessing
Shall from the year depart,
If only we, dear children,
Keep Christmas in the heart.
Its love, its thoughts for others
Are beautiful as flowers,
[And may we sow their beauty
In other hearts than ours."

—ANNIE DOUGLAS BELL.

Mary Kingwood's School.—Story of a Teacher's Success.

By Corinne Johnson, Pennsylvania

(Continued from last month.)

WITH eager faces and with voices ringing with exclamations of delight, the children gathered around their teacher a bright cold Friday morning in November. Snow had fallen and they felt the joy of a bright, winter's day. Where will you find a child with sound body who is not happy with the first snow fall? These pupils of Miss Kingwood came into her presence with overflowing hearts, and she remembered what the Book and the poets had said about snow as an emblem of innocence and purity. She had them learn a new song that morning about the "Beautiful Snow," and as soon as they had sung she permitted one of the pupils to find the verse about washing to be whiter than snow. Then she impressively read a number of verses from the psalm from which it was taken.

At noon the sun had come out, and as little Ben Parker said, carried some of the snow up to the stars and some of it got away to fill the streams before ice would come. The snow was gone, but its mission had been fulfilled. Instead of the bluster and flurry of the early morning, the afternoon sparkled with sunbeams and Miss Kingwood thought it would be best to improve the perfect day by going to the woods with the children, as this might be their last opportunity till spring should come again.

When she asked, "How many would like to take a walk?" they with one voice asked, "O, Miss Kingwood, may we go to the woods?"

They went, and what a day it was! What a walk! They discovered secrets of nature that surprised even the teacher. The trees were almost leafless, but here and there a green pine stood framed in with the lighter colored leafless trees making for the keen eyes the most delightful picture visions. The sky was a beautiful grey, as November skies usually are, but every child was happy. They saw only the bright side of the day. What a wonderful thing is the child heart!

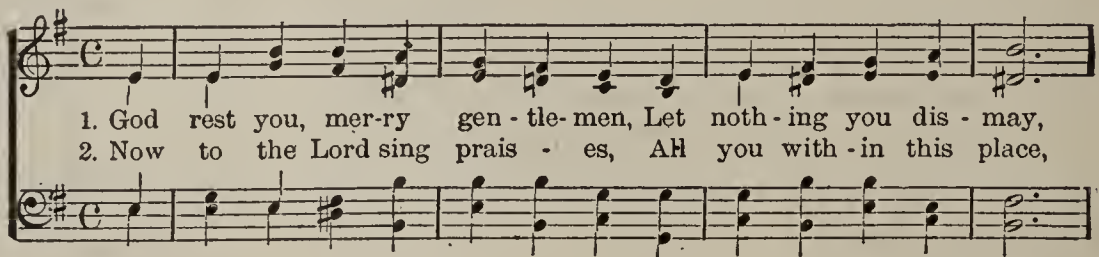

And how they talked—talked of the leaves falling, the flowers dying, the preparation for winter, the fallen leaves forming a coverlet for the seeds, the food stored away for insects, animals, and man, and Miss Kingwood reminded them that nature

seemed to be preparing for a rest. What lessons were learned! Stimulated by their environment one of the children asked if they could not play "Come little leaves, said the Wind one day," and as this was a favorite game they all joined in the request for it. That was a royal rehearsal that afternoon. They caught the spirit of the time, and their teacher said she was sure she saw them grow while engaged in it.

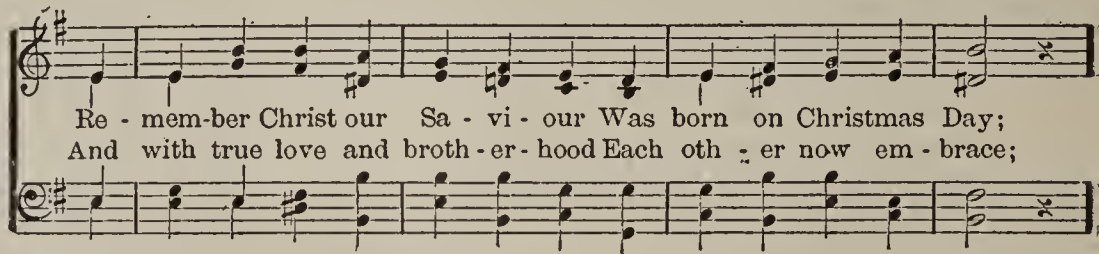

During the month, Miss Kingwood visited several other rooms in the building and came away from them with encouragement and new zeal. She noticed one teacher in particular who made no effort to turn out a number of students exactly alike, but with a most inspiring disregard for conventionalities she allowed the greatest freedom in the way of doing and saying things. Miss Kingwood took particular note of this, for she was impressed with the independence and

God Rest You, Merry Gentlemen

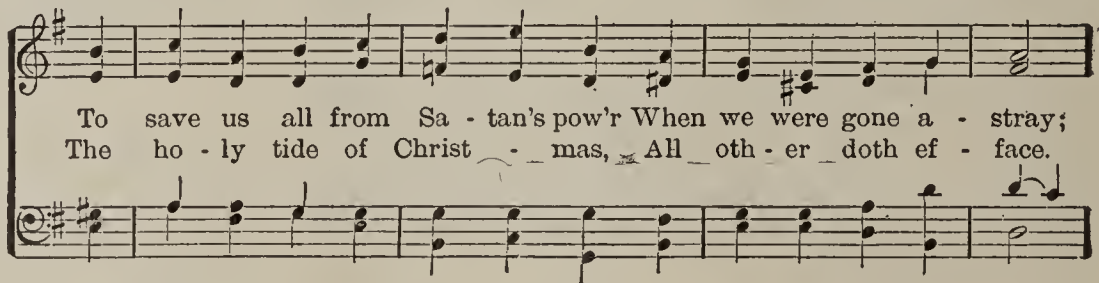

OLD ENGLISH CHRISTMAS CAROL.

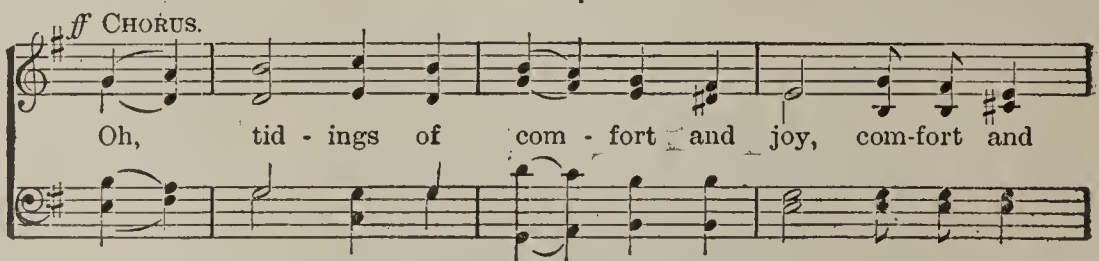

1. God rest you, mer-ry gen-tle-men, Let noth-ing you dis-may,
2. Now to the Lord sing prais-es, AH you with-in this place,

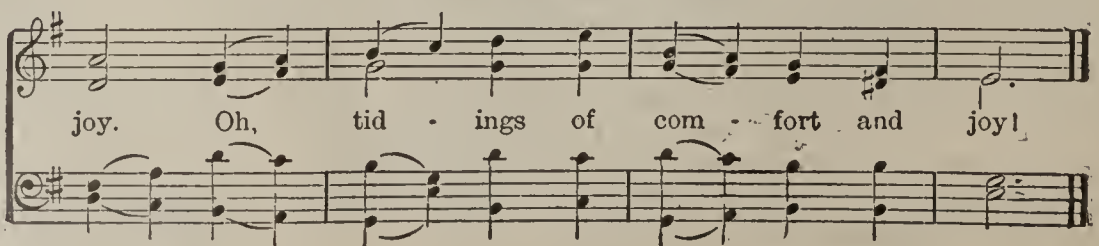

Re-mem-ber Christ our Sa-vi-our Was born on Christmas Day;
And with true love and broth-er-hood Each oth-er now em-brace;

To save us all from Sa-tan's pow'r When we were gone a-stray;
The ho-ly tide of Christ-mas, All oth-er doth ef-face.

CHORUS.
Oh, tid-ings of com-fort and joy, com-fort and

joy. Oh, tid-ings of com-fort and joy!

clearness of expression of many of this teacher's class, and she said, "Here is one giving her life that these may have more abundant life," and she went out of her presence inspired. While she was in this room they were having a lesson in literature, and under the magic touch of the teacher the children seemed to be inspired; and that mysterious something is contagious. Miss Kingwood felt the charm of a noble spirit in tune with the poet's holy vision and she returned to her own little flock with a halo of glory around her purpose which to her was life, for with her to purpose a line of school work was to do that

work. It is true that the children in school appreciate much that seems beyond their understanding, but in literature the heart feels even if the intellect may not reveal the line of life on which the story hangs.

Out of this room on this particular day Miss Kingwood came with conviction that children may memorize poems the meaning of which may not be explained to them, and thenceforth the nobler stanzas of great poems found their way into the child mind along with the simpler rhymes and plainer tales.

A few days after this visit she brought into the room a picture of Eugene Field, the children's poet, and placed it where all the children could see it. She then asked if any of them knew whose picture she had brought for them, and as usual all wanted to tell, at least each one knew some one that he thought it looked like, or that looked like the picture. A number of them said, "It is Professor Brown." Now Professor Brown was the principal, and the ideal man in the estimation of many of the children, if not of all. Strange, how a good teacher takes the place of all others, even of father, in the mind of the child in school. But Professor Brown was the one man they knew, really knew, outside of their homes. Once Miss Kingwood told me that she was sure the teacher, not only in school work, but in every way, is the model by which the child creates his ideal, and that children are influenced more than we think, by the physical appearance of the teacher.

To prove her position she used this incident. It happened one day that Miss Kingwood wore a black guard on her watch, and one of her pupils when he went home from school that evening and was greeted kindly by his mother as was her habit, noticed that she wore a gold chain on her watch. Johnny looked at her for a few moments and then

asked, "Mamma, why don't you wear a black string on your watch like Miss Kingwood does?"

I wish that every teacher might realize the influence she has in the lives of the little ones committed to her care. If we might see the shores to which the waves may reach, how much truer teachers we would be.

But to go back to our lesson—she told them it was the portrait of a good man who had a little boy of his own, and who loved all little children. His name was Eugene Field, she said, and then she told them stories of his life in such a way that that made the children feel that Field had loved them. She laid particular stress on the fact that he was ready at any time to lay aside his work that he might have an opportunity to tell them stories, to sing them quaint lullabys, or to calm a children's quarrel. She told them how he always bought toys of some kind, a drum, a pop-gun, a dolly, a boat, or candy to take to his own children; or for some little one he perchance might meet. She told them that it was said of Mr. Field that at one time he had gathered together twenty-six dolls and had them ready for any who might be without a doll, and that his great pleasure was to bring pleasure to the one to whom a doll was given.

And then to my surprise she sat down among the little ones and talked on with them about Eugene Field and his verses. She said his poems were filled with good things, the things that children like best, and that they had the true child heart, "and," said she, "grown up people all over the land grew to love him just as the the children did, and when he was alive they wanted to hear his verses from his own mouth because he could read and tell them better than anyone else."

"One time," she continued, "he took his little boys to a town not far distant where he was to give a reading that evening. During the entire time that he was reading for the people these two little boys sat on the front seat and with eyes and mouth wide open listened to every word their father uttered. When the meeting was over and they had gone to the home of a friend, where they were to spend the night, Mr. Field said to his boys, 'Well, boys, how did papa do to-night?' The boys quickly replied, 'Oh, papa, you never did better in your life.' This pleased the great man and he said it was the greatest compliment he had ever received. I think it was a great tribute from a six-year-old boy."

After Miss Kingwood had talked in this way for some time to the children, and they seemed to realize that Mr. Field was their friend, too, she read for them "Little Boy Blue," and then told them that if they had gone to Mr. Field's home while he was alive they would have seen the little toys covered with dust just where Mr. Field's little boy had placed them the night before the angel came for him. One little girl in the class who read and memorized poems in a remarkable manner said, "Miss Kingwood, Mr. Field wrote 'Little Boy Blue' after his own little boy had died," and noting her intense interest in the matter she asked her how much of it she knew. The little girl replied that she knew it all, and

Miss Kingwood asked her to repeat it, when with voice eloquent with emotion she began,

The little toy dog is covered with dust,
But sturdy and stanch he stands,
And the little toy soldier is red with rust,
And his musket moulds in his hands.

That was an elocutionary entertainment worthy the greatest of audiences. As the child went along not missing a word or sound, with her heart throbbing and an expression of something more than of this earth on her face, the school was impressively silent, but the light in the eyes of the children showed that they were living thru the story with the reader.

Following up the interest aroused in this kind of literature, Miss Kingwood in a few days gave the children that most beautiful poem "The Dutch Lullaby," and told them it was one of the most nearly perfect poems ever written, and as she read it the children seemed to float away

"Over a river of crystal light
Into a sea of dew."

These poems always brought delight to the children and space will not permit even a reference to the many, many lessons incidentally learned while doing this work. Miss Kingwood found, as every earnest teacher will find, that time was all too short to do what she felt ought to be done with this phase of her work.

Another day she took up the story of the first Thanksgiving, and I was astonished at the geography and history work these little ones did. I noticed that on special occasions there was a great deal of formal work, and so it was with this Thanksgiving lesson, but these wise little tots caught the spirit of the true thankfulness of doing for other and in giving to others, and they took especial delight in the lines,

" 'Tis loving and giving
That makes life worth while,
'Tis loving and giving
That makes life a song."

And this sentiment seemed to be their motto, the guiding star in their work.

This lesson on thankfulness was brought to a close the day before Thanksgiving, at which time the children had a literary program, and every one in the school took part. The parents were invited to come in. The children strung grains of pop corn, brought fruit, and every one was anxious to help decorate the school-room, for mama and papa were coming tomorrow. A huge "Jack-o-lantern" was placed in each window, the curtains were drawn, the lanterns lighted and every one was so full of joy and entered into

the occasion with heart and soul so full of purpose that there was no chance for failure. The morrow came and with it the children and their parents with baskets of supplies. These were set around the platform while the exercises went on, and one could see here and there peeping from under covers, such articles as potatoes, apples, bread, meat, and all sorts of food. After the program was completed, Miss Kingwood spoke a few words and the supplies were taken by the grown people to the homes of those who were not favored with plenty of food for the next day's dinner. Many of the parents tarried to talk of Susie, or Jennie, or John, and from this brief conference with these earnest mothers Miss Kingwood gained great help for the days yet to come.

As the patrons left the building on this occasion they remarked one to the other, "They were right, she is different from other teachers we have had," and from their words of encouragement Miss Kingwood concluded that her work so far had not been in vain. She felt that she was getting acquainted and that a bond of sympathy between herself and the parents as well as the children had been established, and that as the years went on it would not be broken.

Her's was a high resolve that day to live worthy her opportunity and to bring to these little ones the riches of knowledge thru the riches of love and devotion to life and life's enlargement thru the means afforded by Nature and Nature's God.

The First Nowell

OLD ENGLISH CHRISTMAS CAROL

shepherds in fields as they lay, In fields where they lay keep - ing their

sheep, On a cold win - ter's night that was so deep. Now - ell, Now -

ell, Now - ell, Now - ell, Born is the King of Is - ra - el

The Christmas Month.

The Thanksgiving season to which the children had looked forward with such eagerness had come and gone. But the interest did not abate, because Miss Kingwood always had some new vision, and she was so skilful in drawing aside the veil that the glimpse thus afforded became a mighty power in urging the little ones into exploration of the new-found realms of thought and fancy.

With the December days she felt new responsibilities. The whole silent world seemed a veritable fairy land of beauty, and this in itself was an inspiration to Miss Kingwood, but while the external environment had its influence, the presence of the children was her great source of strength.

In spite of the drifts of snow and the biting zero weather, almost every child was present every day. The teacher and her pupils by this time had become such fast friends that if one were absent it seemed as if one instrument out of a great orchestra were silent. They had reached that point at which each seemed to live for the other. One mother said, "Miss Kingwood, my little boy just loves you." Miss Kingwood felt that it was not so much what she could teach, as what she could do in suggestion, that would enable the children to create for themselves ideals. She believed that the child must himself set free the divinity that is within him, and to that end she planned this Christmas lesson.

On these winter days the warmth and cheer of the school-room was in marked contrast with the cold and storm without, and it in fact did service in the work on hand. Then there were days when the calmness of the weather and the whiteness of the snow came to her aid. She marshaled all these forces into her service. The children wanted to sing. Mary Knight had heard "Tiny Little Snow Flakes," and others came to know of it. They wanted to sing it, and it was but a short time till all knew both words and melody.

They talked of the snow, uses of the snow, winter sports, of the little people of the north. They learned about the Eskimo, the Laplander, the reindeer, the arctic dogs, and other animals of the far north. Miss Kingwood found this a great season for nature study. And in speaking of the richness of these experiences, she said, "After all this is the only way." I asked her what she meant and she replied, "Why these unstudied lessons in nature, these unbidden opportunities for investigation which march in legions before you, when you go to seek the better life. I look for facts that will enable the children to build air castles, in the true sense, and nature and the spirit bring facts, facts, facts, all in relation." The joy of this school work is in seeing these relations.

In running along with experiences of snow and storm, the fuel and food and home comforts, they came to the place for the story. Miss Kingwood never said, "to-morrow we shall have a story," but when the time came the story was in waiting, and was given in such a way that it accomplished what it was intended to accomplish. On the day I have in mind she read to them Hawthorne's "The Snow Image." No one can know how these children sympathized with the little snow sister, and

how they lived thru the story as with inspiring touch the teacher read.

The Christmas spirit was everywhere. The Christmas atmosphere pervaded the work of the entire month. The desire of Miss Kingwood was that the happiness of the children should be unlimited on this Christmas-tide. Her tactful leading revealed the joyous, trustful, unconscious-of-self, affectionate child-nature, which is the best semblance of what might be on earth. The teacher's part in keeping that pure nature of the child, a bit of heaven we might say, is a sacred trust, and Miss Kingwood realized that the Christmas season is especially adapted to cultivate the joyousness of childhood.

Of course, the children wanted to talk about Santa Claus. Who ever heard of a Christmas without a Santa Claus? The children wrote letters to "Mr. Santa Claus," and made known to the dear old saint their wants. Tom Baker's joy was full when it came to this, for ever since the day he had written for a sled, Christmas and the sled had been uppermost in his mind. Some parents were heard to say, "There is nothing in it," and one asked his child, "Did Miss Kingwood say there is a Santa Claus?" Oh, if we could but educate the parents who do not understand, we would offer the children the means for more abundant life.

Miss Kingwood spoke truly when she said,

"Yes; I believe in Santa Claus, a real genuine one; overflowing with Christmas love and good cheer. He typifies Christmas love, or that love which prompts us to make others happy." To her it seemed only a step from the Thanksgiving lesson of gratefulness for the things of earth to the gift of the Christ Child, so from the first day of the month till Christmas Eve there was constant study of things in relation to this the greatest event of all history. Especially helpful were the periods devoted to the study of the pictures of Jesus as presented in copies from the world's great masterpieces, and wonderful strength was gained by appropriate poems, such as "Christmas Bells," "Twas the Night Before Christmas," and "The First Christmas."

With the children; Miss Kingwood painted a picture, beginning with the nature thought of the meadow, the sheep, the shepherd, the hills around the little Judean town, and as the picture grew, it took definite shape for the background of the "Coming of the Christ Child." Then when the advent was laid before their vision the picture was complete. Then came the sweet story of the "Babe of Bethlehem." It was given to the children in such a way as to carry them thru from His coming to His departure, and left in their lives the outline for a motive which was designed to lift them into higher and higher phases of living.

Passing from the historic recital, Miss Kingwood asked, "Shall we make gifts?" The hearty response was, "Oh, yes, let us give gifts, too." So Miss Kingwood promised them that before long they might make presents for mother and father. God have pity on the child who knows not the love of mother or father, but such a child adapts itself to conditions and selects some one on whom to bestow its love. The time for work came.

The children were overjoyed at the

thought of making gifts and of surprising their parents. Even careless Paul took extra pains with his writing, and Sara worked doubly hard with her numbers. So they all went to work. The busy little fingers fairly flew. Miss Kingwood knew she had a task of vast magnitude, but when she looked into the faces of the children she received inspiration for the work and the gifts were soon finished. They made raphia napkin rings tied with dainty ribbon for mother, and a blotter shaped like a stocking for father. It was "fun" they said, this cutting and working for others, and when the work was completed many little hearts throbbed with unutterable joy. Little as the gifts were, the experience meant so much to the children and their parents. They had learned the beautiful lesson from

FLOWER AND WEED.

Unto our Lady's altar
Two little children came;
High through the painted casement
The sun shone like a flame;
Outside the birds were singing,
The day was nearly gone,
And there like frozen music,
Our Mother's statue shone.

One bore the rarest roses
Culled from the hot-house store,
And one some tiny posies,—
Just common weeds, no more.
And when the gorgeous blossoms
Shone in a rosy drift,
Warm from his tired fingers,
The poor child laid his gift.

That night a radiant vision
Came down from angel land;
Our Lady smiled upon him,
And the weeds were in her hand;
And he knew then not the offering
Of treasures rare and fine,
But the love he gave her with it
Had made his gift divine.

—Selected.

The Christmas thought was further emphasized by having a Christmas tree, and the joyous occasion was fully rounded out by songs, stories, and poems, and as these little voices sang their glad Christmas anthem it seemed sweeter to Miss Kingwood and the many mothers present than their conception of that other song chanted over Judea's hills, and above the plains of Bethlehem, nearly two thousand years ago.

At the close of this day of special exercises, the teacher wished them a Merry Christmas, and with a cheery "Good-Bye," she was off for her holiday vacation with her mother, and whether her pupils went to homes where Christmas presents were heaped high on Christmas morning or to homes where Christmas presents were meager and rare, they went with memories and inspirations that made for better life in the days to come.

They had from the efforts of their teacher been able to obtain that which is better than any material gift—the Christmas spirit.

**A
HAPPY**

**NEW
YEAR!**

A Happy New Year.

A "Happy New Year" you can make it,
my dear,
By smiling and doing your best;
Be cheery and true the twelvemonth,
So shall the New Year be blest.
—Selected.

A New Year's Thought.

If from your soul no fresh desire
Leaps forth resolved to fully gain
The long-sought victory over self;
For you the New Year dawns in vain!
—ALMEDA E. WRIGHT.

The New Year.

May the year that is dawning,
So fresh and so pure,
Be full of the pleasures
That always endure.

The sunshine of love,
The joy of kind deeds,
The brightness of smiles
That the sad world so needs.

The kindly word uttered,
The angry unspoken;
The merry heart's laughter,
To heal the hearts broken.

And when the New Year
Has grown old and gray,
May you give it back spotless
And pure as to-day.
—Our Dumb Animals.

New Year Resolutions.

I.

There were three little folks, long ago,
Who solemnly sat in a row
On a December night,
And attempted to write
For the New Year a good resolution.

II.

"I will try not to make so much noise,
And be one of the quietest boys,"
Wrote one of the three,
Whose uproarious glee
Was the cause of no end of confusion.

III.

"I resolve that I never will take
More than two or three pieces of cake,"
Wrote plump little Pete,

Whose taste for the sweet
Was a problem of puzzling solution.

IV.

The other, her paper to fill
Began with, "Resolved that I will"—
But right there she stopped,
And fast asleep dropped
Ere she came to a single conclusion.
—Selected.

The New Year.

"Now, what is that noise?" said the glad
New Year,
"Now, what is that singular sound I hear?
As if all the paper in all the world,
Were rattled and shaken and twisted and
twirled."
"Oh! that," said the jolly old earth, "is
the noise
Of all my children, both girls and boys,
A turning over their leaves so new,
And all to do honor, New Year, to you."
—Philadelphia Teacher.

January.

I'm little January,
Perhaps you'd like to know,
How far I've come to greet you,
Across the fields of snow.
Perhaps you weren't expecting,
I'd be so very small,
Perhaps you're almost wishing
I hadn't come at all.

I've several little brothers,
And little sisters too,
And every one is coming
To make a call on you.
But I got ready quickly,
And came right straight off here,
To be the first to greet you,
This happy glad New Year.
—Philadelphia Teacher.

High and Low.

High and low
The winter winds blow!
They fill the hollows with drifts of snow,
And sweep on the hills a pathway clear;
They hurry the children along to school,
And whistle a song for the happy New
Year.
—Selected.

Good Bye, Old Year.

Goodbye, Old Year! I can but say,
Sadly I see thee passing away;
Passing away with hopes and fears,
The bliss and pain, the smiles and tears,
That comes to us all in all the years.
Goodbye, Old Year! With words of grace
Leave us to him who takes thy place;
And say, Old Year, unto the New,
"Kindly, carefully, carry them through,
For much, I ween, they have yet to do!"
—JOHN G. SAXE.

I BRING the frost
the ice, the snow.
Oh little children dear
Many a frolic may you have
Throughout this glad
new year.

Hints and Helps

Plans,
Methods,
Devices, and
Suggestions

from the
Workshops
of many
Teachers

This feature, originally planned for *Institute and Primary School*, has proved so popular with teachers that it has been copied by nearly every educational periodical in the country. *TEACHERS MAGAZINE* will continue to publish the best to be had for this department. The Editor would like nothing better than that he might be able to visit the school-rooms of every one of the hundred thousand teachers who will read this magazine. What an abundance of good things he would find! But that cannot be. The next best plan is to have the teachers aid each other by writing out the devices and plans and thoughts that have proved most helpful to them. Will you not contribute from the store of your experience? A good book will be sent for every contribution accepted for this department.

A German Christmas.

A Christmas for the primary room may be arranged after a pretty German fashion, with a little tree for each child.

The trees should be evergreens about two feet high, and they can be set up in the damp sand of a long sand-table. The trees should be simply decorated with a few candles, a gay bag of popcorn, another of candy, a tiny cake, and the gift of the teacher to the child.

A little cardboard heart with a number in the center should be tied to the topmost bough, and the child draws a similar numbered heart from a basket, and thus finds his tree. The gifts should be uniform in price, tho including a variety of articles.

My children were delighted with this Christmas, and took the little trees home to be a joy for days.
California. MABEL KIMBALL.

An Exhibit Day.

As a rule too little is known by parents of the actual work of the school. Having an exhibit day will help to a better understanding.

The work done by the children,—writing, drawing, stories, dictation exercises, stick-laying, paper cutting, sewing, and modeling—can be displayed, and parents will have an opportunity to compare the work.

For such an occasion little invitations may be sent out, and the school-room be attractively arranged in Japanese style, with posters, lanterns, fans, and paper apple blossoms, and the platform transformed into a miniature tea-house, where two little girls in kimonos can serve tea.

MABEL KIMBALL.

The Blessed Country Teacher.

I have just received the October number of *TEACHERS MAGAZINE* and have read every word of it from beginning to end. I think the combination is an improvement altho all of the other papers were excellent and helped me a great deal in my school work. I get so many good suggestions from the various teachers that I wish I could

send something in return. I am only a rural school teacher but think I have the finest school in the state. My little white school-house stands on the hill overlooking that treacherous river "The Old Muddy." I have been teacher of this school for three years and my thoughts from the rising to the setting of the sun are of it, trying to think of some new plan or device which will interest my scholars in their work. It is all I live for while I am in the work and I hope when I am thru with the school or they are thru with me I have left either by words or actions an impression upon my scholars which will make them better and nobler citizens of our great country.

I wish to thank Prudence S. Jackson for her little suggestion on whispering. I have tried it and it seems to work like a charm. It is as she said—the children take interest when their names are written in a place where all see them.

I was going to give a few of my devices, but feel as tho I have already taken up too much room. Will do so in a future edition.

Iowa.

M. M.

For Weather Prophets.

As an amateur farmer, I am interested in the weather. I have gathered meteorological data for years, but as yet have not found the slightest basis on which to ascertain the state of the weather even twelve hours ahead.

The government weather predictions are very faulty, and as many laymen claim they can predict the weather more accurately than the weather bureau, without any of the elaborate apparatus of the government, I hereby appeal to all the weather prophets of this country to enter a thirty day contest. I will give to whoever predicts the weather most accurately and will tell for the benefit of the public by what methods he arrived at his conclusions \$100 cash to repay him for his trouble. If the editor will kindly publish this and aid in advancing the science of meteorology, I will be grateful.

Ciphering Matches.

My pupils are always delighted when I tell them they may have a ciphering match on Friday afternoon.

I ask one of the pupils in the lowest grade in my room to go to the blackboard. He chooses one of his classmates to cipher with him, and I dictate such work as they do daily in arithmetic. Of course, if the pupils are from primary grades (and mine are), the exercises are very easy, as, $5+2=?$ $7-3=?$ etc. Both contestants begin working at the same moment, and the one who finishes first correctly is the winner. He then chooses another one from his grade to cipher with him and the one who was beaten takes his seat.

When all have been chosen from one grade, the last one at the board chooses from the next higher grade, and so on until all in the room have been chosen.

My pupils take great interest in these matches and work so hard to win, not on Friday afternoons alone, but in preparing for them during the week, that the matches can not help being a benefit as well as a pleasure.

Florida.

MRS. JESSIE G. VINSON.

A Use for Old Magazines.

It has been said that you can find a use for everything in a primary school-room. I, for one, have found this to be true. After cutting all the pictures that would be of service to me from my old magazines, I found that the printed pages were of service to me, also, for I could use them in various ways for language busy work. I cut the page in four parts by first cutting the two columns and then cutting the columns in half. It mattered not what the story was, there were simple words in it, and it could be used. One way in which I used these slips was to write on a piece of paper ten or twelve words that were found on the slip, and require the child to find the words on the printed slip, and underline them. Then again I would underline ten or twelve words on the slips and require them to write a sentence, using each of the underlined words. At another time I would underline thirty words and give them a sheet of paper divided into two columns, one headed "known" and the other "not known," and require them to place the words they could pronounce in the column headed "known," and those they did not know in the one headed "not known."

Virginia.

RUTH O. DYER.

Common Denominators.

Do you ever have trouble in getting your pupils to understand common denominator? If so give this a trial. $1-2-1-3=3-6-2-6=1-6$. Now, the trouble lies in getting the pupil to grasp the idea of a common relationship between the two parts, does it not? Then let's write the word *hog* in the place occupied by the figures of the denominator. Now we have 3-hogs—2-hogs=

1-hog. I have found this helpful. You can use grains, fruits, animals, trees, etc.

Mississippi.

A. M. CLARKE.

Mental Arithmetic Devices.

The average teacher has troubles of his own while inculcating ideas of mental arithmetic. Many pupils have their troubles upon the same subject, as well. Experience plainly teaches that a large number of pupils in all the grades solve problems or rather "do the question" for answers only. Numbers of them do not realize that there is anything of benefit to be derived from the careful study of a well-grounded solution.

Culture and accurate expression should be the prevailing motive in all solutions. When careful expressions are formed, then does the pupil habitually drift into a trend of proper thought, and who can deny the assertion that proper thought is the one great factor in solving problems in mental arithmetic, or for that matter any other problems? This said, we approach the crisis where troubles confront us in presenting this important subject in the class-room.

To adjust our methods so as to remedy the defect properly is truly a weighty task on our part; especially when we realize that pupils are all of diverse minds, and these minds are as various as their faces.

A method that has proved worthy of mention in my experience, in presenting the subject, may possibly not be amiss to some co-worker, if practically applied.

Insist on well formed and carefully worded solutions; especially in the lower grades, where the subject is being introduced or has been, recently. Insist that every pupil has a carefully prepared solution of every problem in the lesson, upon coming into class. Insist upon written solutions in their preparation, particularly in the lower grades. There is usually more accuracy manifested in a written solution than in an oral one, and it helps to lay the foundation for language or correct expression of thought. It develops thinking, the all-important factor in mental work.

Insist on correcting all noticeable errors in expression made during recitation period. Insist upon pupils' getting thought power rather than "answer getting." Insist upon pupils' making note of every problem which was not properly prepared, or which may not be thoroughly understood by the time the recitation period ends. Insist that every pupil keep a special note book where all such problems must be recorded for further preparation on the part of the pupil.

When certain subjects are completed, review carefully all difficult problems found in the pupils' note books, before introducing a new subject in the text. Continue this method with interest for one term, and the pupils, and perhaps the teacher, will by that time know that "answer getting" is not the only thing to be learned in mental arithmetic.

The Autobiography of a Teacher. III

By C. Hanford Henderson

Graduation and the Quest.

I COME now to my graduation. The last year at college was an extremely busy one. Had the general conditions of my life been less favorable, I should doubtless have counted myself overworked. As it was, I went into everything with genuine enthusiasm, and would certainly not have changed places with any one in all the round world. In my actual life there was much to make me happy, and the future was full of beautiful and alluring vistas. Under such conditions one can do a great amount of work and reckon it no task whatever. In spite of its obviousness, we do not sufficiently realize this in either our educational or social plans. I have read much of the discipline of sorrow; and, as things commonly go, we all, sooner or later, get enough of such discipline. I have worked, myself, in joy and I have worked in sorrow; and I have seen others do the same,—and I have noted the harvest. It seems to me that the deeper source of good performance is to be found in a genuine and wholesome joy.

Graduation is such a time for summing up results that I shall probably be ranging pretty freely on both sides of the actual event itself. I have already spoken of the wide field of intellectual interests offered by geology as being its

determining attraction for so general a mind as my own. It was characteristic of this same quality that during the four years of college life I took first prizes in mathematics, English, and economics, and that at graduation I should deliver an oration on Darwin. Such wide interests have naturally kept me from ever being a scholar in the modern sense of the word, but I cannot find it in my heart to regret them, for they have all conspired to make life so very well worth while.

The mathematical prize was given in the Freshman year for extra work in modern geometry. I have always regarded the taking of this prize as something of a triumph, for I began geometry, as I have already said, with tears in my eyes. I do not mean for a moment that it was a triumph in any personal sense, for even now I am not a technical mathematician, but I mean that it was a triumph to have overcome the initial difficulties sufficiently to grasp the inner and hidden beauty of the subject. Had geometry been an elective I fear that I should never have entered this garden of delight. As it was, I had a good and gentle teacher who made the subject transparently clear; and who really showed me what good teaching was. This and other experience gave me in time somewhat pronounced views on prescribed and elective studies.

It is essential to good teaching that children

God·Rest·You·Merry·Gentlemen·Let·Nothing·You·Dismay·

should study only what they are honestly interested in. But this principle is open to two interpretations. In the hands of the foolish it may mean that children must be taught only what they want to learn. In the hands of the wise it reads that children must be interested in the studies that it is desirable that they should learn. This vital difference of interpretation is, I think, at bottom the cause of all the controversy over the question of interest. It is one thing to take children's interests, ready made as it were, and play upon them for all their limited worth; and quite a different thing to create new and richer interests, and then utilize them for individual and social good. In a word, the principle of interest, in sound pedagogy, is more a question of teaching methods than of the curriculum itself, for it goes without saying that no subject ought ever be offered in any curriculum whatever that cannot be made the source of a genuine and helpful interest. And it also goes quite without saying that in determining the proper subjects of study a trained teacher is a far better judge than the most precocious child can possibly be, or even than the average parent.

I once made the mistake of thinking that children ought to determine their own studies in order that they might surely be interested in them. But I now see that the teacher's art is to *get* them interested in studies that promise to be helpful. Excessive specialization makes us moderns rather one-sided creatures at best. It is a pity to let education, and especially secondary education, mean anything less than the unfolding of the human spirit along the broadest and most catholic lines. No one but a veritable genius is qualified to select his life work until he is twenty or more. It is the business of the older generation to open wide the windows on life, to present the fair domain of human knowledge, to help the new generation to get its bearing and act intelligently. I believe, therefore, in prescribed school studies, the best, the broadest, the most illuminating possible, but prescribed; and even at college, in such influence or direction as will secure a broad and balanced course for all undergraduates. The lad must taste science and mathematics and the languages and the humanities before his grasp on the intellectual life is at all sure; and before he is in a position to judge what special lines of work are properly for him. In the best of our universities, the professional schools are open only to college graduates, and this seems a very practical argument for making the undergraduate course as broad and human and cultural as possible.

In the sophomore year there was only one prize offered,—I think it was in oratory—but as I had no gifts in that line, I did not even compete. I have always looked with envy upon those who could speak to advantage, and could carry their audiences with them. It has happened, curiously enough, that during the past few years I have given many lectures, but this has been not at all because I am qualified for such work, but solely because I have been interested in causes which lacked better spokesmen. It seemed finer to speak lamely than not to speak at all. The consciousness that no one can judge the performance more severely than I judge it myself has perhaps

been Spartan comfort and eliminated all embarrassment and nervousness. I even enjoy speaking. But to speak well requires an amount of physical poise and magnetism given only to the robust. I return so often to my own limitations, not in any complaining way—for in spite of its handicaps I have found life very good—but because these limitations, inconvenient as they are personally, have been a great help to me as a teacher. They have led me to emphasize what I am not myself; and to try to spare other boys what I found to be disadvantageous to me. In particular, I have been led to count good health and the accomplished body as the first essential in any rational scheme of education. It seems to me quite futile to teach boys and girls at such infinite pains and to omit the sound health that would enable them to make the teaching personally and socially effective.

The English prize came during the junior year. It was awarded for a special essay, the subject for that particular year being the progress of civilization as shown by the development of the metallurgic arts. I began, I presume, with Tubal Cain and ended with the successors of Sir Henry Bessemer. We should hardly think it wise nowadays to ask lads of nineteen to write essays on such tremendous topics, but those were somewhat discursive days, when the newspapers printed editorials on any one of the cardinal virtues, and every young man of real promise had a lecture up his sleeve on Socrates or Shakespeare taken in the large. My own essay was probably as illuminating as those of its class. It was the custom to announce the prizes at the annual commencement. A large part of the fun of gaining a prize was the perhaps questionable pride of having one's cleverness thus publicly advertised. The English prize, I remember, was number six on the list. When the provost came to it, he hesitated and fumbled

Xmas Fun on the Boston Common in Colonial Times.

From a painting by Forestier.

among his papers only to announce in the end that number six had been awarded, but that he had mislaid the name of the winner! It was a cruel disappointment, and I have often wondered how the provost could have failed to realize that it would be. Several weeks later, when I was up in the coal regions, I received official notification that the prize was mine, and still later the prize itself was paid me; but the joy had been quite squeezed out of it. When I recall the instruction in English, I think this prize must have been offered for a gift of nature, rather than for anything so artificial as human training.

During the senior year we studied economics. The subject was much less valued and much less highly developed then than now, and I fancy that the instruction was necessarily quite elementary. Our professor was an extreme protectionist, and being a brilliant talker, as most Scotch Irishmen are, he carried us all along with him. My own allegiance, however, was short-lived. As I came to think over his arguments they got to be less and less convincing, and I found myself a sincere doubter. Several years later, as assistant literary editor of *The Press*, it was a part of my work to review economic books. The political complexion of the paper naturally brought us all the extreme protectionist writings. It took only a small dose of this sort of literature to complete my own conversion to an opposite point of view, and I have ever since been an absolute free-trader. But whether a man is a protectionist or free-trader is not so much the result of the particular arguments that have been brought to his attention, as it is the almost inevitable outcome of his general attitude of mind on all social questions, and this, I think, is particularly true of older men who have reached some degree of consistency in their views. Among thoughtful persons, I sometimes amuse myself by silently predicting a man's economics from his religious opinions, or his religion from his educational views. In such enterprises the successes naturally make deeper impression than the failures, but in the main I feel as sure of these cross agreements as I do that brunettes will have contralto voices and blondes soprano.

The human side of economics appealed to me then, as it has ever since, so that my going in for the economic prize was not a mere *tour de force*, but was the result of a deep and genuine interest. The prize could not have been very difficult to win or it would never have fallen to any one of so slender an equipment as myself. It was awarded for a competitive essay, the given subject that year being "International Copyright." I took, of course, the affirmative position. My pleasure in winning the prize was considerably heightened when a rumor got abroad that the professor's own position was the opposite, and that he had disinterestedly given judgment against his own side.

In those primitive days—nearly a quarter of a century ago—it was the custom for all the upper honor men to prepare graduation orations, and patient commencement audiences were expected to listen to at least half a dozen of these baccalaureate efforts. Naturally it was the ambition of each honor man to have his oration accepted, but he could easily get out of delivering it, if he had any good and sufficient excuse. This repre-

sented my own case. Darwin had just died,—in the preceding April, if I remember correctly—and the subject was, therefore, particularly timely. I did my best in working it up, writing and re-writing until I had compressed a lot of facts into the prescribed limits, but I had no intention of delivering the oration. All I wanted was to have it accepted. To my surprise and consternation my mother objected to my begging off and quite insisted that I should attend the rehearsals and speak along with the rest.

It must be remembered that these commencements were great occasions, and, to a quiet boy, loomed up even larger than they really were. They were held in the Academy of Music, a fine old building whose proportions and acoustical properties made it at that time the best auditorium in America. It was designed by a German architect temporarily residing in Philadelphia, and, when new, ranked next to La Scala at Milan. This fact is apparently forgotten by those who propose, almost annually, to tear it down and put up a smarter structure. The provost sat on his throne of red velvet and gilt in the center of the large stage; the professors gathered around him like a defensive body of learning; the graduating class, in cap and gown, sat on each side of the stage youthful, radiant, and self-important. In front of all came broad bands of sweet June flowers, the quaint baskets and stiff old-time bouquets offered by loving friends as symbols of the laurels which each man of us was later sure to win. On each side of the stage were piles of silk umbrellas, silver-topped canes, books, and other articles a young man might be supposed to want. America was much poorer then than now, and presents had a utilitarian as well as a sentimental value. And then there was music. Between each oration, I had almost said between each announcement, so prodigal was it, the orchestra "discoursed" well-known and favorite tunes,—not too gay, for it was a dignified occasion, and not too somber, for at heart we were all merry and full of hope.

Beyond the footlights and the orchestra were the proud and happy faces of those who for us really made the occasion, the mothers and fathers, the sisters and sweethearts, the cousins and younger brothers. It was a time for family parties; the good old housekeeper who had helped my sister and me with our earliest reading was there to testify her ceaseless interest. This assemblage would doubtless look old-time now, but it had a tender grace about it which nothing could destroy. These mothers with the son-love in their eyes, these fathers clearing misty spectacles, these maidens of uncertain preferences, breathed into the scene an emotion which none of us could help but feel. It is the fashion to regard commencements as dreary performances. Perhaps they are; objectively speaking, but for me the old glamour still remains. And it is a great thing that each year we should be adding to the less sanguine forces of idealism all this new, strong hope.

It seems to me that the mothers were younger in those days. Now they are gray-haired, placid looking ladies. Then they vied with their daughters in youthful comeliness. My own beautiful mother was so girlish looking that even several years later she was several times mistaken for my

wife; and it came to be a common mistake to assume that my mother and sister were sisters.

I had never spoken in public, and I expected, with good reason, to be very nervous and stage-struck. But when the moment arrived, some larger, impersonal quality in the occasion took possession of me, and I even ventured to make some trifling changes in the memorized oration. I have always been glad that I did pluck up courage to speak. I think that very few persons heard what I had to say, and had they heard, it is more than doubtful whether they would have gained any juster estimate of Darwin and his great work. But it certainly gave my mother genuine pleasure, and it was good for me. It made it easier in later life to attempt enterprises which on the face of them seemed considerably beyond my powers.

A friend of mine, a musician, once used an expression which I have since treasured. He spoke of "the habit of success." My own successes at the university were all small. They could have been duplicated or surpassed by any one willing to give the same amount of time to the work. Lack of physique and of social ideal made me miss the larger human success which I should now hold to be vastly more important than taking prizes and coming out at the front. But I did gain, largely thru my mother's ambitious expectations, what was highly important for a shy, delicate boy to gain, and that was just this habit of success. Such things as I could go in for, I got myself into the way of requiring that I should win. I might have gone in for better things than I did, but one can only seek such good fortune as one sees. This idea of efficiency came to have a fixed place in my thoughts, and it made me take all defeat very hard. When I came in later years to formulate my ideas of morality, in *The Children of Good Fortune*, I found that success played a large part in all my fundamental conceptions. Morality means for me not a simple quantity, but a resultant of two factors,—worth and efficiency; worth in the ideal sought, and efficiency in the seeking. But I shall return to this later, and, I fear, many times, for this double moral yardstick is very exacting. When applied to our older and better organized systems of education it is prone to record high efficiency and doubtful worth; and when applied to newer systems it too often measures off a high degree of worth and a pitiable lack of efficiency. Either ingredient in excess is rather dazzling, and we come to believe in things and to praise things that are in themselves neither credible nor praiseworthy. In scrutinizing performance in general, two questions are always pertinent—was it well done? and was it worth while?

This will, perhaps, be a good place to speak of the beginnings of my literary work, for modest as the work is, it has played a determining part in my life as a teacher. During the last two months of college, I had what was for me a tremendous amount of writing on hand, no less than three separate essays in progress at practically the same time—a graduating thesis on the Coal Mines at Drifton, the essay on International Copyright, and the oration on Darwin. I was too little used to writing to do it easily, and my total instruction

in English had been curiously meager. The three essays, therefore, represented a large amount of work. I should be sorry to have to read them now, but I took genuine pleasure in writing them; and that counted for much. I had read a little of the English essayists, and had taken as my model a writer whom I should now be very sorry to imitate—Macaulay. As I recall the standard; it consisted in a succession of antithetical and balanced sentences that must have been very dreary to the ear, and quite incapable of expressing those finer shades of meaning upon which the true impression really depends. At that time these over-charged sentences were delicious morsels to my tongue, and I doubtless rolled them off at an appalling rate in both speech and writing. Indeed, I am afraid that I did not recover from this unfortunate taste for ponderous, early-Victorian English until several years later, when I came to read Matthew Arnold and Cardinal Newman. I have always felt a genuine gratitude to these men, for they did help to loosen my style, and they did show me, however partially I may have profited by it, how telling and beautiful is the mother tongue when one is content to be sincere and fluid and natural. I still turn to Matthew Arnold to thaw me out when I find that my own sentences are growing hard and metallic.

This taste of literary composition, little promising as it was, did serve to whet my appetite, and I determined, even before I was out of college, that I would eventually be a man of letters. I had not the courage to plunge in at once and make literature my profession, but that was what I meant to work round to. I have naturally wondered since what the result would have been had I gone in for letters immediately after graduation. Perhaps I should be writing better English than I am writing now, but perhaps, also, I should have less to write about. My mother with her magnificent faith in all my abilities gave me most helpful and generous encouragement. I think she honestly believed that I had only to select my department to become in the end a recognized classic. Another friend, in whose judgment I had much confidence, disposed of these airy literary pretensions by saying somewhat epigrammatically: "You may have taste, but you have no talent."

However, no one can say whether a man ought to write or ought not to write,—that is, no one but the man himself. The matter is personal and temperamental. If the impulse toward expression is there, it must find some vent, whether friends approve or publishers buy. My own writing was not so much a choice as a necessity. I had too large a surplus of nervous energy not to require some form of self-expression, and as other avenues were largely closed to me, I had either to

write or to suffocate. In reality my writing has been a great happiness to me. And in a large way it has been the most important part of my teaching work. It has given me a larger audience than I could hope to reach by word of mouth, and, more sacred still, it has brought me some of the best and most helpful friendships of my life.

Looking back upon the attitudes of my mother and my friend, I can see, of course, that both were exaggerated. But it seems to me that of the two, my mother's attitude was far the more helpful. There comes a time when one needs criticism of a most penetrating kind, and one is pretty sure to get it from the great, impersonal outer world, a world which properly regards neither intention nor effort, but solely the finished performance. When one has done one's best, one must be ready to meet this searching criticism, to welcome it, and to gain such lesson from it as one can. But it is quite different in the delicate emotional world of motive and impulse. Here criticism is paralysis. A home atmosphere which is constantly critical may protect us from poor writing and other mediocre performance, but it also has the tendency to rob us of the chance of better things. It is a great boon for boy or man to have home people who believe in him. I feel the same about school and college. It is the men and women who inspire, and not the critics, who are the true teachers. Even at the university my mother was my best teacher, for she believed in me. In her estimate of the value of my writings she was objectively quite wrong; but subjectively, as a spiritual motive, an inspiration, she could not have been more right.

There is a practical side to the writing habit which a teacher may wisely regard. If one can write acceptable English, and has something to say, literature offers one of those wholesome parallel occupations which add immeasurably to the joy and independence of any professional life. A teacher who can do nothing but teach is commonly a poor teacher, quite out of touch with life, and pitifully dependent upon the particular post in hand. And the same thing might reasonably be said of preacher or writer. By having two or more related occupations, it is quite possible to make each help the others;

and between them to live a much richer and more effective life. Personally, I am quite sure that my writing and geologizing have helped my teaching, just as I hope that my teaching has helped them. It is not necessary to be a Jack-of-all-trades, tho even this has, I think, a great advantage over its opposite narrow specialization.

When I came to graduate, at twenty, I had no immediate plans for the future. I had supposed that it would be difficult to obtain suitable work. I had no realization of the immense amount of work to be done in the world, or of the difficulty of finding acceptable workers. It may be that college graduates were somewhat rarer in 1882 than they are now; or it may be that my own friends were particularly thoughtful in looking out for me. At any rate, I recall that within a comparatively few months after graduation, a number

Christmas in the Olden Times.

Boys are Boys in All Ages.

of promising openings presented themselves, and the practical side of the quest came to be a process of exclusion. As I remember them, these offers included a junior mastership in mathematics in a boys' school; a post in the engineering department of the Pennsylvania railroad; an assistant's place on a railway survey in North Carolina; the post of assistant superintendent of a large gold mine in California; and geological work of considerable extent in the South. The variety is the thing that even now most impresses me. It helped to create my belief that, in America at least, one may literally pick and choose one's occupation. It is a tonic belief and I am constantly preaching it to my boys, for it still seems to me true—given, of course, fair average endowment and a reasonably good education. I ought perhaps, to add to these requirements; courage, since it is the lack of it that commonly enslaves the young.

One opening that I had anticipated did not present itself. At the beginning of the senior year it was announced that the student in geology who came out first at graduation would be made an assistant for the ensuing year. I think that the salary was to be a thousand dollars. I wanted the post very keenly, for I loved the student life and had a genuine devotion for geology. There were brighter fellows than I in the department; but none, I think, quite so industrious. It was, therefore, an easy matter to win first place. According to the published terms, the assistantship was mine to accept or refuse. Shortly before graduation, however, the professor sent for me and explained that while I had won the place, hands down as it were, he had decided to give it to another student, as he felt that my own health was somewhat precarious, and that outdoor life would be better for me. It was a bitter disappointment. I have no doubt that the professor acted for what he supposed to be my own best good, but it was several years before I felt quite right about it.

I thus narrowly escaped being a teacher of science before I was twenty-one. The post in mathematics had no attractions for me, chiefly, I think, because of my loyalty to geology. Teaching presented itself to me then wholly from the point of view of the subject, and not at all from the point of view of the art. It would have seemed to me a distinct treason to have accepted any but strictly geological work. I remember looking upon the fellows who went into business as somehow subtly disloyal to a higher calling. It did not occur to me to teach English, in spite of my interest in writing. For one thing, I should not have felt myself qualified, and for another, the teaching of English has always seemed to me rather fatal to the writing of it.

It was not until four years later that I began regularly to teach. But these intervening years were so full of adventure and experience that I count them among the most profitable years of my life. They were very hard years, but they meant so much to me personally that I can hardly imagine any immediate graduate study that would have yielded such human returns. I have been disposed to think ever since that it would be

a wise plan for most students to leave college at the end of their undergraduate course, and see something of the world of events before they go in either for teaching or graduate study. I should not like to think of my own life with the university left out. I feel very much as a young lad did whom I persuaded to go to college. When I inquired how he liked it, he replied most enthusiastically in the affirmative, and then added: "Why, sir, if I had not gone, I should never have known what I missed!" But in spite of this keen appreciation, I do feel that it is possible to remain in the academic world too long and too continuously, and so lose touch with that large world in the great open of life which it behooves each one of us to meet and to know. It is also true that the too-long doing of these ready-made academic tasks does rob a man of initiative and power. My own first plunge into the world of affairs was an heroic one. But I see that I must take it up in the next paper.

"The Past and Future of To-Day." A Breton Grandfather with his Grandson. This charming picture will form one of the illustrations in the article by Dorothy Wells about "Children of Brittany," which will be found in TEACHERS MAGAZINE for January.

There are said to be 439,596 teachers in the United States, of whom 27.8 per cent. are men. New York has 36,636, and Pennsylvania 30,640, while Nevada has but 319. Illinois, Iowa, and Ohio have more than 20,000 each. Arizona; Colorado, Connecticut, Delaware, Florida, Idaho, Indian Territory; Louisiana; Montana; Nevada; New Hampshire; New Mexico; North Dakota, Oklahoma, Oregon, Rhode Island; Utah, Vermont, Washington, and Wyoming each have less than 5,000.

Robbie and the Others: Tales of a Real School-Room

By Alma Grant, Denver, Col.

Chapter IV. A Birthday Party.

AS the season advanced, the special days brought with them the usual amount of healthy excitement. The children listened to the thrilling tales of the heroic achievements of our forefathers, when the axe and the tomahawk were used to clinch arguments and advance the cause of civilization; when log cabins, wigwams, and war whoops were an expected part of it all, not to mention the harrowing experiences of the Puritan children, as compared with those of our own first grade.

But the special days were not confined to past history. On a conspicuous part of the blackboard there appeared every month an artistic calendar, seasonably decorated, bearing on it a verse to be remembered after the month had gone by, and often having the faces of the heroes pasted on the dates made noteworthy by their births, to make the stories that went with the days more interesting and complete. Each child's birthday was likewise noticed in some simple manner, as it occurred. At times Anne was asked to visit in the various homes of the children in her class, and when reasonably sure that their parents had had a voice in the matter, sometimes accepted an invitation.

Her judgment in this respect had been seasoned by experience, but her experiences were not yet ended, for Frieda Schultz was going to have a "birthday." Stella Lauberheiner and Josie Jereneck had each recently had one, and Robbie and Rachel had duly celebrated theirs, and in addition to the privileges of being allowed to mark off the day on the calendar with red crayon instead of white, in each case the event had been honored by a party. At all of these parties Anne had been a distinguished guest.

Frieda Schultz had not been invited to any of the parties, but now it was her turn, and Anne was not to be slighted. Indeed, she found before it was over that not only was she to be invited, but she was to help furnish quite an important part of the entertainment on this occasion.

It was about a week before the time, when Frieda first introduced the subject to Miss Howard: "Teacher, you should come by us next week, I gots me a birthday. It comes on Friday."

Recalling some of Frieda's peculiarities and her own recollections of other social functions of a similar nature, Anne gave a guarded reply this time, expressing appreciation of the favor but reserving an unqualified acceptance of the invitation.

But on the next and each succeeding day, the pleasure of her much desired presence was urged. "Oh please teacher, come by us! My big brudder, he comes, and our Annie, and my cousin and whole much odders. We want you to play with us, like in the stories you tell. Oh

please, teacher! Our Annie's teacher, she comes too."

"Where do you live? How far is your house from here?" inquired Miss Howard, the importance of the event increasing in proportion to the number of teachers invited.

"Oh you go one block down the street, den two out, den one more, und go in, und dere it stands. Taint far, shust a little ways. I'll wait after school and you can come home mit me und our Annie."

Now, tho Frieda's mother was a wash-woman, that was no reason why Frieda should be denied the privilege of celebrating her birthday as well as anyone else. In truth, it pleased Anne to think that any mother who worked so hard to earn her livelihood could feel like making merry over such events. So Miss Howard made Frieda happy by saying that she would go.

When at length the important day arrived, Miss Alton, "our Annie's teacher," and Miss Howard came to school clad in pretty, becoming dresses, enough of a change from their every day school-room apparel to evoke from the children those expressions of approval or delight, or whatever emotions were in sway, when with drawn breath and adoring eyes they furtively exclaimed, "Oh, how nice!"—"So I have when I get big!"—"And so I make my hairs too!"—"So nice, teacher!"

Little hands shyly patting, rubbing and touching Miss Howard's fine clothes, as she passed up and down the aisles during the day kept the admiration that was rampant in the atmosphere, as it were, constantly in mind, until self-satisfaction very nearly approached vanity in the heart of this weakminded young woman, so subtle is the effect of children's ways upon their victims.

Promptly after dismissal Miss Alton entered, duly escorted by "our Annie." Miss Howard noticed that both little girls were in their usual school day attire. No change had been made in their dress on account of the coming festivities. It was only a passing thought, however, as they left the school grounds.

The teachers, for a birthday gift and to add to the pleasure and plenty of the feast, had provided a generous contribution of nuts and candy, which parcels Frieda at once espied. "Oh, leave us carry dose!" seizing the packages and handing a part of them to her sister, as the teachers willingly assented to their plan.

They moved onward for several blocks, led a'long the streets by the children, until at length they passed thru a front yard occupied by a good-sized frame house, and on, into the back part of the lot, where there was a smaller house.

"Here it stands," said Frieda. Opening the door they entered. A woman was on her knees scrubbing the floor. A baby was penned up

with chairs on one side of the room. The air was redolent with the odors of steam, soap suds and garlic. As they stood there, the woman, Frieda's mother, looked up and rose to her feet, wiping her hands upon her apron, and with an unmistakable air of surprise greeted her very evidently unexpected guests.

"We have come to the party," said Miss Howard, after a slight pause.

"The party, what party? We gots no party here," said the woman looking cross.

"Why, Frieda said she had a birthday party to-day, and asked us to come to it," explained Miss Alton.

"Yas," insisted Frieda, "dis is my birthday, I am seven years old."

"Yas," said the woman, "she gots a birthday but she gots no party!"

"Yas, I have, see, mamma! Teacher's brung it."

"Where are the other children you were telling about that were to be here?"

"Oh, dey don't come, only shust you and Miss Howard."

The teachers made a brief call, during which no invitation to remove their hats or wraps was extended, while the children looked on with a slightly abashed expression, not enough of embarrassment, however, particularly to disturb their serenity. So Anne and Miss Alton with a feeling of having encountered one of the little ironies of fate, had to confess themselves victims of circumstances over which they had no control, and quietly made way for the "party,"

which had been so successfully, if innocently, provided for at their expense.

"It might have been pathetic, if some one else had taken the leading parts instead of us," said Miss Alton after they had left.

"Oh, Frieda and our Annie have been taking those places, right along! I shall hereafter make the social ethics of birthday parties a point to be dwelt upon, whenever the subject can be appropriately introduced," said Anne.

The Snow-Ball.

The sky is speckled with the snow,—

Keep the ball a-rolling!

Up and down the hill we go,—

Keep the ball a-rolling!

Small at first, but how it grows!

What care we for purple nose,

Ruby fingers, tingling toes!

Keep the ball a-rolling!

Trees are in their downy beds,—

Keep the ball a-rolling!

Blankets wrapped around their heads,—

Keep the ball a-rolling!

All together, with a will,

Up the lane and down the hill;

We are merry snow-birds still;—

Keep the ball a-rolling!

Giants make these, one by one,—

Keep the ball a-rolling!

Where they snow-ball just for fun,—

Keep the ball a-rolling;

From a single flake it grew;

Hour by hour, so fair and true,

Grow the good deeds that we do,—

Keep the ball a-rolling!

The Teaching of Civics. IV

By Flora Helm, Head Assistant, Robert Morris School, Chicago

Hero Worship: The Ideal.

IF we were to inquire what manifestations of animal life are the most primary in order of unfolding, and the most dominating as forces in existence, the psychologist would doubtless mention first: adapting the self to the environment by the acquiring of food, protection from natural elements, defense and offense with enemies.

For the second, he would doubtless select the instinct to continue one's species, under which would come the social instinct, sex manifestation, and propagation.

We find these primary instincts common to all forms of life, in varying degree, from the simple cell up to and including the complex organization of man.

When we consider man's primal instincts, we find that to these two we may add a third,—the tendency to idealize.

To idealize in its simplest manifestation is to conceive of something better or more desirable than what is. In its higher manifestation, it is to form a conception that the reason, imagination, observation, and experience combined define as the best or most desirable in that line.

This conception is high or low according to the stage of development of the race and of the individual.

No matter to how low a stage in the race of man we go in investigation,—the savage for instance, and no matter how degraded the individual,—the degenerate, for example,—there is found some primal manifestation of idealizing.

It may take the form of conceiving a greater amount of food or a less energy to acquire it; it may take the form of a poem, a song, a dream, a religion. Since this instinct of idealizing is universal, and since it is the first differentiating point between higher and lower animal life, and since it is the basic principle which leads to progress, it is obvious that the educator's work is to develop it by strengthening the power and refining and elevating the quality of the ideal conception.

It is axiomatic that to be great or to be good one must admire greatness and admire goodness.

High ideals then precede the cultivation of virtues; cultivation precedes the possession of them.

In first grade civics our special purpose was related to the first instinct, adaptation to the immediate environment.

In the second grade our special purpose, also based on this instinct, was the study of primary man's adaptation to his environment.

In the third grade let us have the special purpose concerned with the third instinct, that of idealization.

In the department of civics it is natural that this process should be specialized to human idealization. That is, in this study we are teaching the child to conceive high ideals of his knowl-

edge of people. Not ideals in art, nor in letters, nor in action of any kind only inasmuch as these are connected with the creator of the action. At this stage of civics our purpose is to cultivate a child's *human ideals*.

Subjects.

No matter how highly differentiated or specialized a man's or a race's ideals may be there are some features of mankind that are generally recognized as essentials to ideals. Among these are power, beauty, bravery, justice, charity, and service to others. These elements are especially prevailing and dominating among those civilizations that represent the greatest progress in evolution, the Greeks and the Norse peoples. A little study of history shows also that the great events of the world's history are owing to the possession of these qualities by man.

Method.

Let us make three steps out of our purpose:

First, to cultivate ideals in the concrete. A child that admires a character in myth or story or history or life is in the first stages of idealization. And, in this connection, let the teacher frequently *tell* the story. What charm can the expression of face, inflection of voice, and all the nameless subtleties of personal fascination throw around the *told story*!

Second, to separate abstract ideal elements from the character and crystallize them into definite form and name.

The kindergarten child knows instinctively that he likes Jack-the-Giant-Killer, but of course what it is that he admires in this character is a question meaningless to him. But the third grade child can understand that it is because Jack did something great.

From admiring the character of Jack-the-Giant-Killer, he passes into admiration of *power* in general.

From admiring the character of Cinderella, he passes into admiration of *goodness* in general.

From admiring a character, the child grows into admiring the qualities possessed by that character.

From the concrete we deduce the abstract. So let us with the further aid of the myth and the story enable the first grade child to separate the essential elements constituting ideals from the character and crystallize them in his mind as qualities. Let us cultivate his admiration for bravery, power, etc., by presenting these qualities to him first in a concrete form and then cultivate his admiration for them as abstract qualities.

Third, to lead him to see that those qualities he has learned to admire as ideals can be applied to persons and events in his own environment—the fireman who risks his life to save others' lives and their property; the policeman, who safeguards us from crime and accident; the light-house keeper, who guards vessels and their

occupants from the dangers of fog and rock; the man who watches ever from the shore that he may save the drowning person (life-saving service); the soldier and sailor, who lose life and limb that their country may give to all the rights of "life, liberty, and the pursuit of happiness."

We add a list by way of suggestion for carrying out the purpose.

The Greek myths concerning Bellerophon, the Argonaut heroes, Hercules, Achilles, Ulysses, and others. (Strength, skill, courage, bravery, service to others.)

Leonidas and his Spartan followers. (Service to others, bravery.)

Horatius, Regulus, Cincinnatus, Caractacus, Boadicea, Androclus. How the Mountain was Clad, Bjornson. (Service for others.)

The Heimskringla myths that relate the prowess of Odin, the strength of Thor, and the lovingness of Balder. Also in this series the story of the god Wunseh or Wish. (Power.)

Story of Aladdin. (Power.)

The Niebelungenlied.

Story of William Tell.

Story of Arnold Winkelried.

Stories of King Arthur's Round Table of Knights. (Bravery, chastity, justice.)

Stories of Robin Hood and his band. (Bravery, generosity, justice.)

Stories of Canute, Alfred the Great, William Wallace, Robert Bruce, Sir Philip Sidney, Cromwell, Napoleon.

Story of the Pilgrims, John Smith, William Penn, Franklin, Wolfe, Washington, Putnam, Stark, Marion, Wayne, Boone, Clark, Fremont, Lincoln, John Brown, Civil War Soldiers.

Story of Grace Darling.

Story of Florence Nightingale.

Patrasche (A Dog of Flanders).

The Leak in the Dike (a poem).

Newspaper clippings and magazine stories of the bravery, service, and faithfulness of policemen, firemen, light-house keepers,

life-saving guard, soldier, sailor.

"A race of nobles may die out,
A royal line may leave no heir,
Wise nature sets no guard about
Her pewter plates and wooden ware.
But they fail not, the mightier heed,
Who starry diadems attain,
To dungeon, axe, and stake succeed
Heirs of the old heroic strain."

Christmas in Other Lands.

By OLIVE A. SMITH, Kansas.

An exercise for eight children, to precede the distribution of presents from a tree. Each child represents a country, wearing an appropriate costume, and, if possible, displaying a representation of the national flag while speaking. Curtain rises on a little girl dressed as "America."

1. Recitation—"America."

The Christmas tree is ready, now, and waiting,
The Christmas candles shining, clear and bright,
From far and near the joy bells, sweetly
ringing,

Tell their tidings of the holy Christmas night.

I've been thinking, since I read my morning
lesson,

Of those eastern lands, so far beyond the sea,
If I knew how all the children keep their
Christmas,

How very wise and happy I should be!

2. Seven Children enter repeating in concert:

To this land of the brave and home of the free,
We have come to keep Christmas, dear cousin,
with thee.

3. Recitation—Italian Child.

Come to sunny Italy,
And you'll quickly learn
How our famous Mother Goose
Fills our Christmas urn.

Little songs and verses
We carefully repeat,
When, on January sixth,
With our parents dear we meet.

Then, while candles glimmer,
And the bright fires burn,
We draw our gift so precious
From our Christmas urn.

4. Recitation—Austrian Child.

In my beloved Austrian land,
With reverent heart and loving hand,
We place in each window a candle bright,
That the Christ-child, passing, may see the light.

Were it not for our care, he might stumble and
fall,

He, the one who came to bring light to all.
Then we sing of the joyous Christmas morn,
Each one repeating: "The Christ is born."

5. Recitation—Holland Child.

I'm a little boy from Holland,
A land that belongs to the sea,
On the day you call December sixth,
St. Nicholas comes to me.

On that holy night we children
Remember the Christ-child's birth,
In the lowly Bethlehem manger,
When the angels sang, "Peace on earth."

Close together on the hearth stone,
We place our shoes of wood,
Each filled with hay and oats, for we know,
That the saint's white horse needs food.

And when we wake in the morning,
The boys and girls who are good,
Find beautiful presents hidden,
In the little shoes of wood.

And I'm almost ashamed to tell it,
It seems so very sad,
But awful rods are found in the shoes
Of the boys and girls who are bad!

6. Recitation—German Child.

In Germany we try to keep,
The holy Savior's birth,
By being kind to all the poor
And lonely ones of earth.

With warm and useful garments,
And many pretty toys,
We always send our Christmas cheer,
To poor little girls and boys.

7. Recitation—Norwegian Child.

Thru forest of pine and fir tree,
Across great drifts of snow,
To choose our own jolly Christmas tree,
We little Norwegians go.

Our papa cuts it for us,
And gayly takes it home,
Where, at five o'clock on Christmas eve,
The gifts begin to come.

We make feasts for all our creatures,
The birds and beasts all share
The joy that comes with Christmas,
Thru our tender love and care.

8. Recitation—Spanish Child.

We little dark-eyed Spanish boys and maidens,
On the night before our glad Epiphany,
Hide our shoes from good old King Balthasar,
Who comes across the desert far away.

His camel's laden with the precious presents
For all the anxious, waiting girls and boys,
And our brothers and our sisters, howe'er
distant,
Come home to share with us our Christmas joys.

9. Recitation—French Child.

Like my Holland brother I place my shoes
In the corner where Pere Noel passes thru,
On the night before Christmas our French
shops glow,

With a brilliance unknown in this land, I know.

No presents are found on our Christmas tree
For the older people, for, don't you see,
They say that the Holy One, meek and mild,
Came down to earth as a little child.

(All join hands and sing a Christmas song.)

Christmas in Italy.

In Italy the peasants celebrate Christmas by the building of a grotto representing the adoration of the Christ Child by the Magi, more or less true to life. The Child, wrapped in swaddling clothes, is placed in a manger, with Joseph and Mary at either side. Before them stand the three Magi. Over the grotto is a five-pointed star. There are also to be found angels, shepherds, and sheep, with often a castle in the background to emphasize the lowly birth of the *Bambino*. The figures are usually cut out of wood and the costumes are wrought by loving hands and with painstaking effort. The whole scene is placed upon an old sideboard or dresser. In the picture here shown the gaily-attired young girl is fixing the Christmas candles in the chandelier, and the candles will burn thru the greater part of the Holy Night. The joyful mother, with her first-born in her hands, feels something of the mystery of the scene symbolized before her. The playing nomads have entered to pay their homage to the Saviour, upon the ancient instruments. The woman in the foreground is plucking the chicken for the Christmas table, which takes the place of the turkey and goose, in Italy. Chickens and cabbage are the traditional presents exchanged between friendly peasant families on the day of the Nativity. The artist has made the scene very realistic, and typical of the celebrations in Meridional Italy.

Pieces to Speak for *Young and Old.*

Hilda's Christmas.

Standing apart from the childish throng,
Little Hilda was silent and sad;
She could not join in the happy song,
She could not echo the voices glad.

"What can I do on Christmas day?
I am so little and we are so poor,"
She said to herself in a dreary way;
"I wish there was never a Christmas
more."

"Mother is sick and father can't know
How children talk of their gifts and joy,
Or he'd surely try, he loves me so,
To get me just one single toy."

"But Christmas isn't for what you get,"
She heard a small, sweet, tender voice,—
"It's for what you give," said wee Janet,
And the words made Hilda's heart rejoice.

"It isn't our birthday," went on the mite,
"It is Christ's, you know; and I think he'd
say
If he were to talk with us to-night
That he'd wish us to keep it his own way."

A plan came into Hilda's head;
It seemed to her she could hardly wait.
"I can't give nice things," she bravely
said,
"But I'll do what I can to celebrate."

"I can give the baby a day of fun;
I can take my plant to the poor, lame boy;
I can do mother's errands—every one;
And my old kite I can mend for Roy."

"I can read to father and save his eyes;
I can feed the birds in the locust grove;
I can give the squirrels a fine surprise;
And grandma shall have a letter of love."

Now when that busy day was done,
And tired Hilda crept to bed,
She forgot that she had no gift of her own,
"What a lovely Christmas it was," she
said. | —M. A. L. LANE.

The Fir Tree.

O singing Wind
Searching field and wood,
Canst thou find
Aught that's sweet or good,—
Flowers to kiss awake,
Or dewy grass to shake,
Or feathered seed
Aloft to speed?

Replies the wind:
"I cannot find
Flowers to kiss awake,
Or dewy grass to shake,

Or feathered seed
Aloft to speed;
Yet I meet
Something sweet,
When the scented fir,—
Balsam-breathing fir,—
In my flight I stir.
—EDITH M. THOMAS.

Christmas Comparisons.

By ACHSA B. CANFIELD, Wisconsin.
What is brighter than the twinkling of the
candles on a heavy laden Christmas
tree?
'Tis the dancing eyes of little children
when the pretty sight they see.

What is merrier than the bells a-jingling,
jingling Christmas day?
'Tis the happy laugh of little children with
their Christmas fun and play.

What is sweeter than the Christmas can-
dies that good Santa brings to all?
'Tis the kisses that the children scatter
as they "Merry Christmas!" call.

What is better than to make the children
happy? Make joy come and sorrow
cease?
Oh! there's nothing that the old world
brings us can compare with Christ-
mas joy and peace.

A Christmas Good Night.

By ACHSA B. CANFIELD, Wisconsin.
(Air: "Merrily We Roll Along.")
Good-night, children! Good-night, chil-
dren! Good-night, children!
The Christmas tree is decked.
Brightly shine its tiny lights, tiny lights,
tiny lights,
Brightly shine its tiny lights 'neath the
popcorn snow.

Good-night, children! Good-night, chil-
dren! Good-night, children!
The stockings all are hung.
Gaily hang they in a row, in a row, in a
row,
Gaily hang they in a row from Grandma's
down to Babe's.

Good-night, children! Good-night, chil-
dren! Good-night, children!
Old Santa Claus will come.
Merrily he'll roll along, roll along, roll
along,
Merrily he'll roll along, with reindeer, bells
and sleigh.

Good-night, children! Good-night, chil-
dren! Good-night, children!

weet dreams till Christmas morn.
Merrily we'll laugh and shout, laugh and
shout, laugh and shout,
Merrily we'll laugh and shout, early on
Christmas morn.

Mothers Always Do.

By ACHSA B. CANFIELD, Wisconsin.
I made mama an apron, I tried to sew it
true,
And I'm sure she'll think it's lovely—
mothers always do.

I crocheted papa's slippers, they look so
fine and new;
Of course my mother helped me—
mothers always do.

I knit a ball for baby, of soft yarn, red
and blue;
My mother showed me how 'twas done—
mothers always do.

I want a ring for Christmas and another
dolly, too;
Mother said she'd write to Santa—
mothers always do.

Autumn Fires.

In the other gardens
And all up the vale,
From the autumn bonfires
See the smoke trail!

Pleasant summer over
And all the summer flowers;
The red fire blazes,
The grey smoke towers.

Sing a song of seasons,
Something bright in all!
Flowers in the summer,
Fires in the fall.
—ROBERT LOUIS STEVENSON.

Christmas Selection.

Please, sir, I wish you'd tell us
The shortest road to go.
We want to find Kris Kringle
We children love him so,
He brought me Rosybella
And Jack this lovely sleigh—
Please, sir, we'd thank you kindly,
If you'd tell us the way.
We started off quite early
'Fore the sun could melt the snow,
'Cause we heard he lived in Iceland,
Where on sleds they always go.
And I've saved some bread and butter,
And a cake for little Jack,
So please tell us the way, sir,
For we have to hurry back.

The way to Christmas land, dear,
Is that the thing you seek?
First take the path named "Flight of
Days,"

And then a lane named "Weeks,"
Then turn at the fourth corner,
"Months" road you'll surely meet,
And as you travel on it,
Wee maid, be kind and sweet.
Eleven roads you'll find, dear,
That are very much like this,
Tho some are warm and others cold,
The way you'll never miss.
So travel slow but sure, dears,
Till on the last you stand,
Then looking down the lane of days
You'll see the Christmas land.

Winter.

The frost is here,
And fuel is dear,
And woods are sear,
And fires burn clear,
And frost is here
And has bitten the heel of the going year.

Bite, frost, bite!
You roll up away from the light,
The blue woodlouse and the plump dor-
mouse,
And the bees are still'd and the flies are
kill'd,
And you bite far into the heart of the
house,
But not into mine.

Bite, frost, bite!
The woods are all the searer,
The fuel is all the dearer,
The fires are all the clearer,
My spring is all the nearer,
You have bitten into the heart of the
earth,
But not into mine.

—ALFRED TENNYSON.

Winter Time.

Late lies the wintry sun abed
A frosty, fiery sleepy-head;
Blinks but an hour or two; and then,
A blood-red orange, sets again.

Before the stars have left the skies,
At morning in the dark I rise;
And shivering in my nakedness,
By the cold candle, bathe and dress.

Close by the jolly fire I sit
To warm my frozen bones a bit;
Or with a reindeer-sled explore
The colder countries round the door.

When, to go out, my nurse doth wrap
Me in my comforter and cap,
The cold wind burns my face, and blows
Its frosty pepper up my nose.

Black are my steps on silver sod;
Thick blows my frosty breath abroad;

And tree and house, and hill and lake,
Are frosted like a wedding-cake.

—ROBERT LOUIS STEVENSON.

December.

December, oh, December, dear,
We know your laughing face,
And who that jolly fellow is
Who drives at such a pace.

The prancing deer, the jingling bells,
The sleigh with toys heaped high,
Proclaim to every child on earth
That dear St. Nick is nigh.

—LIZBETH COMINS.

Winter.

Old winter is coming; alack! alack!
How icy and cold is he!
He's wrapped to his heels in a snowy
white sack;

The trees he has laden till ready to crack;
He whistles his trills with a wonderful
knack,

For he comes from a cold countree.

A funny old fellow is winter, I trow,
A merry old fellow for glee;
He paints all the noses a beautiful hue;
He counts all our fingers and pinches
them, too;

Our toes he gets hold of thru stocking and
shoe,

For a funny old fellow is he.

Old winter's a rough old chap to some,
As rough as ever you'll see,
"I wither the flowers wherever I come,
I quiet the brook that went laughing
along,

I drive all the birds off to find a new
home;

I'm as rough as rough can be."

A cunning old fellow is winter, they say—
A cunning old fellow is he;

He peeps in the crevices day by day
To see how we're passing our time away,
And mark all our doings, from sober to
gay;

I'm afraid he's peeping at me.

—Selected.

Winter's Coming.

Go bring the sled
From out the shed,
Hunt up your mittens, boys;
For well I know
There'll soon be snow,
And then for winter joys.

We'll build a fort;
Oh, boys, what sport!
So pile the snow-walls high!
We'll have a fight
With bullets white—
Ah, won't the snowballs fly!

Hurrah! my chums!
The snow-storm comes,
Ah, now's the time for fun!
The flakes fall fast,
It snows at last,
The winter is begun.

Oh, oh, oh, oh,
Just see the snow,
The ground is almost white!
To-morrow, boys,
For fun and noise!
I hope 't will snow all night.

—Selected.

O, White, White World.

We live in a white, white world
That's only one day old,
'Twas turned to white all in a night,
When earth was still and cold.
When the day came up the hills
The frost king followed on,
And he worked and worked, and never
shirked,

Till day was past and gone.
And we cry, "Brown world, adieu, adieu!
And hail to the world that's white and
new.

—IDA SCOTT TAYLOR, in *Living Thoughts
for all Ages*.

Mother Earth's Bedquilts.

Four bed quilts are yearly folded and
spread

On Mother Earth's old trundle bed.
The first, a brown and white old thing,
She puts on in the early spring.
The summer one is green and bright,
With four-o'clocks, nodding left and
right,

And then when winds begin to blow,
She spreads a red quilt on, you know.
She sews it thru with yellow thread;
It makes an autumn leaf bedspread.
And by and by, all in a night,
She spreads her quilt of snowy white.

—S. RAYMOND JOCELYN

Kittie to Santa Claus.

Jolly old Kris, what a fellow you are,
Riding all over the world in the air,
Sliding down chimneys thru ashes and
smoke,
Fur-covered Kris, you're a regular joke.

How do you manage to carry such loads?
How do you manage to keep the right
roads?

How do you know all the good girls and
boys?

Why don't we wake with your clatter and
noise?

How can you guess what we all would like
best?

How can you please all "the birds in the
nest"?

What are you doing the rest of the year?
Sleeping, I s'pose, with your little rein-
deer.

Oh, how I'd like to know true if you look
Jolly and fat like the one in the book,
I'd keep awake, but I know that you stay,
When children are watching, quite out of
the way.

Kriss, when to-night you come round
with a whirl,
Do'nt forget Bessie, the washwoman's
girl;
Bring something pretty, for last year,
you know,—
That was a chimney where Kriss did'nt
go.

How does it happen you like the rich best,
Giving them much and forgetting the
rest?

Kriss, that's all wrong, and it is'nt the
way;

All should be equal on Santa Claus' day.

Kriss, good old Kriss, I'm afraid you'll be
mad;

I was just joking, don't put me down bad,
If poor Bessie's chimney is crooked and
small,

Never mind going to Bessie's at all.

Bring up her playthings and put them
with mine,

Wrapped with a separate paper and twine;
Soon as it's day, poor sick Bessie I'll see,
And give her the package you leave here
with me.

—Selected.

Who's the Rogue?

A roguish old fellow is prowling about
In field and in garden; you can't keep him
out.

No matter how tall
You build up your wall,
He'll find a way over in spite of it all.

On the glass of the window his pictures
you'll see,

A grand exhibition (admission is free);
He works hard at night

While the stars glitter bright;
But when the sun rises he keeps out of
sight.

He'll sketch you a snow-covered moun-
tain or tree,

A torrent all frozen, a ship out at sea.
He draws very fast,

But his work does not last;
It fades when the chill of the night-time
is past.

Before the sun rises, while hardly 'tis
light,

He feels of the fruit, and takes a sly bite;
He has a fine taste,
Tho a great deal he'll waste,
Then off he will go in very great haste.

Now, who do you think this old fellow
may be,

The bright, sparkling work of whose fin-
gers we see?

All winter he'll stay,
What more shall I say?
Only this, that his first name begins with
a J.

—Selected.

Jack Frost.

The door was shut, as doors should be,
Before you went to bed last night;
Yet Jack Frost has got in, you see,
And left your window silver white.

He must have waited till you slept;
And not a single word he spoke,
But penciled o'er the panes and crept
Away again before you woke.

And now you cannot see the hills
Nor fields that stretch beyond the lane;
But there are fairer things than these
His fingers traced on every pane.

Rocks and castles towering high;
Hills and dales and streams and fields;
And knights in armor riding by,
With nodding plumes and shining
shields.

And here are little boats, and there
Big ships with sails spread to the breeze;
And yonder, palm trees waving fair
On islands set in silver seas.

And butterflies with gauzy wings;
And herds of cows and flocks of sheep;
And fruit and flowers and all the things
You see when you are sound asleep.

For creeping softly underneath
The door when all the lights are out,
Jack Frost takes every breath you breathe,
And knows the things you think about.

He paints them on the window pane
In fairy lines with frozen steam;
And when you wake you see again
The lovely things you saw in dream.

—GABRIEL SETOUN.

Old Winter.

Old winter sad, in snowy clad,
Is making a doleful din;
But let him howl till he crack his jowl,
We will not let him in.

Ay, let him lift from the billowy drift
His hoary, haggard form,
And scowling stand, with his wrinkled
hand
Outstretching to the storm.

And let his weird and sleety beard
Stream loose upon the blast,
And, rustling, chime to the tingling rime
From his bald head falling fast.

Let his baleful breath shed blight and
death

On herb and flower and tree;
And brooks and ponds in crystal bonds
Bind fast, but what care we?
Let him push at the door,—in the chim-
ney roar,

And rattle the window pane;
Let him in at us spy with his icicle eye,
But he shall not entrance gain.

Let him gnaw, forsooth, with his freezing
tooth,

On our roof-tiles, till he tire;
But we care not a whit, as we jovial sit
Before our blazing fire.

Come, lads, let's sing, till the rafters ring;
Come push the can about;—
From our snug fireside this Christmas-tide
We'll keep old winter out.

—T. NOEL.

Snow in Town.

Nothing is quite so quiet and clean
As snow that falls in the night;
And isn't it jolly to jump from bed
And find the whole world white?

It lies on the window ledges,
It lies on the boughs of the trees,
While sparrows crowd at the kitchen door
With a pitiful "If you please?"

It lies on the arm of the lamp-post,
Where the lighter's ladder goes,
And the policeman under it beats his
arms,
And stamps—to feel his toes;

The butcher's boy is rolling a ball
To throw at the man with coals,
And old Mrs. Ingram has fastened a piece
Of flannel under her soles;

No sound there is in the snowy road
 From the horses' cautious feet,
 And all is hushed but the postman's
 knocks,
Rat-tatting down the street;

Till men come 'round with shovels
 To clear the snow away—
 What a pity it is that when it falls
 They never let it stay!

And while we are having breakfast
 Papa says, "Isn't it light?
 And all because of the thousands of geese
 The old woman picked last night

"And if you are good," he tells us,
 "And attend to your A, B, C,
 You may go in the garden and make a
 snowman
 As big or bigger than me!"

—RICKMAN MARK, in *A Book
 of Verses for Children.*

Kindly Winter.

The snow lies deep upon the ground;
 In coat of mail the pools are bound;
 The hungry rooks in squadrons fly,
 And winds are slumbering in the sky.

Drowsily the snow-flakes fall;
 The robin on the garden wall
 Looks wistful at our window-pane,
 The customary crumb to gain.

On barn and thatch and leafless tree,
 The frost has hung embroidery,
 Fringe of ice and pendants fine
 Of filigree and crystalline.

Pile up the fire! the winter wind,
 Altho it nip, is not unkind: And winter
 days, tho dark can bring,
 As many pleasures as the spring.

If not the floweret budding fair,
 And mild effulgence of the air,
 They give the glow of indoor mirth,
 And social comfort round the hearth.

The winter is a friend of mine;
 His step is light, his eyeballs shine;
 His cheek is ruddy as the morn;
 He carols like the lark in corn.

His tread is brisk upon the snows,
 His pulses gallop as he goes;
 He hath a smile upon his lips,
 With songs and welcomes, jests and quips.

'Tis he that feeds the April buds;
 'Tis he that clothes the summer woods;
 'Tis he makes plump the autumn grain;
 And loads with wealth the creaking train

Pile up the fire! and ere he go,
 Our blessings on his head shall flow—
 The hale old winter, bleak and sear,
 The friend and father of the year.

—MACKAY.

**Fun for the Older Boys and Girls—What can be done with Snow.
 Let them see this page. They will know what to do with it.**

A Mountain Christmas Tree.

By ELIZABETH FERGUSON SEAT, OHIO.

MISS ELLIS gazed with eyes that comprehended not only the cabin with its fourteen children, but the window, the open door, the gray skies, and the purple hills dotted with clumps of pine and cedar.

The teacher, after her manner, was dreaming dreams, and as her dream grew she told it.

"I'm certainly going to try it! Yes, children, we will! We're going to have a tree, a Christmas tree. One of these blue-green cedars from up there on the side of old Bald Knob!"

The children arose in a body and made for the door and window to regard with sudden interest the stretches of green above their cove.

Miss Ellis waited a moment, and as they remained staring at the cedars, she talked on.

"As soon as I dismiss for noon, I wish the boys to take the axe and go up to cut it for us. Choose the prettiest, but one not too tall. Remember our low ceiling. We will hang nuts on it. A nut tree will be new and very pretty, and a few apples will give color. Listen, boys and girls. You may place presents on this tree, as many as you like, but all for others and none for yourselves."

The teacher was so young that she remembered quite distinctly how self sometimes struggles and strives with good intentions.

"It is more blessed to give than to receive.' See that others get presents. Don't expect to find your own name upon every branch of your tree."

She paused and gazed into their faces; they gazed back with wide-open eyes.

"Presents for others!" How generous it sounded! But where, wondered these little people of the silent coves and barren hills, where are they to come from? Perhaps that was a part of the mystery. Maybe it was always so with Christmas trees, and they would find the new, pleasant fruit all ready for the tree. It would be all right, they told themselves; the teacher knew what she was doing, and those vague, mysterious things which she called "presents" would come in time.

The teacher, new to this bare mountain life, where children had always missed so much, had not yet learned the full extent of their deprivations.

The smallest boy held up his hand. He was red-haired, with eyes the color of larkspurs and skin that was always aflame; the poorest child in all that settlement of poverty.

"Where do we find any to hang on the tree?"

"Any what?" demanded the teacher, who had not quite awakened from her dream.

"Presin's," he answered briefly.

"Oh, Love will find a way," was the optimistic answer; "and now it's time to bring the tree."

In another minute she was alone. Every child had made a dash for the slopes of Bald Knob to have a voice in the selection of this wonderful tree. "Remember, dear boys and girls, our celebration will be in the morning at ten o'clock, so that I will have time to drive over the mountains

to the train. And, oh! how ashamed I shall be if you have forgotten that you are to give, not receive. It is more blessed to give. Remember that, dear children."

The tree was lavishly hung with nuts—walnuts, hickory nuts, chestnuts—polished until they shone. A few red apples gleamed among the masses of green, and it really was very pretty. When the last child had disappeared, reluctantly, for the teacher usually walked down the canyon with them, Miss Ellis closed the door and opened her desk. She took out fourteen parcels, wrapped in snowy paper, tied with red and green ribbons, each plainly labeled.

She suspended the gift for the larkspur-eyed boy last, in plain view, nearest the door. Then she put on her hat, locked the door behind her, and hung the key upon the nail just outside, remarking, "There are no thieves upon these bald heights; the mountain air doesn't seem to agree with them!"

When the last gleam of her red jacket had vanished into the canyon, there uprose with a mighty rattling of tin pails from behind the rock ledges, the entire school with the exception of the larkspur-eyed boy, who had not understood.

"Hurry before it's dark. We must get them presents that Love left for us to put on the tree for somebody else. We're going to be blessed givers!"

The earnest, lean, nervous little girl who made this speech was unlocking the door of the school-house; the others stumbled out into the shadowy room behind her. Having never received very much, they were not prepared for an expression upon the blessedness of receiving, but they did know that the uncertainty of the expected giving was very exciting.

There was no little mound of gifts left by Love in the middle of the room all ready to be hung, as had been expected, but—they formed a circle about the blue-green cedar and stared with eyes that shone at the mysterious packages.

The little girl spoke again in tones that broke: "She's put 'em where we're shore to see, on the limbs! We c'n each give our'n to anybody we like; I'll give mine to her."

Not without a few regretful protests were the coveted gifts transferred—six to Jim, who had one already, and seven to her! If it had not been that they loved her so, with a love that was almost adoration, it couldn't have been. It was Love and nothing else that found the way! When the last little ragged, lean figure had stepped out into the gloom of the wintry evening, the labels had been laboriously changed, and every present had been most unselfishly hung. The teacher and the Larkspur Eyes had them all, and the school hadn't any. But never had gray mountain night-skies seemed so beautiful nor keen mountain winds so mild. Never had little children's hearts so throbbed with the exultation of sacrifice; they were testing the teacher's favorite maxim. What the blessedness of receiving might be they could not tell; but giving, ah! it was ecstasy! They could hardly wait until the morning and the completion of their sacrifice.

Thoughts for Teachers

'Work for some good, be it ever so slowly,
Cherish some flower, be it ever so lowly
Labor, all labor is noble and holy,
Let thy great deeds be thy prayer to thy
God."

—GEO. SCHAEFER.

"It is not work that kills any one,
It is worry, work is healthy,
You can hardly put more upon a man
than he can bear.

Worry is rust upon the blade."

—LEROY KELLER.

For he who always does his best,
His best will better grow;
But he who shirks or slights his task,
He lets the better go.
What if your lessons should be hard,
You need not yield to sorrow;
For him who bravely works to-day,
His task grows light to-morrow.

—C. COHEN.

O do not pray for easy lives: Pray to
be stronger men. Do not pray for tasks
equal to your powers. Pray for powers
equal to your tasks. Then the doing of
your work shall be no miracle. But you
shall be a miracle. Every day you shall
wonder at yourself, at the richness of life
which has come to you by the grace of
God.

—PHILIPS BROOKS.

There is dew in one flower and not in
another because one opens its cup and
takes it in, while the other closes itself
and the drop runs off.

—HENRY WARD BEECHER.

The Realm of the Girl.

'Tis the Kingdom of all that is gracious,
And all that is lovely and sweet;
Of realms in the Fairyland spacious,
Where Knighthood and Maidenhood
meet.

And things that are lovely and pleasant
Unknown to the boor and the churl,
For the Queen on her throne, or the
peasant,
All this is the realm of the girl.

The bright, gleaming land of Romances,
Of dreams in the night and the day;
All musings and exquisite fancies,
All kindnesses done by the way.
And goodness and gentle behaving,
And quiet more sweet than the whirl,
For ministries lovely still craving,
All this is the realm of the girl.

To furnish the heart like a Palace,
With thoughts that are lovely and kind,
To raise to the thirsty Love's chalice,
The hearts that are broken to bind.
To lighten the home with her beauty,
The banner of Love to unfurl,
To keep alive Faith, Hope, and Duty,
All this is the realm of the girl.

All things that are winsome and tender,
All things that are bought not nor sold,
And all that her nature can lend her
Of worth beyond rubies and gold,
That cannot be bought but by merit,
Nor had for the price of the pearl,
All this may a maiden inherit,
All this is the realm of the girl.

—FRANK ELLIS.

The Way to Heaven.

Heaven is not gained at a single bound;
But we build the ladder by which we
rise
From the lowly earth to the vaulted
skies,
And we mount to its summit round by
round.

I count this thing to be grandly true,
That a noble deed is a step towards
God—

Lifting the soul from the common sod
To a purer air and a broader view.

We rise by things that are 'neath our feet;
By what we have mastered of good and
gain;

By the pride deposed and the passing
slain,
And the vanquished ills that we hourly
meet.

We hope, we aspire, we resolve, we trust,
When the morning calls us to life and
light,
But our hearts grow weary, and ere the
night
Our lives are trailing the sordid dust.

We hope, we resolve, we aspire, we pray,
And we think that we mount the air on
wings
Beyond the recall of sensual things,
While our feet still cling to the heavy clay.

Wings for the angels, but feet for the
men!

We may borrow the wings to find the
way—

We may hope and resolve and aspire
and pray,
But our feet must rise, or we fall again.

Only in dreams is a ladder thrown
From the weary earth to the sapphire
walls;
But the dreams depart and the vision
falls,
And the sleeper wakes on his pillow of
stone.

Heaven is not reached at a single bound;
But we build the ladder by which we
rise
From the lowly earth to the vaulted
skies,
And we mount to its summit round by
round.

—J. G. HOLLAND.

The Doing.

To try is better than the thing you try
for,
To hope is higher than the height at-
tained,
To love is greater than the love you sigh
for,
To seek is nobler than the object gained.
To "wrestle with the angel,"—this
avails,
Altho the motive for the wrestling
fails.

To learn is more essential than the
knowing,
To know is deeper than the wisdom
found;
To live is grander than all life's be-
stowing,
To advance, more fruitful than the van-
tage-ground.
To give is far more blessed than receiv-
ing,
To tell the truth needs not to force
believing.

—RUTH G. D. HAVENS, in the *Metropolitan*.

Mistress Merryface.

Little Mistress Merryface,
Dance down the way
With a fairy's airy grace,
Cheerful all the day:
In the little songs she sings
Sweet the note of gladness rings,
Love looks from her eyes;
Gentle, joyful, jubilant,
Every sunbeam seems to slant
Her way from the skies.

Is the world a dismal place
Hedged about by woe?
Little Mistress Merryface
Does not find it so:
Every day that follows night
Brings new joys she has the right
To possess or see:
When she laughs all things appear
Glad to know that she is near
Blessing with her glee.

Sadness may not linger where
Her sweet song is heard;
Hatred hurries off with care,
By her laughter spurred;
Grateful, joyful, jubilant,
All the sunbeams seem to slant
Downward but let
Little Mistress Merryface
Keep the world the fairest place
God has made as yet.

—S. E. KISER, in *Christian World*.

Waiting for Santa-Claus.

By HELEN COUTANT PECK.

CHARACTERS REPRESENTED.

Dorothy.—A little girl in school dress.

Fairy Godmother.—A little girl as old woman with a cane.

Fairy.—A little girl in tarlatan dress carrying wand.

Helpers.—Eleven little girls and boys in school dress.

Santa Claus.

SCENE—A SITTING-ROOM.

Curtain off one corner of the room leaving enough space behind the curtain for twelve children to stand. On the front of the curtain fasten the home-made clock-dial described below, cutting away the curtain behind it. A large rocking-chair should be opposite the clock and a doll placed near it.

CLOCK DIAL.

On heavy wrapping paper draw three circles, one within the other, the radius of the first being 24 inches, that of the second 22 inches, and that of the third 4 inches.

With very light dots mark off each circle into twelve equal parts, the divisions coming directly in line. Those on the outer circle give the spacing for the hours, which should be painted on in Roman figures, the entire length of the space between the first and second circles. (Liquid blacking and a sponge are very good substitutes for paint and brush if the latter can not be readily provided.) Care must be taken to place the figures so that the dots come directly over the center of them. From 2½ inches each side of the dots on the second circle, to the corresponding dot on the third circle, draw lines, very lightly, which form twelve sectors coming directly under the hours.

With a sharp knife cut on these lines and loosen the sectors so that they can be easily drawn back, when the children, who are behind the clock as representatives of the hours, are ready to recite.

Make the hands of pasteboard, having the hour hand stationary at twelve and the minute hand movable.

If possible have a metronome behind the curtain set at slow tempo.

The children should be elevated on a little platform, or boxes, so as to come directly behind the hours they represent.

Part First.

Enter Dorothy saying.—Oh dear me! how slowly that old clock does run,
'Twill never be midnight for Santa to come.

If I only could hurry the hours a bit,

I'm sure everybody would thank me for it,—

Except maybe mama, who has so much to do;

That I'm truly afraid, she'll never get thru

In time for the house to be quiet and still,

When Santa is ready our stockings to fill.

Oh! wouldn't it be dreadful if he should pass by it,

As they say he will do if all is not quiet.

So maybe your own way is best, Mr. Clock,

With your dreadfully slow tick-tock and tick-tock.

Come dolly, I'll give you a treat very rare,

And rock you to sleep in my grandma's big chair.

As soon as Dorothy is settled in the chair the curtain falls (screens can be used instead of curtains), and the Fairy Godmother steps out and addresses the children in the audience.

Fairy Godmother.—Now listen my children, and you shall hear

Of something which happened exceeding queer.

Just as Dot and dolly fell into a nap,

They heard at the clock a gentle rap.

Oh, who can it be, said Dot in fear,

As a little fairy to her did appear.

With her I now leave you,

And be quiet, dears,

As she tells wondrous tales,

For listening ears.

(Exit Fairy Godmother.)

Part Second.

Scene the same as when the curtain fell. Dot's position is unchanged, but her eyes are wide open and intent upon the little fairy who is standing by the clock.

Little Fairy.—Of me, little Dot, have not any fear,

For I am the fairy of time, my dear,

Who knew you were having a dreary day,

And have come to help pass the hours away;

With my little helpers, who have asked me to tell

A story I know you will like very well.

So watch, Dotty dear, each turn of this hand,

(Pointing with wand to minute hand.)

And you'll hear what is happening in Santa Claus land.

As the clock strikes one (use a small gong bell), the fairy moves the minute hand with her wand a little past the hour, which is the signal for One O'clock to lift his sector, lean forward and recite. Each in turn follows suit, all keeping their places until the end of the play.

I.—The workers from lunch have just gotten back,

And now with saw, hammer, nail, and tack,

Suggestion for a Blackboard Design.

Are working on the latest toys
Invented by Santa for his girls and boys;
While he at his desk is taking a look
At each child's record in his big roll book.

II.—The dolls are all finished and placed at one side,

Where Santa is looking them over with pride.
This year they excel all others in beauty,
So he claims it is most surely his duty
To leave them only in places where
He knows they will have the tenderest of care.

III.—The mail is just in from north, south, east,
and west.

And Santa is trying his level best
To read every word, and remember each thing,
Which the girls and the boys have asked him to bring.

IV.—Santa is back in his shop again,
Saying he does not remember when
The letters have been so neat and polite,
And he in his book had so little to write.
So every one he intends to remember,
Provided they stay good till the twenty-fifth of December.

V.—I wish you could hear the dreadful noise
Just now being made by the talking toys.
The dolls all saying "how-do-you-do?"
The dogs "bow-wow," and the cows "moo-moo!"

VI.—Santa is working all his forces,
Currying and saddling his hobby horses.
The engines and autos are most finished too;—
Every one has a great deal to do.

VII.—Santa is having a dreadful time, truly,
For the Jacks-in-the-boxes are most unruly.

As soon as the lids are shut down tight,
Up they jump with all their might,
Smiling and nodding like queer little elves,
Till the men are laughing in spite of themselves.

VIII.—Santa is trying the tops which wind,
So the broken ones will be left behind,
The way the clowns jump, the monkeys dance,
The elephants show off, and the horses prance,
You truly might think it a real live show,—
Tho not anywhere near as dangerous, you know.

IX.—With spy-glass Santa is now viewing the land,
To be perfectly sure he will understand,
The shortest and quickest way to go,
For he has thousands of children to visit, you know.

X.—All hands are now helping the bags to fill,
And working away with a merry good will,
To ^(Insert name of the school where the play is given) I first will go,
Santa is saying, for there, you know,
The children are waiting for me to appear,
And I'll not disappoint a single child there.

XI.—Santa is just being packed in his sleigh,
And in a few minutes will speed on his way.
His helpers are cheering with merry call,
While he is giving good wishes to all.
At the strike of twelve his bells you will hear,
And then in a moment will Santa appear.

As the clock strikes twelve have sleigh bells rung behind the curtain and Santa Claus enter the room in a bright, brisk way.

Santa Claus.—Ah! here I am at last, little Dot,
You see old Old Santa forgets you not.
A merry Christmas to you, my dear,
And to all the dear friends who are gathered here.

The Christmas Market of Vienna, Austria.

Little Talks on School Management. V

By Randall N. Saunders, Hudson, N. Y.

Keeping Pupils Busy.

The inexperienced teacher, tho "to the manor born,"—tho thoroly qualified educationally,—tho zealous and conscientious, will puzzle over the spirit of unrest, of listlessness, of consummate deviltry that again and again will pervade the school-room to paralyze endeavor and create disorder. Often, in such cases, by the exercise of a little ingenuity, or thru a knowledge of common helps at hand or easily accessible, the strain on nerves could be relaxed by occupying the wandering or exuberant energy with novel and educating tasks.

I assume that we all realize the bearing on good order and good work that is had by a judicious seating of the pupils. If our seating is not done with reference to the natures, temperaments, and discovered habits, which we desire, in a measure, to balance by bringing, so far as we can opposites into correcting contact, we might plan to have all of our work "busy work" and then fail of attaining the object at which we are aiming.

I assume also that we have our higher grades so interested in the "business" of school that we are seldom, if ever forced to resort to pedagogical "sleight-of-hand" to lure them back into the path of rectitude.

With my older boys and girls, I have seldom had much occasion to consider the question, aside from regular tasks presenting sufficient variety in the course of progress to keep them "busy." But occasionally, I have had pupils who were extraordinary and very active, and have succeeded with history and historical romance in keeping them interested and occupied in moments that without such helps would have been spent in idleness. While I had no regularly appointed reading table, such as has been successfully used by many teachers and is to be recommended, I always had a large number of magazines and the better class of papers which served a good purpose for those able to make use of them in unoccupied periods.

The nature of "busy work" in the lower grades must be carefully studied. In fact, the teacher, like the chess player, should make no move for which he cannot clearly give good reasons. He should aim to have this "busy" work bear on the evolution,—the education, of the child mind. Anything that will lead pupils to think while keeping their attention and occupying their hands; anything that will lead to a cultivation of the senses, quickening sight, touch, smell, taste; anything developing ingenuity and an exercise of the powers of ob-

servation and expression is permissible and only advisable. But anything done without a method under the seeming "madness"—as much of this play with sticks, pictures and color and letter cards would be called in rural districts,—anything done merely to kill and not beneficially to fill time, would better be left undone, as it would tend to shatter the powers which it is desired to strengthen and concentrate.

It is not permitted me here to go into detail regarding helps or apparatus for "busy work." There are many excellent works published on the subject and much assistance will be found in the pages of *TEACHERS MAGAZINE*, where also stimulus to individual and original invention will be found. Let me say that it is not necessary to have expensive paraphernalia, for good results can be gotten from a bundle of twigs or a handful of pebbles gathered on the school grounds. If helps are not at hand the resourceful teacher will not be long without substitutes improvised from materials available. Let us strive for adaptability and the fullest development of intelligence.

The true artist takes a little pigment, a brush, and a stretcher of canvas, and, after a little, rounds out an object of beauty that is pleasant to contemplate. The savage potentate would knock a hole in the canvas, wear the stretcher around his neck, stick the brush thru his nose, plaster the pigment on his person and make himself superlatively ridiculous with the misused materials. Let us strive to be artists.

Pebbles.

Out of a pellucid brook
Pebbles round and smooth I took;
Like a jewel, every one
Caught a color from the sun,—
Ruby red and sapphire blue,
Emerald and onyx too,
Diamond and amethyst,—
Not a precious stone I missed:
Gems I held from every land
In the hollow of my hand.
Workman Water these had made;
Patiently thru sun and shade,
With the ripples of the rill
He had polished them until,
Smooth, symmetrical, and bright,
Each one sparkling in the light
Showed within its burning heart
All the lapidary's art;
And the brook seemed thus to sing:
Patience conquers everything.

—FRANK DEMPSTER SHERMAN.

My First School.

By E. L. COWDRICK, Kansas.

AT these words my memory recalls the low log building, —nearly surrounded by woods,—in which I spent my first term as a teacher.

It was a very small building, the windows, narrow openings where lengths of logs had been sawed out, and the furnishings within of the most primitive character, being merely one long desk, running around three sides of the room, with a long bench behind, so the pupils all faced inwards. The stove I shall always remember, for it took two pupils to "fix the fire," one to hold the door from falling when it was opened, and the other to put the wood in. The ceiling was so low that the heads of the tallest pupils nearly struck the log joists which it held up, and was composed of rough unsmoothed boards.

I was seventeen years old, and had left school when I was sixteen. I had worked on the home farm vacations, but for a year or two had been clerking in my father's store. I had no thought of teaching,—on the contrary I had frequently said that I never would teach school, whatever came; but one day, when my uncle came to me and asked me to take the school in his district, offering me thirty-two dollars a month, I forgot my resolutions, and accepted the proposition at once, dazzled by the munificent salary.

It was to be a two-months' school, and on the appointed morning I was on hand, eager to try my fortune.

Now, what follows may be a disappointment to the reader, for I shall not follow the fashion and ridicule my first efforts, and tell how crude they were, and what great mistakes I made, and how much better I can do now. I do not admire that kind of *real* self-glorification, of ostentatious humility. I worked honestly, earnestly, and persistently, and was rewarded by a fair degree of success,—probably fully as much as I deserved.

I had pupils who were grown men and women, but who had never been held in proper restraint either at home or at school; it was a rough settlement and went under the name of "The Lost Tribes;" the pupils, or big boys rather, pitched their teacher out of doors the winter before, but I did not know that. Young as I was, and slight in build, I taught them a regard for law and order to which they had been strangers heretofore, and I did not whip them either. I kept very strict order for two reasons, one was that then I was too new in the work to do any other way, and the second was because it was dangerous to do otherwise. With such a class of pupils, I should do the same way now, I think. I governed by force of will, not by physical strength. I remember one instance in point: A boy who was much larger than I,

and strong enough to have thrown me out of the window, was creating a disturbance one day, and I ordered him to me; he refused. I had the smaller boys come out from the long desk, so as to be out of harm's way, and again ordered him to come. He again refused, but was evidently weakening. I took my watch in hand and told him I would give him just one minute to obey. Within the specified time he came out from behind the intrenchment of the desk, but with an ugly and defiant look and bearing which boded no good to me. I saw he wanted me to attempt to punish him.

I ordered him to hold both arms out, horizontally, and he obeyed by sticking his hands in his pockets.

I again gave him one minute in which to obey me, and counted off the seconds for him. Finally, I said, "You have just one second left," closing my watch with a snap and placing it in my pocket, when out went his arms with a jerk, and I made him hold them there eight minutes and a half, from which the boy's strength may be judged. My design was to thoroly subdue him, as I thought it fatal to

have left him without doing so, and I succeeded, for when I got thru with him he was bellowing like a calf. Would I do the same now? Probably not, I never have since then.

Sometimes I kept the pupils in at recess, and that seemed a grievous punishment to them. One day a young man of nearly twenty-one, and a quiet, well-disposed man, said to me, "I am willing to study, and mean to obey, but I do not think I should be deprived of my play spell."

The pupils learned quite rapidly, and when school closed I could look back upon it with a degree of satisfaction, for I knew that I had worked hard, and I felt that what success I had was deserved. Of course I made many mistakes, but I do that now. I may have been too strict, but I am one of the old-fashioned teachers who believe that the foundation stone of a good school is good order,—obtained by moral suasion if possible, but obtained at whatever cost; nothing less will do.

JOHN GREENLEAF WHITTIER,
(Born in 1807; died Sept. 7, 1892.) Whose birthday occurs on December 17.

WHITTIER'S HOME, AMESBURY, MASS.

Construction Work

For the Christmas Month

By A. J. LINEHAN, Supervisor of Manual Training,
Asheville, N. C.

Grade 1.

1st week.—Lesson on cylinder. Modeling same. Also objects like it, such as muff, rolling pin, drum, etc.

2nd week.—Cutting bells, each child cutting double on straight line at top of bell or singly.

3rd week.—Cutting bells and coloring them red. If cut double Christmas greeting to be written between covers; or, if singly, on the white side. Children to take them home.

Grade 2.

1st week.—Lesson on cone and modeling same.

2nd week.—Folding and decorating booklet.

3rd week.—Cutting and coloring fir-trees, and finishing booklet to take home.

If preferred, the class could make cornucopias of square weaving mats or of colored paper.

Grade 3.

1st week.—Lesson on square pyramid. Modeling same in clay.

2nd week.—Folding and planning design for booklet.

3rd week.—Coloring and finishing same to take home.

In the first grade the teacher may prefer to make lanterns, by taking paper 4 inches square, laying off border of one-half inch on the four sides, then cutting parallel strips one-fourth

inch to the border. Paste the border lines parallel with strips, press upper and lower edges a little to spread out strips, and fasten a quarter inch strip on upper edge for handle.

If the bells are made, a deep red should be used to produce the best effect.

If the teacher will draw a few bells on the blackboard, it adds to the interest. She should tell the children how the bells of the churches all over the world are ringing out the glad story.

For the second grade have pieces of manila paper $4\frac{1}{2} \times 6$ inches. Bisect 6-inch side and join points by very light line. Fold vertical edge to this line, and the booklet will be folded.

In the previous lessons the children had practiced cutting trees, so they should have no trouble in cutting good fir trees for inner panel. When finished the tree should be a dark green.

The outside panels may be decorated with red or green candles with red flame, and the border lines should be red and green.

In place of the trees the teacher may prefer to have one of the small Christmas pictures which may be easily procured.

For the booklet given for the third grade take a piece of manila paper 4 by 6 inches, fold on short diameter, and decorate cover with some simple design in red and green. Between the leaves of the booklet some greeting may be written; or, one of the Madonna or other Christmas pictures may be neatly pasted in.

A neat little box can be made from the drawing of the square basket given in the November number. If two are made, with one about one-sixteenth inch larger than the other, it will make a cover for the smaller one. The cover can be decorated with some simple design, if only lines in red and green.

Having drawn the box given for fourth grade, fold carefully on all the lines. Cut the three-fourth inch lines which are darkened, fold under and paste. The cover should be decorated before folding.

In the fifth grade the pupils could make a calendar mount either panel or easel effect. A case for clippings could be made by taking red or green construction paper $8\frac{1}{2} \times 9\frac{1}{2}$ inches. Fold carefully thru long diameter. Place five or six No. 9 envelopes between the folds, with closed edges against the fold, glue them in place or make holes with eyelet punch and fasten with ribbon or gilt cord. The same may be used to close it.

The sixth grade could make picture frames, square, oblong, or circular, by taking two pieces of the same size heavy paper, cutting them the

shape desired, and pasting them together, leaving a place on top for picture to be slipped thru. These frames may be decorated or not as the teacher may desire. The frame can be finished with two rings on the back by which to hang it up, or a piece of stiff paper can be fastened on the back for a rest.

If in the beginning of December the teacher urges the pupils to bring in pictures of sprays or wreaths of holly or mistletoe, the collection can be placed in some prominent part of the room, and it will help very materially in their design work for Christmas gifts.

Old magazines, catalogs, or lists of books furnish good examples for them and are easily procured. Observation and discrimination are developed, as well as help given to the drawing.

Water colors are not within the reach of every class, but a box of good crayons, containing seven colors, can be purchased for five cents, and with care will last thru the year. Water color crayons are more satisfactory than wax ones.

In the upper classes baskets of raffia or reed will always be useful for Christmas gifts. Tilo matting is attracting attention now for portfolios, brush holders, &c., and that as well as book linen, which could be used for the same purpose, show off very effectively designs in water color.

But, for lack of time or material, should articles of these materials not be possible, the upper

grades having learned to do good lettering, working to a scale, would be able to make

acceptable gifts by carefully printing some appropriate quotation for the holiday season, using either paper or tracing paper of good quality.

The Christmas colors are red and green, and if the pupils in the upper grades have acquired some degree of proficiency a little gilding could be used with discrimination, especially for the initial letter of the quotation.

Every child should have some gift for a dear

one at home, and simple as the gift may be, it should show care and neatness.

"Let him who hath, his plenty share,
And him who lacks, his lack.
Give, each one, what he may, nor care
What recompense comes back,
If only love his heart shall swell,
And kindness guide his hand,
His Christmas he shall keep as well
As any in the land."

Santa Claus.

He comes in the night! He comes in the night!

He softly, silently comes;
While the little brown heads on the pillows so white

Are dreaming of bugles and drums.
He cuts thru the snow like a ship thru the foam,

While the white flakes around him whirl;

Who tells him I know not, but he findeth the home

Of each good little boy and girl.

His sleigh it is long, and deep, and wide;

It will carry a host of things,
While dozens of drums hang over the side,
With the sticks sticking under the strings.

And yet not the sound of a drum is heard,
Not a bugle blast is blown,
As he mounts to the chimney-top like a bird,

And drops to the hearth like a stone.

The little red stockings he silently fills,
Till the stockings will hold no more;
The bright little sleds for the great snow hills

Are quickly set down on the floor.
Then Santa Claus mounts to the roof like a bird,

And glides to his seat in the sleigh;
Not the sound of a bugle or drum is heard
As he noiselessly gallops away.

He rides to the East and he rides to the West,
Of his goodies he touches not one;
He eateth the crumbs of the Christmas feast

When the dear little folks are done.
Old Santa Claus doeth all that he can;
This beautiful mission is his;
Then, children, be good to the little old man,

When you find who the little man is.

—SELECTED.

History and Civics

Causes of the Revolutionary War.

By Supt. G. B. COFFMAN, Lewistown, Ill.

HISTORY should be taught from the standpoint of cause and effect. Teachers are learning that it is best to put more time in working out the cause of the war. The war itself is but the measurement of the strength and ability of nations. The causes of the Revolution and those things that led up to the fight are far more valuable to the student than the fight itself. If the pupil can be led to see how one thing brought on another and how the independent spirit was worked in the colonists, he can then see how it was possible for the colonists to gain their independence.

This independent growth started away back in 1643 when the New England colonists united to protect themselves against the Indians and the Dutch. While this in a way had nothing to do with the Revolution, it had the tendency to show the colonists if they wished to accomplish anything they must unite. Even to protect themselves against the Indians, they must be organized. This and the Inter-Colonial wars helped to unite the colonists in one common cause. It brought them together and gave them a chance to discuss things that were of common interest. It also gave them confidence in their ability to do.

On the other hand, there were many things that had the tendency to keep them apart and make them strangers. The Navigation Act was the principal thing. This act and others along that line caused them to trade directly with England. All goods must be carried in English ships. Acts were passed that prevented the colonists from trading with one another. This had the tendency of keeping them apart and preventing them from getting acquainted. Where they were permitted to deal with one another they naturally talked of the conditions of their trade and became interested in one another's troubles and pleasures. This England sought to prevent. Another thing that kept the colonists from uniting was the different nationalities. The unsettled condition of the churches had the same effect. It is true with nations just as it is true with individuals, the more they are thrown together in trade and business, the better they understand one another. England certainly handled the colonists so that they were alienated.

After the French and Indian war the all-absorbing question was taxation without representation, the colonists claiming that England had no right to tax them unless she allowed them to have a voice in parliament. England

took the stand that the colonists were represented, because as she said, when a man is elected from any district, he is then not the representative from the district, but from the whole empire including the colonists. The colonists replied that that could not be because they, the representatives elected in England, knew nothing of conditions in America and thus could not know what laws would be wholesome. He therefore could not vote just taxation on the colonists.

England attempted to govern the colonies for the benefit of England, ignoring that which would be best for them. The all-absorbing question was how far can we go? How much can we get from them without breaking with them? This spirit is brought out fully by the acts that prevented the colonists from trading with one another and the acts that prevented the colonies from manufacturing the things that were made in England. England wanted the colonies to raise those things that she did not raise, and she prevented them from producing things which she could raise and manufacture, so that she might have market for her goods.

England gave as her excuse for taxing the colonies, the great debt and the great expense made by the French and Indian war. She claimed that it was for the good of America that the war was brought on. In 1764 parliament under the leadership of Lord Grenville made a formal declaration that it had a right to tax the colonies and in the year 1665 passed the Stamp Act. This act touched almost every man, woman and child in the colonies. It was just the thing to get the common people turned against the mother country. It was just the thing to work up the spirit of union. When they read a newspaper they were reminded that it cost an extra penny for the benefit of the mother country. When they wrote a letter or made a deed they knew they were paying taxes to England. Thus the colonists from the highest to the lowest resented this act and organized against it. Meetings were held and very bitter speeches were made and a very strong feeling grew up against England. Lawyers all over the country agreed not to regard paper as made illegal by the absence of a stamp. Newspapers were issued bearing the sign of a skull and crossbones in place of a stamp. Stamps were seized and burned on their arrival from England.

The resentment was so great that parliament was compelled to repeal the act, but at the same time held that it had the right to tax the colonies. After the repeal of the Stamp Act the Townshend Acts were passed. The colonies were forbidden to trade with the West Indies so

that it would give England a better market. A duty was put on glass, paints, paper, and tea. But the most obnoxious act was the Writs of Assistance. The officers carried these papers, signed, but with the name of the person whom they wished to search, blank. When the officer thought best to search a house for smuggled goods all he had to do was to insert the name of the owner in the blank space.

These acts brought a storm of opposition. People pledged themselves not to use the taxed articles. The Massachusetts Assembly sent a circular letter to the other colonies asking them to join her in resisting the acts. The king on hearing this ordered the governor to demand

They soon came in contact with the colonists, and in Boston several men were killed. This was known as the Boston Massacre. The spirit of resentment grew so high that it was necessary to march the troops out of Boston and place them for a while on an island near by.

England soon recognized that it would be impossible to enforce her laws and collect the tax. So she repealed all but the tax on tea. She kept the tax on tea in order that she might still claim the right to tax the colonies. The tea was made so cheap that it could be bought for less money in America than in England. This was done so that the colonies might be induced to use the tea, thus acknowledging the right of England to tax them. But the scheme did not work. At some places the tea was sent back, at other places it was burned or stored in damp cellars where it soon spoiled, and at Boston it was emptied into the bay. At no place was the tea used, so bitter was the feeling against the principle. This treatment surprised England very much. She thought this plan would surely work. When England learned of the reception of the tea in the different ports she became very angry and passed what is known as the Five Acts. It was these acts that precipitated the crisis.

The Boston Port Bill closed the port of Boston. No ship was allowed to enter or leave the port till Boston paid for the tea that she emptied in the bay. The Transportation Bill provided that a person accused of crime might be taken back to England to be tried. This was to prevent the colonists from bribing judges. It was the custom of the legislature to control the judges and governor appointed by the king, by withholding their salary. The judges and governor were paid by the colonies. In order for them to get their salaries they must favor the colonies. England in order to punish the leaders of this resistance were compelled to take them to England. The charter was taken away from Massachusetts and the governor was given plenary power. The fourth of these acts quartered troops on the people and made them feed them. The Quebec Act gave all the land west of the Alleghanies and north of the Ohio, to Canada. As this territory was claimed by the colonies, the act was regarded as a gross infringement.

As soon as the acts became known in America, steps were taken to unite the colonies for resisting this tyranny. It was plainly seen by all the colonies that they must unite or allow England to crush them one by one. That was England's plan. And, indeed, the time had come when this could be done. The different acts of parliament had stirred every man and woman and even the children so completely, that England was hated in almost every household. Each colony had a committee of correspondence, whose duty it was to find out what was being done in every other colony. This committee completed the union and brought about a meeting of men from each colony. The meeting is known by the name First Continental Congress. After this meeting things rapidly drifted on to war. It was this body that organized the army and later formed the Articles of Confederation.

the Assembly to rescind the request. He did so, but the order was disobeyed and the governor dissolved the Assembly.

John Dickinson stirred the people to the uttermost by his famous Farmer's Letters. These were written on the obnoxious laws and sent out from time to time.

The organization of the colonies against these acts was so great and the feeling was so bitter that England felt it her duty to send troops across the ocean to restore order and enforce the law. This was another act that helped to bring on the war. The soldiers, as did their generals, supposed that they were coming among an ignorant set of people. And the worst of all, they thought the colonists were a set of cowards. They had the same spirit as did the king who sent them, haughty, unprincipled, and stubborn. It did not take them long to cause trouble.

Miss Helm's article on Civics will be found on page 298.

Nature Study and Geography

At the convention of the National Educational Association held in Boston in 1893 a committee was appointed to investigate the feasibility of industrial education in schools for rural communities. In its report, recently issued, this committee has given some helpful suggestions with regard to the teaching of nature study, suited both to city and to country schools. The nature study material given below is taken from the report.

Earth and Sky.

(For the Lower Grades.)

THERE are four leading categories in this group: (1) the weather; (2) the natural events of the year; (3) the conformation of the surrounding country; (4) survey of a brook or other strong natural feature of the country.

The Weather.

First year.—The child should observe and tell what the weather is, and should begin to learn to be weatherwise and to know the "signs" of the weather.

Second year.—Clouds, sunshine, and shadow, both indoors and outdoors; sun-dial.

Third year.—Wind; making and flying kites; weather vanes; chimney hoods; effect of wind on shape of trees; begin weather record, perhaps as blackboard exercise.

Fourth year.—Temperature; begin thermometer readings; continue record, perhaps in notebook.

Fifth year.—Barometer; weather maps, signals, and forecasts.

Events of the Year.

First year.—Note the change of seasons; position of the sun at different seasons; holidays.

Second year.—Begin seasonal observations, chiefly on date of appearing of frogs, migrations of birds, etc.

Third year.—The calendar; continue observations, chiefly on trees, fruit trees, etc., begin a record, perhaps on blackboard.

Fourth year.—Continue observations, taking up the farming industries if in the country; times of plowing, tilling, sowing, harvesting, wood-hauling, fence-building, etc.; making a diary of work in the community.

Scenery, or Conformation of Region.

Second year.—General observations as to contour of country, perhaps as seen from school-room windows.

Third year.—More detailed observations, classifying into swamps, hills, flats, woodlands, riverbeds, orchards, grazing lands, etc.

Fourth year.—Describe the scenery in oral and written work; how the scenery can be improved.

Fifth year.—Observations on a particular area, one farm, the school yard, the main road, etc.; make charts and drawings.

Survey.

Third year.—Begin a regular "survey" of a brook or other prominent natural feature of the region; it is better if the feature is near the school-house; the first work will be chiefly exploration.

Fourth year.—Continue survey; begin to take definite measurements of the brook, width, depth, length, tributaries, pools, etc.

Fifth year.—Continue; describe the brook; make charts; determine the drainage basin and how the brook affects its region.

A Rain Storm.

(For the Lower Grades.)

Purpose of the Lesson.

(1) To put the pupil in the right attitude toward the weather. (2) To interest the pupil in the changes to be seen in the out-of-doors after a storm; to lay foundations for geography lessons.

The Lesson.

Altho discussion of a rain storm may take place profitably in the first and second grades, the best time for continued observation will be the third year in school. Then the pupils are ready to do some independent observing, and they can seek certain definite results of the storm.

The spring shower comes up suddenly; the room darkens and the children cannot see to work. This is the time to have them feel the part that the rain storm takes in their lives. It will be restful to lay all books aside, to clear the desks and study the shower. Can the rain be heard on the roof? How cheery it sounds! With closed eyes, you know that the drops are coming down thick and fast. Let us go to the windows. It is interesting to watch the water dash against the window panes and roll down; to see it falling on the trees and flowers; to think what it means to the fields. How fast the streams flow in the gutters and ruts in the road! Why? How muddy the rills and rivulets are! Why? Where are the birds? What a good time Robin is having out there in the rain! Do you suppose the squirrel dislikes the rain? Do the wild animals run for cover? Are the cows and horses in the fields in a hurry to seek shelter from the storm?

The nature of the rain itself should be noted: Drops large or small? Very numerous or relatively few on the pane? Does the rain fall straight down or does it come slanting? Does it strike hard? Does it seem to come from a great height, or are the clouds low? Let the first few drops strike on a clean piece of glass, then dry

the glass. Is the glass soiled? Why? Catch some of the last drops in the same way.

It frequently happens that the spring showers are heavy and brief. They cease before the close of school. The wise teacher will go out with the children to see the results of the storm. If her class is large, she can limit the observations to one or two definite things, as, for instance, the flowing of the water, making tiny valleys and carrying the waste material; but if there is time, she may take this opportunity for teaching some of the land and water forms, for after a shower these are present in miniature and are best taught afield. If the class is large, preparation for this lesson can be made by means of sand and clay maps, and then the children may be told what kinds of things to seek before leaving the school-house. Young people enjoy a particular quest. Who will be the first to find an island, a peninsula, a lake, a mountain, a valley, a delta, a mountain range? Then will come the question: How are these land and water forms made?

A Tree. (Maple.)

(For the Upper Grades.)

Purpose of the Lesson.

(1) Still further to relate the pupil to the world in which he lives. (2) To bring the pupil into contact with a tree as a living organism. (3) To determine what phenomena are transpiring about the tree and within the limits of its parts. (4) To become acquainted with the different parts of a tree. (5) To discover what events overtake the tree during the year. (6) To learn or identify the kinds of trees.

The Lesson.

It is best to study one tree during an entire year, thus cultivating in the pupil the habit of seeing and knowing a tree thoroly. This habit will be of the greatest importance in a later study of the trees of the region. To begin the study, the pupil should have a notebook which is to be devoted to his observations on the tree for a year. This notebook should be large enough so that a leaf may be sketched in it lengthwise. A favorite tree in a school yard should be chosen for this observation; it is far better if this tree may be seen from the school-house window. The maple is an excellent subject for this first study in the northeastern states, as it has many interesting features; but similar work may be undertaken with any kind of a tree, only it is always best to choose a species that is characteristic of the surrounding country.

Call attention first to the relation of the tree to its environment. If the tree is a maple, determine on what soils it usually grows. How abundant are these trees in the neighborhood? In what places are they commonly found? Do they grow alone or with other trees? Do they grow to be very large? To what use do the people put these trees? And similar general questions.

The Tree Itself, in Foliage.

Work may be begun in September and be continued once a week until all the leaves have fallen.

The work should be done in separate observation lessons, not more than fifteen or twenty minutes long, and may be made in the yard with the teacher or by the pupils themselves at recess, the teacher each time suggesting lines of observation. These observations should cover the following points:

1. The shape of the tree, i. e., whether its trunk is bare for some distance or whether the limbs grow near the ground; whether the branches at the top are spreading or close. A sketch should be made in pencil or water color of the general shape of the tree.

2. Are the leaves borne near the trunk of the tree, or are they borne on the tips of the twigs? Get from this observation the relation of leaves to the light.

3. Are the leaves opposite each other on the twigs?

4. What is the color of the leaf above? Beneath? Are all the leaves on the tree of the same color? This observation must be made each week, showing the change due to the autumn influences.

5. The approximate length and width of the largest leaf; of the smallest leaf.

6. Find the greatest variation in shape, if possible, on two leaves of this tree.

7. Study the leaf-stalk, or petiole, and its relation to the twig. Is the stalk the same length on different leaves? Does the length of the stalk have to do with the leaf reaching the light? Is there a bud in the axil where the stalk joins the twig?

8. What sort of an edge has the leaf? What is the color of the veins of the leaf, i. e., does each vein branch off the midrib or do the veins themselves branch? Do the veins extend to the end of the leaf? If so, do they end in a point on the margin or at the base of a notch?

9. Careful drawings should be made in the notebook of a normal leaf of the tree and its fruit (if the fruit can be had). The changes of the color of the leaves should be noted each week, and also when the first leaves begin to fall; also, the effect on the leaves of the heavy winds and rains, and finally what becomes of the leaves after they have fallen.

The Tree in Winter.

1. General shape of the whole tree.
2. Height of bole as compared with height of tree.

3. Is the bole slender or stocky? Does it continue straight up or divide into great branches?

4. What sort of bark has it, rough or smooth? If rough, are the ridges or sutures far apart or close together? Do they intersect or are they distinct and vertical?

5. What is the color of the bark and what blotches or marks are there on it?

6. Are the lower branches very large? Does the bark on them resemble that on the trunk?

7. At what angle do the branches in general stand to the trunk?

8. Are there many large branches?

9. Where is the spray borne, along the branches or at the tips? ("Spray" is a term used for the mass of twigs because they re-

seemble the spray of a fountain). Study the spray; is it coarse or fine? Does it stand erect or droop? What is its color?

10. Make a drawing of the tree in pencil, showing it bare of leaves.

The Tree in Early Spring.

About the last of March bring in twigs from the trees to be kept in a warm room and in the sunshine. Place the twigs in water and watch the opening of the leaves. Later, when the leaves open on the trees, note the following:

1. How the leaves are folded, as shown by the wrinkles in them, as they come from the bud. The falling of the bud-scales. The color of the leaves when they first come out, and how long it takes to change them to green. The leaf should be sketched in a notebook, in all its stages of development.

2. The flowers of the tree should be studied, noting the shape and color; and week by week the development of the flower into the seed should be noted.

3. During the spring the shade cast by the tree should be studied, noting how it grows more dense; also the extreme points reached by the shade night and morning should be marked and noted.

4. In connection with the shade, the arrangement of the leaves should be again studied, noting that the leaves in their efforts to reach the light make a complete canopy. A water-color sketch of the tree in its June dress should be made, showing the shadow which it casts, and the shape of the shadows in the top indicating the position and the direction of the branches.

Spruce—Winter Tree Study in the North.

Studies of North America. V

A Series of Lesson Outlines by Adelaide R. Pender, Connecticut

(To be used with any geography.)

Climate.

To the pupils.—In what belts or zones is North America? We learned these in our study of latitude. What kind of weather would you expect to find were there no modifying influences from the Tropic of Cancer to the Arctic Circle?

What is one of these modifying effects? (Winds.) Let us see what story the winds of North America tell us; the reason why they exist and why they take certain directions.

Did you ever see vapor rising when the sun is setting? We say the sun is "drawing water." You have seen vapor rising from water boiling on the stove. You have learned that this occurs because heat is driving the molecules of the liquid farther and farther apart, thus forming a vapor or gas.

Vapor is rising all the time from some parts of the earth. Mention any. (The equator is the best example.) What influence is hard at work at the equator, making vapor rise? (Sun's direct rays.)

Mention other places where there is little heat from the sun. Would you find vapor rising here? All parts of the earth are heated unequally, therefore the air is kept in motion which results in winds.

To the teacher.—Review briefly the work or talks on heat expansion. This will lead to the fact that at the equator the light air or vapor flows north. From the poles the cold air flows southward.

To the pupils.—Now we have learned that there is always something everywhere, therefore, when the hot air of the equatorial belts moves outward, cooler air flows in to take its place. A constant interchange is carried on.

'Look at your picture of the equator and show with your finger a cool wind flowing in from from the cooler belts of the north and south. Owing to the constant motion of the earth there winds do not strike the equator exactly vertically, but are turned a little toward the west. So we have trade winds blowing westward. Draw roughly the globe on the board, and show the equator with arrows to represent western blowing trade winds.

What characteristics have the trade winds? (On the ocean, steady blowing with little change day and night.) Of what benefit is this to mariners? Why are the trade winds not so constant on land? Point on the map to places in North America that are in the trade wind belt. What topographical features in this section would change these winds from their constancy?

As the trade winds enter the warm belt they hold a great deal of moisture which they deposit when they come against any chilling surface. Hence there is a great deal of rain on the windy side of highlands in this belt.

Another kind of winds is the westerly which

deposit rain on the coast of North America before they cross the high mountains.

Let us look at our map of the winds and trace them. Notice how the trade winds whirl about into the westerly winds. In British America, toward the western coast, the westerly winds are curved upward. Why is this? Notice where the arrows converge in the center of the continent. Were it not for continents and earth movements, how would the winds move?

Watch the daily weather bulletin for wind movements. What winds are common in Chicago, California, Texas, New England?

Can you think out a reason for a sea breeze toward nightfall? (Use your knowledge of the primary cause of winds.)

There is a little breeze stirring the leaves of our trees. What causes it? There is a breeze on the mountain when there is none in the valley. What is the cause? Why do you fan yourself? What is the cause of heavy winds that often accompany thunder showers? What effect does a summer breeze have on the air? What difference is noted between seashore air in summer, and inland air?

What names of winds have you heard? (South, west, and so forth.) What is a "northeaster?" What is an equinoctial or line storm? What is meant by Boreas, Auster, Mistral, Siroces? What is the cause of a sandstorm? What effects does a mountain have on the climate of a place. Name all. Why is mountain air preferable in summer? Suppose the mountain near your home were taken away what direct effect would the loss have upon the climate of your town? How would storms be affected by it?

What difference between the climate of Denver and New York city, and why? What difference between the climate of your town and San Francisco? Between Chicago and New Orleans? What between an inland city and a coast port? Compare the rainfall of several cities. Account for differences.

The Rocky mountains are in the path of westerly winds but do not receive rainfall. Why?

To the teacher.—Have the pupils account for climate on the Pacific slopes, in the Cascades, the Sierra Nevadas, in the Great Basin, the prairie region, the Mississippi valley. Many facts may be obtained from the geographies, as supplemental to the lessons.

To the pupils.—What kind of a climate would you expect to find on the tiptop of Pike's Peak? Mt. Washington? Why is there snow all the year on some mountains? Did you ever stand on a mountain top or high hill? How did the air differ from that in the valley? Compare the temperatures of a mountain and valley in summer and winter. Some of your friends live on hills; do they ever compare the air they breathe with that which you breathe? What do they say?

Let us take a trip in imagination from a val-

ley in the Rocky Mountains to the top of a high peak. What kind of air do we breathe at first? As we go higher? On the very top? The higher we go the rarer becomes the atmosphere. People who have lung trouble seek high altitudes where there is less work for the lungs to do.

To the teacher.—Talk about the fact that water boils much more readily in high altitudes, and the inconvenience to cooks under those conditions.

To the pupils.—Recall your picture of the relief map and tell whether you think the region between the Rocky mountains and the Pacific ocean would get much rain from the westerly winds that blow from the Pacific ocean? Why not?

The Sierra Nevada mountains are higher than the Coast range. How does that affect the rainfall on the former? (They are in the path of the moist westerly winds and their west slope, consequently, receives heavy rains.) This is also true of the Coast range and slopes. But what condition do you find existing in the Great Central Basin?

Turn to the relief map and find sections that ought to be fertile, if the land were level, and tell why they are not. Give your reason for there being barren sections. Why are the Appalachian slopes fertile? Why the gulf plains?

To the Teacher.—One of the most interesting subjects under a study of climate is rain. With the older pupils an effective method is to have read famous descriptions of rain storms. The class will enter into the author's spirit and be led to give their own experiences. Here also is a fruitful source for written language descriptions.

Select such passages as the storm in "The Little Minister"; the flood in "The Mill on the Floss"; the storm in "Richard Carvel"; the rain in "Barnaby Rudge" or the storm in "David Copperfield," and hosts of others. Among the poems there are: "Summer Rain," by Beecher; "Thunderstorm," by Prentice; "Rainy Day" and "Rain in Summer," by Longfellow; "Before the Rain," by T. B. Aldrich; "Rain in September," by Collins; "The Equinoctial," by M. E. Blake. Many excellent rain poems, including those mentioned above, are found in "Poetry of the Seasons," published by Silver, Burdett & Company.

When these descriptions and poems are read have the pupils select words and phrases which aptly describe the events taking place. A few of these that were noted in rain poems are: The long, slender spears quiver and flash; clouds send cavalry down; a rushing of waters is heard in the air; drops pelt; the dancing lines flash on the water and brim the dusky pool; rain loads the heavy boughs with moisture; in pools a thousand points dart up in the light.

Have the pupils select rain and snow pictures in geographies.

Animals.

To the pupils.—Let us turn to the animal map and make an alphabetical list of the animals found in North America.

To the Teacher.—Such a list might include: Alligator, antelope, bear, beaver, bison, birds, caribou, cattle, civet, cougar, dog (prairie), duck (eider), eagle, ermine, fish, ferret, fowl, fox, gopher, hare, herring, hog, horse, iguana, lobster, lynx, manatee, martin, mink, mole, moose, muskrat, ocelot, opossum, otter, peccary, porcupine, ptarmigan, puma, raccoon, rabbit, sable, salmon, seal, shad, sheep, snakes, sponge, squirrel, turkey, turtle, walrus, weasel, whale, wildcat, wolf, woodchuck.

Select a few of these animals and study carefully from pictures in the geography, readers, zoological works. Have the picture described with eyes closed. Have the animals sketched roughly at board and on paper.

The following topical outline may be used to advantage with the picture study. It presupposes familiarity with text either in geographies or supplementary works.

Family, name, color, size (measure and compare with a known domestic animal), head (eyes, mouth, teeth, tongue, ears), legs, (feet), body, tail, habits, food, home, uses, (compare with any of our domestic animals.) (Found where on the continent?) Weapons of defense, why does it live where it does? Adaptation to home (including climate, food, covering, shelter, habits). Select places in North America and tell what animals you would expect to find there (bearing in mind soil, altitude, latitude and so forth), what effect climate, mountains, rivers, zones have on animals, how animals depend on vegetation and soil; relation of animals to us.

What animals familiar to us were used in Bible times? What animals in North America have been favorites with artists? Watch the daily papers for any interesting animal items.

Most of these topics will be developed by questions. The field for thought is wide here, and time only will be the teacher's limitation.

In one geography used by the writer for reference there were pictures of the following animals: Beaver, buffalo, caribou, cattle, dog, donkey, fish, horse, seal, sheep, sponge. All of the pictures told varied stories of life in the section where the animal was found.

Take the cattle pictures, for instance: After developing them by the topics, comparing constantly with farm scenes near home, why not go further into the realm of poetry and art?

Study such celebrated pictures as these by Rosa Bonheur: Ploughing in Nivernais, Scotch Cattle at Rest, Straits of Ballachulish, Landais Peasants, Cattle of Brittany; Dupre's Escaped Cow, Milking Time, Group of Cows at Milking Time, Cows Going Home, The Cow; Vuillefroy's Return of Herd; Landseer's Wild Cattle of Chillingham; Edwin Douglas's Sark, A Jersey Family, Alderney, Jersey, Evangeline; Corot's Landscape with Cattle; R. Bonheur's Cows at Watering Place; Troyon's Cattle Resting from Work; Van Marckes Cattle in Marsh; Paul Potter's The Bull; Swinsted's Morning Greeting; Le Rolle's By the Riverside.

Also read with the pupils Ingelow's High Tide on the Coast of Lincolnshire and Kingsley's The Sands 'o Dee.

A Border for the Christmas Blackboard.

Suppose Landais Peasants is selected for a critical picture study during the language period. Topics the teacher has in mind may be: Landais where? (Use map to locate.)

Prominent features in picture—Sheep, oxen, men, woman, child, vegetation, sky.

Any landscape like this seen by the student at home.

Reasons why picture pleases.

Subjects noted in the picture: Geography, zoology, botany, meteorology, mineralogy, ethnography, and so on.

Study of people.—
Dress, stilt, expression on faces (happiness, mother's affection and care), health, vigor.

Special study, sheep and oxen. Play of light and shadow; massing of light and shadow.

Compare people, wagon, dress, with our farmers, wagon, dress.

Beauties and lessons in picture.

Music Lessons

Quiz in the Grammar School.

By ADELAIDE GRIGGS, New Hampshire.

1. What is music ?
2. A musical sound can be high, or ?
3. “ “ “ “ “ long, “
4. “ “ “ “ “ soft, “
5. How many lines in the staff ? Why ?
6. “ “ spaces “ “ “ “
7. If each line and space is called a degree, how many degrees are there in the staff ?
8. What letters do we use to name the degrees ?
9. Repeat them backward.
10. What clefs are in general use ?
11. On which line of the staff is the G clef placed ?
12. What letter does it place on that line ?
13. Where is E ? its octave ?
14. Locate the two F's ; G's ; A's ; B's ; D's ;
15. “ “ three C's.
16. Name by letter, the spaces of the staff G clef.
17. “ “ “ “ lines “ “ “ “ “
18. On which line of the staff is the F clef placed ?
19. What letter does it place on that line ?
20. Name the letters on all the lines of the F clef.
21. “ “ spaces of the F clef.
22. What characters represent the relative length of tones ?
23. How is a whole note made ? half note ? quarter note ? etc.
24. What characters are employed to indicate silence ?
25. How is a whole rest made ? half rest ? quarter rest ? etc.
26. What effect has the Dot ?
27. How many eighth-notes is a dotted quarter note equal to ?
28. What is a scale ?
29. Give the numerals of the scale
30. “ “ syllables “ “ “
31. What syllable is always applied to One of every major scale ?
32. What syllable is always applied to the first of every minor scale ?
33. With the G clef, on what degree is One of the scale of C located ?
34. With the F clef, on what degree is One of the scale of C located ?
35. Give the letters in the scale of C, G, D, A, A flat, B, D flat, F sharp, C sharp, B flat, C flat, E, E flat.
36. What tone pitch do we use in the key of G that we do not use in the key of C ?
37. On which line of the G clef is One or do in the key of G ?
38. What pitch is 7 in the key of G ?
39. What key is indicated when the clef is used alone ?
40. What is the signature of the key of— G, D, A, E, F, B flat, E flat, A flat, B, C sharp, C flat, F sharp, C ?
41. How does the pitch of F sharp differ from F ?
42. What is the chromatic scale ?
43. Give syllable names of chromatic scale ascending, and descending.
44. What is an interval ?
45. Give the staff intervals.
46. Which are the perfect consonances ?
47. “ “ “ imperfect “
48. “ “ “ dissonances ?
49. When is an interval major ?
50. “ “ “ “ minor ?
51. Give a major third on C, G, F, D, A, E, B, B flat, E flat, A flat, G flat, D flat, C flat, C sharp, F sharp.
52. How many did we skip over in naming our thirds ?
53. What is a chord ?
54. What is a triad ?
55. How many positions has a triad ?
56. When is a triad in its first position, second position ? third position ?
57. What is transposition ?
58. “ “ modulation ?
59. “ “ melody ?
60. “ “ harmony ?

What Santa Claus Will Bring.

By ANNIE STEVENS PERKINS.

Oh, Santa Claus is coming soon, it's really Christmas time!
We'll hear his (A) sleigh-bells jingle far away.
He knows what boys and girls all like, and oh, what fun
'twill be
To watch him and to see what's in his sleigh.

CHORUS TO VERSE 1.

I guess there'll be a (1) rattle and a (2) big, big drum,
A doll with (3) "truly" hair that (4) shuts her eyes;
A (5) rubber ball that bounces and a (6) red tin horn
to blow,
And a (7) sled that goes so fast it really flies.

Yes, Santa Claus is coming and I'm sure that he will bring
A present fine for grandma and mamma,
And something for big brother and for sister dear, Louise,
And something for dear grandpa and papa.

CHORUS TO VERSE 2.

I guess there'll be some (8) scissors and a (9) thimble
bright;

What Santa Will Bring.

(Action Song for Christmas.)

Words and Music by ANNIE STEVENS PERKINS.

Oh, San - ta Claus is com - ing soon, It's real - ly Christ - mas time! We'll

hear his sleighbells jin - gle far a - way; He knows what boys and girls all like, And

oh, what fun 'twill be To watch him and to see what's in his sleigh.

CHORUS.

I guess there'll be a rat - tle, and a big, big drum,— A

doll with "tru - ly" hair, that shuts her eyes; A rub - ber ball that bounces, And a

red tin horn to blow, And a sled that goes so fast it real - ly flies.

Some (10) compasses to draw a circle true;
Some new piano (11) music, too, for somebody to play;
(12) An umbrella and some (13) glasses bright
and new.

Before the song is rendered, let one child (or more) retire
to an ante-room with a string of bells which are to be
jingled at (A).

(1.) In lifted right hand energetically shake imaginary
rattle.

(2.) Both hands, holding imaginary drum-sticks, in
vigorous thumping motion.

(3.) Left hand touches hair.

(4.) Forefinger of both hands shut eyelids down.

(5.) Right hand at low right moved up and down as
if bouncing a ball.

(6.) Both hands form around an imaginary horn held
to lips,—not too closely.

(7.) Slide palm of right hand along palm of left (held
horizontally) and off to extreme right.

(8.) Forefinger crossed at lowest knuckles.

(9.) Motion of putting thimble on forefinger of
right hand by left hand.

(10.) Right thumb vertical in
palm of left hand turned so that
fingers describe a circle as com-
passes would do.

(11.) Imitate playing the
piano, as children naturally do
this, using both hands.

(12.) Left forefinger held ver-
tical, the other fingers curled
away; right hand horizontal above
the forefinger "stick" palm down
ward.

(13.) Forefinger and thumb of
each hand make circles for the
"glasses." Hold to eyes.

NOTE.—The song can be used
in the school-room, or if desired,
at a Christmas entertainment,
preceding the entrance of Santa
Claus. All reference to a Christ-
mas tree is eliminated, as an in-
creasingly prevalent sentiment
obtains against the waste of trees
for celebration purposes.

Let the children make the song
a help to themselves by deciding
who shall receive the compasses,
glasses, etc., mentioned in verse
2. The order of relatives men-
tioned is the order of the gifts of
the chorus, except that papa's
gift precedes grandpa's.

Games for School and Playground.

The games described in the series of which the second instalment is given in the present number were arranged for use in the schools of New York city. They are accordingly suited to the school-room, or small playgrounds as well as large. Many of the games are old and many are new. All have been tried and are enjoyed by pupils.

Circle Ball.

The players form a ring. One of them throws the ball at another player, who must catch it, and throw it at some other one in the ring. It should be thrown in quick succession and unexpectedly. Variations may be made by bouncing the ball, by clapping the hands before catching it, or the person who fails to catch it may sit down. The game may also be played with the players seated.

Center Base.

The players form a ring, one player standing in the center and holding the bean bag. He tosses it at some player, who must catch it, place it in the center of the circle, and at once chase the one who threw it. The one who threw the bag runs out of the circle, and tries to return and touch the bag before he is tagged. If he is tagged, he is out of the game, and the other player throws the bag. If he is not tagged, he throws again.

Ball Tag.

Arrange the players in two lines facing each other, and about forty feet apart. One side sends out a player, who stands in the middle, half-way between the lines, and facing his own side. One of the opposite side throws the ball, and strikes the one in the middle on the back. The one struck must guess who threw the ball. If he guesses correctly, one of the opposite side takes his place. If he does not, the opposite side continues throwing until he is successful.

Guess Ball.

The players form a line. One stands several feet in front of the others, with his back toward them. He counts aloud a given number. Meantime the ball is passed back and forth along the line. When the given number is called, the person who holds the ball throws it, and strikes

the player in front on the back. If he is hit, he turns quickly, and tries to guess who threw the ball. If correct, the two players change places; if not, the game is repeated, with the same player in front. If the player in line fails to hit the one in front with the ball, they change places.

Catch Ball.

The ball is thrown into the air, and the name of a player called. If he catches the ball before its second bounce, he tosses it up, and calls the name of another player. If he does not catch the ball, he loses a point. When a player has lost four points, he is out of the game.

Days of the Week.

Each player is given the name of a day of the week. One throws the ball against the wall, and calls the name of some day, as Monday. The player named Monday must catch the ball before it touches the floor. If he catches it, he throws the ball; if he does not, the first player continues.

Dodge Ball.

Half the players form a circle, the other half stand inside it. The ball is thrown by any person in the circle at any one within the ring. If the person is hit, he joins the circle. The player wins who is the last to stand within the circle.

Circle Catch Ball.

Form a circle, the players standing from six to eight feet apart. Toss the ball from one to the other, either to the right or left. The first player who does not catch the ball steps into the circle, and throws it to some player. It is then passed from one to another, so as to be difficult to catch. The one in the center tries to catch it. If he is successful, the one who threw it last may take his place, or, if preferred, the one who failed to catch it.

Pass Ball.

The players form a ring, with the feet placed sufficiently far apart for the ball to roll between them, and each foot touching a neighbor's foot, so that the ball cannot readily pass between players. One stands in the center of the circle, and tries to roll the ball between the feet of a

player; who rolls it back with his hands. If it passes between his feet or if he moves his feet so that it cannot pass, he takes the place of the player in the center.

Still Pond.

One person is blindfolded; the other players move about the room until he counts seven aloud, and calls, "Still pond, no more moving!" After he has said this, each one may take only seven steps. He tries to catch one of the players. If he is successful and guesses who it is, the one caught is blindfolded.

Ball and Bases.

Mark a place for home plate and three bases to complete the diamond, as in baseball. Choose sides, which may be called Reds and Blues. Appoint an umpire and a scorer. The first Red player stands at the home plate, the first Blue not less than five paces from him. The Red player strikes the ball with his hand as far as possible in any direction, and runs to the first base, to the second, the third, and the home plate, if he can, before the Blue has returned the ball to the home plate. He scores as many points as he has run bases before the ball is returned. If the Blue catches the ball, the Red is out. If the runner reaches the third base before the ball is returned to the home plate, he may remain over and try for the home plate when the next one of his side strikes the ball. When all the Reds have played, the Blues have their innings. A game consists of two innings.

Fives.

On a wall free from obstacles draw a line three feet and a half above the ground. On the ground or floor draw a line parallel to the wall and ten feet distant. Draw lines to mark the outer edge of the court on the wall and on the ground. One player throws the ball against the wall above the chalk-line. When it has bounced back and rebounded from the ground, or before it touches the ground, a player of the opposite side strikes it against the wall with the palm of his hand. One of his opponents must strike it next. The ball is thus struck alternately by one of each side until a failure is made. A failure consists in

missing the ball, striking it against the wall below the chalk-line, letting the ball touch the ground outside the court, or not striking it until after its second bounce. When any such failure is made, it scores one for the opposite side. The game is won by the side which first scores a certain number, as 11 or 21.

Preparation for Volley Ball.

Mark off a court 40 by 40 feet. Draw a line thru the center, dividing the space into two equal courts A and B. Call the players in A and B Nos. 1, 2, 3, etc. Let No. 1 A serve first. He takes the ball, bounces it, and then bats it over to Court B, using either or both hands. The ball is allowed to bounce once, and then must be returned, or it may be returned before it bounces, except immediately after a serve. A wins a point if B fails to return it before it bounces twice or if he returns it outside A's court. When the ball is not properly returned by either side, No. 1 B serves, then No. 2 A, and so alternately on each side. The score is kept by the scorer; and is called before each play begins. A's score is always called first. Any number of players on a side may bat the ball to return it, so long as they do not let it touch the floor twice while it is in their court. The game may be modified by forbidding the use of more than one hand or of either the left or the right. Bouncing the ball, except after the service, may also be forbidden.

The Belled Cat.

Hang a bell around the neck of one player; calling him the cat, blindfold two, and let the others form a ring, inside which the two blindfolded may chase the cat. When the cat is caught, the successful player becomes cat, wears the bell, and chooses one from the ring to be blindfolded.

French Blind Man's Buff.

One player is blindfolded; the others form a ring about him. All in the ring are numbered. The one in the center calls two numbers. The players having these numbers change places at once, while the center player tries to catch one. If he succeeds, the one caught takes his place.

Simple Drawings.

Christmas in Other Lands

By Dorothy Wells

CHRISTMAS means good times for the children wherever the day is celebrated. However much the ways of keeping it may differ in the various countries, everywhere reigns the same kindly thought, expressed in our land by the words, "I wish you a merry Christmas!"

Many of our Christmas customs have come from England. In the olden times the festival there lasted for several days; and in many parts of the country the ancient ways of celebrating are still kept up. The fun begins on Christmas eve, when the great Yule-log is brought into hallway or sitting-room. By its light the children dance and play such games as blind-man's buff, or shoe the white mare, until they are tired; then they are glad to gather about the fire and listen quietly to stories of days gone by. They go to sleep amid visions of candles and plum pudding, always intending to watch on the sly for the coming of Santa Claus, whom they somehow never manage to see.

The decorating with holly, and the hanging of the mistletoe, are English customs, too. The hunt for the mistletoe began, in the olden times, several days before Christmas, people going to the woods in a long procession to find it. When a spray was seen, as it grew on a large oak tree, the vine was cut with a silver knife, and dropped upon a white cloth spread out below the tree. The mistletoe was fastened to a doorway, or chandelier, and every time a maiden was caught beneath, and had paid the penalty with a kiss, one white berry was taken from the bunch. When the last berry had been removed, no more kisses could be snatched.

The boar's head was as much a part of the old English Christmas as the famous plum pudding. The head was cooked to a crisp brown color, and, when placed in a dish, surrounded by rosemary, with the ears pointed upward, and a lemon in its mouth, looked very enticing. The dish was always placed at the head of the table, with a candle on each side.

For many years, either Christmas morning, or the night before, boys and girls went about singing carols. The custom still exists in some of the older English cities, as well as those of Germany and France. They sing under the windows of every house, receiving money in return, which they spend for Christmas goodies, or carry to their parents, if it is needed in the home.

Names for Santa Claus.

Santa Claus is known by various names in the different countries. In the Netherlands he is known as St. Nicholas, from which our own name Santa Claus comes. St. Nicholas is specially loved in Amsterdam, where besides Christmas a day in November is devoted to his honor. The Dutch children leave their two little wooden shoes by the fireplace Christmas eve, to be filled by the good old saint, instead of stockings, as we do here.

The Christmas messenger in Alsace is supposed to be a lady dressed in white, whose face is powdered with flour. She has long, yellow hair, and a golden crown, ornamented with tiny candles. She carries a basket of presents in one hand, and a silver bell in the other. Hans Trapp, a mysterious some one of whom the little ones are all afraid, rides with her on the same donkey. The children place a bunch of hay behind the door for the tired donkey, with a glass of wine beside it for the lady and Hans Trapp.

Christmas in Norway.

The Yule-log was first burned in Norway, where many Christmas legends and stories are still told. There it is Kristine who brings the gifts, and in many places candles are left burning in the window, to give her light. Bright pictures are used for decorating the houses, instead of evergreens. The festivities last among the Norwegians for thirteen days, during which all the people dress in their gayest clothing, and no guest may leave the house without tasting the strong Yule ale. A very pretty custom is practised in Norway: the giving of a Christmas dinner to the birds. Every barn-door or gable is decorated with a sheaf of grain fastened to a long pole, and even the very poorest people manage to save a few stalks for the birds. The Norwegian children believe that at midnight Christmas eve all the cattle turn their faces toward the east, then bow down and worship the Christ. Since the Child was laid in a manger at His birth, a special dinner is prepared for the cattle on Christmas day.

Customs in Brittany and France.

In Brittany a quaint custom has been preserved from ancient times. When the country people go to mass at midnight Christmas eve, all, even the children, carry lanterns to light them on their way. Upon their arrival at the church they give the lanterns to the poor old women of the parish, who are gathered in a crowd outside the church awaiting them. When the mass is ended, and they are dismissed with the benediction, they come forth to find the patient women still waiting for them. The lanterns are given back to their owners, and as each takes his own, he gives in return for it a piece of money. The value of the piece varies, but it is as large as the owner of the lantern can possibly afford.

After the Christmas dinner is over, in this same country, a large cake is brought in, of which all the girls eat a piece. Somewhere in the cake is a bean, and the girl who finds the bean in her piece is queen of the festival. She chooses some one to be her king, and the two receive special honors thruout the Christmas time.

French children are sent to bed, with the promise that "le petit Noel," the Christmas Child, will bring them a present while they sleep. The gifts are usually found in the shoes, or they are placed on the two ends of the Christmas log.

Russian Stories and Festivities.

It is probable that the idea of St. Nicholas, or Father Christmas, as he is sometimes called, comes from Russia. A great many years ago there was an old Russian nobleman who, once a year, went about the villages near his castle, distributing presents of clothing, food, and toys to all the poor children whom he could find. After his death, the custom was kept up by others, and so has continued from that day to this.

The story that is told in Russia corresponding to our Santa Claus is of old Babousca. When the three wise men of the East, seeing the star, started to find the Christ Child, they stopped at Dame Babousca's hut, and asked her to show them the way to Bethlehem. The night was cold, so the old woman refused; but after they had gone, she regretted her decision, and, filling a basket with toys, she said to herself, "I will find the kings, and together we will search for the Child, and lay these gifts at His feet." She started, but tho she has searched every year since, she has failed in her quest. When the children find the Christmas goodies and toys, they exclaim, "Old Babousca has passed this way!"

Preparations for the celebration in Russia begin about two weeks before Christmas. In the villages the peasant boy drives home his load of wood; that the cottage may be snug and warm; and the father kills a boar for the feast. This is a custom that no Russian peasant neglects. In some parts of the country boys go about the streets singing carols. One of the boys carries a star made of paper, as the emblem of the light that brightens the universe.

At dawn, on Christmas morning; the church bells ring, and every one, young or old, hastens to give thanks for the Redeemer's birth. Later in the forenoon carriages and sleighs are rushing in all directions, for everyone calls on everyone else on Christmas day; consequently most of the visits cannot be more than a minute in length. In the evening the city or town usually gives a dance for the boys and girls of the schools. The festivities continue for several days. The morning after Christmas tobogganing and skating parties are arranged, and in the village the boys gather to sing, and join in a choral dance, every lad trying to outdo the others. The girls make snow-men, play tag, and have dances of their own.

Christmas Among the Germans.

Germany is the children's paradise thru the Christmas season, for this is the true home of the Christmas tree. So many of these are required that the raising of the trees is an extensive industry, and many train-loads are carried to the cities, in anticipation of the day. The market-places appear almost like forests of evergreens that spring up at Christmas time. The tree is usually brought home and concealed in some cool place till the evening of the twenty-third; when it is placed in the most favorable position in the best room, and the doors are closed. Then the decoration begins; lasting thru the next day. As the mother hurries in and out of the room, the excitement of the children grows more and more intense;

and the air of mystery pervading the whole house is one of the enjoyable features of the holiday season.

Christmas is the occasion of family reunions. Grandmother always has the place of honor. As the time approaches for enjoying the tree she gathers her grandchildren about her, to tell them the story of the Christ child, with the meaning of the Christmas tree; how the evergreen is meant to represent the life everlasting, the candle-lights to recall the light of the world, and the star at the top of the tree is to remind them of the star of Bethlehem.

Meanwhile the father has been lighting the candles on the tree, and as the story is finished; parents and children gather about the still closed door and sing a Christmas hymn. Then the doors are opened, and again all sing a hymn. Beneath the tree are little baskets of apples, candies, and nuts, each marked with the name of its owner. As the hymn is finished the children rush for the

tree, each selecting the basket marked with his name. The presents are then distributed; and after being duly admired, are put away until the morning. The little ones give to parents and each other the simple gifts over which they have toiled with their own hands, and the evening is finished with singing and games.

Here in America the children are apt to scorn

a present that is strictly useful; but it is not so in Germany. Altho each child is remembered with some little toy; the gifts are most of them practical. One child will receive a much-needed pair of shoes, another a new dress, or a pair of mittens. The fact that these come at Christmas time gives added value to even the simplest articles. An orange or an apple coming from the magic tree tastes sweeter than any other, and Christmas shoes or cap are enjoyed as such until they are worn out.

At five o'clock Christmas morning all must be at church for the early service. In some parts of the country each person carries a Christmas candle, to be placed on the edge of the pew in front, the candles furnishing all the light for the church. As the people go home the trees in the houses are lighted, and the shades are raised, so that the Christmas cheer penetrates the darkness of the street.

Christmas Cakes.

The making of a special kind of cakes for Christmas is a custom quite general among European nations. On the farms in central France a certain cake is baked on Christmas eve to which astonishing virtues are attributed. Like the Good Friday bread of Old England, it remains uncorrupted during the year, and if a person or an animal fall ill, a piece of the cake given to the sufferer is a most effective cure. Cakes endowed with like medicinal virtues are known in other parts of France, and even as far away as Sweden.

Among the peasants of Berri, a province of central France, it has been customary for generations to give crescent-shaped cakes, called bullocks' horns, to the poor at Yule-tide, in addition to the alms always bestowed at that season. The shape of these cakes perhaps bears reference to the ox, said to have been present at the Nativity. It is more probable that these cakes, formed of the produce of the field, and baked on the hearth for the benefit of the poor, are of pagan origin, being primarily sacrifices to the power controlling cattle and crops. There is undoubtedly some connection between the manufacture of the crescent cakes, as those ornamented with an ox or cow, and the devotion shown to the celestial bodies.

In some of the towns of Berri the bakers make little cakes for Christmas in the shape of the infant Jesus. These are known as Naulets, the popular name of the Christ child. Many of the French provinces have their Naulets, some of them oblong, forming an infant of sugar, others representing men, women, horses, or oxen.

In Wurtemberg the biscuit-like Christmas cakes are of no special pattern, tho they may have the imprint of a boar. Some of them represent religious subjects, such as the crucifixion, the head of Christ, or one of the apostles. Effigies of New Testament characters may be seen heaped together with Bismarcks, Moltkes, and other German heroes; all of them manufactured of flour, sugar, and lemon juice.

In Finland, similar cakes are shaped like some implement of agriculture. The favorite shape in Denmark, Sweden, and Norway is that of a pig. This is most likely in allusion to the boar, which, according to the Norse mythology, drew the chariot of Frey, god of sunshine and rain, giver of harvest; and lord of light. Before the Christian religion was adopted in these countries, the Yule-tide was sacred to Frey. On Yule eve a boar, consecrated to him, believed to represent the grain-spirit of Scandinavian mythology, was sacrificed, while men laid their hands on it and plighted solemn engagements. To the present day, ideas apparently connected with this sacrificial animal and with his prototype, Gullinbursti (Gold Bristles), whose brilliant bristles, yellow, like ripe corn, could illumine the thickest darkness, are to be traced in the familiar practices of the Teutonic nations.

The Scandinavian Christmas cake is therefore no common loaf. Often it is baked from flour ground from corn of the last sheaf harvested, and is kept on the table thruout the days. Frequently it is preserved till sowing time in spring, when

part of it is given to the ploughman and his horses; that the harvest may prove to be good.

An Old English Christmas.

And well our Christian sires of old
Loved when the year its course had rolled,
And brought blithe Christmas back again,
With all its hospitable train,
Domestic and religious rite
Gave honor to the holy night;
On Christmas eve the bells were rung;
On Christmas eve the mass was sung:
That only night, in all the year,
Saw the stoled priest the chalice rear.
The damsel donned her kirtle sheen;
The hall was dressed with holy green;
Forth to the wood did merry-men go,
To gather in the mistletoe.

Then opened wide the Baron's hall
To vassal, tenant, serf, and all;
Power laid his rod of rule aside,
And ceremony doffed his pride.
The heir, with roses in his shoes,
That night might village partner
choose;

The lord, underogating, share
The vulgar game of "post and pair."
All hailed, with uncontrolled delight,
And general voice, the happy night,
That to the cottage, as the crown,
Brought tidings of salvation down.

The fire, with well-dried logs supplied,
Went roaring up the chimney wide;
The huge hall-table's oaken face,
Scrubbed till it shone, the day to
grace,

Bore then upon its massive board
No mark to part the squire and lord.
Then was brought in the lusty brawn
By old blue-coated serving-man;
Then the grim boar's-head frowned on
high,

Crested with bays and rosemary.
Well can the green-garbed ranger tell,
How, when, and where the monster
fell;

What dogs before his death he tore,
And all the baiting of the boar.
The wassel round, in good brown
bowls,

Garnished with ribbons, blithely
trowls,
There the huge sirloin reeked; hard by
Plum-porridge stood, and Christmas
pie;

Nor failed old Scotland to produce
At such high tide, her savory goose.
Then came the merry maskers in,
And carols roared with blithesome
din;

If unmelodious was the song,
It was a hearty note, and strong.
Who lists may in their mumming see
Traces of ancient mystery;
White shirts supplied the masquerade,
And smutted cheeks the visors made;
dressed

But, O! What masquers, richly
dight,

Can boast of bosoms half so light?
England was merry England, when
Old Christmas brought his sports again
'Twas Christmas broached the mighti-
est ale;

'Twas Christmas told the merriest tale;
A Christmas gambol oft could cheer
The poor man's heart thru half the
year.

—From "Marmion," by SIR
WALTER SCOTT.

Child's Gifts.

Motion Song.

Words and Music by T. B. WEAVER, Prospect, O.

1. Just a lit - tle sun-ny smile, Is all that I can give, To help some lone-ly,

ten-der life That it may bet-ter live; To cheer some one whose throbbing heart Is

heav - y with its care, And be a lit - tle sunbeam shining ev - 'ry - where.

Then here's a smile ¹for you, ²for you, A sunny smile ³that's true, ⁴that's true; Oh,

may it cheer you on your way, And bless this glad Thanks-giv-ing Day!

MOTIONS—1 Gesture to left. 2. Gesture to right. 3. Place left hand on heart. 4. Place right hand upon left hand over heart.

2nd. Just an earnest wish I bring,
So earnest, kind, and true,
Is that the birds may always sing
Their sweetest songs for you,
The flowers and the sparkling
brooks,
The woods and meadows wide,
The flowers and the sparkling
brooks,
The woods and meadows wide,
May keep for you their charming
nooks,
Where joys abide!

REFRAIN.—Then here's a wish (1) for
you, for you,

An earnest wish that's (3)
true, that's true, etc., etc.

3rd. Just a simple little lay
Of smiles and wishes true,
On this glad Thanksgiving Day,
I humbly bring to you;
'Tis all I have, 'tis all I need,
To make this life more dear,
Love is the greatest gift indeed
Our lives to cheer.

REFRAIN.—Then here's a song (1) for
you, (2) for you,
A simple lay that's (3) true,
that's (4) true, etc., etc.

Language Work

Rules in Spelling.

VERY much help will be had by the seventh and eighth grade pupils in spelling if certain rules are drilled into their memories by examples. But all these rules should not be forced upon them at one time. The best way is to give an example—point out the rule and ask that it be written in their “blank books”; then give a pupil the next day an example that will employ the rule and ask that it be stated. (The “blank book” referred to is for placing important matters and conclusions stated by the teacher; every pupil should have one; it should be kept neatly; it will be a treasure in after years.)

Dropping the e.—The teacher gives out “move” and then “movable.” Then asks that the rule be stated: “The *e* is dropped when ‘able’ is added.” Then several examples are given, the pupils citing them as well as the teacher. Then the teacher gives out “manage” and then “manageable,” placing both on the blackboard.

He says: “Here the *e* seems to be retained; it is an exception; there are exceptions to all rules.” He asks for a rule to cover this case. “The *e* is retained when *c* or *g* precede it.” The pupils are asked to find examples.

Now this step is interesting and easy; but unless the teacher recalls the rule and the exception many times, they will be forgotten. Good teaching consists in recalling what has been learned and weaving it into the new materials. Suppose a week has passed; he will call one of the pupils to the blackboard saying, “I want to see whether John ever forgets; write ‘likable.’” If the *e* is not dropped another is called to state the rule. Those who remember the rule are praised. Then the teacher gives out “changeable” and follows a like course.

Other rules:—In the same way the doubling of the ending consonant in monosyllables is dealt with as in “shipping”; the exception is shown in words like “trooper.” In the same way the rule needed in words like “committing” where the only exception is “chagrined.”

There is a large class of words like “mill,” “sell” etc. Here a rule is needed. Suppose “gall” to be an entirely new word, the teacher will ask “Why are there two *l*s?” They will say, “Because all monosyllables ending in *l* have two *l*s.” Let them give many examples. But how about “mail,” “sail” etc? the teacher asks. Here the letter or letters that precede the *l* must be taken into account.

Words like “faithful” are given out. It appears that words of more than one syllable ending in an *l* sound require only one *l*. Let many

examples be given of this. But, if the accent falls on the last syllable it ends in a double *l*; as “befall,” “recall,” etc.

The teacher gives out “have,” “having” and demands a rule; then many examples. “But” he says, “how about ‘see’ ‘seeing?’” State a rule for the exception.”

He gives out “brave” “bravely” and demands a rule; he asks for examples.

He gives out “refine” and “refinement” and asks for the rule. Exception: “acknowledgment.” He gives out “money” “moneys” and asks for the rule, and for examples. “But how about ‘bounty’ ‘bounties?’” This leads to an investigation of the letters that precede the *y*. He gives out “beauty” “beautiful” and asks for a rule.

At other times he puts such words as follow on the blackboard and demands the rule: “accompaniment,” “wholesaling,” “cheerful” (only foretell distill, instill, fulfill retain the double *l* of the primitive) “omitted,” etc. This drills the rule into the memory; they learn to spell by rule by employing the rule.

Outline for Study of Evangeline.

(For higher grades.)

By STATE SUPERINTENDENT W. E. HARMON, Montana.

For the story of the exile of the Acadians see Bancroft's United States History, Volume II., pages 425-434.

Was there any possible justification for their being sent into exile by the English?

For the origin of the poem see Hawthorne's American note-books.

Read the selections first for the story. After the pupils have received a general impression, make the following study of the whole poem:

I. Notice the divisions in the poem. Reason for each division.

II. Chief characteristic of the poem? (Pathos.) How are the pathetic effects produced? (Thru the feelings and acts of the characters and the description of nature.)

III. Is the poem chiefly a character study, a story, or a series of beautiful pictures?

IV. Try to analyze the charm of the poem. Why is it so popular?

V. What use does the poet make of nature in the poem? (He uses nature as a background for human figures, to intensify or change our moods and to produce pleasing images.)

VI. What is the climax? Describe it.

VII. What is the central thought? (Woman's devotion).

After studying the poem as a whole, study the parts.

1. Give the purpose of the introduction.
2. Describe Grand Pre.
3. Describe the betrothal of Evangeline and Gabriel.

Describe and characterize :

1. Evangeline.
2. Gabriel.
3. Benedict Bellefontaine.
4. The notary.
5. The priest.

Give several descriptions of nature. Purpose of each description.

Give example of superstition in the people.

Give scenes that show a deep religious sentiment in the people.

1. Describe the effect on the people when they are ordered to leave their homes.

2. Describe scenes while they are embarking. Locate Nova Scotia on a map and trace the wanderings of Evangeline while she is searching for Gabriel.

Give the circumstances of their meeting for the last time.

Why does the poem close as it does?

Memorize choice selections from the poem.

The following figures of speech should be recognized and named by the pupils: Simile, metaphor, personification, synecdoche, metonymy, hyperbole, climax, and irony.

Simple Dictation Exercises

The public schools of Milton, Mass., of which Mr. Asher J. Jacoby is superintendent, publish a paper once a month. The *Milton School Journal*, as it is called, is mimeographed instead of being printed, and contains many good things that can be used to advantage elsewhere. The dictation exercises given below come from this school paper.

Introductory to the exercises are the following pertinent suggestions relative to their use:

Writing from dictation, sentences, paragraphs, and stanzas in which attention is given to spelling, capitalization, punctuation, and arrangement, is an effective aid in teaching the written forms of English, and making pupils skilful in their use. The mere writing of sentences, paragraphs, and stanzas, altho models in form as they should be, without reference to content, is too formal, however, and will not produce the best results. The exercises should be rich in content—"the vital quality of thought and feeling embodied in words,—and the child should get the thought and feeling contained therein. They should be interesting, and the facts they contain should be valuable. They may be used to familiarize the child with social and business forms, to introduce him to choice bits of literature—prose and poetry, and to instill into his mind moral truths. Exercises of this nature are on a broad plane and likely to produce excellent results.

The exercises should be carefully graded in thought, feeling, and on the mechanical side of expression. Each lesson should be chosen for a purpose, otherwise there will be loss.

There should be no exercises in Grade 1, except toward the close of the year when very short sentences may be written from dictation. No sentences should be used for this purpose, however, with which the pupils are not familiar. In Grades 2 and 3 the exercises should increase somewhat in number and difficulty. The teachers in Grades 1-3 should remember that the greatest stress should be laid on easy and correct oral expression

Grade 1.

I.

I see.
I eat.
See me.
I can see.
See me eat.
See the man.
I see the man.
See the man eat.
The man can see.
The man can eat.

II

See my kitty.
She is little.
My kitty can run.
Can you catch her?
Run, kitty, run.

III.

Jack is a bad boy.
My cap is black.
I was sick last week.
You must rake up the grass.
Can you skim a stone?
Fan's doll is pretty.
The hen's head is small.

Grade 2.

I.

I have a ball.
Has the boy a top?
A girl likes a doll.
Did you see the man?
Let us play tag.
Can he run fast?
She gave it to me.
Is this your hat?
I saw a little dog.
A cat can catch a rat.

II.

That is a large house.
Dr. Kite lives here.
I walk on Canton Avenue.
Mrs. ——— is my mother.
Mr. ——— came to our school.
Where is the teacher?
Have you a brother?
My sister jumps rope.
Does he live in Milton?
Thank you, I will go.

III.

My name is ———.
I live on ——— St., or Ave.
My father's name is ———.
My mother's name is ———.
Do you live in Milton?
Mr. Robin has a nest.
Mrs. Mouse will run.
That is the boy's hat.
Isn't the bird pretty?
Dr. Brown lives here.

IV.

I am a little (boy).
(girl).
My name is ———.
I live in Milton.

My home is on ——— St.
 My mother is Mrs. ———.
 My father is Mr. ———.
 I have ——— sisters.
 I have ——— brothers.
 Our doctor is Dr. ———.
 I play with my (cat) (dog).

V.

Some grapes were on a vine.
 A fox saw them.
 He was hungry.
 He liked grapes.
 He jumped and tried to get some.
 He tried many times.
 He could not reach them.
 He went away.

VI.

Are there any ripe apples?
 Their feet are wet.
 The cow's horns are sharp.
 John's pencil is broken.
 Mr. White is a farmer.
 The boy's top is lost.
 Many stars are in the sky.
 Dr. Kite came to me when I was sick.

VII.

I am a little plant.
 My flower is a bright yellow.
 I have pretty green leaves.
 They are long and narrow.
 They have sharp points.
 See my pretty seed ball.
 It is fluffy and white.
 Children tell the time by it.
 Do you know my name?
 It is dandelion.

VIII.

Milton is near Boston.
 Mr. and Mrs. Brown are not at home.
 Dr. Lane's office is on School St.
 Come and play with me on Saturday.
 Isn't this your knife?
 Wouldn't Mary come?
 Father's story made us laugh.
 Fish live in the water.
 The boy is happy.
 The boys are happy.

Grade 3.

I.

There are two robins in our apple tree. They have built their nest there. There are four blue eggs in the nest. By and by there will be four baby robins. Then their father and mother will have to work hard to feed them.

The little birds must stay there until their feathers grow. Then their mother will teach them to fly. As soon as they can fly they will leave their home and make nests of their own.

II.

I must always do my best.
 Where are the frogs in winter?
 Oh, what can little hands do?
 The golden-rod is an autumn flower.
 Mr. Hunt comes on Friday.
 My mother's name is Mrs. ———.
 My home is on ——— (St. or Ave.)

Mr. Lincoln was born Feb. 12, 1809.
 When do you sail for Boston?
 Is this horse for sale?

III.

South wind said; "Where are you, Pussy Willow?"

"I will blow your house in," said the wolf.

Henry W. Longfellow was a poet.

Longfellow and Whittier were both born in 1807.

Mr. Snow's family lives on Hillside St.

Alice hasn't any pencil.

This is my brother's cart.

Christmas comes in December.

IV.

My mother and I start for New York on Monday.

Jennie, did you give the book to John?

Yes, ——— gave it to ———.

Two knives are too many for a little boy to have.

When we found the house, the doors ——— locked and the family ——— gone.

"Doctor, I don't like your medicine," whined fussy little Ernest.

Mary lay on the bed asleep.

Her doll was beside ———, with ——— eyes shut.

Your brother is a polite boy, ——— takes off his hat to those older than he.

This is a stanza I ——— in May.

V.

The Fox and the Grapes.

A fox found a vine full of grapes.

The grapes were far up from the ground.

The fox looked up and longed for them.

He jumped and sprang about for a long time.

But he was unable to reach them.

Then he went away saying to himself, "Green; sour things. I will not have one of them."

VI.

I live in ———.

My house is on Oak St.

Mr. and Mrs. Brown live near us.

Dr. Lee came to see us.

My teacher is Miss ———.

Tuesday is the second day of the week.

This is the month of ———.

Why didn't you write your lesson?

Is this Mary's pencil?

"The bell rang," said Annie.

The children took ——— seats. (there—their.)

VII.

Mary said; "Will you come now?"

"I will if I can," said he.

The boy's cap is lost.

The boys' caps are lost.

I'll try.

Mr. Smith is here.

The girl is on Adams St.

Is it he?

It is I.

To-day is Monday.

King Santa Claus.—A Christmas Exercise

By Frances M. Fenwick, New Jersey

CHARACTERS.

Fairy Queen	Jim ..
Santa Claus	Bob ..
Little Boy Blue	Tom..
Jack the Giant-Killer	Bill .. Six Small Boys
Puss-in-Boots	Bert..
Little Red Riding Hood	Jack..
Cinderella	..
Little Bo-Peep	Little Jack Horner
Simple Simon	Blue-beard

Scene opens with the six boys in night gowns and night-caps lying in one large bed. Six large stockings dangle above their heads.

Jim.—Oh, boys, this is the best night in the year.

Bob.—Oh, don't you wish Santa Claus would appear.

Tom.—Oh, pshaw! He never comes till one's asleep.

Bill.—I wish that I could get one little peep.

Bert.—Let's lie awake and see the dear old man.

Jack.—I always mean to, but (yawns) I never can (yawns again).

Bert.—Oh, stupid! I'm not going to sleep to-night (throws pillows at Jack).

All.—Oh, Sport! We'll have a rare old pillow-fight!

All throw pillows and laugh and make a great noise. Deep, angry voice from behind the scenes "Boys!" Boys arrange pillows quickly behind their heads, settle down and pretend to go asleep. They are quiet for a minute or two, then one after another snores loudly; then all snore together in chorus about a dozen times. Door opens. Fairy Queen enters. Stamps and waves her wand. Stage illuminated. Boys stop snoring and start up.

Fairy Queen.—Wake up, my dears! I am the Fairy Queen,
And 'tis not every night I can be seen.

Bert.—Why, no, indeed! This is a great surprise.

All.—Indeed we hardly can believe our eyes. (All rub eyes and blink.)

Fairy Queen.—Of course you've no idea what brought me here.

Jim.—No! (Shakes his head.)

Bob.—No! (Shakes his head.)

Tom.—No! (Shakes his head.)

Bill.—No! (Shakes his head.)

Bert.—No! (Shakes his head.)

Jack.—No! Do tell us, dear.

Fairy Queen.—

Yes, I will. You see it is this way,
The fairies in my kingdom night and day
Dispute as to which one you girls and boys
I like best of all. Therefore, to stop the noise
I'm going to bring them to your room to-night,
And you shall say who gives you most delight.

Jack-the-Giant-Killer, Cinderella fair,
Bluebeard, and all the others shall appear,
And see! this crown of finest fairy gold
Shall deck the head that wins your favor bold.
Now, boys! Prepare to give opinions right,
For one by one I'm going to call each sprite.

Stamps and waves her wand. Jack the Giant-killer runs in brandishing sword in left hand and heads in right.

Jack.—

Oh, boys, you all love me; I know,
And well you may, my dears.
Who was it killed all wicked giants,
Freed knights, stopped ladies' tears?
Why, Jack-the-Giant-killer bold,
So give to him that crown of gold.

Fairy Queen stamps and waves wand. Enter Little Red-Riding-Hood.

Little Red-Riding-Hood.—

Before you boys could read at all,
I know you heard of me,
And how that wicked, wicked wolf
Ate granny for his tea;
And tried to make a meal of me;
But oh! he didn't! for you see,
The brave men killed him quite stone dead.
Please put that crown upon my head.

Fairy Queen repeats gestures. Enter Little Boy Blue.

Little Boy Blue.—

Toot! Toot! Boys, did you hear that horn?
I blew it before you were born.
My sheep and cows run quick and fast,
And bleat and moo as I go past.
Now, boys! give me that crown! You know
There's no one else that you love so!

Fairy Queen repeats gesture. Enter Bluebeard. Boys shake their fists and hide their faces.

Bluebeard.—

Why, boys, what's up? You know quite well,
You love to read of me,—
And Fatima and Sister Anne.
Now don't be cross! You see,
I got killed in the end! So pray
Don't cherish malice at this day.
Give me that crown; my beard of blue
Will look fine 'neath that golden hue.

Fairy Queen repeats gesture. Enter Cinderella.

Cinderella.—

I once was a poor little drudge, dears,
And sat 'mid the ashes alone,
But now I have wedded a Prince, dears;
And sit by his side on a throne.
Don't think that I mean to be greedy,

But it certainly does seem to me
That that crown *should* belong to a Princess,
And I am a Princess, you see.
Fairy Queen repeats gesture. Enter Little Jack Horner.

Little Jack Horner—

I'm Little Jack Horner, who sat in a corner,
And pulled out a plum from a pie,
And I said what I thought at that time, and still
think,

Namely, what a good boy am I!
Now, boys! I'm a boy, and a good one at that,
A thing you don't every day see;
So show your good taste! Make all possible haste;
To bestow that gold crown upon me.

Fairy Queen repeats gesture. Enter Puss-in-Boots.

Puss-in-Boots (waves rabbit)—

Say, boys! Look at me!

I'm the cleverest cat

That ever wore fur on his back.

My master's a king, and 'twas I made him one,

And there's only one thing that I lack:

I have gallons of milk, and armies of mice;

I've of talents and virtues good store,

But I've not got a crown; please present me with
that,

And I'll never ask gift of you more.

Fairy Queen repeats gesture. Enter Simple Simon.

Simple Simon—

I'm Simple Simon, boys,

And I've nothing much to say.

Just as I once loved pie,

I love that crown to-day.

I do not mean to tease,

But give it to me, please.

Fairy Queen repeats gesture. Enter Santa Claus.

Santa Claus.—I'm good old Santa Claus—

Boys sit up in bed, throw up their nightcaps and shout
"Hurrah for Santa Claus!"

Santa Claus.—Thank you, boys! As I just
said—

Boys.—Hurrah for Santa Claus!

Jack.—He is the best of all! Oh, Fairy Queen,
give Santa Claus the crown.

Fairy Queen—

'Tis plainly seen

Whom you like best; but boys I want to know,

What is it makes you all love Santa so?

Bob.—It is because he is so kind and good.

Tom.—And thinks of others always.

Bill.—If you could,

Just crown him for us; we should be so
glad!

Bert.—For it is getting late; 'twould be too bad
If Santa had not time to pay his calls.

Jack.—Dear Queen,

Give him the crown.

All.—Crown Santa Claus, dear Queen.

Santa Claus kneels in front of Queen who puts crown on
his head. Boys get out of bed, form circle and dance
around Santa Claus and Queen. Fairies form circle and
dance around boys.

What the Snow-Birds Said.

"Cheep! cheep!" said some little snow-
birds

As the snow came whirling down;

"We haven't a nest,

Or a place to rest,

Save this oak tree bending down."

"Cheep! cheep!" said little Wee Wing,
The smallest bird of all;

"I have never a care

In this winter air—

God cares for great and small."

"Peet! peet!" said her father, Gray
breast;

"You're a thoughtless bird, my dear;

We all must eat,

And warm our feet,

When snow and ice are here."

"Cheep! cheep!" said little Wee Wing;

"You are wise and good, I know;

But think of the fun

For each little one

When we have ice and snow!

"Now I can see, from my perch on the
tree,

The merriest, merriest sight—

Boys skating along

On the ice so strong;

Cheep! cheep! how merry and bright!"

"And I see," said Brownie Snow-bird,

"A sight that is prettier far:

Five dear little girls

With clustering curls,

And eyes as bright as a star."

"I see some sleds," said Mother Brown,

"All filled with girls and boys!

They laugh and sing,

Their voices ring,

And I like the cheerful noise."

Then the snow-birds all said, "cheep
and "Chee!"

"Hurrah for ice and snow!—

For girls and boys

Who drop us crumbs

As away to their sport they go!

"Hurrah for the winter clear and cold!

When the dainty snow-flakes fall,

We will sit and sing

On our oaken swing,

For the dear God cares for all."

—Selected.

Among Ourselves

The Editor's Round Table

THIS number brings an abundance of poems suitable for the Christmas and winter time, besides exercises for all grades, stories and descriptions enough for several entertainments. I hope they will be a means of making this joyous season a memorable one in your life and that of your pupils, and that parents and friends will share the pleasure with you. I wish I could be with you all on the eventful morning, evening, or afternoon. As it is, I can only send you my good wishes. May you have as fond a time as I used to have with my pupils and their parents and friends at our Christmas celebrations, in my own teaching days.

Last month I spent several very pleasant days in visiting schools at Buffalo, N. Y., my former home. Several of the good things seen in the buildings presided over by Miss Gates, Miss Brennan, Mr. Duschak, and Mr. Moyer will be passed on to the readers of this magazine. One especially gratifying experience was to see one of my own former pupils at work in Principal Duschak's school and to hear that still another of my girls is teaching in the same building. I met still another teacher who as a little girl was for a time under my educational care. These are pleasures which no one but a teacher can fully understand. They help make teaching the most precious work in the world.

To teach love of labor is to teach respect for labor. He who has not learned the lesson in his youth is destined to suffer in the hard school of life itself. The teacher can spare the children many bitter hours of disappointment in later days by training them properly to a genuine appreciation of labor. Such healthy, hearty poems as Longfellow's "The Village Blacksmith" do accomplish something: they pave the way. But the realization of the dignity and worthiness of labor, especially labor of the hand, must be learned by experience—by actual work with the hand. Miss Amy C. Scammell, in her article on page 280, has taken up in an eminently practical way, a very important matter.

One's chances for happiness are increased a hundred fold by clinging to the banner of hope. Be hopeful for yourself, for the growth of your own powers, the increase of your influence, your growing efficiency in social service. Be hopeful for your pupils. Put away the pedantic spectacles that magnify harmless evidences of fun-loving youngsters, bubbling over with energy, into crimes and signs of depravity. One teacher told

me not long since that he never felt smaller in his life than when he had to report to his board of trustees, composed of reasonable laymen, concerning the conduct of children who were giving trouble at school. Occasional whispering, a smile out of season, lack of enthusiasm in carrying out an unpleasant behest, and other things that, to the cramped vision of the teacher, had looked like riotous behavior, began to dwindle into nothingness when he considered how to explain to his trustees the weight of his complaints. Let us be reasonable—and hopeful.

Some readers evidently do not agree with Superintendent Coffman's views with reference to the early French colonies in America. Neither do I. That does not necessarily prove Mr. Coffman wrong. My policy with regard to historic matters is that the writer may state his own views of them in his own way, provided his position is not clearly contrary to facts. It is always dangerous, of course, to suggest motives for recorded acts and events. However, without a frank statement of one's convictions, there will be no stirring of the spirits, and without the clashing of views there will be no clearing of the fog, and an ultimate establishment of truth. I enjoy running up against an opinion, now and then, which is opposed to my belief and yet appears to have considerable weight in its favor. The wrestling with it, till I have it either disproved or made partly or fully my own, is always profitable.

Take Mr. Coffman's article, for example. My personal convictions all run counter to his criticisms of the attitude of the early missionaries in New France toward the Indians. Considering the extreme danger to which the life of a missionary was exposed among the Iroquois, it would seem ridiculous for an intelligent man to choose this road to earthly glory. On the other hand, there were undoubtedly better chances for ecclesiastic preferment in Canada than there were in France. Who will be the judges of motives?

There comes to my mind the example of Marguerite Bourgeoys, a woman of wonderful power, who founded the Congregation of Notre Dame of Montreal. She was refused support by the Bishop of Quebec when she first began her splendid work. She arrived in New France in the fall of 1653, shortly after the first Sulpicians had begun their missionary labors. For a long time she was regarded as a suspicious person. She was, however, so filled with zeal for teaching that she bore her fate patiently. It was not till a year or so before her death, which occurred in 1700, that the rules of her Congregation received the Bishop's

approval. The partisans of Sister Marguerite in their zeal said things which no doubt gave a wrong view of the matter. Some of these things sound very much like Mr. Coffman's assertions, tho I doubt if his opinions sprang from this source.

And now a word to show why I cannot agree with a portion of the article in question. The priests of St. Sulpice were saintly heroes if ever there were any in the American colonies. Their posts were constantly exposed to the fury of the Iroquois. Of course they loved France and wanted to build up a new France in the wilderness for the greater glory of their country. This is but laudable, especially as *La Grande Nation* held the faith which these preached to the American aborigines. What to an unsympathetic eye, therefore, appears selfish may in reality be a noble example of self-abnegation. The incontrovertible fact is that the Indians of New France have ever remained loyal to the church whose priests first taught them the gospel of the Cross. Even to this day the Micmacs are devout believers. Would that be the case if the Indians had been treated as Mr. Coffman suggests? I cannot believe it. At the same time I see no reason for forcing my views upon him. I have been stimulated by the presentation of his views to a re-examination of my own conclusions in the matter. That is worth something, too. If this magazine were published for children, instead of reasonable teachers, I should not want to let questionable statements appear in any article. But this is the TEACHERS MAGAZINE, written by teachers, for teachers, in the interest of teachers.

This has seemed to me an opportune time for stating my attitude concerning contributed articles. Generally speaking, the magazine reflects the views to which I would like to have every reader subscribe. But there must be freedom of speech for the clearing of mooted questions. The contributed articles furnish more or less of stimulus to a friendly contest of opinions. That is what they are for to some extent. They are as carefully edited as time and strength and the limitations of my judgment permit. A reasonable point well argued is often allowed to stand, tho I may differ from it and others with me. The magazine is intended to present a round table meeting of teachers with the editor in the chair, rather than a pulpit, a lecture platform, or a normal school class. Discussion is always welcome. Short replies are published in the "Hints and Helps" columns; for longer ones we have a department of "Letters" whenever there are such. This latter department appeared in the *Teachers' Institute* also, under the title "Teachers' Forum." Come, let us reason together, and let us be fair.

A number of school boards require that publishers who desire to have their books considered for adoption must supply free sample copies to every member of the board. Sometimes this means that fifty copies must be given away with a possible chance of selling five hundred. Disregarding wholly the side of the publisher, who has come to be regarded as a legitimate victim for amercement. Suppose the superintendent of a county poorhouse should require butchers and grocers and bakers and dairymen to

supply samples of their wares to all heads of departments in the institution. What a temptation to dishonesty that regulation would conjure up.

The dealers in second-hand books could collaborate a tale that would show how many of the books were disposed of, with which an unrighteous regulation supplied the members of school boards at the expense of the publishers and the higher considerations of honesty and fair dealing. There is no doubt that samples should be submitted, in order that an intelligent choice of texts may be made, but there is no reason why more than one sample should be needed for the average school board, nor why those samples should be kept after a selection has been made.

To be sure, some publishers are perfectly willing to have their samples preserved for future reference. In that case these books should be kept in an accessible library as the property of the school system. Anything coming to a man in an official capacity should be regarded strictly as official and not as personal property. A superintendent or principal leaving one position for another, or members of a school board retiring from office should leave behind them whatever does not belong to them by rightful acquisition.

Getting things for nothing is unworthy of educators. A moral attitude toward life requires that an equivalent, or value considered equivalent by the recipient should be given in return for everything accepted. The frequent violation of this rule has wrought much mischief in the land.

This is an era of free trade in the world of ideas. Individual men may not rejoice in it, but mankind is profiting by it. The school garden conducted in the heart of the crowded tenement district of the New York city Ghetto, under the wise leadership of Miss Rector has attracted attention far and wide. From New Zealand, East India, Germany; Great Britain, Tasmania, and other countries have come news clippings and letters giving evidence of the interest taken in the experiment. The supply of numbers of *The School Journal* in which a description of the garden appeared has long been exhausted. It is barely possible that next spring I may be able to republish the story in TEACHERS MAGAZINE. Here is an extract from a recent letter addressed to Miss Rector by Mr. Geo. Gilchrist, editor of the *Cape of Good Hope Teachers Annual*, which shows that in South Africa, too, the seed has fallen on fruitful ground. Mr. Gilchrist writes:

I was much interested in the article which spoke of your school in Rivington street showing how it was possible to have a school garden even in a New York city Ghetto. We are reproducing—if one may compare small things with large—some of the features of New York city life in Cape-town, and I should very much like to hear more about the enterprise you have initiated in your city. I have long been convinced that the conditions under which children study here and the actual method and the end of the study are capable of improvement.

Truly the works of our hands preach sermons. The age of publicity has increased individual responsibility. What is done in the smallest corner may become a blessing to all mankind in a marvelously short time—or a curse.

THE CHILD WORLD

A Magazine of Supplementary Reading.

Supplement to TEACHERS MAGAZINE, December 1905.

The Fir Tree.

Out in the deep forest there once grew a pretty little fir tree. It stood in a very pleasant place. The sun warmed it, and the breezes played with it, and all around grew pines and firs. But the fir tree was not contented. It longed to be taller. In the summer time the children came to the forest to look for strawberries and raspberries. When they had their baskets filled and had strung berries on a straw, like beads, they would sit down by the little fir tree. Then one child would say, "How pretty this small one is!" And the others would say, "What a pretty little tree!" The fir tree did not like to hear that. One year went by, and another and a third, and each year the fir tree grew taller. But it was not yet satisfied.

"Oh, if I were only as tall as some of the other trees!" it sighed, "Then I would spread my branches far around and look out into the wide world. The birds would build nests in my boughs, and when the wind blew I could bow as grandly as that tall fir over there."

It took no pleasure in the sunshine, nor in the birds, nor in the red clouds that sailed over it morning and evening.

When it was winter and the snow lay all around, white and sparkling, a rabbit would sometimes come scampering along and pop over the little fir tree. Oh, how provoking that was! But two winters went by, and when the third winter came, the little tree had grown so tall that the rabbit had to run around it.

"Oh, to grow, to grow, and to become tall and old! That's the finest thing in the world," thought the tree.

In the fall the woodcutters came and cut down several of the largest trees. The little fir tree was now quite well grown, and it shuddered, as the great trees fell to the ground with a crash. Then the branches were cut off so that the trees looked so naked, long and slender one would hardly have known them. They were laid upon wagons and dragged by horses out of the woods. Where were they going? What would happen to them?

In the spring, when the swallows and the stork came back, the tree asked: "Do you know where those trees went? Did you meet them?"

The swallows knew nothing about them. But the stork looked thoughtful, nodded his head, and said: "Yes, I think so. When I flew out of Egypt, I met many new ships; on the ships were tall masts; I fancy these were the trees. They smelled like fir, and they were very tall and slender."

"I wish I were tall enough to go over the sea. What is the sea, and how does it look?"

"It would take too long to explain all that," said the stork, and away he stalked.

THE CHILD WORLD

“Rejoice in your youth,” said the sunbeams; “rejoice in your sweet growing life.”

The wind kissed the tree, and the dew wept tears upon it; but the fir tree did not understand them.

When Christmas time came the woodcutters appeared again with their axes and took away many trees. They selected young firs, the prettiest that could be found. They did not chop off the branches, but put the trees upon wagons and carted them away.

“Where are they going?” asked the fir tree. “They are not larger than I---indeed, one of them was much smaller. Why do they keep all their branches? Where are they going?”

“We know! we know!” twittered the sparrows. “We have been in town and looked in through the windows. Oh, those trees are made to look glorious. We looked in through the windows, and saw them planted in the middle of a warm room, and covered with the most beautiful things—gilt apples, silver chains, sweetmeats, and many, many, bright candles.”

“And then?” asked the fir tree, trembling in every twig; “and then? What happened then?”

“That is all we saw. But it was beautiful; very, very beautiful.”

“I hope I may be taken to that glory some day,” cried the fir tree, with joy. “That is better than crossing the sea. Oh, how I long for the time! If it were only Christmas again! I am now tall and full of green branches like the others that were taken away last year. I wish I were on the wagon or in the warm room with all the pretty things on me. And then? Why, then something even better may come, or else why should they make the tree look so beautiful? There must be something grander still to come; but what? Oh, how I long to find out!”

“Rejoice in our love!” said the air and the sunshine. Rejoice in your youth and your freedom out here in the woodland.”

The fir tree took no pleasure in anything, but it grew and grew. Winter and summer it stood there, green and delightful to behold. The people who saw it said, “That is a beautiful tree!” And at Christmas time it was the first to be taken.

The axe cut sharply through the wood, and the fir tree fell to the ground with a heavy groan. It suffered pain and grew faint. Now the hour of parting had come it could not help feeling sad. It was hard to leave home, and the fir tree knew that it should never again see the dear old friends, the flowers, the bushes, the other trees---perhaps not even the birds.

The tree did not recover from its sadness till it was unloaded in a yard with other trees, and heard a man say, “This one is very fine; we want this one!” Then two servants picked up the fir tree and carried it into a large beautiful room. Everything the sparrows had told came true. Three young ladies began to adorn the tree. On some branches they hung little nets, cut out of colored paper and filled with candy, and many other pretty things. The gilt apples and walnuts looked as if they had grown on the tree. More than an hundred little wax tapers, red, white, and blue, were fastened to the boughs. Dolls that looked just like real people seemed to be dancing to and fro among the boughs. High up, on the very top of

the tree, was fixed a large star of bright gold tinsel. It was beautiful; very, very beautiful.

"To-night," said everybody, "to-night the tree will be lighted up."

"Oh," thought the tree, "I wish it were night now! and that the tapers were all lighted. What will happen then? I wonder if trees will come out from the forests to look at me? Will the sparrows peep in through the windows? Will they let me grow fast here, and stand adorned summer and winter?"

The fir tree guessed and wondered till its bark ached, and barkaches for a tree are just as bad as headaches for us.

At last the tapers were lighted. What a blaze of splendor! The tree trembled with joy in all its branches, so that one of them caught fire and was scorched.

"Oh, dear! how dreadful!" cried the young ladies; and some one quickly put out the fire.

The tree did not dare to tremble again. It was afraid that some of its ornaments might be scorched. It was dazzled and bewildered by the many lights.

The folding doors were thrown open now. A troop of children rushed in as if they would overturn the tree. The older people followed more slowly. The little ones stood silent, but only for a minute; then they shouted again till the room rang. They danced round the tree, and then one present after another was taken down.

"What are they doing?" thought the tree. "What will happen now?"

And the tapers burned down to the twigs, and were put out.

The children danced about with their pretty playthings. No one looked at the tree except the old nurse, who peeped among the branches to see if a fig or an apple had been left there.

"A story! a story!" shouted the children; and they drew a little fat man toward the tree. He sat down just under it. "For then we shall be in the greenwood," said he, "and the tree may hear my tale. But I shall tell only one. Will you hear the story of Henny Penny or of Humpty Dumpty, who fell downstairs, and yet came to honor and married a princess.

"Henny Penny!" shouted some. "Humpty Dumpty!" shouted others. And there was a merry noise again. Only the fir tree was silent, and thought to himself, "Am I to do some shouting, too? or have I no part in this?" But its work was already done.

The fat man told about Humpty Dumpty, who fell downstairs, and yet came to honor and married a princess. The children clapped their hands, and called out, "Tell another! tell another!" for they wanted to hear about Henny Penny, too; but they got only the story of Humpty Dumpty.

The fir tree stood silent and thoughtful. The birds in the woods had never told such a story as that.

Humpty Dumpty fell downstairs, and yet came to honor and married a princess! "Yes, strange things happen in the world," thought the fir tree. It believed the story was all true because the one who told it was such a nice man. "Who knows? who knows? Perhaps I shall fall downstairs and marry a princess." And it looked forward with pleasure to being adorned again the next evening with tapers and toys and fruit.

"To-morrow I shall not tremble," it thought. "I shall enjoy my splendor even more than I did to-day. To-morrow I shall hear the story of Humpty Dumpty again, and perhaps that of Henny Penny, too."

All night the tree stood quiet and thoughtful. In the morning the servants came in.

"Now they will adorn me again," thought the tree. But they dragged it out of the room and upstairs to the garret. Here they put it in a dark corner, where no ray of light could enter.

"What does this mean?" thought the tree. "What am I to do here? What is going to happen now?"

It leaned against the wall and thought and thought. And time enough it had to think, for days and nights went by and no one came into the room. At last somebody did come, but only to push some old boxes into the corner. Now the tree stood quite hidden, and seemed to be entirely forgotten.

"It is winter now," thought the tree. "The ground is hard and covered with snow, so the people cannot plant me. I suppose I am to stay here under shelter until spring comes. How kind and thoughtful men are! I only wish it were not so dark here and so dreadfully lonely! Not even a little rabbit is to be seen. How pleasant it was out in the forest when the snow lay on the ground and the rabbit scampered about;--yes, even when he hopped over me; though I did not like it then! It is dreadfully lonely up here!"

"Squeak! squeak!" said a little mouse, and crept forward. Then another mouse came. They smelled at the fir tree, and then slipped in and out among the branches.

"If it were not so cold," said the two little mice, "we should be comfortable here. Don't you think so, you old fir tree?"

"I am not old at all," said the fir tree. "There are many who are much older than I."

"Where do you come from?" asked the mice. "And what do you know?" They were very curious mice. "Tell us about the best place on earth. Have you been there? Have you been in the storeroom where cheeses lie on the shelves and hams hang from the ceiling, where one can dance on tallow candles, and goes in thin and comes out fat?"

"I know nothing about that," said the tree; but I know the forest, where the sun shines and the birds sing." And then it told all about its youth.

The little mice had never heard anything like it before. They listened and said: "You certainly have seen a great deal. How happy you must have been!"

"Happy?" asked the fir tree in surprise. Then it thought a while and said: "Yes, after all, those were pleasant times." Then it told of the Christmas Eve when it had been covered with toys and tapers.

"Oh!" cried out the little mice, "how happy you must have been, you old fir tree!"

"I am not old at all," said the fir tree. "I left the forest only this winter. I am quite young."

"What splendid stories you can tell!" said the little mice. And next

night they came again and brought with them four other little mice to hear stories. The more the tree told of its youth the more clearly it remembered what had passed. This time it closed by saying, "Yes, those were happy days. But they may come again. Humpty Dumpty fell down-stairs, yet he came to honor and married a princess. Perhaps I may marry a princess." Then the fir tree thought of a lovely little birch tree in the wood. For to the fir tree that birch was a real princess.

"Who is Humpty Dumpty?" asked the little mice. And then the fir tree told the whole story again. It remembered every single word, and the little mice were so pleased that they jumped to the very top of the tree for joy. Next night many more mice were there, and on Sunday came also two rats. But the rats said the story was stupid. The little mice were sorry to hear that, and then they began to like it less themselves.

"Do you know only that one story?" asked the rats.

"Only that one," replied the tree. "I heard it on the happiest evening of my life. Only I did not know then how happy I was."

"It is a very poor story. Tell us one about bacon and tallow candles, some kind of a storeroom story?"

"No," said the tree.

"Then we have had enough of you," said the rats, and off they ran.

At last the little mice stayed away, too. Then the tree sighed and said: "How pleasant it was to have all the merry little mice sit around me and listen when I talked! Now all that is past. I should be glad if some one would take me away from this place."

But when would that be? One morning people came to clean out the garret. The boxes were put away, and the tree was dragged out of the corner. It was thrown rather roughly on the floor, and a servant carried it down-stairs.

"Now life is beginning again!" thought the tree. It felt the fresh air and the first sunbeams. It was again in the yard. All happened so quickly that the tree quite forgot to look at itself; there was so much to look at all around. The yard was close to a garden, where many flowers were blooming. The roses hung fresh and fragrant over the fence, and a swallow twittered, "Quirri-virri-vit, my husband is come!" But it was not the fir tree she meant.

"Now I shall live!" said the tree with joyful hope, and it tried to spread out its branches. But alas! they were all dried up and yellow; and it lay in the corner among nettles and weeds. The tinsel star was still fastened to its top, and glittered in the bright sunshine.

Two of the merry children who had danced round the tree at Christmas time were playing in the yard. The younger one ran up and tore off the gilt star.

"Look what is left on the ugly old Christmas tree!" said the child. He trampled upon the boughs till they broke.

The tree looked at the blooming flowers in the garden. Then it looked at itself and wished it had stayed in the dark corner of the garret. It thought of its fresh youth in the wood, of the merry Christmas Eve, and of the little mice which had listened so eagerly to the story of Humpty Dumpty.

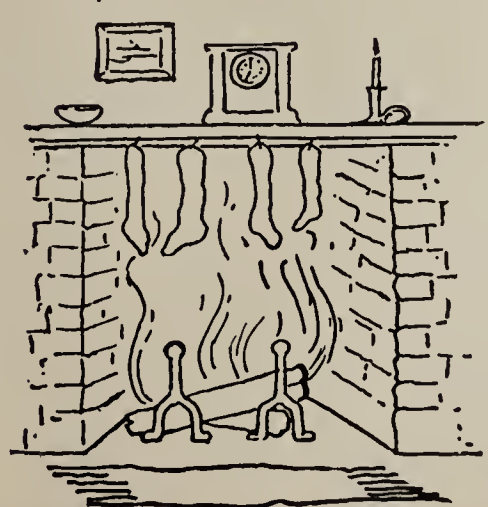

"If I had only tried to be happy while I could!" said the old tree. "Now all is over and gone."

A servant came and chopped the tree into small pieces. Then he set fire to them. The tree sighed, and each sigh was like a little shot. The children ran up and set down before the fire, looked into it, and cried, "Piff! puff! bang!" But at each sigh, the tree thought of a bright summer day in the forest, or of a winter night there when the stars were shining. It thought of Christmas Eve, and of Humpty Dumpty, the only story it had ever heard or knew how to tell---and at last the whole tree was burned.

The boys played in the yard, and the younger had on his breast the gilt star which the tree had worn on the happiest evening of its life. Now that was past, and the tree's life was at an end, and this story is at end, too, for all stories must come to an end some time or other.

December

Mon.	Tues.	Wed.	Thurs.	Fri.

Replies to Questions.

By Amos M. Kellogg.

It will not be possible to reply to all of the questions that have been received; several that seem of direct practical moment to the working teacher will be briefly discussed.

Keeping Order.—No specific rules can be given for the maintenance of order. The teacher must strive against fear of her pupils and against nervousness. If something unlooked-for happens she must not be startled—she must seem to be cool at all events. The letters come from inexperienced teachers evidently; bearing the above rules in mind, have and hold tenaciously to a program of recitation and study; have so many minutes (and no more) for each class.

Teaching U. S. History.—It is a bad plan to give so many pages for a lesson, and thus proceed thru the book. In some way (1) a general idea of the entire field will be given; this may be done by assigning the reading of the three periods (Colonial, revolutionary, and constitutional) for three days. Then (2) a chart is made and suspended, on which the main events of the first period are put down; this each pupil will copy. Subjects from this chart will be assigned for investigation; pupils will rise and tell what they can about these as their names are called; they may have their books open. (3) Having thus become familiar with characters, reviews will be had and pupils will be able to sketch out an entire period, naming events and persons. Only a few dates should be asked for.

Recesses.—If the schoolyard is large enough both sexes may take the recesses at the same time; then the room can be thoroly aired—an important matter. If there is nothing but the roadway for a playground the sexes will have separate recesses. Let the teachers insist on two properly constructed outhouses; the law in every state now provides for this; if local officers are delinquent, call on the county superintendent.

Prizes.—There are serious objections to the giving of rings, books, gold watches, etc., to the so-called "best pupils." In the case of J. B. M. the offer of a telescope to the one who ranked highest in studies, attendance, and deportment, being made by a man of influence, and a special friend to the school, can not well be refused by the teacher. She may suggest the giving of other things to the next five pupils on the list, and thus lessen the evil somewhat.

Officials.—How to interest officials is a matter of importance. E. L. S. reports that she was not visited by a single trustee during the year. This would seem to indicate that the entire district was negligent. Interest may be aroused by receptions; parents will usually come if their children speak pieces and present dialogs.

Criticism.—A Texas teacher asks, "Should teachers criticise their classes?" Certainly. But criticism is not synonymous with fault-finding. Just criticism holds an ideal in mind. Let us

suppose a class in arithmetic is before the teacher and he feels it needs criticism. He may say, "We have performed all the examples given out for the lesson, but is that all we should aim at? (Desiring to draw out the opinion of the class.) What do you say, Henry?" An opportunity is given to several to speak; one refers to the work on the board; another to the bodily attitude; another to the language, etc. After this expression of opinion the teacher comments *briefly*. This done rightly from time to time keeps an ideal before the class. But that must include more than mechanical or physical elements.

R. L. F., Vineland. It is not necessary that you antagonize the saloon interest in teaching temperance. The effect of alcohol on the human system is one thing, the traffic in liquor is quite another. There are many cases where the sellers of liquor are on school boards and act very efficiently. Such men do not object to a teacher's explaining to a class the evil effects of alcohol, but they might object to your going on to declare the saloon-keeper a wicked man. In this city, for instance, (and it is so in most cities and large towns), a majority of the people are in favor of the open sale of liquor. The class opposed to it is relatively small. They claim that every man must be his own judge as to whether a drink of whiskey is harmful or not.

Sound Sleep Can Easily Be Secured.

"Up to two years ago," a woman writes, "I was in the habit of using both tea and coffee regularly.

"I found that my health was beginning to fail, strange nervous attacks would come suddenly upon me, making me tremble so excessively that I could not do my work while they lasted; my sleep left me and I passed long nights in a restless discomfort. I was filled with a nervous dread as to the future.

"A friend suggested that possibly tea and coffee were blame, and I decided to give them up and in casting up about for a hot table beverage, which I felt was an absolute necessity, I was led by good fortune to try Postum Food Coffee. For more than a year I have used it three time a day and expect, so much good has it done me, to continue its use during the rest of my life.

"Soon after beginning the use of Postum; I found, to my surprise, that, instead of tossing on a sleepless bed through the long, dreary night, I dropped into a sound, dreamless sleep the moment my head touched the pillow. Then I suddenly realized that all my nervousness had left me, and my appetite, which had fallen off before, had all at once been restored, so that I ate my food with a keen relish.

"All the nervous dread has gone. I walk a mile and a half each way to my work every day and enjoy it. I find an interest in everything that goes on about me that makes life a pleasure. All this I owe to leaving off tea and coffee and the use of Postum, for I have taken no medicine." Name given by Postum Co., Battle Creek, Mich.

There's a reason.

Read the little book, "The Road to Wellville" in pkgs.

R. G. Pardee. The system of managing the liquor traffic in Sweden is often called the "Wohenberg system," because it was employed first in the town thus indicated. A corporation in 1865 undertook the business of managing the traffic--here it would be called a "trust"--the aim being to prevent abuses. It endeavors to make liquor (1) dearer (2) contain less alcohol (3) restrict the amount drunk (4) provide good and cheap food (5) prevent any under 18 from drinking. The results were so good that the plan has been generally adopted in Sweden and Norway; for instance in '68 there was one saloon for every 2293 people; in '99 one for 8158. The plan is to convert the saloons into restaurants and furnish (from 12 to 2 P.M.) liquor only with food and only one drink; also to open reading rooms where light refreshments are furnished, but no liquors. The general result has been to lessen the amount drunk 50 per cent. The "trusts" in both Sweden and Norway pay over large sums to hospitals, etc.

This method while it attempts simply to "regulate" the traffic does really educate the people to abstinence, and is probably the true one to be employed. Note (1) the people are allowed each five years to vote for or against the sale of liquor in towns; (2) the "trusts" make no money, the entire profits go to the town treasuries.

Lawrence. What is meant by the "private car" lines is such as the refrigerator car by the Armour Company. There are 300 such lines, owning 130,000 cars. The Interstate Commission found, for example, that a carload of grapes from Michigan to Duluth cost \$98.70; the Armour line got the business and the charge was \$160.20. From this and many similar disclosures it appears that the cost of all our articles of food are largely increased to make money for the "private car" interests.

D. Flynn. The Robert Hunter concerning whom you inquire is the author of a notable book on "Poverty" (Macmillan) that is destined to create a wide influence. He is a graduate of the Indiana university '96; a student at Hull House, Chicago; Toynbu Hall, London; at the University Settlement, New York. His effort is to better the condition of the poor.

D. J. Pratt, Toledo. The subject of attention to the teeth of school children has been often discussed in these pages; it is deemed a most important and practical one. In Darmstadt, Germany, according to Consul Liefeld, during the year 1776 children were examined; 1561 teeth were filled; 1871 extracted; in Strasburg 2666 children were examined; 699 teeth filled; 2912 extracted. Nine such municipal dentistries exist in St. Petersburg; several in Moscow.

Dakota Teacher. Brazil derives its name from the Brazil tree, used extensively in dyeing, and which was found growing wild in that country. As little was known of the country it was spoken of by the voyagers as the Brazil country, and afterwards as Brazil. But the so called Brazil nut does not come from this tree; it takes its name from being found in Brazil itself.

L., Pasadena. The account you give of the "municipal farm" is very interesting, but room cannot be found for it. It is plain that the field of municipal activity is widening; at present the following is a list of a part of the activities assumed, not all in one city, however:

Roads, bridges, sidewalks, sewers, ferries, markets, scales, wharves, canals, parks, baths, schools, libraries, museums, hospitals, lodging-houses, poor-houses, jails, cemeteries, prevention of fire, supply of water, gas, electricity, heat, power, transportation, telegraph and telephone service, clocks, skating-rinks, musical entertainments, exhibition of fireworks, and employment offices.

Miss W. Leonard. Teaching is not necessarily an unhealthy work; teachers and clergymen are among the long-lived class. But the matter is one that needs attention. The school-room should be kept clean and well ventilated.

R. L. D. It is not easy to advise in your case. It is probable that the normal schools of some states are superior to those of some other states; some are such only in name; that you attend a genuine normal school is, of course, essential.

Passing of Porridge.

MAKES WAY FOR THE BETTER FOOD OF A BETTER DAY.

"Porridge is no longer used for breakfast in my home," writes a loyal Briton from Huntsville, Ont. This was an admission of no small significance to one "brought up" on the time-honored stand-by.

"One month ago," she continues, "I bought a package of Grape-Nuts for my husband, who had been an invalid for over a year. He had passed through a severe attack of pneumonia and la grippe combined, and was left in a very bad condition when they passed away.

"I tried everything for his benefit, but nothing seemed to do him any good. Month followed month and he still remained as weak as ever. I was almost discouraged about him when I got the Grape-Nuts, but the result has compensated me for my anxiety.

"In the one month that he has eaten Grape-Nuts he has gained ten pounds in weight, his strength is rapidly returning to him, and he feels like a new man. Now we all eat Grape-Nuts food, and are the better for it. Our little five-year-old boy, who used to suffer from pains in the stomach after eating the old-fashioned porridge, has no more trouble since he began to use Grape-Nuts, and I have no more doctor's bills to pay for him.

"We use Grape-Nuts with only sweet cream, and find it the most tasty dish in our bill of fare.

"Last Monday I ate four teaspoonfuls of Grape-Nuts and cream for breakfast, nothing else, then set to work and got my morning's work done by 9 o'clock, and felt less tired, much stronger, than if I had made my breakfast on meat, potatoes, etc., as I used to. I wouldn't be without Grape-Nuts in the house for any money." Name given by Postum Co., Battle Creek, Mich. There's a reason.

Read the little book, "The Road to Wellville," in pkgs.

Questions on Current Events

The answers to these questions are found in late numbers of *Our Times*. For the convenience of those who desire more complete answers, the pages and dates of issue are given.

When was the peace treaty officially signed? A. On Oct. 14. 115. Oct. 21.

What policy will Japan adopt toward Korea? A. A stern policy. It is predicted that the shadow of Korean government will soon be swept away. 115. Oct. 21.

What famous actor died lately in England? A. Sir Henry Irving. 116. Oct. 21. Where was he buried? A. In Westminster Abbey. 132. Oct. 28.

Why is Germany anxious to save Heligoland from destruction? A. Because it is desired to turn it into a naval station. 116. Oct. 21.

What is the oldest republic in existence? A. Switzerland, which lately celebrated the 714th anniversary of its founding. 117. Oct. 21.

When and where will the national convention on immigration be held? A. At New York, Dec. 6 and 7. 119. Oct. 21.

What celebration lately took place at New-Glarus, Wis.? A. The fiftieth anniversary of its settlement by the Swiss. 123. Oct. 21.

Who did the Norwegians choose for their king? A. Prince Charles of Denmark. 131. Oct. 28.

What league of peace did Andrew Carnegie advise? A. Britain France, and the United States. 132. Oct. 28.

What are some of the cities President Roosevelt visited on his southern trip? A. Richmond, Raleigh, Jacksonville, and New Orleans. 133. Oct. 28.

Where will the Panama canal be fortified? A. At Panama and Colon. 134. Oct. 28.

How much did the United States pay altogether for the friars' lands in the Philippines? A. About \$7,000,000. 134. Oct. 28.

What change is likely to be made in the Philippine policy? The free entry of Philippine products into the United States and the opening of the islands to investment. 134. Oct. 28.

Where was the cornerstone of the Jefferson Davis monument lately laid? A. At Richmond, Va. 135. Oct. 28.

Where is Henry George's theory of taxation being tested? A. In Baldwin county, Ala., at a place called Fairhope. 137. Oct. 28.

When did the czar sign an agreement to grant Russia a constitution? A. On Oct. 30. 147. Nov. 4.

Name some concessions proposed in the new treaty with China. A. The definition of what a laborer is; exceptions in favor of Chinamen from colonies of other countries, and better detention quarters. 149. Nov. 4.

What important civil service rule was lately made? A. In regard to the removal of employees of the government for inefficiency or misconduct. 149. Nov. 4.

What two towns have been created by the government in a desert? A. Heyburn and Rupert, in Idaho. 150. Nov. 4.

Name some special rights granted in the charter signed by the czar. A. Civic liberty, based on real inviolability of person, freedom of conscience, speech, union, and association. 163. Nov. 11.

How did the people receive the manifesto? A. In some places it was hailed with patriotic processions and devout thanksgivings in the churches. The radicals were not satisfied, as they desired more extensive reforms. Then followed strife between the conservatives and revolutionists and massacres of the Jews. 163. Nov. 11.

What was one of the results of the new order of things? A. The resignation of Constantine Pobiedonostzeff, procurator of the Holy Synod. 164. Nov. 11.

How did the Finns regain their freedom? A. By striking for it while the uprising in Russia was at its height. 164. Nov. 11.

In respect to government how did Finland differ from the rest of Russia? A. When it was annexed it retained

its constitution, and each succeeding czar swore to support it. 164. Nov. 11.

What remarkable order was lately carried out in Korea? A. In obedience to an imperial Japanese edict, the Korean people gave up their national white mourning costume and hat for dark garments and black headgear. 165. Nov. 11.

For what was a Russian general who lately died noted? A. Gen. Michael I. Dragomiroff was regarded as the leading authority on war tactics in Russia, if not in the world. 165. Nov. 11.

What noted English admiral was lately given hearty receptions in Annapolis, Washington, New York, and other places? A. Prince Louis of Battenberg, nephew of King Edward VII. 166. Nov. 11. 182. Nov. 18.

Where was the monument to the Erie railway dedicated? A. At Deposit, N. Y., where the road was begun seventy years ago. 166. Nov. 11.

Where will the U. S. lose territory as the result of a survey? A. On the border of Vermont. 168. Nov. 11.

Why is there really a closer relation between Norway and Denmark than between Norway and Sweden? A. Because, politically and socially, Denmark, like Norway, and unlike Sweden, is organized on democratic principles. 167. Nov. 11.

Why does Russia fear the influence of Germany? A. Russia fears Germany will take some action in Poland to advance her own interest at the expense of Russia. 177. Nov. 18.

Why did Greece and Roumania fall out? Because Turkey took the side of Roumania in the dispute over the Koelso-Wallachs, a people living on the Greek border, and over whom the Greek patriarch at Constantinople claimed jurisdiction. 180. Nov. 18.

How does Russia propose to change to the Gregorian calendar? A. By shortening February thirteen days and beginning March 1 in the new style. 181. Nov. 18.

Who was the founder of the Young Men's Christian Association? A. Sir George Williams, who lately died in London. 181. Nov. 18.

What important change in the constitution did Maryland vote down at the late election? A. The proposal to alter the constitution in such a way that not only negroes but many whites would have been deprived of the suffrage. 183. Nov. 18.

How was the question of frontier fortifications between Sweden and Norway settled? A. By a compromise. 116. Oct. 21.

DYSPEPSIA

You can permanently cure your dyspepsia in no other way than by strengthening and toning your stomach. Therefore begin to-day to take

Hood's Sarsaparilla

whose record of cures of this distressing disease is positively unparalleled in the history of medicine.

"I had dyspepsia with pains at the pit of the stomach. I decided to try Hood's Sarsaparilla, and after the second dose the pains were relieved, my appetite improved and I began to get better. I now try to be careful of my diet. I don't believe there is a better medicine for dyspepsia than Hood's Sarsaparilla."—Mrs. ALICE SEHMAN, Dyers-town, Pa.

Accept No Substitute

The New Musical Education

Popular Home Courses

The design of the "New Musical Educational" Courses, issued by the Music-Lovers Library, is to give expression in practical form to the new movement in musical education which has been forging to the front for many years, having for its aim the development of musical appreciation.

Signs of the growth of this interest may be seen on every side—in the popularity of lecture recitals—in the multiplication of books on, "How to listen to music," "How to understand good music," "What is the meaning of music," etc.—in the growth of attendance at orchestral and chamber-music concerts and opera performances, in the introduction of historical and cultural courses in our leading colleges and universities, in the development of music clubs, and in many other phases of musical activity; but most, in the instantaneous response of the public six years ago, to the Pianola.

The rise and development of the Pianola, the most practically useful of all instruments, is one of the characteristic signs of our time. As printing revolutionized literature ages ago, so the Pianola is revolutionizing music, as a social, moral, and esthetic agency in the life of the modern world.

It is because the Pianola leaves room for the personal impress, because it constitutes a sensitive, responsive, and plastic agency, because, in short, it is not mechanical, but a mechanical aid to a musical performer, that it seems destined to play so great a part in making music known to the world.

The Crying Need.

The crying need of musical education, hitherto, has been of some

means of *repeatedly* presenting to the ear the concrete subject-matter of music—viz.: sounding musical compositions.

The miracle is accomplished by means of the Pianola.

The serious opinion of the most thoughtful musicians and educators of the world, is that in this little instrument there lie the germs of a revolution in the means and in the standpoint of musical education.

Already Pianolas and Courses of the "New Musical Education," have been adopted by Harvard, Columbia, Vassar, and some fifty other leading educational institutions thruout the country, as a working laboratory and lecture system.

In many other schools, clubs, and associations, lecture courses employing as subject matter, the "New Musical Education," in one phase or another, illustrated with the Pianola, have been inaugurated with great success.

There can be no doubt that the Pianola and "New Musical Education" are destined to accomplish an inestimable amount of good in the musical world, by making the appreciation and understanding of the world's greatest music accessible to all lovers of music, whether they be performers or not.

Music Teachers and Superintendents of Normal and High Schools.

The new method of teaching the appreciation and understanding of "Great Music" by "Hearing Courses," makes the teaching of music, easy and delightful to the pupils and fascinating to the teacher. With the specially prepared rolls; lesson pamphlets and scores, it offers a means of livelihood thru *School Work, Private Class Work,*

Club Work, and Individual Pupils.

In school work, any intelligent teacher may successfully employ the "New Musical Education" after a week's training.

The possession of a Pianola and "New Musical Education" Courses in the appreciation of great composers gives any normal or high school a *permanent reference library of classical music* for class-room laboratory work and for entertainments, besides saving the labor and expense of having music played for marches and gymnastic work.

Special rates and terms to teachers and schools.

All those wishing further information regarding this "New Musical Education" and the Pianola, may receive the same by sending their names to

CARROLL BRENT CHILTON,

Editor-in-Chief, Music Lovers Library,
Æolian Hall, New York City.

God's Music.

Do you hear the music ringing, oh, my brothers?

All the melody of lives we live to-day?
For that life makes perfect music when it smothers

All the discords in the part it has to play.

For the Master hand has written out the numbers,

And set us each to play our little part;
To touch the strings of hearts wherein it slumbers,

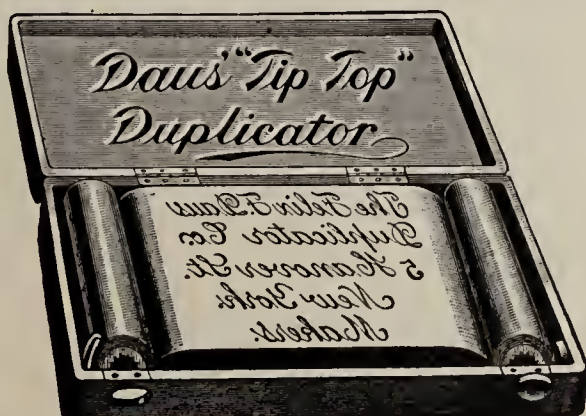

And waken them to glorify his art.

Do you hear the music ringing, oh, my brothers?

Do you hear the glorious anthem swell the breeze?

Is your little harp in tune with all the others?

Do you catch the strain of perfect melodies?

What Is Daus' Tip-Top?

TO PROVE

that Daus' "Tip-Top" Duplicator is the best, simplest, and cheapest device for making

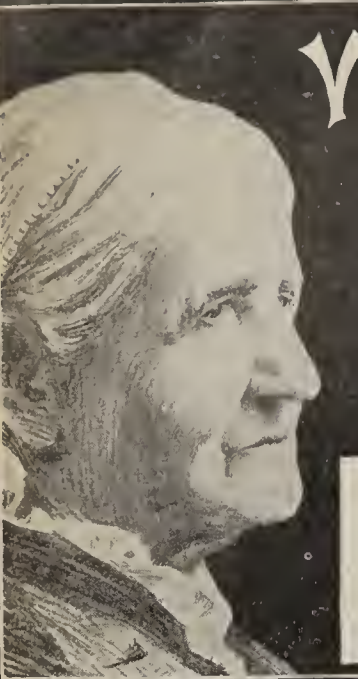

100 copies from Pen-written and 50 copies from Typewritten original

we are willing to send a complete DUPLICATOR without deposit on ten days' trial, if you mention TEACHERS MAGAZINE.

No mechanism to get out of order, no washing, no press, no printer's ink. The product of 23 years' experience in DUPLICATORS.

Price for complete apparatus, cap size (prints 8 3/4 in. by 13 in.), \$7.50, subject to the trade discount of 33 1/3 per cent. or **\$5 NET**

FELIX C. E. DAUS DUPLICATOR CO., Daus Bldg., 111 John St., New York

Vinol

The
Cod Liver
Preparation
without
Oil.

Body Builder and Strength Creator
For Old People, Puny
Weak, Run-down Persons, and after Sickness

The latest improvement on old-fashioned cod liver oil and emulsions. Deliciously palatable at all seasons

For sale at THE Leading Drug Store in Every Place.
Exclusive Agency given to One Druggist in a Place
CHESTER KENT & CO., Chemists, Boston, Mass.

COLORED PICTURES OF BIRDS

In full colors true to life Size 7 x 9 inches. 700 subjects. Also nest eggs, insects, animals, fishes, minerals, trees, flowers, plants, fruits, etc. Invaluable for bird and nature study. 2c. each. Sample and illustrated catalogue for 2c. stamp.

Geo. P. Brown & Co.
BEVERLY, MASS.

A Clear Complexion

Pure sulphur, as compounded in Glenn's Sulphur Soap, will clear the complexion of pimples, moth patches, liver spots, dry scaling and other defects. Use it daily in toilet and bath. Sold by all druggists.

Hill's Hair and Whisker Dye
Black or Brown, 50c.

CLASS PINS

this style, with any 4 letters or figures and one or two colors of enamel, sterling silver, 25c. each; \$2.50 a doz. Silver plated, 10c. each; \$1.00 a doz.

Special designs in pins or badges made for any class or society at reasonable prices; send design for estimates; also manufacturers celluloid buttons and ribbon badges. Catalogue free. Bastian Bros., 2105 Rochester, N.Y.

READERS will confer a favor by mentioning TEACHERS MAGAZINE when writing to advertisers.

Is there discord in the music just beside you?
Does the melody ring harsh and out of tone?
Wake the sweetest notes of faith, whate'er betide you,
Till the harsher notes be softened by your own!

Do you hear the music ringing, oh, my brothers?
There's the viol and sweet-voiced clarionet;
There are instruments more sweet than all the others,
But your own may sing a grander beauty yet.
Must you play a simple second, faintly hearing,
While a silvery harp beside you charms the ear?
Strike your sweetest chords and trust, then, never fearing
That the One who wrote the music will not hear.

Do you hear the music ringing, oh, my brothers?
How its wondrous beauty surges thru the air,
How the grandeur of the simple praise song smothers
Out the voice of sin and sorrow everywhere!
Tho our part may be a simple one and lowly,
Tho you long to strike a nobler, grander string,
Yet play on, and swell the chorus sweet and holy,
Till the whole world sings praises to our King!

God of the Dew, God of the Sun.

God of the Dew,
In gentlest ministry,
As silently
Would I some soul afresh anew.

God of the Sun,
Far flaming heat and light,
Be my delight
On radiant errands swift to run.

God of the Star,
To its stern orbit true,
My soul imbue
With dread, lest I Thine order mar.

God of the Sea,
Majestic, vast, profound,
Enlarge my bound,—
Broader and deeper let me be.

—MALTBE D. BARCOCK.

What Sulphur Does

For the Human Body in Health and Disease.

The mention of sulphur will recall to many of us the early days when our mothers and grandmothers gave us our daily dose of sulphur and molasses every spring and fall.

It was the universal spring and fall "blood purifier," tonic and cure-all, and mind you, this old-fashioned remedy was not without merit.

The idea was good, but the remedy was crude and unpalatable, and a large quantity had to be taken to get any effect.

Nowadays, we get all the beneficial effects of sulphur in a palatable, concentrated form, so that a single grain is far more effective than a tablespoonful of the crude sulphur.

In recent years, research and experiment have proven that the best sulphur for medicinal use is that obtained from Calcium (Calcium Sulphide) and sold in drug stores under the name of Stuart's Calcium Wafers. They are small chocolate-coated pellets and contain the active medicinal principle of sulphur in a highly concentrated, effective form.

Few people are aware of the value of this form of sulphur in restoring and maintaining bodily vigor and health: sulphur acts directly on the liver, and excretory organs, and purifies and enriches the blood by the prompt elimination of waste material.

Our grandmothers knew this when they dosed us with sulphur and molasses every spring and fall, but the crudity and impurity of ordinary flowers of sulphur were often worse than the disease, and cannot compare with the modern concentrated preparations of sulphur, of which Stuart's Calcium Wafers is undoubtedly the best and most widely used.

They are the natural antidote for liver and kidney troubles and cure constipation and purify the blood in a way that often surprises patient and physician alike.

Dr. R. M. Wilkins while experimenting with sulphur remedies soon found that the sulphur from Calcium was superior to any other form. He says: "For liver, kidney and blood troubles, especially when resulting from constipation or malaria, I have been surprised at the results obtained from Stuart's Calcium Wafers. In patients suffering from boils and pimples and even deep-seated carbuncles, I have repeatedly seen them dry up and disappear in four or five days, leaving the skin clear and smooth. Although Stuart's Calcium Wafers is a proprietary article, and sold by druggists, and for that reason tabooed by many physicians, yet I know of nothing so safe and reliable for constipation, liver and kidney troubles, and especially in all forms of skin disease, as this remedy."

At any rate people who are tired of pills, cathartics and so-called blood "purifiers," will find in Stuart's Calcium Wafers a far safer, more palatable and effective preparation.

Cut-up Number Stories

There are two pencils and I put one more with them, how many are there now?

If I take one thimble away from three thimbles, how many are left?

There is one slate on the desk. If I put two more slates with it, how many slates are there now?

How many apples must I put with these two so that there may be three of them?

Tommy had three pennies but he lost one penny. How many pennies had he left?

There were three bones on a plate. How many will be left when the dog has eaten two of them?

Polly has two cakes and Lizzie has three cakes. Which has more cakes? How many more cakes has Lizzie than Polly?

Tommy has three oranges and Jack has one orange. How many must I give to Jack so that he may have as many as Tommy?

Three little boys are sitting on a bench. If I send two of them out to play how many will be left?

There are two red balls and one white one. How many balls can you see?

I gave away two kittens and then had one left. How many had I at first?

There are three books on that shelf. How many times can I take one away?

A little girl had three apples. She ate all but one. How many had she left?

If I give a penny for one bun, how much will three buns cost?

Dr. E. S. Ferris of Hamilton, O., writes: I have found antikamnia tablets an excellent remedy in all forms of neuralgia. Druggists dispense them and we would suggest your getting a dozen to have on hand in time of pain. Camping and out-ing parties will do the proper thing by having some in their medical kit for emergency cases.—*Courier of Medicine.*

Every day I have a breakfast, a dinner, and a supper. How many meals do I have each day?

There is one school for big boys, and one school for big girls, and one school for little children. How many schools are there?

When the clock strikes three times, what time is it?

There are three drawers in the table, and in each drawer there is one duster. How many dusters are there?

How many times will the clock strike at three o'clock?

There are three slates on the desk. How many will there be when three girls have taken away one each?

My cat caught one mouse on Sunday, one on Monday, and one on Tuesday. How many mice did she catch in the three days?

I had three pigeons, but I gave one pair away. How many pigeons had I left?

In each of three rooms there is one blackboard. How many blackboards in all?

The New Moon.

Dear mother, how pretty
The moon looks to-night!
She was never so cunning before;
Her two little horns
Are so sharp and so bright,
I hope she'll not grow any more.
If I were up there
With you and my friends,
I'd rock in it nicely, you see;
I'd sit in the middle
And hold by both ends;
O, what a bright cradle t'would be!

I would call to the stars
To keep out of the way,
Lest we should rock over their toes;
And there I would rock
Till the dawn of the day,
And see where the pretty moon goes.

And there we would stay
In the beautiful skies,
And thru the bright clouds we would
roam;
We would see the sun set
And see the sun rise,
And on the next rainbow come home.

From One Year's End to Another It's Wise to Use RUBIFOAM

A year of Rubifoam works wonders. One can see what it has done for the beauty of the teeth and gums, but it is hard to estimate the decay and pain and dentist's bills that it has saved.

RUBIFOAM

is priceless for what it brings and what it keeps away. The longer you use Rubifoam the better it pays.

An Owl and a Squirrel,
A Snake and a Bee,
Once met at the Tadpole's house,
To point out his failings
And sympathy bring
For the sorrow his wants would arouse.

Said the Owl: "I can't see
How you manage to be
So cheerful, with all that you lack;
Why—you wriggle all day,
In one place never stay,
And you cannot look over your back."

And the Squirrel declared:
"When I see how you've fared,
I'm as sorry as sorry can be.
You are wet all the time,
In this damp, chilly clime,
And, moreover, you can't climb a tree."

Then the Snake came apace
With a grin on his face,
And he spoke with a false, yawning
voice:
"You're so short, don't you see—
You'd be longer, like me,
I've no doubt, if you had but your
choice."

When the Bee's turn had come,
He began with a hum:
"Excuse me—but you are so funny!
Your wings haven't grown—
You can't fly, you must own,
And you do not know how to make
honey."

But the Tadpole replied
(And I've heard that he sighed
As he wriggled about in his bog):
"There is much I can't do—
But then, none of you
Can ever become a green frog."

Christmas Cards

SPECIAL BARGAIN—Series 1

This is our biggest bargain in Christmas Cards and surpasses anything heretofore offered. It consists of two cards, 3½x5½ tied together with silk ribbon. The design on the first card is scenery and flowers, elegantly lithographed and embossed, with a Christmas and New Year greeting. The second card has a short poem appropriate for Christmas and New Year, surrounded by a border of holly, the leaves and berries being in their natural colors of green and red. It is an elegant card in every respect and we guarantee satisfaction. By making them in immense quantities we are able to cut the price to

3c. each, 40 for \$1

SPECIAL BARGAIN—Series 2

This is similar in a general way to the card described above, but is considerably larger, being 4¼x6 inches. It is also tied with wider ribbon.

5c. each, 24 for \$1

OTHER STYLES—Single Cards

Series A—About 3½x5½, embossed, assorted designs, 1c. each, 120 for \$1
Series C—About 4¼x6, embossed, assorted designs, 1 1-2c. each, 80 for \$1
Series E—New designs, 5x7, embossed, flowers and scenery, 2c. each, 60 for \$1
Series H—5¼x8¼, embossed, cut out edge, beautifully designed in scenery and flowers, big value for the money, 4c. each, 30 for \$1
Series J—Fancy shaped 9x9, embossed, and cut out, elegant heavy cards, 5c. each, 24 for \$1
Series K—7x11, embossed and cut out, usually sold at 8c. each, 6c. each, 20 for \$1
Series M—9x11, embossed and cut out, sold by other dealers at 10c. each, 8c. each, 15 for \$1
Christmas Booklets—Elegantly lithographed imported goods, none prettier made, 5c., 10c., 15c., 20c., 25c., each

Postpaid—All goods sent postpaid at the prices quoted. Cash must accompany every order. Catalogue free.

Our Students Did Not Fail

In a teachers' examination in August, 1905, in a representative Northern State, 51 per cent of the applicants failed to get certificates. In one of the best Southern States 46 per cent failed in the summer examination. The subjects of arithmetic and grammar proved the stumbling blocks in the majority of cases. A number of students of our School took these examinations, and so far as we were able to learn upon careful investigation, not one of them failed in any subject studied with us.

THE VITAL ELEMENT OF THE SCHOOL

Is the instruction department: our affiliation with Northwestern University affords evidence that our work is on a high plane. We confidently assert that few colleges, except the strongest in each State, engage better equipped teachers than those we employ. A person enrolling in a correspondence school has the right to expect that highly specialized teachers shall be in charge of his work.

NO OTHER CORRESPONDENCE SCHOOL CAN OFFER: Advantages of affiliation with a great university; courses of such strength that they receive university entrance credits; instruction especially adapted to individual needs; annual scholarships in Northwestern University for the best work in correspondence courses.

Normal Elective Courses for strong reviews preparatory to examination; Primary Methods for teachers of lower grades. Academic branches for more exhaustive study; Commercial, Shorthand and Typewriting for preparation for business. Write today for information.

Cut-Up Story

The Sky Flowers.

By MARY LEWIS HARRIS, North Carolina.

This morning when Janie came in she had roses in her cheeks. Jack Frost had put them there.

What has Jack Frost done to the flowers out of doors? All of them are gone.

He kissed them, and they withered, and he blew his frosty breath on the leaves. They turned all sorts of bright colors and danced away.

The roots are asleep in the ground. Many little seeds, cozy and warm, are waiting for the spring sun to wake them.

The Cat and X-Ray.

Our Tom is as fine and brave a Maltese house cat as one ever had, and a fighter, but the other evening he entered into a scrap from which he has not recovered yet.

It seems that Milancie, our "queen of the kitchen," had polished up her stove with the new X-Ray Stove Polish, which has the peculiar faculty of not burning off from a hot stove. Tom came in and discovered what he thought was another cat on his stamping ground, but which was his own reflection in the stove. A fight was on in an instant, and, according to Tom, the other cat was as ready as he. The result was a sad one. Poor Tom burned his paws, upset a dish of hot fat, and finally turned a double somersault backward out of the kitchen, and has now transferred his domicile to the woodshed, and no amount of coaxing can bring him back to the kitchen. Housewives must not use X-Ray Stove Polish unless they introduce their house cat by degrees; otherwise a catastrophe is likely to occur.

UNITED EDUCATIONAL COMPANY :: 61 EAST NINTH STREET, NEW YORK

But there are some flowers that bloom all the year. They look brightest in the cold weather.

They are not like the roses in Janie's cheeks. They are not like the sweet flowers in mother's garden, but they are very beautiful.

They bloom in the sky. What are they?

Yes, they are the stars, and we call them the sky flowers.

Look up into the sky to-night, and see how many there are. There are many more than you can count, tiny baby stars, and beautiful bright ones.

In one part of the sky you may see seven little stars very close together. They twinkle, twinkle, all night long, and all day, too, if you could only see them.

They are the "Seven Sisters," and there is a pretty story about them.

The James F. McCullough Teachers' Agency has grown rapidly from small beginnings to a position of commanding influence in the central and far West. It has become necessary to enlarge its scope of work and extend its organization. Mr. F. B. Spaulding, who for six years was manager of the Fisk Agency in Chicago, has been added to the organization, and will have the active management of the agency. Mr. Spaulding is widely and favorably known in educational circles both East and West, and we predict continued success for this popular agency under his vigorous management.

The seven stars, says the story, were once seven sisters. They were always together, and they loved each other very dearly.

One of them must go away from home, but her sisters could not bear to have her leave them. So they were all changed into stars, and put together in the sky.

One day there was a great battle upon the earth, and the sisters saw it. It frightened one of them, and she hid behind her sisters.

And what do you think? No matter how hard you look, you cannot find her—you can't see but six stars shining in the sky.

But even if your bright eyes cannot find her she is there close to her sisters. And with the rest, she twinkles down on you at night when you are fast asleep!

Some day I will tell you about the Great Dipper, a big bunch of sky flowers, in the northern heavens. Ask mother to teach you this little verse:

"I cannot do much, said a little star
To make this dark world bright,
My silvery beams cannot pierce far
Into the gloom of night;
Yet I am a part of God's great plan,
And so I will do the best that I can."

BOOKS of THE DAY

In **THE BOY CRAFTSMAN**, A. Neely Hall gives practical and profitable ideas for a boy's leisure hours. In fact, for the youth with a mechanical turn of mind this book is a perfect mine of practical suggestions. The work was undertaken with a view of helping boys with their problems of earning money, as well as furnishing recreative and entertaining work, and to this end the first portion has been devoted to suggestions for the carrying on of a number of small business enterprises, and the second and third parts to outdoor and indoor pastimes for all seasons of the year. It is impossible to enumerate all the occupations and pastimes included in this book, but the list is very comprehensive. The tools and apparatus used are such as a boy of average ability can procure with a little hustling, and can be purchased singly or one or two at a time, as his money permits. Technical terms and phrases have been eliminated from the text as far as possible. (Lee & Shepard, Boston.)

SPECIAL METHOD IN LANGUAGE, by Charles A. McMurry, Ph. D., is one of a series by the same author in which all the studies of the eight grades are considered. The change that has taken place in the old curriculum, adding especially literature and nature study, has given opportunity to treat Language more broadly than once possible. In the old school, reading, spelling, and

grammar were taught, but language was taught only incidentally. There was much effort expended to make the pupil acquainted with the symbols of language, but not with its power.

This volume discusses the relation of language to other studies (a most important consideration); it also gives illustrative lessons and a course of study. The suggestion is made that in the first year the child should be introduced to the treasure house of English literature by having read to him such stories as "The Three Bears," "The Ugly Duckling," etc. Thus a literary taste will be developed, and during the entire course the strong, beautiful and noble productions of the best writers should be introduced to the pupil. The technical methods of language teaching as proposed by the author are excellent; the day of making the study of grammar the main thing in the elementary school has gone by; how to speak correctly, how to write sentences in logical order concerning appropriate objects of thought, these are things to be striven for. The reader cannot but follow the author with exceeding delight; he will find himself often saying, "True, true" repeatedly as he reads. (The Macmillan Company.)

If your stomach is weak it should have help. Hood's Sarsaparilla gives strength to the stomach and cures dyspepsia and indigestion.

"I'm Well

Because of Liquozone," is a Tale Told Everywhere.

In almost every hamlet—every neighborhood—there are living examples of what Liquozone can do. Wherever you are, you need not go far to find some one who has been helped by it.

Talk to some of those cured ones; perhaps your own friends are among them. Ask if they advise you to try Liquozone. Or let us buy you a bottle, and learn its power for yourself. If you need help, please don't wait longer; don't stay sick. Let us show to you—as we have to millions—what Liquozone can do.

What Liquozone Is.

The virtues of Liquozone are derived solely from gases. The formula is sent to each user. The process of making requires large apparatus, and from 8 to 14 days' time. It is directed by chemists of the highest class. The object is to so fix and combine the gases as to carry into the system a powerful tonic-germicide.

Contact with Liquozone kills any form of disease germ, because germs are of vegetable origin. Yet to the body Liquozone is not only harmless, but helpful in the extreme. That is its main distinction. Common germicides are poison when taken internally. That is why medicine has been so helpless in a germ disease. Liquozone is exhilarating, vitalizing, purifying; yet no disease germ can exist in it.

We purchased the American rights to Liquozone after thousands of tests had

been made with it. Its power had been proved, again and again, in the most difficult germ diseases. Then we offered to supply the first bottle free in every disease that required it. And over one million dollars have been spent to announce and fulfill this offer.

The result is that 11,000,000 bottles have been used, mostly in the past two years. Today there are countless cured ones, scattered everywhere, to tell what Liquozone has done.

But so many others need it that this offer is published still. In late years, science has traced scores of diseases to germ attacks. Old remedies do not apply to them. We wish to show those sick ones—at our cost—what Liquozone can do.

Where It Applies.

These are the diseases in which Liquozone has been most employed. In these it has earned its widest reputation. In all of these troubles we supply the first bottle free. And in all—no matter how difficult—we offer each user a two months' further test without the risk of a penny.

Asthma
Abscess—Anæmia
Bronchitis
Bod Poison
Bowel Troubles
Coughs—Colds

Give full address—write plainly.

Note that this offer applies to new users only. Any physician or hospital not yet using Liquozone will be gladly supplied for a test.

Occupations for Little Fingers.

Does it not sound fascinating? And when I add that the book is a manual for grade teachers, mothers, and settlement workers, by Elizabeth Sage and Anna M. Cooley, both connected with Teachers College, New York, you will realize how excellent it is certain to be. There are many books of constructive work for primary grades, but this is one of the best published. It tells how children can make use of cord and string, raffia, paper (cutting and folding), clay, weaving, bead-work, furnishing a doll's house, crocheting and knitting, use of "nature's materials"—such as grape-vine, twigs of green wood, wistaria vine, birch-bark, corn husks, grass, and hemp. I know of no other book that tells about constructive work with materials that can be gathered by the rural school teacher at first hand, or by the children themselves. It is, accordingly, especially fitted for the rural school, tho it can be used anywhere, even in New York, the metropolis of America. (Charles Scribner's Sons, New York.)

It is a pleasure to comment upon the conservative methods employed by the G. & C. Merriam Company in the publication of the Webster's International Dictionary. Not every little slang word or phrase is put into the book regardless of its scholastic or linguistic qualities. It is this conservatism backed by the scholarship of the editor-in-chief, William T. Harris, Ph. D., LL. D., United States Commissioner of Education, and hundreds of others of the greatest educators of this and other nations, which has made the International a standard in the United States Supreme Court and in all the courts of the nation, as well as in colleges and public schools.

The Pure Food Era.

The medals of award at the Lewis and Clark Exposition, Portland, Ore., were made in conformation with the most rigid food laws with respect to purity, freedom from adulteration, preservatives and coloring matter, and under this most careful ruling, together with the consideration given to flavor, beauty of package and attractiveness, the Gold Medal was awarded to the following products:

Cooked Corn Beef.
Lunch Tongue.
Sliced Bacon.
Ox Tongue.
Sliced Dried Beef.
Peerless Plum Pudding.
Salad Dressing.
Pimento Stuffed Olives.

Prepared by Libby, McNeill & Libby in the famous Libby Hygienic Kitchens at Chicago.

Boiling Rice.

"How do you boil your rice?" is an ever-recurring question to the southern housewife as her guests gaze with envy at the snowy mounds of dry but perfectly cooked grain. Like most things, "it's easy when you know how"! Wash the rice in fresh cold water. Put into a saucepan, cover well with hot water and boil briskly for half an hour. When the water is all gone, put the rice into a fine colander, set the colander on a saucepan filled with boiling water, and finish your cooking by steam. When properly cooked each grain is separate. If rice were used more frequently as a vegetable instead of potatoes, the housekeeper would find she had made a gain economically as well as hygienically. Rice is not only much more nourishing than potato, but its form of starch is much more easily assimilated by delicate digestions.—Harper's Bazar.

How Are Pens Made?

A full description of the thirteen different processes required to make a perfect steel pen, will be sent on application to Spencerian Pen Co., 349 Broadway, New York.

Pat's Patriotism.

An Irishman on returning home to his native land gave vent to his joyful feelings by exclaiming repeatedly: "Hurrah for Ireland! Hurrah for Ireland!" much to the amusement of the passengers, but very much to the disgust of an Englishman on board, who finally retaliated with these words:

"Hurrah for Ireland! Hurrah for Hell!"

"That's right," answered Pat. "Every man for his own country."—*Ladies' Home Journal*.

The Reason.

A Scotch dominie, after telling his scholars the story of Ananias and Sapphira, asked them: "Why does not God strike everybody dead that tells a lie?"

After a long silence one little fellow exclaimed: "Because there wouldn't be nobody left."—*Exchange*.

Reproduction Stories

The Reindeer.

The reindeer is a species of deer, and inhabits the Arctic regions of Europe, Asia, and America.

The reindeer is a heavy and rather clumsy animal. It has short, strong limbs, and cloven feet like the camel, which spread out when walking on snow. Its neck is short, with a tuft of hair underneath. The color is brown, which becomes almost white in winter. It is covered with two coats, one of thick, coarse hair, under which lies a soft, wooly fur. It sheds its branched horns or antlers each year.

The reindeer is extremely useful to the Laplanders, as its skin and hair are used to make clothes, its flesh forms food, its milk is drunk, and it carries all their burdens. The skin of the face is made into boots.

This animal can run about ten miles an hour with a weight of two hundred pounds behind it.

The Camel.

There are two kinds of camels, one with a single hump, called the true camel, from Arabia, and the two-humped, or Bactrian camel, from Africa.

The camel is called the Ship of the Desert, as it would be impossible to cross many deserts without it. The camel can stand long and tiring journeys without requiring much food or water.

The camel is about eight feet high. Its neck and limbs are long. The hump is on its back, and is made up of fatty balls. This fat supplies nourishment when food is short. At the beginning of a desert journey the hump is firm, but at the finish very limp and drooping.

The camel can do without drinking water for a long time, because in its stomach there are several divisions to hold about a gallon of water each. Travelers sometimes kill the animal for this water when short themselves.

The feet of the camel have two padded toes, which spread out when the animal walks, and give it a firm hold on the sand. The nostrils can be closed by the camel to keep out the blowing sand, and the eyes are covered by long lashes. The tail is long, almost reaching the knees.

The fur of camels is used for clothing, the finer kind for painting brushes.

Camel flesh is eaten by the Arabs, who also drink its milk. They use its fat also, as we do butter.

The camel is stupid, and never shows much attachment to its master.

AN AGENCY is valuable in proportion to its influence. If it merely hears of vacancies and tells is something, but if it is you about them THAT used to recommend a teacher and recommends you, RECOMMENDS. that is more. OUR C. W. BARDEN, Syracuse, N. Y.

The Bear.

There are many kinds of bears, the chief kinds being the brown bear, the white polar bear, and the grizzly bear. Bears are found in Europe, Asia, North Africa, and America.

Bears feed chiefly on vegetables, but the polar bear can also eat flesh.

Bears are covered with fur, and swim and climb well, having five toes on each foot, with very strong claws.

The brown bear was found formerly in Great Britain. It is a clumsy animal, three and a half feet high and five feet long. It shuffles along very slowly. It lives alone, eats vegetables, and likes honey.

Its skin is used for rugs, muffs, and capes. Its flesh is eaten, and its fat is made into pomade for the hair.

Bears, before winter starts, generally gorge themselves and become very fat. They then find a cave where they sleep thru the winter. As soon as spring comes, they come out, looking very thin.

When the bear goes honey-hunting, and finds a bee's nest, it clears the entrance, blows into the hole and draws out the air again with great strength, which brings out the honey by suction. Hunters often find the bear by the great noise it makes in blowing.

Bears do not often attack man, except when provoked. They kill their victims by squeezing them. Bears can be tamed and made to do many tricks.

The Beaver.

The beaver is a rodent animal, that is, one that has gnawing teeth, like rats and mice.

It is found in Europe, but owing to its being so much hunted it is getting scarce. In Asia and North America it is found in large numbers.

The beaver measures about two and a half feet long. It has a heavy body with flat scaly tail. Its front gnawing teeth grow as long as the animal lives. On each foot are five toes, and it uses its front feet for carrying food, wood, etc., and its back feet for swimming only. These back feet are webbed like a duck's such feet being found on no other quadruped.

The beaver's fur is used for jackets, muffs, etc., Indians eat its flesh.

Beavers are great workers, and live in companies. If a beaver is lazy, its companions turn it out of their colony, and it has to live alone.

Beavers build their homes on the banks of rivers covered with shrubs and willows. They eat berries and the bark of trees.

When making a house, a tree is eaten round the bottom till it falls. The branches are used to make the walls and roof, being plastered together with mud or clay. The floors are covered with moss, and the door is made under the water. If the water is not deep enough the beaver makes a dam with trunks of trees plastered together to hold the water up.

Publishers' Talk.

To each individual member of our family of readers we extend a most cordial wish for a Happy and Successful New Year. The year cannot fail in the realization of either of these enjoyments if the duties falling to your lot are fulfilled faithfully and efficiently. Happiness is in doing, and success in achieving. In all your ministrations, whether it be in the class-room, the home, the social circle, or elsewhere, we hope that the satisfaction and pleasure found will be in the consciousness of a relationship sustained with credit to yourself and helpfulness to others. Thus the new year will bring to you a wealth of happiness and success.

New Year's day is a time for retrospection, introspection, and prospection. This experience is not without its disappointments, its regrets, and its fears. Neither is it without its pride, its satisfaction, and its anticipations. As publishers we congratulate ourselves upon the successful creation of this Magazine, upon the host of friends it has made, and upon the still larger family of readers that we hope it will minister to, but good as it is, it is not good enough for the splendid constituency for which it is published. Perhaps we are too exacting, perhaps our ideal of what a Teachers' Magazine should be is too exalted, but it certainly is no fault to be dissatisfied with one's attainments so long as it does not result in despondency. We hope, sincerely hope, that this magazine may improve more and more, until it can most worthily represent the teachers of this country, which it so earnestly is trying to serve.

Perhaps our ideals are too advanced for the revenue that we shall have to work with. If this should prove true, it will be your fault and not ours. We confidently believe the teachers will ratify our efforts and encourage us by an ever-expanding patronage. We hope, however, that they will not feel that they have reached the end of their co-operation when they have sent us the price of their subscription. There are other ways in which you can assist. Write the Editor now and then a word of encouragement, let him know your problems, tell him what you like in the Magazine and also what does not help you, inform him of devices and methods you have found

successful in your work. That is one way. Again, if you like the Magazine talk about it. Your friends may not know its virtues, tell them about them. Let your approbation spill over until your enthusiasm may lead to some friend gaining the benefit. Don't add any "but" to your endorsement either; even tho you have cause. That is another way. Again, if you happen to be in arrears for your subscription send us the amount promptly. It costs a good deal of money to put up this Magazine in its present form, and your subscription is a great help. Again, read the advertisements and if anything appeals to you, and you need it, write the advertiser and tell him you are doing so because you saw his advertisement in TEACHERS MAGAZINE. Furthermore, if you are compelled in the process of living to utilize any given article of whatsoever nature of which there are many kinds made, buy the one advertised in your educational paper if it appears therein. Reciprocation is one of the merits of friendship, and if advertisers try to help you by making it possible to improve your educational magazine will you not respond by giving to them such little support as your daily wants may make possible? Again, be patient with our faults. We have been fighting against some difficulties that have seemed hopeless, but please don't become discouraged. We know we ought to have the Magazine in your hands by the first of each month or before, and we have been trying hard to do so, but first one difficulty arose and then another to prevent the accomplishment of our purpose. We admire and thank you for your patience and loyalty under these trying circumstances, and if our resolution and determination count for anything we hope to correct this fault very shortly. Let us have your co-operation and support in all of these essentials, and then we shall be striving together for a better and more prosperous TEACHERS MAGAZINE, which shall be well for us and well for you.

Again we wish for you the fullness of your powers; the broadening of your aspirations, the enlargement of your service, and the attainment of noble results. Surely such would mean to you a Happy and Successful year.

Pussy=Cat—A Cut-Up Story.

If a mother cat could talk, do you know what she would say to her kittens? I think I do, so I will tell you.

When they are big enough to find their own food, she will tell them how to use their claws to catch a mouse for their dinner or supper.

Now, my dears, she would say, you have sharp claws at the ends of your toes. With these claws you can climb up a tree or catch a mouse.

You must keep your claws well drawn in, when you are walking, and step softly on the pads under your feet. Then you will not be heard as you move about.

To keep your claws from growing too long, you must scratch something hard. Any piece of wood will do, such as a table, a chair, or the trunk of a tree.

When you smell a mouse, steal along, one step at a time. Do not be in a hurry. If you do not learn to watch and to wait, you will not make a good hunter.

When you see a mouse, crouch down and get ready to spring. As soon as you are sure of it, pounce upon it like a flash, and thrust out your sharp claws and seize it.

When you have caught a mouse you may toss it about, and play with it, until you are ready to crush its bones with your sharp teeth.

Mind you keep your soft, warm fur as nice and clean as you can. You must often wash it with your tongue. The parts you cannot reach with your tongue—your face, your ears, and the top of your head—you can rub with your wet paw.

Your tongue is rough and is covered with sharp points, which turn backwards. With your tongue you can comb your fur and keep it smooth. You can also scrape the meat off a bone and lap up milk.

If you are good mousers, you will always have a good home. Almost anyone will be glad to keep you, and find you a warm corner to sleep in.

If you are good and kind you will have many friends, who will pet and feed you. But you must not scratch or bite those who pet and play with you. If you do, no one will love and care for you. If you are good, every one will say—I love little pussy.

When you move about after dark, always feel your way with your long whiskers. Where your whiskers can pass, there is plenty of room for your body.

Do not think you can see when it is quite dark. No animal can. But you can see when there is very little light. In the darkness your eyes will open wide.

Now you are kittens and fond of play. No one expects you to be as wise as I am. As you grow older, you will learn many things which you do not know now.

If you have seen a cat catch a mouse, you will know how quick she is, and how well she can use her claws and her teeth.

Kitty has five toes on her fore feet and four toes on her hind feet. Each toe has a sharp claw, which is like a small hook. She can hold fast to anything she seizes with them.

The claws on the hind feet are not as sharp as those on the fore feet. They are not used to catch mice. Each claw is kept in a sheath, and puss can push it out and draw it in when she pleases. When she springs on a mouse or a bird, she thrusts all her claws out at once.

Her teeth are made to seize her prey, and to hold it fast. Her front teeth are long and sharp. When she shuts her jaws, these teeth will go through the skin of any animal she has caught.

Cats sleep a great deal in the daytime, and are very lively at night. This is because they are night hunters. In the darkness they can catch animals which hide in their holes during the day.

The cat is made for hunting. Her teeth and claws are those of a beast of prey. Her eyes also help her to hunt by night.

If you look at your eyes in the looking-glass, you will see a dark spot in the middle of each eye. This dark spot is the hole which lets in the light. It is called the pupil.

If you look at a cat's eyes during the day, you will see that the pupils are narrow slits. They are then almost closed to keep out the bright light.

At night the pupils of the cat's eyes open wide, and become large and round, to take in all the light there is. Then she can see when you and I could not see at all.

Painter's Great Pedagogical Essays

\$1.25

This volume contains selections illustrating every period of educational history from Plato to Herbert Spencer. Selections from twenty-six of the world's most prominent educators are given, each introduced by a brief biographical sketch. The reader is thus enabled to secure an acquaintance with the original sources of information, and a correct critical estimate of each author's views and works.

Roark's Economy in Education

\$1.00

This book discusses the application of the principles of economy to the work of the school. It deals with the careful and economical use of time, money, and energy in effecting the right education. The general divisions of the subject are the organization and management of the individual school, and of the school system, and the useful direction of the other educational forces of the community.

The Best Five Cent Copy Books Published

Rational Writing Books

Medium Slant Edition—Vertical Edition

Each in Six Books. Per dozen, 60 cents

This system is the result of special study and experience in the training of school children to write, and combines perfectly the elements of simplicity, utility, and beauty. It contains many valuable features not possessed by any other series at any price, and covers in six books the work which in other series requires eight books. The same copies occur in both the Medium Slant and Vertical Editions, thus making the books interchangeable. In the first two books, the copies are repeated half way down the page, thus enabling the beginner to do better work. The lower books contain attractive illustrations and interesting and instructive work. In the higher books many practical forms are introduced.

Note These Preparatory Latin Books

As to Towle and Jenks's

Caesar's Gallic War :

"It is far and away the most practical text-book for classes that I have seen . . . The Appendix defines the principles of Latin syntax in the simplest and clearest language. The simple typographical arrangement by which the student is led to refer from his notes to the Grammatical Appendix is one of the many attractions of the book." So writes to us an experienced teacher of Greater New York. Others think so, too. **Gallic War, complete. List Price, \$1.25. Gallic War, Book I-IV, \$1.00.**

Have you seen Doty's

Latin Exercise Books

On Caesar's Gallic War ?

They furnish the pupil with a certain definite line of work in the study of each chapter in preparation for recitation. There is ruled space for writing out the results of such study. They are practical books—one for each of the first four books of the Gallic War. **Book II, III, IV, 20 cents each; Book I, 25 cents.**

Tunstall's Cicero's Orations, \$1.20. Six Orations, \$1.00.
Barss's Writing Latin, Book One, 50 cents. Book Two, 75 cents.
Bain's First Latin Book, 75 cents.
Gildersleeve-Lodge Latin Grammar, School Edition, 80 cents.

Which of these books interest you? Write us.

TEXT-BOOKS OF ART EDUCATION

THE ILLUSTRATIONS

in these books give opportunity for the study of expression by means of pencil and brush.

The reproductions in ink, crayon, pencil, and water color afford examples of good rendering in these mediums.

They demonstrate principles given for study in the accompanying text.

They show a child how to make a good drawing.

THE TEXT

Explains how to work out a given lesson.

It sets forth principles to be studied.

It affords opportunity for home study.

It stimulates the child to do original thinking and creative work.

For School Entertainments

The Recitation, Dialogue, Pantomime, Drill, Motion Song, or Play that you are looking for is probably in one of the books named below. We are specialists in this sort of material. Write to us for suggestions.

Tiny Tot's Speaker

By Misses Rook & Goodfellow. Contains more than one hundred and fifty pieces of only a few lines each, expressed in the simplest language. For the wee ones. Paper Binding, 15 cents; Boards, 25 cents.

Child's Own Speaker

By E. C. & L. J. Rook. A collection of Recitations, Motion Songs, Concert Pieces, Dialogues, and Tableaux. Contains over one hundred pieces, many of which were specially written for this book. For children of six years. Paper Binding, 15 cents; Boards, 25 cents.

Little People's Speaker

By Mrs. J. W. Shoemaker. A superior collection of Recitations for little people, mostly in verse, and ranging in length from four to twenty lines. For children of nine years. Paper Binding, 15 cents; Boards, 25 cents.

Young People's Speaker

By E. C. & L. J. Rook. This book is composed of bright, cheery, and wholesome recitations by the most popular authors. For children of twelve years. Paper Binding, 15 cents; Boards, 25 cents.

Young Folks' Recitations

By Mrs. J. W. Shoemaker. An excellent collection of fresh and crisp recitations adapted to the various needs of young people's entertainments. For children of fifteen years. Paper, 15 cents; Boards, 25 cents.

Little People's Dialogues

By Clara J. Denton. All new and original. Everything bright and fresh, and arranged for special days and seasons, as well as for general occasions. For children of ten years. Paper, 25 cents; Boards, 40 cents.

Young Folks' Dialogues

By Charles C. Shoemaker. Everything specially written for this volume. One of the best dialogue books in print. For children of fifteen years. Paper Binding, 25 cents; Boards, 40 cents.

Young Folks' Entertainments

By E. C. & L. J. Rook. Motion Songs, Concert Pieces, Pantomimes, Tambourine and Fan Drills, Tableaux, etc. All specially prepared, directions simple, everything taking. Paper, 25 cents; Boards, 40 cents.

Drills and Marches

By E. C. & L. J. Rook. Everything specially prepared for this volume. Contains Broom Drill, Hoop Drill and March, Mother Goose Reception and Drill, Doll Drill, New Tambourine Drill, etc. Fullest directions, and success of every drill assured. Paper Binding, 25 cents; Boards, 40 cents.

Choice Humor

For Readings and Recitations. By Charles C. Shoemaker. One of the best and most popular humorous recitation books ever published. Contains many of the best humorous selections in print. Every piece is a gem and there is not a coarse one among them. Paper Binding, 30 cents; Cloth, 50 cents.

Choice Dialect

For Readings and Recitations. By Charles C. Shoemaker. Contains selections in all dialects, such as Irish, Scotch, French, German, Negro, etc., representing all phases of sentiment, the humorous, pathetic, and dramatic, and all the very best of their kind. Paper Binding, 30 cents; Cloth, 50 cents.

Ideal Drills

By Marguerite W. Morton. A collection of entirely new and original drills into which many unique features are introduced. There are nearly one hundred diagrams illustrating the movements. Among the more popular and pleasing drills are the Brownie Drill, Taper Drill, Maypole Drill, Rainbow Drill, Tennis Drill, Easter Drill, Ring Drill, and Scarf Drill. Paper Binding, 30 cents; Cloth, 50 cents.

Choice Dialogues

By Mrs. J. W. Shoemaker. This is doubtless the best all-round dialogue book in print, being adapted as it is to the Sunday-school or day-school, to public and private entertainments, and to young people or adults. Each dialogue specially written for this book. Paper Binding, 30 cents; Cloth, 50 cents.

Good Humor

For Readings and Recitations. By Henry Firth Wood. Many of the pieces make their first appearance in this volume, while a number of others are original creations of the compiler. No reader wishing to keep abreast of the times can afford to be without this book. Paper Binding, 30 cents; Cloth, 50 cents.

Humorous Dialogues and Dramas

By Charles C. Shoemaker. All the dialogues are clean, bright, and taking, and sure to prove most successful in their presentation. They can be given on any ordinary stage or platform, and require nothing difficult in the way of costume. Paper, 30 cents; Cloth, 50 cents.

Holiday Selections

For Readings and Recitations. By Sara S. Rice. The selections are specially adapted to Christmas, New Year's, St. Valentine's Day, Washington's Birthday, Easter, Arbor Day, Decoration Day, Fourth of July, and Thanksgiving, and are classified accordingly. Paper Binding, 30 cents; Cloth, 50 cents.

Holiday Entertainments

By Charles C. Shoemaker. Contains many exercises, dialogues, and entertainments suitable not only to the Christmas Holidays, but also to Easter, Decoration Day, Fourth of July, Thanksgiving, etc. Paper Binding, 30 cents; Cloth, 50 cents.

Select Speeches for Declamation

By John H. Bechtel. A volume specially prepared for college use and containing a superior collection of short prose extracts from the leading orators and writers of all ages and nations. Paper Binding, 30 cents; Cloth, 50 cents.

These books are for sale by all booksellers or they will be sent prepaid upon receipt of price to any address

“Nothing is troublesome that we do willingly.”

It will not trouble us in the least to send you some samples of **DIXON'S AMERICAN GRAPHITE PENCILS** if you will send us 16c. in stamps. The reason we mention this sum is because everyone can easily get postage stamps, they are convenient to send, are always worth their face value, and it takes this amount to make a representative package.

We make pencils for the ordinary work of the school-room, with or without erasers, round or hexagon shape, pencils for drawing in all its branches, from the one with a fine hard point for very fine lines to the pencils with a large thick soft lead for deepest shadow effects. Pencils of extra large diameter for the little fingers that get tired so easily, and many varieties of checking and marking pencils of all colors, shapes, sizes, and prices.

What shall we put in your package? We will do it willingly if you send us 16c. in stamps.

No. 5

The Spirit Quickeneth

SCHOOL cannot be judged by its course of study. The right sort of teacher will turn a narrow program into a feast of "fat things full of marrow," and a poor teacher will reduce the richest curriculum to a dull gradgrind. The children will come from the room of one teacher with full note-books and from another with hearts aglow.

The important consideration is not so much the subject on the program, as what the teacher puts into it. Whatever the powers that be may prescribe, they cannot wholly prevent a good teacher from doing good work.

There is little excuse for the oft-heard groan; "If I could only be *free* how much good I might be able to do for my pupils!" No doubt educational authorities sometimes arrogate to themselves the dictation of the course of study down to the lowest detail. But except under the very worst conditions, the efficient teacher may still find abundance of opportunity for the kind of work that shapes lives.

Judging by programs we may classify schools as narrow gage and broad gage. The former limit themselves to the traditional three Rs; the latter attempt to awaken in the children interests of various kinds and to increase their powers of self-expression by training in the manual arts and crafts. The three R schools are slowly but surely receding to the land of the dodo and of the saurians. The wonder is that specimens of them may still be found here and there. However, the new education schools are not yet so absolutely in possession of the field that challenges have altogether ceased. Even parents occasionally fail to appreciate the value of anything beyond the barest rudiments, as is witnessed by the following pointed note received by a teacher from an irate mother:

i sends my childer to skule to larn redin ritin an figgers an no tomei rott as you larn them i want you to no yous respectful Mrs——

The case is plainly stated. That is the beauty of it. There is no doubt that Mrs. —— wants her children taught the three Rs. All parents are practically agreed on this point. It remains to be shown that after making the fullest allowance for these demands, there is still time left for other studies. Here we can talk just as plainly as Mrs.——.

The remarkable series of researches made by Dr. J. M. Rice have placed at our disposal some absolute facts. He has proved by data which cannot be argued away that from ten to fifteen minutes devoted to spelling each school day for a number of years will produce results which no larger ex-

penditure of time can surpass. The greater or less success depends upon the efficiency of the teacher, and not upon the amount of time. Forty minutes a day is the reasonable maximum for arithmetic. English composition and language work need not consume more than fifty minutes a day at the utmost. All that is commonly included in the three Rs can therefore easily be managed in from two hours to two and a half hours a day. A good teacher can produce in this time the best possible results, the poor teacher with twice as many minutes will still fail to do satisfactory work.

People who point to the schools which they and their fathers and grandfathers visited in their youth as models and who are forever telling how much better spellers and better cipherers were produced when the schools had smaller programs, should be acquainted with a recent investigation made at Springfield, Mass., by Principal Riley. Careful comparison of the spelling, arithmetic, and geography in 1846 with the work in these same branches in 1905 showed conclusively that the pupils attending the present-day grammar schools at Springfield are much better grounded in the rudiments than were their forebears of sixty years ago. The story of the test may be read in *The School Journal* of December 2, in *Educational Foundations* for January, and in *The Forum* for January-March. This is a most valuable contribution to education. It establishes clearly that the enrichment of the school programs has not reduced one iota the possibility of attaining as good results in the three Rs to-day as at any time in the past. The spelling of our grandparents was no less fearfully and wonderfully made than that of their descendants. Shall we then withhold from the children the good things that may be theirs simply because ignorance claims that there is no time?

The teacher who constantly strives to perfect himself in efficiency can open to his pupils sources of life and usefulness and joy which to the self-satisfied are forever closed. The good shepherd spends his strength that his sheep may have life more abundantly: for the hireling there is no place in education. The value of a school is not in the studies taught, but in the spiritualization of the program by the teacher. Here is the key to the situation. Teaching must be spiritual work. "The letter killeth, but the spirit quickeneth." The more we give of ourselves the richer our own lives will grow. What wonderful promise this holds out to the teacher! Truly, there is no grander work to be found anywhere.

Autobiography of a Teacher. IV

By C. Hanford Henderson

"Adventures Are to the Adventurous."

AS I have said, my own first plunge into the world of affairs was an heroic one, for it took me into the wilderness of Eastern Kentucky, something like a hundred miles from the railroad. Just why I selected such a remote spot to begin my quest for fame and fortune, I am quite at a loss to remember. There was no immediate haste for me to be making money, for the family fortunes had by this time so far repaid themselves that we were in wholly comfortable circumstances. I think that it must have been the first work to present itself which really satisfied my geological conscience. It may also have been that the spice of adventure which it promised was not unwelcome. It is sometimes observable that your very quiet people have hidden away under their demure and drab exterior a genuine appetite for adventure which would quite respectably fit out the most dashing cavalier. I detect such a strain in myself, and it both amuses and pleases me to find that it is not yet dead.

This journey to Kentucky was the longest that I had ever undertaken and was the beginning of very wide wanderings over land and sea.

I have just been reading Haeckel's last book,—"The Wonders of Life,"—a book, it seems to me, full of more than questionable philosophizing; but rich nevertheless in wise and beautiful observations about nature. He calls attention to those organisms which move about quite freely when they are young, and become stationary in mature life. It seems that this settling down is attended by quite disastrous results, involving as it sometimes does, the loss of bones, or even of the head itself! Both Haeckel and Arnold Lang, who have studied the same phenomena are disposed to draw the conclusion that the stationary habit in both animals and man means in many cases an absolute loss of power, and in all cases a lessened possibility of development. Such a point is much too good not to be seized upon by so inveterate a wanderer as myself. Perhaps it does not quite justify the fact that for the past dozen winters I have lived in a dozen different places; but it is to be hoped that it may later when I come to settle down and make use of my gains.

My going to Kentucky came about very naturally. While I was looking about for something suitable to do, a cousin of mine, who had, quite unknown to myself, been taking a very kindly interest in my career, sent for me to go and see him. Such an unexpected summons also suited my fancy and I was not slow in responding. I was hardly acquainted with my cousin personally, but I found him a delightful old gentleman, at least he seemed old to me then; in reality I suppose that he was about forty-five. He explained to me that two acquaintances of his, gentlemen of considerable wealth, owned something like 200,000 acres of land in Eastern Kentucky and Southwestern Virginia which they proposed to develop and even add to, and that they wanted a geologist

to examine the whole tract. It is safe to say that I felt very important at the prospect of such responsible work.

My cousin quizzed me a bit in a good-natured way, and even put me thru a very informal examination. I always hated examinations, but as my old professor of geology used to say to me, "You might as well get over your aversion to examinations, for out in the world you will have them *every single day!*"

I have found this to be true, and I have not always had such kindly examiners as my delightful old cousin. His capitalist friends, he said, knew their small principality to contain unlimited quantities of coal and iron; and believed that it also covered rich deposits of gold and silver and copper and lead. That the list of treasures was not even longer than this was probably due to their own lack of chemical knowledge. My cousin did not take these large expectations too seriously and laughed with me over gold specimens that had clearly been manipulated.

The upshot of the matter was that the capitalists offered me the work and that I accepted. I think they must have taken me on faith, for I was a boy of twenty, without any practical experience, and of so slight a physique as to suggest reasonable doubts as to whether I could successfully cope with even the bodily demands of the enterprise. They agreed to pay me seventy-five dollars a month and all my expenses. I do not remember how this pay impressed me, but I hope I was duly appreciative, for even now, in the present expansive state of the financial mind, it seems to me very good for such a mere stripling.

I was to start in August. When the time came my mother was ill in bed, and I was wholly miserable at the prospect of leaving her. The propriety of waiting over a few days does not seem to have occurred to either of us. But then, as my sister says, we have the blood of martyrs in our veins! In addition, I believe that Mr. Jonathan Edwards; if not a direct forbear, was at least a kinsman,—so much is accounted for. It was a cruel thing to do, to go away at such a time. Even after more than twenty years, it makes me catch my breath to recall the misery of that parting.

I have already observed, in the first paper, that my most commanding ancestors had the preaching habit, and added the reflection that I agreed with Haeckel as against Weissmann, that acquired characteristics are transmitted! When one confesses so openly to a fault, one expects, of course; to be allowed to indulge it without further reprobation. So I may offer, with a perfectly clear conscience, at least one preachment. And it is this: I have since come to see that it is a crime of the first magnitude to allow any supposed duty of an exterior and mechanical sort to interfere with the higher obligations imposed by human relationship. Those divine comrades whom God in his goodness allows us out of the vast loneliness of space to discover and make ours, we owe our first and supreme duty. Indeed, it now seems to me that the other acts can claim the dignity of

duty only as they serve those whom we love. He who loves most can most fulfill the duty of life. I did not see this when I was twenty. I am not sure that I saw it when I was thirty. At forty I began to see it, and it still has about it the glamor of a great revelation. Happily, my mother recovered, and I had her with me for several years longer, but I dread to think of the bitter, life-long regret that would have been mine, had it happened otherwise. Perhaps these mistakes, these crimes, I may even call them, were veritable teachers. Certain it is that I live now in a different world, a world in which things human are the element of supreme moment.

So I went to Kentucky. But the crime of going was punished then and there, for never did more disconsolate knight set out to seek his fortune in the unknown. The train left at midnight. My father went with me to the station. The city had about it the mystery of quiet and of the night. Something like terror took possession of me. The recurrent thought passed and re-passed thru my mind, "Perhaps I shall never see my mother again! Perhaps I shall never see my mother again!" And so my first real journey into the world began in a genuine agony, and all because I had not been taught the real values in life, had not learned to put persons before things.

The railway journey took twenty-four hours; and landed me, again at midnight, at what was then the small frontier town of Bristol. Part of the town was in Virginia; and part in Tennessee.

I got out of the train, a heavy valise in one hand, a surveyor's tripod in the other. A correspondingly heavy trunk was likewise vomited forth into the darkness. I had expected to be met by an agent of my two capitalists, but no one was at the station. The little town itself lay wrapped in complete darkness.

I think that I was almost the sole passenger. The sleepy but friendly station master took me to the end of the platform and gave me careful directions how to find the agent's house. I started off into the darkness without any great feeling of confidence that I should land in bed that night. I had gone only a short distance when I saw a lantern moving on the other side of the broad street. Thinking that it was probably my man out in search of me, I started to cross. I got half way over, when *voila*; my valise flew in one direction, the tripod in another, and I found myself curled up in a ball, and lying on my back! It was all so very sudden that I did not know what had happened to me. My outcry brought the lantern to my rescue. I found that I had been tripped up by a pile of sharp, broken limestone to be used in mending the road. My clothes were rather the worse for the encounter, but so quickly had the instinct of self-preservation acted (and I mention the incident on that account) that quite unconsciously I rolled into a ball, face and hands in the center, and escaped without a scratch.

The lantern, as I had supposed, was carried by the man I most wanted to see. With his help, I gathered up my belongings, and was soon settled for the night in one of those comfortable little cottages, vine-covered and veranda-surrounded, which were then characteristic of the South. Since she has taken to importing those ready-made designs, which, fitting everywhere, really fit nowhere, the new South has not been so happy in her architecture. I slept like the Seven Sleepers.

On the following day, with the help of mine host, I secured a pair of mules, a driver, and a covered wagon. I mention them in the order of their endurance. I mistrusted the wagon from the start. It would probably have withstood the driver and myself, for we were both rather slender, but my trunk was wickedly heavy. It contained some very solid surveying instruments and almost enough books of reference to supplement my own profound ignorance. But for a time, that is to say for two or three days, all went well. Our route took us across the southwestern corner of the Old Dominion, over the range of the Cumberland mountains, into the region since made famous by Mr. Fox's charming story, "The

Little Shepherd of Kingdom Come," charming at least in its early chapters. Had it not been for my anxiety about my mother, I should have thoroly enjoyed the journey. Even as it was, the fresh air, the bright skies, the natural beauty brought out all my temperamental optimism and

Thou, who art ever the same,
grant us so to pass through the
coming year with faithful hearts,
that we may be able in all things
to please Thy loving eyes—Amen.

Mozarabic, 700 A. D.

I easily assured myself that my mother was better. It took us four days to make the hundred miles; for my poor wagon at last broke down completely. We left it at a wayside smithy and got a stout mountain wagon for the rest of the journey, so stout indeed that it had no springs and one had to stand up to prevent being jolted to pieces. For the greater part of the way I walked or ran alongside of the wagon, while my too heavy luggage paid for its sins by a shaking up which almost brought dissolution.

Late on the afternoon of the fourth day we reached our destination, the tiny town of Whitesburg, in Letcher county. It lies on the upper waters of the Kentucky, and occupies a little stretch of level land between the river and a low range of roughly gullied ridges. One straggly street runs parallel to the river, and midway between it the naked red ridge. Many of the houses were fair sized, even pretentious in appearance, and would have looked extremely comfortable after the many log cabins I had passed on the journey were it not that they were commonly unfinished. Second story doors opened onto balconies that had never been built. Gaps yawned in the weather boarding between floors for porch rafters that had never been inserted. Dormer windows filled with boards in place of glass turned blind eyes toward the passer-by. Pigs were everywhere, in the streets, in the gardens; in the muddy puddles between the two.

One who has never seen these Southern villages can hardly realize the sense of desolation produced by their disorder and unfinish. That first afternoon I felt pretty far from home. In fact, as it took four or five days for the mail to reach me, I was for all practical purposes as remote as if I had been in the far West.

I was fortunate in finding a home with a very kind and intelligent family. Their house was one of the few that had ever been really completed,—a roomy brick structure on the upper side of the street. My own apartment was a large front room in the second story. It had plenty of windows and a good sized fire-place. Its one defect was that every time I moved across the room, it shook so noticeably as to suggest to my engineering mind a speedy and disastrous collapse. This never occurred, however, and in my subsequent wanderings among the mountains, I came to look upon these headquarters as a veritable haven of comfort, even of luxury.

In India, the natives regard the Englishman as an "uncomfortable, unaccountable work of God." It was I think only my youth and high spirits that kept me from a similar verdict in Kentucky, for my ideas differed so radically from theirs, and especially in the matter of time. Having gone out there to geologize, I proposed to do it,—understandable enough,—but I also proposed to do it at once,—less understandable,—for in addition to my own nervous energy, I had my Puritan conscience along with me. I think I never quite forgot that my time was paid for, was not my own, and that I must use every available moment to further the purpose for which I had been sent out. That very night, if I remember correctly, I set about my first preparations, getting a guide and a horse. By way of guide, I secured a handsome young mountaineer by the name of Adams. He came to see me in my room, and either curiosity or his idea of politeness prompted him to remain an awkwardly long time. Partly to make conversation, I asked him if Whitesburg was a pretty orderly place. I shall never forget his answer: "Wal, thar's right smart killin' goin' on." Adams himself had never killed a man. Once he had fired with intent to kill, but thanks to mountain whiskey his aim was less sure than usual and he had missed the mark. He acknowledged that he was glad he *had* missed. Yet he proved a good comrade, faithful and considerate always, and I trusted him to the utmost. This was also true of another man with whom I had considerable to do. who had, since the war, killed between fourteen and twenty-one men,—estimates differed—but who was personally as gentle and kind to me as a father. I dubbed him "the firm man." I think he would have done anything in the world for me. Indeed, he afterwards assured my father that I was quite as safe in Kentucky as right in my own home; and that if any one had touched a hair of my head, he "would have smashed his ugly mug for him!" It is hard to picture the effect of such a statement when merely seen in cold print. One must add the gentle, almost tender drawl peculiar to the mountaineers of the South.

I was as fortunate in my horse as in my guide. Adams rode a little black mule, as small as he himself was large. I used to fancy that if Adams

but stretched his long legs, the mule must surely walk out from under him. My own mount was better, a chestnut mare of moderate size, who was willing to travel on the road or off it, and who made her way across fields and thru forests with rare success. When the ground got too rough or too steep, she would stop and look around at me, as much as to say, "Well, really, you don't expect me to go any further, do you?" Commonly I agreed with her, got off, tied her to a tree, and went on afoot, looking out the while for rattlesnakes and copperheads. As I had recently been reading Dickens, I called my mare "Little Nell." I should really have called her Rosinante, for Adams and I on our curious mounts and picturesque errand, often reminded me of Don Quixote and his redoubtable squire.

Two hundred thousand acres of land is a large amount, and combining loss of time thru floods and bad weather, it took the greater part of three months to cover it. The holdings varied from fifty or a hundred acres up to large tracts of ten or even thirty-five thousand acres, and each bit of property had to be visited. It was wholly virgin territory. While most of the land was on a true coal foundation, the carboniferous, not a single coal mine had ever been opened up. There were small clearings around the occasional cabins; patches of tobacco, straggling fields of corn, little apple orchards, rough pastures, but most of the land was *au naturel* primitive forests and untouched mountainside. There were native surveyors running off the boundaries of these varied tracts; but for my own guidance I had not so much as a rough sketch map. I had copies of the deeds, but they were so far from accurate that the final course, "so-and-so many rods back to the beginning," was quite likely to land one a mile or even more from the specified point.

With Whitesburg as a center, Adams and I radiated in all directions. We usually left headquarters early Monday morning and did not return until Saturday night. We had to stop wherever night found us, and seek accommodation in the nearest cabin. Often it contained but one room. This served for kitchen, dining room, and bed chambers. The living room might be said to be all out doors. The cooking was done on the hearth and usually there were no windows. A bed stood in each corner; and in one of these Adams and I found such rest as we could. I have vivid recollections of a night spent in such a cabin when there were thirteen persons in the one room; two dogs, and a burning lamp. Occasionally we were better off and had a whole cabin to ourselves. The food, too, was of the roughest, black coffee, bacon, and corn-bread. Sometimes, in the better cabins, we met fried chicken, apple sauce, and wheat biscuit. Beef and potatoes were rare. There were plenty of sheep, but the mountaineers had a curious objection to mutton, and seldom or never ate it. As I never touch pork; my own fare was very limited; and I wonder that I kept up and did my work. It must be that in the plenty of civilization we all eat more than is good for us. I recall one keen autumn morning when a long ride had given me a genuine boyish appetite. I looked over the dinner table in dismay, for the only things on it that I was willing to

eat were a saleratus biscuit and a pickled cucumber. But alas, the biscuit opened with a suspicious cleavage—there was a goose feather in the center of it and so my dinner reduced itself to the one pickle. My host never noticed how badly I was faring. He ate with the bowed head of one who says the perpetual grace.

News of myself and my work soon spread thru the mountains and I came to be generally known as "the mineral man." I think the mountaineers liked me personally, for I felt a genuine interest in them and tried to tell them interesting stories of the far-off world of railroads and cities, about which most of them knew absolutely nothing. Many of them had never seen a railroad, and some of the men confessed quite frankly that they would be "plumb scairt" to see a locomotive. It is hard to realize how primitive the life was. It is hard for me, writing, as I happen to be, on a luxurious trans-Atlantic liner, to believe that I did not imagine that life, rather than experience it. One evening, for example, Adams and I reached a cabin about nightfall. The family had already had supper, but willingly got us ours. They had no lamp, no candles, not even the customary tallow dip. We ate our meals by the light of something still more primitive, a pine torch held by a mountain girl, so like a creature of the woods that she seemed different in kind from the women of my home acquaintance. The older people regarded me with open-mouthed curiosity, and I could hardly blame them. Here was a slender youth, of different speech, dress, manners, carriage, and driven by motives not only not understood but wholly incomprehensible. Finally the old woman blurted out to her husband, "Eli, they tell me thar's as many as a thousand people in the place whar this man lives." Instead of letting it go at that, which would have been sufficiently wonderful, my alert sense of truth made me hasten to add that there were over eight hundred thousand,—a bit of liberalness which I am sure got me the reputation of being considerable of a liar.

At another cabin, a lad, he must have been sixteen at least, asked me if we had a railroad in Philadelphia. And this he did quite seriously and not after the manner of a New Yorker. When I replied that at one station a train arrived or departed on an average every three minutes during the whole twenty-four hours, he said nothing audibly, but his face put me down as a person to be classed with Ananias and Sapphira.

So long as I was recognized as "the mineral man," I was perfectly safe. I think the general attitude of the mountaineers was truthfully expressed by old man Polly, (his wife by the way was Mistress Polly Polly) when he assured me that he would take better care of me than he would of his own Lou. In addition to their personal friendliness, the mountaineers took pride in seeing to it that no stranger in their midst came to any harm. It was only when I was mistaken for someone else that I stood in any real danger. Surveyors, for example, were not in good repute. Many of the mountaineers occupied lands which they had never taken the trouble to patent. They had, of course, the moral right of prior occupation, but in the eyes of the law they were mere squatters, and

the land belonged to those who had covered it with "blanket" surveys and paid the nominal fee;—I think it was six cents an acre. Consequently the running out of the boundary lines meant ultimate eviction. The simplest way out of the trouble was to shoot the surveyor, preferably in the back; from a clump of bushes, and this was occasionally done. One morning,—a heavenly morning it was; too,—I was riding quite alone over a mountain trail. Adams could not go with me into that particular district, as the deputy revenue officer lived there, and had a warrant for the boy's arrest. I omitted to mention that my handsome mountaineer, in addition to other activities, was a moonshiner, a believer in State Rights as opposed to Centralization, and made mountain whiskey by moonlight without paying the tax. And so I was riding quite alone.

As I came down the mountain, I skirted a little clearing in which an old man was at work. I called out a cheery salutation. The old man looked up and remarked with perfect good nature; "Wal, they haint killed you yet!" I doubt if the gentle reader can imagine the effect of such words; coming from the heart of the wilderness, and addressed, if you please, to yourself. The old man had mistaken me for a surveyor; and explained that "they" allowed they'd kill the surveyors.

Revenue officers were even less acceptable than the poor surveyors. The best people in the mountains were moonshiners either in sympathy or in actual practice, and quite honestly believed that they had a perfect right to distill their own whiskey and brandy; and that the Federal Government was manifestly and inexcusably interfering with their natural rights in placing a tax upon the liquor. In this state of public opinion the revenue officer was a very unpopular person; a common enemy, and quite as likely as not to die with his boots on. The chance of violence was increased if he came from outside, and was open to the suspicion of being a spy. It is amusing that so peaceable a youngster as myself should have been mistaken for an officer, but this happened several times and got me, I suppose, into some real danger. At other times, it led to nothing more serious than an absurdity.

But my narrowest escape from a well-aimed bullet came one night when Adams and I got mixed up in one of those dreadful family feuds for which Eastern Kentucky was at that time all too famous. I knew perfectly well that the feud was on, but I could go with entire safety from one party to the other, and was at the time so much absorbed in my geological work, that I quite forgot the existence of the feud. We had been delayed, one dull, stormy day, until after dark; and had some difficulty in finding shelter. In a country wholly devoid of hotels, the law of hospitality—always very exacting in the South—demanded that any stranger must be entertained; but it also provided that he must present himself before dark, and must not dismount until invited to do so. I had learned a part of the mountain etiquette, but not all, and my ignorance came near costing me dear. Adams and I made our way thru the darkness, silently and unannounced; to the very cabin which happened that night to be

the headquarters of one party to the feud. We were naturally mistaken for the attacking party. We left our horses tied to the fence, and came quietly thru the orchard, all unconscious of our danger. It was perhaps the very boldness of this supposed attack that saved us from being shot then and there. As it was, the besieged, eight or a dozen of them, took to their heels, and spent the night in the woods, while I and my one squire marched in and occupied their quarters! The woman of the house ungraciously got us our supper and showed us to our beds, ungraciously got our breakfast and took our money. It was not until we rode away the following morning that I learned from Adams the true state of affairs, and the danger we had been in.

Meanwhile my geological work was going much to my mind. Fortunately for me, the geology of Eastern Kentucky is very simple, or I might not have been able to read it so easily. One vast fault extends thru this part of the state, throwing the sub-carboniferous limestone to the surface along flank of the Pine mountain. On top of this came the telltale Milestone Grit, the recognized floor of the Coal Measures. Aside from this one up-throw the rocks were practically horizontal and displayed the usual successions of sandstones, slates, and shales, interspersed with beds of coal varying from a few inches to as much as ten feet in thickness. It is essentially a coal country. There were no considerable bodies of iron ore discoverable, merely scattered "Ridneys" too poor and too occasional to be the basis of an industry. My own small knowledge of Economic Geology spared me from expecting the precious metals or even copper and lead. There was, of course, the traditional story of astute Indians and needy hunters who had resorted to Pine mountain to get lead for their bullets, but no one could quite find the locality.
